**62.8(1)** *Effluent limitations more stringent than the effluent limitation guidelines.* An effluent limitation more stringent than the effluent limitation guidelines representing the degree of effluent reduction achievable by application of the best practicable control technology currently available may be required in an NPDES permit if the factors relating to the equipment or facilities involved, the process applied, or other such factors related to the discharger are fundamentally different from the factors considered by the administrator in the establishment of the guidelines. An individual discharger or other interested person may submit evidence concerning such factors to the director. On the basis of such evidence or other information available to the director, the director will make a written finding that such factors are or are not fundamentally different for the facility compared to those specified in the development document. Any such more stringent effluent limitation must, as a condition precedent, be approved by the administrator.

**62.8(2)** *Effluent limitations necessary to meet water quality standards.* No effluent, alone or in combination with the effluent of other sources, shall cause a violation of any applicable water quality standard. When it is found that a discharge that would comply with applicable effluent standards in 62.3(455B), 62.4(455B) or 62.5(455B) or effluent limitations in 62.6(455B) would cause violation of water quality standards, the discharge will be required to meet whatever effluent limitations are necessary to achieve water quality standards, including the nondegradation policy of 567—subrule 61.2(2). Any such effluent limitation shall be determined using a statistically based portion of the calculated waste load allocation, as described in “Supporting Document for Iowa Water Quality Management Plans” (Iowa Department of Water, Air and Waste Management, July 1976, Chapter IV, as revised on June 16, 2004). (Copy available upon request to the Department of Natural Resources, Henry A. Wallace Building, 900 East Grand, Des Moines, Iowa 50319. Copy on file with the Iowa Administrative Rules Coordinator.)

**62.8(3)** *Pretreatment requirements more stringent than pretreatment standards or requirements.* The department or the publicly owned treatment works may impose pretreatment requirements more stringent than the applicable pretreatment standard of 62.4(455B) or pretreatment requirements of 62.6(455B) if such more stringent requirements are necessary to prevent violations of water quality standards, or the permit limitations of the treatment works.

**62.8(4)** *Effluent limitations or pretreatment requirements in approved areawide waste treatment management plans.* Effluent limitations or pretreatment requirements more stringent than applicable effluent or pretreatment standards in 62.3(455B) to 62.5(455B) or effluent limitations or pretreatment requirements in 62.6(455B) may be imposed by the department if the more stringent effluent limitations or pretreatment requirements are required by an approved areawide waste treatment management (208(b)) plan.

**62.8(5)** *Effluent limitations for pollutants not covered by effluent or pretreatment standards.* An effluent limitation on a pollutant not otherwise regulated under 62.3(455B) to 62.6(455B) (e.g., polybrominated biphenyls, PBBs) may be imposed on a case-by-case basis. Such limitation shall be based on effect of the pollutant in water and the feasibility and reasonableness of treating such pollutant.

**567—62.9(455B) Disposal of pollutants into wells.** Commencing September 1, 1977, there shall be no disposal of a pollutant other than heat into wells within Iowa. Any disposal of heat shall be sufficiently controlled to protect the public health and welfare and to prevent pollution of ground and surface water resources. In reviewing any permits proposed to be issued for the disposal into wells, the director shall consider, among other things, any policies, technical information, or requirements specified by the administrator in regulations issued pursuant to the Act or in directives issued to EPA regional offices.

These rules are intended to implement Iowa Code chapter 455B, division III, part 1.

CHAPTER 63  
MONITORING, ANALYTICAL AND REPORTING REQUIREMENTS

[Prior to 7/1/83, DEQ Ch 18]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—63.1(455B) Guidelines establishing test procedures for the analysis of pollutants.** Only the procedures prescribed in this chapter shall be used to perform the measurements indicated in an application for an operation permit submitted to the department, a report required to be submitted by the terms of an operation permit, and a certification issued by the department pursuant to Section 401 of the Act.

**63.1(1)** Identification of test procedures.

*a.* The following is adopted by reference: 40 Code of Federal Regulations (CFR) Part 136, revised as of July 1, 2007.

*b.* All parameters for which testing is required by a wastewater discharge permit, permit application, or administrative order, except operational performance testing, must be analyzed using approved methods specified in 40 CFR Part 136.3 or, under certain circumstances, by other methods that may be more advantageous to use when such other methods have been previously approved by the director pursuant to 63.1(2). Samples collected for operational testing pursuant to 63.3(4) need not be analyzed by approved analytical methods; however, commonly accepted test methods should be used.

**63.1(2)** Application for alternate test procedures.

*a.* Any person may apply to the EPA regional administrator through the director for approval of an alternate test procedure.

*b.* The application for an alternate test procedure may be made by letter and shall:

(1) Provide the name and address of the responsible person or firm holding or applying for the permit (if not the applicant) and the applicable ID number of the existing or pending permit and type of permit for which the alternate test procedure is requested and the discharge serial number, if any.

(2) Identify the pollutant or parameter for which approval of an alternate testing procedure is being requested.

(3) Provide justification for using testing procedures other than those specified in 40 CFR Part 136.3.

**63.1(3)** Required containers, preservation techniques and holding times. All samples collected in accordance with self-monitoring requirements as defined in an operation permit shall comply with the container, preservation techniques, and holding time requirements as specified in Table VI. Sample preservation should be performed immediately upon collection, if feasible.

**63.1(4)** All laboratories conducting analyses required by this chapter must be certified in accordance with 567—Chapter 83 except that routine, on-site monitoring for pH, temperature, dissolved oxygen, total residual chlorine and other pollutants that must be analyzed immediately upon sample collection, settleable solids, physical measurements such as flow and cell depth, and operational monitoring tests specified in 63.3(4) are excluded from this requirement.

**567—63.2(455B) Records of monitoring activities and results.**

**63.2(1)** The permittee shall maintain records of all information resulting from any monitoring activities required in its operation permit.

**63.2(2)** Any records of monitoring activities and results shall include for all samples:

*a.* The date, exact place and time of sampling.

*b.* The dates analyses were performed.

*c.* Who performed the analyses.

*d.* The analytical techniques or methods used, and

*e.* The results of such analyses.

**63.2(3)** The permittee shall retain for a minimum of three years any records of monitoring activities and results including all original strip chart recordings for continuous monitoring instrumentation and calibration and maintenance records. The period of retention shall be considered to be extended during the course of any unresolved litigation or when requested by the director or the regional administrator.

**567—63.3(455B) Minimum self-monitoring requirements in permits.**

**63.3(1) *Monitoring by organic waste dischargers.*** The minimum self-monitoring requirements to be incorporated in operation permits for facilities discharging organic wastes shall be the appropriate requirements in Tables I, II, and IV. Additional monitoring may be specified in the operation permit based on a case-by-case evaluation of the impact of the discharge on the receiving stream, toxic or deleterious effects of wastewaters, industrial contribution to the system, complexity of the treatment process, history of noncompliance or any other factor which requires strict operational control to meet the effluent limitations of the permit.

**63.3(2) *Monitoring by inorganic waste dischargers.*** The minimum self-monitoring requirements to be incorporated in the operation permit for an inorganic waste discharge shall be the appropriate requirement in Table V. Additional monitoring may be specified in the operation permit based on a case-by-case evaluation of the impact of the discharge on the receiving stream, toxic or deleterious effects of wastewaters, complexity of the treatment process, history of noncompliance or any other factor which requires strict control to meet the effluent limitations of the permit.

**63.3(3) *Monitoring of industrial contributors to publicly owned treatment works.*** All major contributing industries as defined in 567—60.2(455B) and industrial contributors that are subject to national pretreatment standards shall be monitored in accordance with the requirements in Tables I, II and V, provided that the monitoring program of a publicly owned treatment works with a pretreatment program approved by the department may be used in lieu of the tables. The results of such monitoring shall be submitted to the department in accordance with the reporting requirements in the operation permit.

**63.3(4) *Operational monitoring.*** The minimum operational monitoring to be incorporated in permits shall be the appropriate requirements in Table III. These requirements reflect minimum indicators that any adequately run system must monitor. The department recognizes that most well-run facilities will be monitored more closely by the operator as appropriate to the particular system. However, the results of this monitoring need not be reported to the department. Operational monitoring requirements may be modified or reduced at the discretion of the director when adequate justification is presented by the permittee that the reduced or modified requirements will not adversely impact the operation of the facility. Additional operational monitoring may be specified in the operation permit based on a case-by-case evaluation of the impact of the discharge on the receiving stream, toxic or deleterious effects of wastewaters, complexity of the treatment process, history of noncompliance or any other factor that requires strict control to meet the effluent limitations of the permit.

**567—63.4(455B) Effluent toxicity testing requirements in permits.**

**63.4(1) *Effluent toxicity testing.*** All major municipal and industrial dischargers shall be required to carry out effluent toxicity testing. Minor dischargers may be required to conduct effluent toxicity tests based on a case-by-case evaluation of the impact of the discharge on the receiving stream or industrial contribution to the system. All dischargers required to conduct effluent toxicity tests shall conduct, at a minimum, one valid effluent toxicity test annually. The testing requirements will be placed in the operation permit for each discharger required to conduct this testing. Additional monitoring may be specified in the operation permit based on a case-by-case evaluation of the impact of the discharge on the receiving stream, toxic or deleterious effects of wastewaters, industrial contribution to the system, complexities of the treatment process, history of noncompliance or any other factor which requires strict operational control to meet the effluent limitations of the permit. Any effluent toxicity test completed by the department or other agency and conducted according to procedures stated or referenced in this rule may be used to determine compliance with an operational permit.

**63.4(2) *Testing procedures.*** Dischargers shall be required to conduct effluent toxicity tests in accordance with the following general requirements:

*a.* The effluent toxicity tests shall be performed using a 24-hour composite sample of the effluent collected at the location stated in the operation permit. All composite samples shall be delivered to the testing laboratory within a reasonable time (approximately 24 hours) after collection and all tests must commence within 36 hours following sample collection. The results of all effluent toxicity

tests conducted using approved procedures, including any tests performed at a greater frequency than required in the operation permit, shall be submitted to the department, on Form 542-1381 provided by the department, within 30 days of completing the test.

*b.* All effluent toxicity tests shall be conducted using the test methodologies and protocols described within “Standard Operating Procedure: Effluent Toxicity Testing, Iowa Department of Natural Resources,” March 1991. This procedure is adopted as part of this subrule and is filed as part of this subrule with the administrative rules coordinator. This procedure is an essential part of the testing procedures and is available upon request to the department although not printed in this subrule. Laboratories performing the effluent toxicity tests shall also have a quality assurance plan.

*c.* All effluent toxicity tests shall be performed using the water flea (*Ceriodaphnia dubia*), and the fathead minnow (*Pimephales promelas*).

*d.* Effluent toxicity tests shall include, at a minimum, two different concentrations of effluent. One test shall consist of 100 percent effluent, and a second test shall be a diluted effluent sample as defined. A control test, consisting of 100 percent culture water for each respective organism shall also be used. The test shall last for 48 hours at which time the mortality will be determined for all tests.

*e.* All effluent toxicity tests shall be of the pass/fail type.

**63.4(3)** If there is a positive toxicity test result in the diluted effluent sample from a valid effluent toxicity test, the following requirements apply unless the exception in paragraph “c” of this subrule is applicable.

*a.* At a minimum, the discharger shall be required to conduct quarterly effluent toxicity tests until three successive tests are determined not to be positive, after which the normal annual testing shall be resumed.

*b.* If the discharger has two successive positive valid diluted effluent toxicity test results or three positive test results out of five valid diluted effluent toxicity tests, the discharger shall be required to conduct a toxicity reduction evaluation (TRE). The discharger may be required to carry out instream monitoring or other analysis in conjunction with the TRE. At any time during the course of conducting a TRE there are three consecutive follow-up toxicity test results for the diluted sample which are not positive, the facility will be considered in compliance and work on the TRE may cease. Annual testing for effluent toxicity shall then resume. Nothing in these rules shall preclude the department from taking enforcement action beyond that described in these rules.

*c.* When the pretest chemical analysis for un-ionized ammonia nitrogen (NH<sub>3</sub>-N) or total residual chlorine (TRC) on the diluted effluent sample exceeds the concentrations given below, a positive test result is likely to have been caused by high concentrations of NH<sub>3</sub> or TRC, and the test result will not be used to determine if follow-up testing is needed.

- (1) Un-ionized Ammonia Nitrogen—0.9 mg/l
- (2) TRC—0.1 mg/l

**567—63.5(455B) Self-monitoring and reporting for animal feeding operations.**

**63.5(1)** The following self-monitoring requirements may be imposed on an animal-feeding operation in any operation permit issued for such an operation.

- a.* Measurement of liquid level in a waste storage facility on a periodic basis.
- b.* Measurement of daily precipitation, as appropriate.
- c.* Sampling and analysis of groundwater as necessary to determine effects of wastewater application.
- d.* Other measurements necessary to evaluate the adequacy of a waste disposal system.

**63.5(2)** Reports of the self-monitoring results shall be submitted to the department quarterly.

**567—63.6(455B) Report of bypass.**

**63.6(1)** Except for bypasses that occur as a result of mechanical failure or acts beyond the control of the owner, owners of waste disposal systems shall obtain written permission from the department prior to any bypassing of any sewage or wastes from the waste disposal system.

**63.6(2)** In the event that bypassing of sewage or waste occurs as a result of mechanical failure or acts beyond the control of the owner (other than rain or other precipitation), said owner shall notify the department by telephone of the bypassing within 12 hours of the time of the discovery of the bypassing. Notification shall include the reasons for the bypass and expected duration. The owner shall comply with the instructions of the department calculated to minimize the effect of the bypassing on the receiving water of the state.

**63.6(3)** Bypasses other than those described in this rule shall be reported in the records of operation.

**567—63.7(455B) Submission of records of operation.** Records of operation shall be submitted to the department within 15 days following the close of the reporting period specified in 63.8(455B) and in accordance with monitoring requirements derived from this chapter and incorporated in the operation permit.

**567—63.8(455B) Frequency of submitting records of operation.** Except as provided in subrule 63.1(2), records of operation required by these rules shall be submitted at monthly intervals. The department may vary the interval at which records of operation shall be submitted in certain cases. Variation from the monthly interval shall be made only under such conditions as the department may prescribe in writing to the person concerned.

**567—63.9(455B) Content of records of operation.** Records of operation shall include the results of all monitoring specified in or authorized by this chapter and incorporated in the operation permit. Monitoring performed but not specified in the operation permit shall be recorded and maintained in accordance with 63.2(455B).

**567—63.10(455B) Records of operation forms.** Records of operation forms shall be those provided by the department unless its forms are not applicable and in such case the records of operation shall be submitted on such other forms as are agreeable to the department.

**567—63.11(455B) Certification and signatory requirements in the submission of records of operation.** All records of operation as required by these rules shall include certification which attests that all information contained therein is representative and accurate. Each record of operation shall contain the signature of a duly authorized representative of the corporation, partnership or sole proprietorship, municipality, or public facility which has proprietorship of the wastewater treatment or disposal system.

Table I Minimum Self-Monitoring in Permits for Organic Waste Discharges  
Controlled Discharge Wastewater Treatment Plants

Wastewater Parameter	Sampling Location	Sample Type <sup>5</sup>	Frequency by P.E. <sup>1</sup>				
			< 100	101-500	501-1,000	1,001-3,000	> 3,000
Flow <sup>2</sup>	Raw	24-Hr Total	1/Week	Daily	Daily	Daily	Daily
	Final	Instantaneous	2/Week	Daily During Periods of Discharge			
BOD <sub>5</sub> <sup>3</sup>	Raw	24-Hr Composite	–	–	–	1/3 Months	1/Month
	Final	Grab	1/6 Months	1/Month	1/2 Weeks	1/Week	2/Week
Suspended Solids	Raw	24-Hr Composite	–	–	–	1/3 Months	1/Month
	Final	Grab	1/6 Months	1/6 Months	1/6 Months	1/3 Months	1/Month
Ammonia Nitrogen <sup>4</sup>	Final	Grab	1/6 Months	1/Month	1/2 Weeks	1/Week	2/Week
pH	Raw	Grab	–	–	–	1/3 Months	1/Month
	Final	Grab	1/6 Months	1/Month	1/2 Weeks	1/Week	2/Week

### Explanation of Superscripts

- 1 - The P.E. shall be computed on the basis of the original engineering design criteria for the facility, and any modifications thereof. Where such design criteria are not available, the P.E. shall be computed using 0.167 pounds of BOD per capita per day.
- 2 - Facilities serving a population equivalent less than 100 are not required to provide continuous flow measurement but are required to provide manual flow measurement at the specified frequency. Facilities serving a population equivalent greater than 100 are required to provide continuous flow measurement of the raw waste but need only provide manual flow measurement on the final effluent. Acceptable flow measurement and recording techniques shall be those described in the "Iowa Wastewater Facilities Design Standards," Chapter 14 (14.7.2).
- 3 - In addition to the sampling required above, for controlled discharge facilities following a period of storage for more than six weeks, a grab sample of the lagoon cell contents collected near the outfall structure shall be analyzed at least two weeks prior to an anticipated discharge to demonstrate that the wastewater is of such quality to meet the effluent limitations in the permit. Where the analyses indicate that wastewater quality does not meet the effluent limitations, storage shall be continued until further analyses indicate the wastewater quality is satisfactory for discharge.
- 4 - Ammonia nitrogen monitoring is required only for facilities with an ammonia effluent limitation.
- 5 - The meanings of sample types are:  
 "Grab Sample" means a representative, discrete, portion of the sewage, industrial waste, other waste, surface water or groundwater taken without regard to flow rate.  
 "24-Hr Composite" means:
  - a. For facilities where no significant industrial waste is present, a sample made by collecting a minimum of six grab samples taken four hours apart and combined in proportion to the flow rate at the time each grab sample was collected. (Generally, grab samples should be collected at 8 a.m., 12 a.m. (noon), 4 p.m., 8 p.m., 12 p.m. (midnight) and 4 a.m. on weekdays (Monday through Friday) unless local conditions indicate another more appropriate time for sample collection.)
  - b. For facilities where significant industrial waste is present, a sample made by collecting a minimum of 12 grab samples taken two hours apart and combined in proportion to flow rate at the time each grab sample was collected. (Generally, grab samples should be collected at 8 a.m., 10 a.m., 12 a.m. (noon), 2 p.m., 4 p.m., 6 p.m., 8 p.m., 10 p.m., 12 p.m. (midnight), 2 a.m., 4 a.m. and 6 a.m. on weekdays (Monday through Friday) unless local conditions indicate another more appropriate time for sample collection.)
  - c. An automatic composite sampling device may also be used for collection of flow proportioned or time proportioned composite samples.

Table II Minimum Self-Monitoring in Permits for Organic Waste Discharges  
Continuous Discharge Wastewater Treatment Plants

Wastewater Parameter	Sampling Location	Sample Type <sup>4,6</sup>	Frequency by P.E. <sup>1,9</sup>						
			< 100	101-500	501-1,000	1,001-3,000	3,001-15,000	15,001-105,000	> 105,000
Flow <sup>2</sup>	Raw or Final	24-Hr Total	1/week	Daily	Daily	Daily	Daily	Daily	Daily
BOD <sub>5</sub>	Raw	24-Hr Comp.	—	—	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
	Final	24-Hr Comp.	1/3 Months	1/Month	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
Suspended Solids	Raw	24-Hr Comp.	—	—	1/3 Months	1/Month	1/Week	2-5/Week <sup>7</sup>	7/Week
	Final	24-Hr Comp.	1/3 Months	1/3 Months	1/3 Months	1/Month	1/Week	2-5/Week <sup>7</sup>	7/Week
Ammonia Nitrogen <sup>3</sup>	Final	24-Hr Comp.	1/3 Months	1/Month	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
pH	Raw	Grab	—	—	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
	Final	Grab	1/3 Months	1/Month	1/Week	1/Week	2/Week	5/Week	7/Week
Fecal Coliform <sup>5</sup>	Final	Grab	1/3 Months	1/3 Months	1/3 Months	1/3 Months	1/3 Months	1/3 Months	1/3 Months
Temperature	Raw	Grab	—	—	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
	Final	Grab	1/3 Months	1/Month	1/Week	1/Week	2/Week	2-5/Week <sup>7</sup>	7/Week
Settleable Solids <sup>8</sup>	Final	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week

#### Explanation of Superscripts

- 1 - See Footnote #1, Table I.
- 2 - See Footnote #2, Table I.
- 3 - See Footnote #4, Table I.
- 4 - See Footnote #5, Table I.
- 5 - Analysis is required only when the effluent is being disinfected.
- 6 - For lagoons, 24-hour composite samples are not required on the final effluent, grab samples are acceptable.
- 7 - Generally, the frequency of sample collection and analysis shall be increased by 1/Week for each additional 30,000 P.E.
- 8 - Not required for industrial contributors to publicly owned treatment works.
- 9 - The requirements for industrial contributors shall be that specified for final effluent monitoring.

Table III Operational Monitoring Requirements in Permits

LAGOONS									
Parameter	Sampling Location	Sample Type	Frequency by P.E. <sup>1</sup>						
			< 100	101-500	501-1,000	1,001-3,000	3,001-15,000	15,001-105,000	> 105,000
Cell Depth	Each Cell	Measurement	1/Week	1/Week	1/Week	2/Week	2/Week	2/Week	2/Week

AERATED LAGOONS									
Dissolved Oxygen	Cell Contents	Grab	1/Month	1/2 Weeks	1/2 Weeks	1/Week	2/Week	2/Week	2/Week

TRICKLING FILTERS									
Recirculation	—	Measurement	1/Week	1/Week	1/Week	2/Week	3/Week	5/Week	7/Week

ACTIVATED SLUDGE									
MLSS	Aeration Basin Contents	Grab	1/Month	1/Week	1/Week	2/Week	3/Week	5/Week	7/Week
Dissolved Oxygen	Aeration Basin Contents	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week
Temperature	Aeration Basin Contents	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week
30-Minute Settleability	Aeration Basin Contents	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week

ANAEROBIC DIGESTER									
Temperature	Digester Contents	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week
pH	Digester Contents	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week
Alkalinity	Digester Contents	Grab	—	—	—	1/Week	1/Week	2/Week	2/Week
Volatile Acids	Digester Contents	Grab	—	—	—	1/Week	1/Week	2/Week	2/Week

AEROBIC DIGESTER									
Dissolved Oxygen	Digester Contents	Grab	—	—	1/Week	2/Week	3/Week	5/Week	7/Week

CHLORINATION FACILITIES									
Total Residual Chlorine	Final Effluent	Grab	1/Week	1/Week	2/Week	2/Week	3/Week	5/Week	7/Week

## Explanation of Superscripts

1 - See Footnote #1, Table I.

2 - Alternative test methods for operational monitoring:

Dissolved Oxygen	—	Pao Titration
MLSS	—	Spectrophotometric, Centrifuge
pH	—	Colorimetric Comparator
30-Minute Settleability	—	Standard Methods Test 213C

Alkalinity	—	Standard Methods Test 403
Volatile Acids	—	Standard Methods Test 504A
Residual Chlorine	—	Colorimetric Comparator

Table IV Minimum Self-Monitoring in Permits for Land Application Systems

Wastewater Parameter	Sampling Location	Sample Type <sup>2</sup>	Flow in Million Gallons Per Day <sup>1</sup>		
			< 0.5	0.5 - 2.0	> 2.0
Nitrate Nitrogen	Monitoring Wells <sup>3</sup>	Grab	1/3 Months	1/2 Months	1/Month
Dissolved Solids	Monitoring Wells <sup>3</sup>	Grab	1/3 Months	1/2 Months	1/Month
Fecal Coliform	Monitoring Wells <sup>3</sup>	Grab	1/3 Months	1/2 Months	1/Month

Volume Applied	Final <sup>4</sup>	24-Hr Total	Daily	Daily	Daily
Total Nitrogen	Final <sup>4</sup>	24-Hr Comp.	1/3 Months	1/2 Months	1/Month
Total Phosphorus	Final <sup>4</sup>	24-Hr Comp.	1/3 Months	1/2 Months	1/Month

#### Explanation of Superscripts

- 1 - The flow to be used for determining sample frequency shall be the original engineering design, average wet weather flow, or any modifications thereof. The design flow shall be the raw wastewater flow prior to any treatment units.
- 2 - See Footnote #5, Table I.
- 3 - Monitoring wells shall be sampled according to the procedures described in Table VI.
- 4 - Final shall be the final effluent from the storage facility prior to land application.

Table V Minimum Self-Monitoring in Permits for Inorganic Waste Discharges

Category <sup>1</sup>	Treatment Type, Size	Wastewater Parameter	Sample Frequency	Sample Type <sup>2</sup>	Sample Location
I	Non-Contact Cooling Water	Flow	1/Month	24-Hr Total	Final
		Temperature	1/Month	Grab	Final
		pH	1/Month	Grab	Final
II	Mining Activities				
A.	Quarry Dewatering	Suspended Solids	1/Year	Grab	Final
		pH	1/Year	Grab	Final
B.	Rock Washing	Suspended Solids	1/Month	Grab	Final
		pH	1/Month	Grab	Final
		Settleable Solids	1/Month	Grab	Final
C.	Coal Mining	Suspended Solids	1/3 Months	Grab	Final
		pH	1/Month	Grab	Final
		Iron	1/3 Months	Grab	Final
		Manganese	1/3 Months	Grab	Final
		Settleable Solids	1/Month	Grab	Final
III	Inorganic Wastes <sup>3</sup>				
A.	Less than 0.5 MGD	Flow	1/Month	24-Hr Total	Final
		Other Pollutants	1/Month	Grab	Final
B.	Greater than 0.5 MGD	Flow	Daily	24-Hr Total	Final
		Other Pollutants	1/Week	Grab	Final
IV	Steam Electric Power Plants				
A.	Condenser Cooling	Flow	Daily	24-Hr Total	Final
		pH	1/Week	Grab	Final
		Temperature	Daily	Grab	Final
		Free Available Chlorine	1/2 Weeks	Grab	Final
B.	Coal Pile Runoff	Suspended Solids	1/Month	Grab	Final
		pH	1/Month	Grab	Final
C.	Other Wastes	Suspended Solids	1/Month	Grab	Final
		Oil and Grease	1/Month	Grab	Final
		pH	1/Month	Grab	Final
V	Toxic Waste Discharges <sup>4</sup>				
A.	A permit limitation of less than 1 lb. toxic discharge allowed or no mass limitations (No Treatment)	Toxics	1/Month	24-Hr Composite	Final
		Flow	1/Week	24-Hr Total	Final
B.	A permit limitation of less than 1 lb. toxic discharge allowed (Lagoon)	Toxics	1/2 Weeks	24-Hr Composite	Final
		Flow	1/Week	24-Hr Total	Final

Category <sup>1</sup>	Treatment Type, Size	Wastewater Parameter	Sample Frequency	Sample Type <sup>2</sup>	Sample Location
C.	A permit limitation of less than 1 lb. toxic discharge allowed (Mechanical Treatment)	Toxics	1/Week	24-Hr Composite	Final
		Flow	1/Week	24-Hr Total	Raw or Final
D.	A permit limitation of 1 - 5 lbs toxic discharge allowed	Toxics	2/Week	24-Hr Composite	Final
		Flow	2/Week	24-Hr Total	Raw or Final
E.	A permit limitation of 5 - 10 lbs toxic discharge allowed	Toxics	3/Week	24-Hr Composite	Final
		Flow	Daily	24-Hr Total	Raw or Final
F.	A permit limitation of greater than 10 lbs special discharge allowed	Toxics	5 - 7 Weeks	24-Hr Composite	Final
		Flow	Daily	24-Hr Total	Raw or Final

### Explanation of Superscripts

- 1 - The above categories are not mutually exclusive. Some facilities may fall within more than one category, in which case a combination of monitoring requirements from both categories will be used in establishing permit monitoring requirements.
- 2 - See Footnote #5, Table I.
- 3 - For Category III facilities, the size of the facility shall be based on the original engineering design, average wet weather flow, for the raw wastewater.
- 4 - Only those parameters demonstrated, or suspected, as a pollutant in the discharge shall be required to be monitored. Toxics include the 129 priority pollutants listed at 40 CFR Part 122.21, Appendix D (FR 14177) April 1, 1983.

Table VI Required Containers, Preservation Techniques, and Holding Times

PARAMETER	CONTAINER <sup>1</sup>	PRESERVATIVE <sup>2</sup>	MAXIMUM HOLDING TIME <sup>3</sup>
<u>Bacterial Tests</u>			
1. Coliform, fecal and total	P,G	Cool, 4°C 0.008% Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub> <sup>4</sup>	6 hours
2. Fecal streptococci	P,G	Cool, 4°C 0.008% Na <sub>2</sub> S <sub>2</sub> O <sub>3</sub> <sup>4</sup>	6 hours
<u>Chemical Tests</u>			
3. Acidity	P,G	Cool, 4°C	14 days
4. Alkalinity	P,G	Cool, 4°C	14 days
5. Ammonia	P,G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
6. Biochemical oxygen demand	P,G	Cool, 4°C	48 hours
7. Biochemical oxygen demand, carbonaceous	P,G	Cool, 4°C	48 hours
8. Bromide	P,G	None required	28 days
9. Chemical oxygen demand	P,G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
10. Chloride	P,G	None required	28 days
11. Chlorine, total residual	P,G	None required	Analyze immediately
12. Color	P,G	Cool, 4°C	48 hours
13. Cyanide, total and amenable to chlorination	P,G	Cool, 4°C NaOH to pH > 12 0.6g ascorbic acid <sup>4</sup>	14 days <sup>5</sup>
14. Cyanide, free	P,G	Cool, 4°C NaOH to pH > 12 0.6g ascorbic acid <sup>4</sup>	4 hours
15. Fluoride	P	None required	28 days
16. Hardness	P,G	HNO <sub>3</sub> to pH < 2	6 months
17. Hydrogen ion (pH)	P,G	None required	Analyze immediately
18. Kjeldahl and organic nitrogen	P,G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
<u>Metals</u>			
19. Chromium VI	P,G	Cool, 4°C	24 hours
20. Mercury	P,G	HNO <sub>3</sub> to pH < 2	28 days
21. Metals, except above	P,G	HNO <sub>3</sub> to pH < 2	6 months
22. Nitrate	P,G	Cool, 4°C	48 hours
23. Nitrate-nitrite	P,G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
24. Nitrite	P,G	Cool, 4°C	48 hours
25. Oil and grease	G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
<u>Metals</u>			
26. Organic carbon	P,G	Cool, 4°C Cl or H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
27. Orthophosphate	P,G	Filter immediately Cool, 4°C	48 hours
28. Oxygen, dissolved probe	G Bottle and top	None required	Analyze immediately
Winkler	G Bottle and top	Fix on site and store in dark	8 hours
29. Phenols	G only	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
30. Phosphorus (elemental)	G	Cool, 4°C	48 hours
31. Phosphorus, total	P,G	Cool, 4°C H <sub>2</sub> SO <sub>4</sub> to pH < 2	28 days
32. Residue, total	P,G	Cool, 4°C	7 days

PARAMETER	CONTAINER <sup>1</sup>	PRESERVATIVE <sup>2</sup>	MAXIMUM HOLDING TIME <sup>3</sup>
33. Residue, filterable	P,G	Cool, 4°C	7 days
34. Residue, Nonfilterable (TSS)	P,G	Cool, 4°C	7 days
35. Residue, settleable	P,G	Cool, 4°C	48 hours
36. Residue, volatile	P,G	Cool, 4°C	7 days
37. Silica	P	Cool, 4°C	28 days
38. Specific conductance	P,G	Cool, 4°C	28 days
39. Sulfate	P,G	Cool, 4°C	28 days
40. Sulfide	P,G	Cool, 4°C, add zinc acetate plus sodium hydroxide to pH > 9	7 days
41. Sulfite	P,G	None required	Analyze immediately
42. Surfactants	P,G	Cool, 4°C	48 hours
43. Temperature	P,G	None required	Analyze immediately
44. Turbidity	P,G	Cool, 4°C	48 hours
45. Sampling Procedures for Monitoring Wells			
A. Measure depth from top of well head casing to water table			
B. Calculate quantity of water to be flushed from well using the formula:			
Gallons to be pumped = 0.221 d <sup>2</sup> h, where			
d = well diameter in inches			
h = depth in feet of standing water in well prior to pumping			
C. Pump well			
D. Measure depth from well hand casing to water table after pumping			
E. Wait for well to recharge to or near static water level prior to sampling			

#### Table VI Notes

1. Polyethylene (P) or Glass (G).
2. Sample preservation should be performed immediately upon sample collection. For composite samples, each aliquot should be preserved at the time of collection. When use of an automated sampler makes it impossible to preserve each aliquot, then samples may be preserved by maintaining at 4°C until compositing and sample splitting is completed.
3. Samples should be analyzed as soon as possible after collection. The times listed are the maximum times that samples may be held before analysis and still be considered valid. Samples may be held for longer periods only if the permittee, or monitoring laboratory, has data on file to show that the specific types of samples under study are stable for the longer time, and has received a variance from the executive director. Some samples may not be stable for the maximum time period given in the table. A permittee, or monitoring laboratory, is obligated to hold the sample for a shorter time if knowledge exists to show this is necessary to maintain sample stability.
4. Should only be used in the presence of residual chlorine.
5. Maximum holding time is 24 hours when sulfide is present. Optionally, all samples may be tested with lead acetate paper before the pH adjustment in order to determine if sulfide is present. If sulfide is present, it can be removed by the addition of cadmium carbonate powder until a negative spot test is obtained. The sample is filtered and then NaOH is added to pH 12.
6. Samples should be filtered immediately onsite before adding preservative for dissolved metals.

These rules are intended to implement Iowa Code section 455B.173.

CHAPTER 64  
WASTEWATER CONSTRUCTION AND OPERATION PERMITS

[Prior to 7/1/83, DEQ Ch 19]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—64.1(455B) Definitions.** In addition to the definitions in Iowa Code sections 455B.101 and 455B.171, the following definitions shall apply to this chapter.

**64.1(1)** “*Application for construction permit*” means the engineering report, plans and specifications and other data deemed necessary by the department for the construction of a proposed wastewater disposal system or part thereof.

**64.1(2)** “*Construction permit*” means a written approval of the director to construct a wastewater disposal system or part thereof in accordance with the plans and specifications approved by the department.

**64.1(3)** “*Application for operation permit*” means an application for a written operation permit made on a form provided by the department.

**64.1(4)** “*Operation permit*” means a written permit by the director authorizing the operation of a wastewater disposal system or part thereof or discharge source, and, if applicable, the discharge of wastes from said disposal system or part thereof or discharge source to waters of the state. An operation permit will be issued as an NPDES permit if the regional administrator has approved the department’s NPDES program and an NPDES permit is required for the disposal system.

**64.1(5)** “*Private sewage disposal system*” means a system which provides for the treatment or disposal of domestic sewage from four or fewer dwelling units or the equivalent of less than 16 individuals on a continuing basis.

**64.1(6)** “*Semipublic sewage disposal system*” means a system for the treatment or disposal of domestic sewage which is not a private sewage disposal system and which is not owned by a city, a sanitary sewer district, or a designated and approved management agency under Section 208 of the Act (33 U.S.C. 1288).

**567—64.2(455B) Permit to construct.**

**64.2(1)** No person shall construct, install or modify any wastewater disposal system or part thereof or extension or addition thereto without, or contrary to any condition of, a construction permit issued by the director or by a local public works department authorized to issue such permits under 567—Chapter 9, nor shall any connection to a sewer extension in violation of any special limitation specified in a construction permit pursuant to 64.2(10), paragraph “a,” “b,” or “f” be allowed by any person subject to the conditions of the permit.

**64.2(2)** The site for each new wastewater treatment plant or expansion or upgrading of existing facilities must be inspected and approved by the department prior to submission of plans and specifications. Applications must be submitted in accordance with 567—60.4(455B).

**64.2(3)** Site approval under 64.2(2) shall be based on the criteria contained in the Ten States Standards, design manuals published by the department, applicable federal guidelines and standards, standard textbooks, current technical literature and applicable safety standards. To the extent that separation distances of this subrule conflict with the separation distances of 567—subrule 23.5(1) or 23.5(2), the greater distance shall prevail. The following separation distances from treatment or lagoon water surface shall apply:

*a.* 1000 feet from the nearest inhabitable residence, commercial building, or other inhabitable structure. If the inhabitable or commercial building is the property of the owner of the proposed treatment facility, or there is written agreement with the owner of the building, the separation criteria shall not apply. Any such written agreement shall be filed with the county recorder and recorded for abstract of title purposes, and a copy submitted to the department.

*b.* 1000 feet from public shallow wells.

*c.* 400 feet from public deep wells.

*d.* 400 feet from private wells.

*e.* 400 feet from lakes and public impoundments.

*f.* 25 feet from property lines and rights-of-way.

When the above separation distances cannot be maintained for the expansion, upgrading or replacement of existing facilities, the separation distances shall be maintained at no less than 90 percent of the existing separation distance on the site, providing no data is available indicating that a problem has existed or will be created.

**64.2(4)** Applications for a construction permit must be submitted to the director in accordance with 567—60.4(455B) at least 120 days in advance of the date of start of construction.

**64.2(5)** The director shall act upon the application within 60 days of receipt of a complete application by either issuing a construction permit or denying the construction permit in writing unless a longer review period is required and the applicant is so notified in writing. Notwithstanding the 120-day requirement in 64.2(4), construction of the approved system may commence immediately after the issuance of a construction permit.

**64.2(6)** The construction permit shall expire if construction thereunder is not commenced within one year of the date of issuance thereof. The director may grant an extension of time to commence construction if it is necessary or justified, upon showing of such necessity or justification to the director.

**64.2(7)** The director may modify or revoke a construction permit for cause which shall include but not be limited to the following:

- a.* Failure to construct said wastewater disposal system or part thereof in accordance with the approved plans and specifications.
- b.* Violation of any term or condition of the permit.
- c.* Obtaining a permit by misrepresentation of facts or failure to disclose fully all material facts.
- d.* Any change during construction that requires material changes in the approved plans and specifications.

**64.2(8)** A construction permit shall not be required for the following:

- a.* Storm sewers or storm water disposal systems that transport only storm water.
- b.* Any new disposal system or extension or addition to any existing disposal system that receives only domestic or sanitary sewage from a building, housing or occupied by 15 persons or less.

**64.2(9)** Review of applications.

*a.* Review of applications for construction permits shall be based on the criteria contained in the “Iowa Wastewater Facilities Design Standards,” the Ten States Standards, applicable federal guidelines and standards, standard textbooks, current technical literature and applicable safety standards. To the extent of any conflict between the above criteria the “Iowa Wastewater Facilities Design Standards” standards shall prevail.

*b.* The chapters of the “Iowa Wastewater Facilities Design Standards”\* that apply to wastewater facilities projects, and the date of adoption of those chapters are:

<u>Chapter</u>	<u>Date of Adoption</u>
11. Project submittals	April 25, 1979
12. Iowa Standards for Sewer Systems	September 6, 1978 (Amended March 28, 1979 and May 20, 1987)
13. Wastewater pumping stations and force mains	March 19, 1985
14. Wastewater treatment works	March 22, 1984 (Amended May 20, 1987)
15. Screening and grit removal	February 18, 1986
16. Settling	March 22, 1984 (Amended May 20, 1987)
17. Sludge handling & disposal	March 26, 1980
18. Biological treatment	
<i>A.</i> Fixed film media treatment	October 21, 1985
<i>B.</i> Activated sludge	March 22, 1984

C. Wastewater treatment ponds (Lagoons)	April 25, 1979 (Amended May 20, 1986 and May 20, 1987)
19. Supplemental treatment processes	November 13, 1986
20. Disinfection	February 18, 1986
21. Land application of wastewater	April 25, 1979

\*The design manual as adopted and amended is available upon request to department, also filed with administrative rules coordinator.

*c.* Variances from the design standards and siting criteria which provide in the judgment of the department for substantially equivalent or improved effectiveness may be requested when there are unique circumstances not found in most projects. The director may issue variances when circumstances are appropriate. The denial of a variance may be appealed to the commission.

*d.* When reviewing the variance request the director may consider the unique circumstances of the project, direct or indirect environmental impacts, the durability and reliability of the alternative, and the purpose and intent of the rule or standard in question.

*e.* Circumstances that would warrant consideration of a variance (which provides for substantially equivalent or improved effectiveness) may include the following:

(1) The utilization of new equipment or new process technology that is not explicitly covered by the current design standards.

(2) The application of established and acceptable technologies in an innovative manner not covered by current standards.

(3) It is reasonably clear that the conditions and circumstances which were considered in the adoption of the rule or standard are not applicable for the project in question and therefore the effective purpose of the rule will not be compromised if a variance is granted.

**64.2(10)** Applications for sanitary sewer extension construction permits shall conform to the Iowa Standards for Sewer Systems, and approval shall be subject to the following:

*a.* A sanitary sewer extension construction permit may be denied if, at the time of application, the treatment facility treating wastewater from the proposed sewer is not in substantial compliance with its operating permit or if the treatment facility receives wastes in volumes or quantities that exceed its design capacity and interfere with its operation or performance.

If the applicant is operating under a compliance schedule which is being adhered to that leads to resolution of the substantial compliance issues or if the applicant can demonstrate that the problem has been identified, the planning completed, and corrective measures initiated, then the construction permit may be granted.

*b.* A sanitary sewer extension construction permit may be denied if bypassing has occurred at the treatment facility, except when any of the following conditions are being met:

(1) The bypassing is due to a combined sewer system, and the facility is in compliance with a long-term CSO control plan approved by the department.

(2) The bypassing occurs as a result of a storm with an intensity or duration greater than that of a storm with a return period of five years. (See App. A<sup>1</sup>)

(3) The department determines that timely actions are being taken to eliminate the bypassing.

*c.* A sanitary sewer extension construction permit may be denied if an existing downstream sewer is or will be overloaded or surcharged, resulting in bypassing, flooded basements, or overflowing manholes, unless:

(1) The bypassing or flooding is the result of a precipitation event with an intensity or duration greater than that of a storm with a return period of two years. (See App. A<sup>1</sup>); or

(2) The system is under full-scale facility planning (I/I and SSES) and the applicant provides a schedule that is approved by the department for rehabilitating the system to the extent necessary to handle the additional loadings.

*d.* Potential loads. Construction permits may be granted for sanitary sewer extensions that are sized to serve future loads that would exceed the capacity of the existing treatment works. However, initial connections shall be limited to the load that can be handled by the existing treatment works. The department will determine this load and advise the applicant of the limit. This limitation will be in effect until additional treatment capacity has been constructed.

**64.2(11)** Certification of completion. Within 30 days after completion of construction, installation or modification of any wastewater disposal system or part thereof or extension or addition thereto, the permit holder shall submit a certification by a registered professional engineer that the project was completed in accordance with the approved plans and specifications.

<sup>1</sup> See end of chapter for Appendix A.

**567—64.3(455B) Permit to operate.**

**64.3(1)** Except as provided otherwise in this subrule and in 567—Chapter 65, no person shall operate any wastewater disposal system or part thereof without, or contrary to any condition of, an operation permit issued by the director; nor shall the permittee of a system to which a sewer extension has been made under a construction permit limited pursuant to 64.2(10), paragraph “*a*,” “*b*” or “*f*,” allow a connection to such sewer extension in violation of any special limitation in such construction permit. An operation permit is not required for the following:

- a.* Private sewage disposal system which does not discharge into a water of the state.
- b.* A semipublic sewage disposal system, the construction of which has been approved by the department and which does not discharge into a water of the state.
- c.* Any discharge of sewage from vessels, effluent from properly functioning marine engines, laundry, shower, and galley sink wastes, or any other discharge incidental to the normal operation of a vessel: Provided, that this exclusion shall not be construed to apply to rubbish, trash, garbage, or other such materials discharged overboard; nor to discharges when the vessel is being used in a capacity other than as a means of transportation.
- d.* Discharges to aquaculture projects as defined in 40 CFR §122.25 (eff. 12-18-84).
- e.* Discharges of dredged or fill material into navigable waters which are regulated under Section 404 of the Act.
- f.* Any discharge of pollutants directly to another waste disposal system for final treatment and disposal, with the exception of storm water point sources. (This exclusion from requiring an operation permit applies only to the actual addition of materials into the subsequent treatment works. Plans or agreements to make such additions in the future do not relieve dischargers of the obligation to apply for and receive permits until the discharges of pollutants to navigable waters are actually eliminated. It also should be noted that, in all appropriate cases, pretreatment standards promulgated by the administrator pursuant to Section 307(b) of the Act and adopted by reference by the commission and other pretreatment standards and requirements must be complied with.)
- g.* Any discharge in compliance with the instruction of an On-Scene Coordinator pursuant to 40 CFR Part 300 [The National Oil and Hazardous Substances Pollution Plan] or 33 CFR §153.10(e) [Pollution by Oil and Hazardous Substances].
- h.* Water pollution from agricultural and silvicultural activities, runoff from orchards, cultivated crops, pastures, rangelands, and forestlands, except that this exclusion shall not apply to the following:
  - (1) Discharges from concentrated aquatic animal production facilities as defined in 40 CFR §122.24 (eff. 12-18-84);
  - (2) Discharges from concentrated animal feeding operations as defined in 40 CFR §122.23 (eff. 12-18-84);
  - (3) Discharges from silvicultural point sources as defined in 40 CFR §122.27 (eff. 12-18-84);
  - (4) Storm water discharge associated with industrial activity as defined in 567—Chapter 60.
- i.* Return flows from irrigated agriculture.

**64.3(2)** Rescinded, effective 2/20/85.

**64.3(3)** The owner of any disposal system or part thereof in existence before August 21, 1973, for which a permit has been previously granted by the Iowa department of health or the Iowa department of environmental quality shall submit such information as the director may require to determine the conformity of such system and its operation with the rules of the department by no later than 60 days after the receipt of a request for such information from the director.

**64.3(4)** Applications.

*a. Individual permit.* Except as provided in 64.3(4) “b” or 64.3(4) “c,” applications for operation permits required under 64.3(1) shall be made on forms provided by the department. The application for an operation permit under 64.3(1) shall be filed at least 180 days prior to the date operation is scheduled to begin unless a shorter period of time is approved by the director. Permit applications for a new discharge of storm water associated with construction activity as defined in 567—Chapter 60 under “storm water discharge associated with industrial activity” must be submitted at least 60 days before the date on which construction is to commence. Applications submitted to the department must be accompanied by the appropriate permit fee as specified in rule 64.16(455B). The director shall issue operation permits for applications filed pursuant to 64.3(1) within 90 days of the receipt of a complete application unless the application is for an NPDES permit or unless a longer period of time is required and the applicant is so notified. The director may require the submission of additional information deemed necessary to evaluate the application. If the application is incomplete or otherwise deficient, processing of the application shall not be completed until such time as the applicant has supplied the missing information or otherwise corrected the deficiency.

*b. General permit.* A Notice of Intent for coverage under a general permit must be made on the appropriate form provided by the department listed in 567—subrule 60.3(2) and in accordance with 567—64.6(455B). A Notice of Intent must be submitted to the department according to the following:

(1) For existing storm water discharge associated with industrial activity, with the exception of discharges identified in subparagraphs (2) and (3) of this paragraph, on or before October 1, 1992.

(2) For any existing storm water discharge associated with industrial activity from a facility or construction site that is owned or operated by a municipality with a population of less than 100,000 other than an airport, power plant or uncontrolled sanitary landfill, on or before March 10, 2003.

For purposes of this subparagraph, municipality means city, town, borough, county, parish, district, association, or other public body created by or under state law. The entire population served by the public body shall be used in the determination of the population.

(3) For any existing storm water discharge associated with small construction activity on or before March 10, 2003.

(4) For storm water discharge associated with industrial activity which initiates operation after October 1, 1992, with the exception of discharges identified in subparagraphs (2) and (3) of this paragraph, where storm water discharge associated with industrial activity could occur as defined in rule 567—60.2(455B).

(5) For any private sewage disposal system installed after July 1, 1998, where subsoil discharge is not possible.

(6) For any discharge, except a storm water only discharge, from a mining or processing facility after July 18, 2001.

*c. Group applications.* Group applications identified in 40 CFR Part 122.26(c)(2) as amended through June 15, 1992, that were submitted and approved by the U.S. Environmental Protection Agency will be accepted by the department as an application for an NPDES permit for a storm water discharge associated with industrial activity. A copy of the group application does not need to be submitted to the department. The department will notify a participant in a group application of the required application and individual permit fees as specified in 64.16(3) “b” if an industry specific general permit is not available for the participants in the group.

**64.3(5)** Requirements for industries that discharge to another disposal system except storm water point sources.

a. The director may require any person discharging wastes to a publicly or privately owned disposal system to submit information similar to that required in an application for an operation permit, but no operation permit is required for such discharge.

Major contributing industries must submit a treatment agreement which meets the following criteria:

- (1) The agreement must be on a form provided by the department; and
- (2) Must identify and limit the monthly average and the daily maximum quantity of compatible and incompatible pollutants discharged to the disposal system and the variations in daily flow; and
- (3) Be signed by the industrial contributor and the owner of the disposal system accepting the wastewater; and
- (4) Provide that the quantities to be discharged to the disposal system must be in accordance with the applicable standards and requirements in 567—Chapter 62.

b. A major contributing industry should submit a new treatment agreement form 60 days in advance of a proposed expansion, production increase or process modification that may result in discharges of sewage, industrial waste, or other waste in excess of the discharge stated in the existing treatment agreement. An industry that would become a major contributing industry as a result of a proposed expansion, production increase or process modification should submit a treatment agreement form 60 days in advance of the proposed expansion, production increase or process modification.

c. A treatment agreement form must be submitted at least 180 days before a new major contributing industry proposes to discharge into a wastewater disposal system. The owner of a wastewater disposal system shall notify the director by submitting a complete treatment agreement to be received at least ten days prior to making any commitment to accept waste from a proposed new major contributing industry. However, the department may notify the owner that verification of the data in the treatment agreement may take longer than ten days and advise that the owner should not enter a commitment until the data is verified.

d. A treatment agreement form for each major contributing industry must be submitted with the facility plan or preliminary engineering report for the construction or modification of a wastewater disposal system. These agreements will be used in determining the design basis of the new or upgraded system.

e. Treatment agreement forms from major contributing industries shall be required as a part of the application for a permit to operate the wastewater disposal system receiving the wastes from the major contributing industry.

**64.3(6)** Rescinded, effective 7/23/86.

**64.3(7)** Operation permits may be granted for any period of time not to exceed five years. Applications for renewal of an operation permit must be submitted to the department 180 days in advance of the date the permit expires. General permits will be issued for a period not to exceed five years. Each permit to be renewed shall be subject to the provisions of all rules of the department in effect at the time of the renewal.

**64.3(8)** Identity of signatories of operation permit applications. The person who signs the application for an operation permit shall be:

a. *Corporations.* In the case of corporations, a principal executive officer of at least the level of vice president.

b. *Partnerships.* In the case of a partnership, a general partner.

c. *Sole proprietorships.* In the case of a sole proprietorship, the proprietor.

d. *Public facilities.* In the case of a municipal, state, or other public facility, by either the principal executive officer, or the ranking elected official.

e. *Storm water discharge associated with industrial activity from construction activities.* In the case of a storm water discharge associated with construction activity, either the owner of the site or the general contractor.

The person who signs NPDES reports shall be the same, except that in the case of a corporation or a public body, monitoring reports required under the terms of the permit may be submitted by the person who is responsible for the overall operation of the facility from which the discharge originates.

**64.3(9)** When necessary to comply with present standards which must be met at a future date, an operation permit shall include a schedule for the alteration of the permitted facility to meet said standards. Such schedules shall not relieve the permittee of the duty to obtain a construction permit pursuant to 64.2(455B). When necessary to comply with a pretreatment standard or requirement which must be met at a future date, a major contributing industry will be given a compliance schedule for meeting those requirements.

**64.3(10)** Operation permits shall contain such conditions as are deemed necessary by the director to ensure compliance with all applicable rules of the department, including monitoring and reporting conditions, to protect the public health and beneficial uses of state waters, and to prevent water pollution from waste storage or disposal operations.

**64.3(11)** The director may suspend or revoke in whole or in part any individual operation permit or coverage under a general permit for cause. Except for general permits, the director may modify in whole or in part any individual operation permit for cause. A variance or modification to the terms and conditions of a general permit shall not be granted. If a variance or modification to a general permit is desired, the applicant must apply for an individual permit following the procedures in 64.3(4) "a."

Cause for modification, suspension or revocation of a permit includes the following:

- a. Violation of any term or condition of the permit.
- b. Obtaining a permit by misrepresentation of fact or failure to disclose fully all material facts.
- c. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.
- d. Failure to submit such records and information as the director shall require both generally and as a condition of the operation permit in order to ensure compliance with the discharge conditions specified in the permit.
- e. Failure or refusal of an NPDES permittee to carry out the requirements of 64.7(5) "c."
- f. Failure to provide all the required application materials or appropriate fees.

**567—64.4(455B) Issuance of NPDES permits.**

**64.4(1) Individual permit.** The director shall, when an operation permit expires and an NPDES permit is required for the discharge, and, upon proper application, issue an individual NPDES permit in accordance with 64.5(455B), 64.7(455B), 64.8(1) and 64.9(455B).

**64.4(2) General permit.**

a. The director may issue general permits which are consistent with 64.4(2) "b" and the requirements specified in 64.6(455B), 64.7(455B), 64.8(2), and 64.9(455B) for the following activities:

(1) Storm water point sources requiring an NPDES permit pursuant to Section 402(p) of the federal Clean Water Act and 40 CFR 122.26 (as amended through June 15, 1992).

(2) Private sewage disposal system discharges permitted under IAC 567—Chapter 69 where subsoil discharge is not possible as determined by the administrative authority.

(3) For any discharge, except a storm water only discharge, from a mining or processing facility.

b. Each general permit issued by the department must:

(1) Be adopted as an administrative rule in accordance with Iowa Code chapter 17A, the Administrative Procedure Act. Each proposed permit will be accompanied by a fact sheet setting forth the principal facts and methodologies considered during permit development,

(2) Correspond to existing geographic or political boundaries, and

(3) Be identified in 567—64.15(455B).

c. If an NPDES permit is required for an activity covered by a general permit, the applicant may seek either general permit coverage or an individual permit. Procedures and requirements for obtaining an individual NPDES permit are detailed in 64.3(4) "a." Procedures for filing a Notice of Intent for coverage under a general permit are described in 567—64.6(455B) "Completing a Notice of Intent for Coverage Under a General Permit."

**567—64.5(455B) Notice and public participation in the individual NPDES permit process.**

**64.5(1)** *Formulation of tentative determination and draft NPDES permit.* The department shall make a tentative determination to issue or deny an NPDES permit for the discharge described in a Ref-use Act or NPDES application in advance of the public notice of 64.5(2). If the tentative determination is to issue the NPDES permit, the department shall prepare a draft NPDES permit. The draft permit shall include the following:

*a.* Effluent limitations identified pursuant to 64.6(2) and 64.6(3), for those pollutants proposed to be limited.

*b.* If necessary, a proposed schedule of compliance, including interim dates and requirements, identified pursuant to 64.6(4), for meeting the effluent limitations and other permit requirements.

*c.* Any other special conditions (other than those required in 64.6(5)) which will have a significant impact upon the discharge described in the NPDES application.

**64.5(2)** *Public notice.*

*a.* Prior to the issuance of an NPDES permit, public notice shall be circulated in a manner designed to inform interested and potentially interested persons of the proposed discharge and of the tentative determination to issue or deny an NPDES permit for the proposed discharge. Procedures for the circulation of public notice shall include at least the procedures of subparagraphs (1) to (3).

(1) The public notice shall be circulated by the applicant within the geographical areas of the proposed discharge by posting the public notice in the post office and public places of the city nearest the premises of the applicant in which the effluent source is located; by posting the public notice near the entrance to the applicant's premises and in nearby places; and by publishing the public notice in local newspapers and periodicals, or, if appropriate, in a newspaper of general circulation.

(2) The public notice shall be mailed by the department to any person upon request.

(3) Upon request the department shall add the name of any person or group to the mailing list, described in 567—4.2(455B), to receive copies of all public notices concerning proposed NPDES permits within the state or within a certain geographical area and shall mail a copy of all public notices to such persons.

*b.* The department shall provide a period of not less than 30 days following the date of the public notice during which time interested persons may submit their written views on the tentative determinations with respect to the NPDES application. All written comments submitted during the 30-day comment period shall be retained by the department and considered by the director in the formulation of the director's final determinations with respect to the NPDES application. The period for comment may be extended at the discretion of the department.

*c.* The contents of the public notice of a proposed NPDES permit shall include at least the following:

(1) The name, address, and telephone number of the department.

(2) The name and address of each applicant.

(3) A brief description of each applicant's activities or operations which result in the discharge described in the NPDES application (e.g., municipal waste treatment plant, corn wet milling plant, or meat packing plant).

(4) The name of the waterway to which each discharge of the applicant is made and a short description of the location of each discharge of the applicant on the waterway indicating whether such discharge is a new or an existing discharge.

(5) A statement of the department's tentative determination to issue or deny an NPDES permit for the discharge or discharges described in the NPDES application.

(6) A brief description of the procedures for the formulation of final determinations, including the 30-day comment period required by paragraph "b" of this subrule and any other means by which interested persons may influence or comment upon those determinations.

(7) The address and telephone number of places at which interested persons may obtain further information, request a copy of the draft permit prepared pursuant to 64.5(1), request a copy of the fact sheet, if any, described in 64.5(3) and inspect and copy NPDES forms and related documents.

**64.5(3)** *Fact sheets.*

*a.* For every discharge which has a total volume of more than 500,000 gallons on any day of the year, the department shall prepare and, upon request, shall send to any person a fact sheet with respect to the application described in the public notice. The contents of such fact sheets shall include at least the following information:

(1) A sketch or detailed description of the location of the discharge described in the NPDES application.

(2) A quantitative description of the discharge described in the NPDES application which includes at least the following: the rate or frequency of the proposed discharge (if the discharge is continuous, the average daily flow in gallons per day or million gallons per day); for thermal discharges subject to limitation under the Act, the average summer and winter discharge temperatures in degrees Fahrenheit; and the average daily discharge in pounds per day of any pollutants which are present in significant quantities or which are subject to limitations or prohibition under Section 301, 302, 306 or 307 of the Act and regulations published thereunder.

(3) The tentative determinations required under 64.5(1).

(4) A brief citation, including a brief identification of the uses for which the receiving waters have been classified, of the water quality standards applicable to the receiving waters and effluent standards and limitations applicable to the proposed discharge.

(5) A fuller description of the procedures for the formulation of final determinations than that given in the public notice including: the 30-day comment period required by 64.5(2); procedures for requesting a public hearing and the nature thereof; and any other procedures by which the public may participate in the formulation of the final determinations.

*b.* Upon request the department shall add the name of any person or group to a mailing list, described in 4.2(455B), to receive copies of fact sheets and shall mail a copy of all fact sheets to such person.

**64.5(4)** *Notice to other government agencies.* Prior to the issuance of an NPDES permit, the department shall notify other appropriate government agencies of each complete application for an NPDES permit and shall provide such agencies an opportunity to submit their written views and recommendations. Procedures for such notification shall include the procedures of paragraphs “*a*” to “*d*.”

*a.* At the time of issuance of public notice pursuant to 64.5(2), the department shall transmit the fact sheet, if any, to any other state whose waters may be affected by the issuance of the NPDES permit and, upon request, the department shall provide such state with a copy of the NPDES application and a copy of the proposed permit prepared pursuant to 64.5(1). Each affected state shall be afforded an opportunity to submit written recommendations to the department and to the regional administrator which the director may incorporate into the permit if issued. Should the director fail to incorporate any written recommendation thus received, the director shall provide to the affected state or states and to the regional administrator a written explanation of the reasons for failing to accept any written recommendation.

*b.* At the time of issuance of public notice pursuant to 64.5(2), the department shall mail the public notice for proposed discharges (other than minor discharges) into navigable waters and the fact sheet, if any, to the appropriate district engineer of the army corps of engineers.

(1) The department and the district engineer for each corps of engineers district within the state may arrange for: notice to the district engineer of minor discharges; waiver by the district engineer of the right to receive fact sheets with respect to classes, types, and sizes within any category of point sources and with respect to discharges to particular navigable waters or parts thereof; and any procedures for the transmission of forms, period of comment by the district engineer (e.g., 30 days), and for objections of the district engineer.

(2) A copy of any written agreement between the department and a district engineer shall be forwarded to the regional administrator and shall be available to the public for inspection and copying in accordance with 567—Chapter 4.

*c.* Upon request the department shall mail the public notice and fact sheet, if any, to any other federal, state, or local agency, or any affected country, and provide such agencies an opportunity to respond, comment, or request a public hearing pursuant to 64.5(6).

*d.* The department shall mail the public notice and fact sheet, if any, for any proposed NPDES permit within the geographical area of a designated and approved management agency under Section 208 of the Act (33 U.S.C. 1288).

*e.* The department shall mail the public notice and fact sheet, if any, to the local board of health for the purpose of assisting the applicant in coordinating the applicable requirements of the Act and Iowa Code chapter 455B with any applicable requirements of the local board of health.

**64.5(5)** *Public access to NPDES information.* The records of the department connected with NPDES permits are available for public inspection and copying to the extent provided in 567—Chapter 4.

**64.5(6)** *Public hearings on proposed NPDES permits.* The applicant, any affected state, the regional administrator, or any interested agency, person or group of persons may request or petition for a public hearing with respect to an NPDES application. Any such request shall clearly state issues and topics to be addressed at the hearing. Any such request or petition for public hearing must be filed with the director within the 30-day period prescribed in 64.5(2)“*b*” and shall indicate the interest of the party filing such request and the reasons why a hearing is warranted. The director shall hold an informal and noncontested case hearing if there is a significant public interest (including the filing of requests or petitions for such hearing) in holding such a hearing. Frivolous or insubstantial requests for hearing may be denied by the director. Instances of doubt should be resolved in favor of holding the hearing. Any hearing held pursuant to this subrule shall be held in the geographical area of the proposed discharge, or other appropriate area in the discretion of the director, and may, as appropriate, consider related groups of permit applications.

**64.5(7)** *Public notice of public hearings.*

*a.* Public notice of any hearing held pursuant to 64.5(6) shall be circulated at least as widely as was the notice of the NPDES application.

(1) Notice shall be published in at least one newspaper of general circulation within the geographical area of the discharge;

(2) Notice shall be sent to all persons and government agencies which received a copy of the notice or the fact sheet for the NPDES application;

(3) Notice shall be mailed to any person or group upon request; and

(4) Notice pursuant to subparagraphs (1) and (2) of this paragraph shall be made at least 30 days in advance of the hearing.

*b.* The contents of public notice of any hearing held pursuant to 64.5(6) shall include at least the following:

(1) The name, address, and telephone number of the department;

(2) The name and address of each applicant whose application will be considered at the hearing;

(3) The name of the waterway to which each discharge is made and a short description of the location of each discharge on the waterway;

(4) A brief reference to the public notice issued for each NPDES application, including identification number and date of issuance;

(5) Information regarding the time and location for the hearing;

(6) The purpose of the hearing;

(7) A concise statement of the issues raised by the person requesting the hearing;

(8) The address and telephone number of the premises where interested persons may obtain further information, request a copy of the draft NPDES permit prepared pursuant to 64.5(1), request a copy of the fact sheet, if any, prepared pursuant to 64.5(3), and inspect and copy NPDES forms and related documents; and

(9) A brief description of the nature of the hearing, including the rules and procedures to be followed.

**567—64.6(455B) Completing a Notice of Intent for coverage under a general permit.**

**64.6(1)** *Contents of a complete Notice of Intent.* An applicant proposing to conduct activities covered by a general permit shall file a complete Notice of Intent by submitting to the department materials required in paragraphs “*a*” to “*c*” of this subrule.

*a. Notice of Intent Application Form.* The following Notice of Intent forms must be completed in full.

(1) General Permit No. 1 “Storm Water Discharge Associated with Industrial Activity,” Form 542-1415.

(2) General Permit No. 2 “Storm Water Discharge Associated with Industrial Activity for Construction Activities,” Form 542-1415.

(3) General Permit No. 3 “Storm Water Discharge Associated with Industrial Activity from Asphalt Plants, Concrete Batch Plants, Rock Crushing Plants and Construction Sand and Gravel Facilities,” Form 542-1415.

(4) General Permit No. 4 “Discharge from On-Site Wastewater Treatment and Disposal Systems,” Form 542-1541.

(5) General Permit No. 5 “Discharge from Mining and Processing Facilities,” Form 542-4006.

*b. General permit fee.* The general permit fee according to the schedule in 64.16(455B) payable to the Department of Natural Resources.

*c. Public notification.* The following public notification requirements must be completed for the corresponding general permit.

(1) General Permits No. 1, No. 2 and No. 3. A demonstration that a public notice was published in at least two newspapers with the largest circulation in the area in which the facility is located or the activity will occur. If a facility or activity authorized by General Permit No. 3 is to be relocated to a site not included in the original notice, a public notice need be published in only one newspaper. The newspaper notices shall, at the minimum, contain the following information:

#### PUBLIC NOTICE OF STORM WATER DISCHARGE

The (applicant name) plans to submit a Notice of Intent to the Iowa Department of Natural Resources to be covered under NPDES General Permit (select the appropriate general permit—No. 1 “Storm Water Discharge Associated with Industrial Activity” or General Permit No. 2 “Storm Water Discharge Associated with Industrial Activity for Construction Activities”). The storm water discharge will be from (description of industrial activity) located in (¼ section, township, range, county). Storm water will be discharged from (number) point source(s) and will be discharged to the following streams: (stream name(s)).

Comments may be submitted to the Storm Water Discharge Coordinator, IOWA DEPARTMENT OF NATURAL RESOURCES, Environmental Protection Division, 900 E. Grand Avenue, Des Moines, IA 50319-0034. The public may review the Notice of Intent from 8 a.m. to 4:30 p.m., Monday through Friday, at the above address after it has been received by the department.

(2) General Permit No. 4. There are no public notification requirements for this permit.

(3) General Permit No. 5. There are no public notification requirements for this permit.

**64.6(2) Authorization to discharge under a general permit.** Upon the submittal of a complete Notice of Intent in accordance with 64.6(1) and 64.3(4)“b,” the applicant is authorized to discharge after evaluation of the Notice of Intent by the department is complete and the determination has been made that the contents of the Notice of Intent satisfy the requirements of 567—Chapter 64. The discharge authorization date for all storm water discharges associated with industrial activity that are in existence on or before October 1, 1992, shall be October 1, 1992. The applicant will receive notification by the department of coverage under the general permit. If any of the items required for filing a Notice of Intent specified in 64.6(1) are missing, the department will consider the application incomplete and will notify the applicant of the incomplete items.

**64.6(3) General permit suspension or revocation.** In addition to the causes for suspension or revocation which are listed in 64.3(11), the director may suspend or revoke coverage under a general permit issued to a facility or a class of facilities for the following reasons and require the applicant to apply for an individual NPDES permit in accordance with 64.3(4)“a”:

a. The discharge would not comply with Iowa's water quality standards pursuant to 567—Chapter 61, or

b. The department finds that the activities associated with a Notice of Intent filed with the department do not meet the conditions of the general permit. The department will notify the affected discharger and establish a deadline, not longer than one year, for submitting an individual permit application.

**64.6(4) Eligibility for individual permit holders.** A person holding an individual NPDES permit for an activity covered by a general permit may apply for coverage under a general permit upon expiration of the individual permit and by filing a Notice of Intent according to procedures described in 64.3(4)“b.”

**64.6(5) Filing a Notice of Discontinuation.** A notice to discontinue the activity covered by the NPDES general permit shall be made in writing to the department 30 days prior to or after discontinuance of the discharge. For storm water discharge associated with industrial activity for construction activities, the discharge will be considered as discontinued when “final stabilization” has been reached. Final stabilization means that all soil-disturbing activities at the site have been completed and that a uniform perennial vegetative cover with a density of 70 percent for the area has been established or equivalent stabilization measures have been employed.

The notice of discontinuation shall contain the following:

- a. The name of the facility to which the permit was issued,
- b. The general permit number and permit authorization number,
- c. The date the permitted activity was, or will be, discontinued, and
- d. A signed certification in accordance with the requirements in the general permit.

**64.6(6) Transfer of ownership—construction activity part of a larger common plan of development.** For construction activity which is part of a larger common plan of development, such as a housing or commercial development project, in the event a permittee transfers ownership of all or any part of property subject to NPDES General Permit No. 2, both the permittee and transferee shall be responsible for compliance with the provisions of the general permit for that portion of the project which has been transferred, including when the transferred property is less than one acre in area, from and after the date the department receives written notice of the transfer, provided that:

a. The transferee is notified in writing of the existence and location of the general permit and pollution prevention plan, and of the transferee's duty to comply, and proof of such notice is included with the notice to the department of the transfer.

b. If the transferee agrees, in writing, to become the sole responsible permittee for the property which has been transferred, then the transferee shall be solely responsible for compliance with the provisions of the general permit for the transferred property from and after the date the department receives written notice of the transferee's assumption of responsibility.

c. If the transferee agrees, in writing, to obtain coverage under NPDES General Permit No. 2 for the property which has been transferred, then the transferee is required to obtain coverage under NPDES General Permit No. 2 for the transferred property from and after the date the department receives written notice of the transferee's assumption of responsibility for permit coverage. After the transferee has agreed, in writing, to obtain coverage under NPDES General Permit No. 2 for the transferred property and the department has received written notice of the transferee's assumption of responsibility for permit coverage for the transferred property, the authorization issued under NPDES General Permit No. 2 to the transferor for the transferred property shall be considered by the department as not providing NPDES permit coverage for the transferred property and the transferor's authorization issued under NPDES General Permit No. 2 for, and only for, the transferred property, shall be deemed by the department as being discontinued without further action of the transferor.

d. All notices sent to the department as described in this subrule shall contain the name of the development as submitted to the department in the original Notice of Intent and as modified by any subsequent written notices of name changes submitted to the department, the authorization number assigned to the authorization by the department, the legal description of the transferred property including lot number, if any, and any other information necessary to precisely locate the transferred property and to establish the legality of the document.

**567—64.7(455B) Terms and conditions of NPDES permits.**

**64.7(1) Prohibited discharges.** No NPDES permit may authorize any of the discharges prohibited by 567—62.1(455B).

**64.7(2) Application of effluent, pretreatment and water quality standards and other requirements.** Each NPDES permit shall include any of the following that is applicable:

*a.* An effluent limitation guideline promulgated by the administrator under Sections 301 and 304 of the Act and adopted by reference by the commission in 567—62.4(455B).

*b.* A standard of performance for a new source promulgated by the administrator under Section 306 of the Act and adopted by reference by the commission in 567—62.4(455B).

*c.* An effluent standard, effluent prohibition or pretreatment standard promulgated by the administrator under Section 307 of the Act and adopted by reference by the commission in 567—62.4(455B) or 567—62.5(455B).

*d.* A water quality related effluent limitation established by the administrator pursuant to Section 302 of the Act.

*e.* Prior to promulgation by the administrator of applicable effluent and pretreatment standards under Sections 301, 302, 306, and 307 of the Act, such conditions as the director determines are necessary to carry out the provisions of the Act.

*f.* Any other limitation, including those:

(1) Necessary to meet water quality standards, treatment or pretreatment standards, or schedules of compliance established pursuant to any Iowa law or regulation, or to implement the policy of nondegradation in 567—subrule 61.2(2); or

(2) Necessary to meet any other federal law or regulation; or

(3) Required to implement any applicable water quality standards; or

(4) Any legally applicable requirement necessary to implement total maximum daily loads established pursuant to Section 303(d) of the Act and incorporated in the continuing planning process approved under Section 303(e) of the Act and any regulations and guidelines issued pursuant thereto.

*g.* Any more stringent legally applicable requirements necessary to comply with a plan approved pursuant to Section 208(b) of the Act.

In any case where an NPDES permit applies to effluent standards and limitations described in paragraph “a,” “b,” “c,” “d,” “e,” “f,” or “g,” the director must state that the discharge authorized by the permit will not violate applicable water quality standards and must have prepared some verification of that statement. In any case where an NPDES permit applies any more stringent effluent limitation, described in 64.7(2) “f”(1), based upon applicable water quality standards, a waste load allocation must be prepared to ensure that the discharge authorized by the permit is consistent with applicable water quality standards.

**64.7(3) Effluent limitations in issued NPDES permits.** In the application of effluent standards, and limitations, water quality standards, and other legally applicable requirements, pursuant to 64.7(2), the director shall, for each issued NPDES permit, specify average and maximum daily quantitative limitations for the level of pollutants in the authorized discharge in terms of weight (except pH, temperature, radiation, and any other pollutants not appropriately expressed by weight). The director may, in addition to the specification of daily quantitative limitations by weight, specify other limitations such as average or maximum concentration limits, for the level of pollutants authorized in the discharge.

[COMMENT. The manner in which effluent limitations are expressed will depend upon the nature of the discharge. Continuous discharges shall be limited by daily loading figures and, where appropriate, may be limited as to concentration or discharge rate (e.g., for toxic or highly variable continuous discharges). Batch discharges should be more particularly described and limited in terms of (i) frequency (e.g., to occur not more than once every three weeks), (ii) total weight (e.g., not to exceed 300 pounds per batch discharge), (iii) maximum rate of discharge of pollutants during the batch discharge (e.g., not to exceed 2 pounds per minute), and (iv) prohibition or limitation by weight, concentration, or other appropriate measure of specified pollutants (e.g., shall not contain at any time more than 0.1 ppm zinc or more than ¼ pound of zinc in any batch discharge). Other intermittent discharges, such

as recirculation blowdown, should be particularly limited to comply with any applicable water quality standards and effluent standards and limitations.]

**64.7(4) Schedules of compliance in issued NPDES permits.** The director shall follow the following procedure in setting schedules in NPDES permit conditions to achieve compliance with applicable effluent standards and limitations, water quality standards, and other legally applicable requirements.

*a.* With respect to any discharge which is not in compliance with applicable effluent standards and limitations, applicable water quality standards, or other legally applicable requirements listed in 64.7(2) “*f*” and 64.7(2) “*g*,” the permittee shall be required to take specific steps to achieve compliance with: applicable effluent standards and limitations; if more stringent, water quality standards; or if more stringent, legally applicable requirements listed in 64.7(2) “*f*” and 64.7(2) “*g*.” In the absence of any legally applicable schedule of compliance, such steps shall be achieved in the shortest, reasonable period of time, such period to be consistent with the guidelines and requirements of the Act.

*b.* In any case where the period of time for compliance specified in paragraph “*a*” of this subrule exceeds nine months, a schedule of compliance shall be specified in the permit which will set forth interim requirements and the dates for their achievement; in no event shall more than nine months elapse between interim dates. If the time necessary for completion of the interim requirements (such as the construction of a treatment facility) is more than nine months and is not readily divided into stages for completion, interim dates shall be specified for the submission of reports of progress toward completion of the interim requirement.

[COMMENT. Certain interim requirements such as the submission of preliminary or final plans often require less than nine months and thus a shorter interval should be specified. Other requirements such as the construction of treatment facilities may require several years for completion and may not readily subdivide into nine-month intervals. Long-term interim requirements should nonetheless be subdivided into intervals not longer than nine months at which the permittee is required to report progress to the director pursuant to 64.7(4) “*c*.”]

*c.* Either before or up to 14 days following each interim date and the final date of compliance the permittee shall provide the department with written notice of the permittee’s compliance or noncompliance with the interim or final requirement.

*d.* On the last day of the months of February, May, August, and November the director shall transmit to the regional administrator a list of all instances, as of 30 days prior to the date of such report, of failure or refusal of a permittee to comply with an interim or final requirement or to notify the department of compliance or noncompliance with each interim or final requirement (as required pursuant to paragraph “*b*” of this subrule). Such list shall be available to the public for inspection and copying and shall contain at least the following information with respect to each instance of noncompliance:

- (1) Name and address of each noncomplying permittee.
- (2) A short description of each instance of noncompliance (e.g., failure to submit preliminary plans, two-week delay in commencement of construction of treatment facility; failure to notify of compliance with interim requirement to complete construction by June 30).
- (3) A short description of any actions or proposed actions by the permittee to comply or by the director to enforce compliance with the interim or final requirement.
- (4) Any details which tend to explain or mitigate an instance of noncompliance with an interim or final requirement (e.g., construction delayed due to materials shortage, plan approval delayed by objections).

*e.* If a permittee fails or refuses to comply with an interim or final requirement in an NPDES permit such noncompliance shall constitute a violation of the permit for which the director may, pursuant to 567—Chapters 7 and 60, modify, suspend or revoke the permit or take direct enforcement action.

**64.7(5) Other terms and conditions of issued NPDES permits.** Each issued NPDES permit shall provide for and ensure the following:

*a.* That all discharges authorized by the NPDES permit shall be consistent with the terms and conditions of the permit; that facility expansions, production increases, or process modifications which result in new or increased discharges of pollutants must be reported by submission of a new NPDES application or, if such discharge does not violate effluent limitations specified in the NPDES permit, by

submission to the director of notice of such new or increased discharges of pollutants; that the discharge of any pollutant more frequently than or at a level in excess of that identified and authorized by the permit shall constitute a violation of the terms and conditions of the permit; that if the terms and conditions of a general permit are no longer applicable to a discharge, the applicant shall apply for an individual NPDES permit;

*b.* That the permit may be modified, suspended or revoked in whole or in part for the causes provided in 64.3(11).

*c.* That the permittee shall permit the director or the director's authorized representative upon the presentation of credentials:

(1) To enter upon permittee's premises in which an effluent source is located or in which any records are required to be kept under terms and conditions of the permit;

(2) To have access to and copy any records required to be kept under terms and conditions of the permit;

(3) To inspect any monitoring equipment or method required in the permit; or

(4) To sample any discharge of pollutants.

*d.* That, if the permit is for a discharge from a publicly owned treatment works, the permittee shall provide notice to the director of the following:

(1) One hundred eighty days in advance of any new introduction of pollutants into such treatment works from a source which would be a new source as defined in Section 306 of the Act if such source were discharging pollutants;

(2) Except as specified below, 180 days in advance of any new introduction of pollutants into such treatment works from a source which would be subject to Section 301 of the Act if such source were discharging pollutants. However, the connection of such a source need not be reported if the source contributes less than 50,000 gallons of wastewater per day at the maximum discharge, or less than 5 percent of the organic or hydraulic loading of the treatment facility, or does not contribute toxic materials that may adversely affect the treatment process or any waste that may have an adverse or deleterious impact on the treatment process; and

(3) Sixty days in advance of any substantial change in volume or character of pollutants being introduced into such treatment works by a source introducing pollutants into such works at the time of issuance of the permit.

Such notice shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works.

*e.* That, if the permit is for a discharge from a publicly owned treatment works, the permittee shall require any industrial user of such treatment works to comply with the requirements of Sections 204(b), 307, and 308 of the Act. As a means of ensuring such compliance, the permittee shall require that each industrial user subject to the requirements of Section 307 of the Act give to the permittee periodic notice (over intervals not to exceed six months) of progress toward full compliance with Section 307 requirements. The permittee shall forward a copy of the notice to the director.

*f.* That the permittee at all times shall maintain in good working order and operate as efficiently as possible any facilities or systems of control to achieve compliance with the terms and conditions of the permit.

*g.* That if a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Act for a toxic pollutant which is present in the permittee's discharge and such standard or prohibition is more stringent than any limitation upon such pollutant in the NPDES permit, the director shall revise or modify the permit in accordance with the toxic effluent standard or prohibition and so notify the permittee.

*h.* If an applicant for an NPDES permit proposes to dispose of pollutants into wells as part of a program to meet the proposed terms and conditions of an NPDES permit, the director shall specify additional terms and conditions of the issued NPDES permit which shall prohibit the proposed disposal or control the proposed disposal in order to prevent pollution of ground and surface water resources

and to protect the public health and welfare. (See rule 567—62.9(455B) which prohibits the disposal of pollutants, other than heat, into wells within Iowa.)

*i.* That the permittee shall take all reasonable steps to minimize or prevent any discharge in violation of the permit which has a reasonable likelihood of adversely affecting human health or the environment.

*j.* It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the terms of this permit.

**64.7(6) POTW compliance—plan of action required.** The owner of a publicly owned treatment works (POTW) must prepare and implement a plan of action to achieve and maintain compliance with final effluent limitations in its NPDES permit, as specified below:

*a.* The director shall notify the owner of a POTW of the plan of action requirement, and of an opportunity to meet with department staff to discuss the plan of action requirements. The POTW owner shall submit a plan of action within six months of such notice, unless a longer time is needed and is authorized in writing by the director.

*b.* The plan of action will vary in length and complexity depending on the compliance history and physical status of the particular POTW. It must identify the deficiencies and needs of the system, describe the causes of such deficiencies or needs, propose specific measures (including an implementation schedule) that will be taken to correct the deficiencies or meet the needs, and discuss the method of financing the improvements proposed in the plan of action.

The plan may provide for a phased construction approach to meet interim and final limitations, where financing is such that a long-term project is necessary to meet final limitations, and shorter term projects may provide incremental benefits to water quality in the interim.

Information on the purpose and preparation of the plan can be found in the departmental document entitled “Guidance on Preparing a Plan of Action,” available through the records center of the department.

*c.* Upon submission of a complete plan of action to the department, the plan should be reviewed and approved or disapproved within 60 days unless a longer time is required and the POTW owner is so notified.

*d.* The NPDES permit for the facility shall be amended to include the implementation schedule or other actions developed through the plan to achieve and maintain compliance.

This rule is intended to implement Iowa Code chapter 455B, division III, part 1 (455B.171 to 455B.187).

#### **567—64.8(455B) Reissuance of NPDES permits.**

**64.8(1) Individual NPDES permits.** Individual NPDES permits will be reissued according to the procedures identified in 64.8(1) “a” to “c.”

*a.* Any state NPDES permittee who wishes to continue to discharge after the expiration date of the permit shall file an application for reissuance of the permit at least 180 days prior to the expiration of the permit. The application may be a simple written request. However, the applicant for reissuance must submit or have submitted information to show:

(1) That the permittee is in compliance or has substantially complied with all the terms, conditions, requirements and schedules of compliance of the expiring NPDES permit.

(2) Up-to-date information on the permittee’s production levels, permittee’s waste treatment practices, nature, contents, and frequency of permittee’s discharge.

(3) That the discharge is consistent with applicable effluent standards and limitations, water quality standards and other legally applicable requirements listed in 64.7(2), including any additions to, or revision or modifications of, such effluent standards and limitations, water quality standards, or other legally applicable requirements during the term of the permit.

*b.* The director shall follow the notice and public participation procedures specified in 64.5(455B) in connection with each request for reissuance of an NPDES permit.

*c.* Notwithstanding any other provision in these rules, any new point source the construction of which is commenced after the date of enactment of the Federal Water Pollution Control Act Amendments

of 1972 (October 18, 1972) and which is so constructed as to meet all applicable standards of performance for new sources shall not be subject to any more stringent standard of performance during a ten-year period beginning on the date of completion of such construction or during the period of depreciation or amortization of such facility for the purposes of Section 167 or 169 (or both) of the Internal Revenue Code, as amended through December 31, 1976, whichever period ends first.

**64.8(2) *Renewal of coverage under a general permit.*** Coverage under a general permit will be renewed subject to the terms and conditions in paragraphs “a” to “d.”

*a.* If a permittee intends to continue an activity covered by a general permit beyond the expiration date of the general permit, the permittee must reapply and submit a complete Notice of Intent as follows:

(1) For storm water discharge associated with industrial activity, complete Notice of Intent requirements are listed in 64.6(1).

(2) Reserved.

*b.* A complete Notice of Intent for coverage under a reissued or renewed general permit must be submitted to the department within 180 days after the expiration date of a general permit.

*c.* A person holding a general permit is subject to the terms of the permit until it expires or a Notice of Discontinuation is submitted in accordance with 64.6(5). If the person holding a general permit continues the activity beyond the expiration date, the conditions of the expired general permit will remain in effect provided the permittee submits a complete Notice of Intent for coverage under a renewed or reissued general permit 180 days after the expiration date of the expired general permit. If the person continues an activity for which the general permit has expired and the general permit has not been reissued or renewed the discharge must be permitted with an individual NPDES permit according to the procedures in 64.3(4)“a.”

*d.* The Notice of Intent requirements shall not include a public notification when a general permit has been reissued or renewed provided the permittee has already submitted a complete Notice of Intent including the public notification requirements of 64.6(1). Another public notice is required when any information, including facility location, in the original public notice is changed.

**567—64.9(455B) Monitoring, record keeping and reporting by operation permit holders.** Operation permit holders are subject to any applicable requirements specified in 567—Chapter 63.

**567—64.10(455B) Silvicultural activities.** The following is adopted by reference: 40 CFR 122.27 as promulgated April 1, 1983 (48 FR 14153).

**567—64.11 and 64.12** Reserved.

**567—64.13(455B) Storm water discharges.**

**64.13(1)** The following is adopted by reference: 40 CFR 122.26 as promulgated November 16, 1990 (55 FR 47990), and amended March 21, 1991 (56 FR 12098), April 2, 1992 (57 FR 11394), and December 8, 1999 (64 FR 68838).

**64.13(2)** Small municipal separate storm sewer systems.

*a.* For any discharge from a regulated small municipal separate storm sewer system (MS4), the permit application must be submitted no later than March 10, 2003, if designated under this subrule.

*b.* All MS4s located in urbanized areas as defined by the latest decennial census and all MS4s which serve 10,000 people or more located outside urbanized areas and where the average population density is 1,000 people/square mile or more are regulated small MS4s unless waiver criteria established by the department are met and a waiver has been granted by the department.

*c.* Permit coverage requirements for MS4s located in urbanized areas and serving 1,000 or more people and fewer than 10,000 people may be waived if the following requirements are met:

(1) The department has evaluated all waters of the United States that receive a discharge from the MS4, and for all such waters, the department has determined that storm water controls are not needed based on wasteload allocations that are part of an EPA approved or established total maximum

daily load (TMDL) that addresses the pollutants of concern or, if a TMDL has not been developed or approved, an equivalent analysis that determines sources and allocations for the pollutants of concern. The pollutants of concern include biochemical oxygen demand, sediment or a parameter that addresses sediment (total suspended solids, turbidity or siltation), pathogens, oil and grease, and any pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the MS4.

(2) The department has determined that future discharges from the MS4 do not have the potential to result in exceedances of water quality standards, including impairment of designated uses or other significant water quality impacts including habitat and biological impacts.

*d.* Permit coverage requirements for MS4s located in urbanized areas and serving fewer than 1,000 people may be waived if the following requirements are met:

(1) The system is not contributing substantially to the pollutant loadings of a physically interconnected MS4 that is regulated by the NPDES storm water program.

(2) The MS4 discharges any pollutants that have been identified as a cause of impairment of any water body to which the MS4 discharges and the department has determined that storm water controls are not needed based upon wasteload allocations that are a part of an EPA approved or established TMDL that addresses the pollutants of concern.

*e.* Permit coverage requirements for MS4s located outside of urbanized areas and serving 10,000 or more people may be waived if the following criterion is met:

The MS4 is not discharging pollutants which are the cause of the impairment to a water body designated by the department as impaired.

*f.* Should conditions under which the initial waiver was granted change, the waiver may be rescinded by the department and permit coverage may be required.

*g.* MS4 applications shall, at a minimum, demonstrate in what manner the applicant will develop, implement and enforce a storm water management program designed to reduce the discharge of pollutants from the MS4 to the maximum extent practicable, to protect water quality and to satisfy the appropriate water quality requirements of the Clean Water Act. The manner in which the permittee will address the following items must be addressed in the application: public education and outreach on storm water impacts, public involvement and participation, illicit discharge detection and elimination, construction site storm water runoff control, postconstruction storm water management in new development and redevelopment, and pollution prevention for municipal operations. Measurable goals which the applicant intends to meet and dates by which the goals will be accomplished shall be included with the application.

**64.13(3)** Waivers for storm water discharge associated with small construction activity. The director may waive the otherwise applicable requirements in a general permit for storm water discharge from small construction activities as defined in 567—Chapter 60 when:

*a.* The value of the rainfall erosivity factor (“R” in the Revised Universal Soil Loss Equation) is less than 5 during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by Water: A Guide to Conservation Planning With the Revised Universal Soil Loss Equation (RUSLE), pages 21-64, dated January 1997; or

*b.* Storm water controls are not needed based on a TMDL approved or established by the EPA that addresses the pollutant(s) of concern or, for nonimpaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutant(s) of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. The pollutant(s) of concern includes sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity.

**567—64.14(455B) Transfer of title.** If title to any disposal system or part thereof for which a permit has been issued under 64.2(455B), 64.3(455B) or 64.6(455B) is transferred, the new owners shall be

subject to all terms and conditions of said permit. Whenever title to a disposal system or part thereof is changed, the department shall be notified of such change within 30 days.

Rules 567—64.3(455B) to 64.14(455B) are intended to implement Iowa Code section 455B.173.

**567—64.15(455B) General permits issued by the department.** The following is a list of general permits adopted by the department through the Administrative Procedure Act, Iowa Code chapter 17A, and the term of each permit.

**64.15(1)** Storm Water Discharge Associated with Industrial Activity, NPDES General Permit No. 1, effective October 1, 2007, to October 1, 2012. Facilities assigned Standard Industrial Classification 1442, 2951, or 3273, and those facilities assigned Standard Industrial Classification 1422 or 1423 which are engaged primarily in rock crushing are not eligible for coverage under General Permit No. 1.

**64.15(2)** Storm Water Discharge Associated with Industrial Activity for Construction Activities, NPDES General Permit No. 2, effective October 1, 2007, to October 1, 2012.

*a.* Part I, provision B, section 1, paragraph A of General Permit No. 2 is amended to read as follows:

Except for discharges identified under Parts I.B.2. and I.B.3., this permit may authorize the discharge of storm water associated with industrial activity from construction sites, (those sites or common plans of development or sale that will result in the disturbance of one or more acres of total land area),

*b.* Part VIII, under the definition: Storm water discharge associated with industrial activity, paragraph (x) of General Permit No. 2 is amended to read as follows:

Construction activity including clearing, grading and excavation activities except: operations that result in the disturbance of less than one acre of total land area which is not part of a larger common plan of development or sale.

**64.15(3)** Storm Water Discharge Associated with Industrial Activity from Asphalt Plants, Concrete Batch Plants, Rock Crushing Plants, and Construction Sand and Gravel Facilities, NPDES General Permit No. 3, effective October 1, 2007, to October 1, 2012. General Permit No. 3 authorizes storm water discharges from facilities primarily engaged in manufacturing asphalt paving mixtures and which are classified under Standard Industrial Classification 2951, primarily engaged in manufacturing Portland cement concrete and which are classified under Standard Industrial Classification 3273, those facilities assigned Standard Industrial Classification 1422 or 1423 which are primarily engaged in the crushing, grinding or pulverizing of limestone or granite, and construction sand and gravel facilities which are classified under Standard Industrial Classification 1442. General Permit No. 3 does not authorize the discharge of water resulting from dewatering activities at rock quarries.

**64.15(4)** “Discharge from Onsite Wastewater Treatment and Disposal Systems,” NPDES General Permit No. 4, effective January 1, 2004, to December 31, 2008.

**64.15(5)** “Discharge from Mining and Processing Facilities,” NPDES General Permit No. 5, effective July 18, 2001.

**567—64.16(455B) Fees.**

**64.16(1)** A person who applies for an individual permit or coverage under a general permit to construct, install, modify or operate a disposal system shall submit along with the application an application fee or a permit fee or both as specified in 64.16(3). Certain individual facilities shall also be required to submit annual fees as specified in 64.16(3) “*b.*” Fees shall be assessed based on the type of permit coverage the applicant requests, either as general permit coverage or as an individual permit. For a construction permit, an application fee must be submitted with the application. For General Permits Nos. 1, 2, 3 and 5, the applicant has the option of paying an annual permit fee or a multiyear permit fee at the time the Notice of Intent for coverage is submitted.

For individual storm water only permits, a one-time, multiyear permit fee must be submitted at the time of application. A storm water only permit is defined as an NPDES permit that authorizes the discharge of only storm water and any allowable non-storm water as defined in the permit. For all other non-storm water NPDES permits and operation permits, the applicant must submit an application fee at the time of application and the appropriate annual fee on a yearly basis. A non-storm water NPDES

permit is defined as any individual NPDES permit or operation permit issued to a municipality, industry, semipublic entity, or animal feeding operation that is not an individual storm water only permit. If a facility needs coverage under more than one NPDES permit, fees for each permit must be submitted appropriately.

Fees are nontransferable. If the application is returned to the applicant by the department, the permit fee will be returned. No fees will be returned if the permit or permit coverage is suspended, revoked, or modified, or if the activity is discontinued. Failure to submit the appropriate fee at the time of application renders the application incomplete, and the department shall suspend processing of the application until the fee is received. Failure to submit the appropriate annual fee may result in revocation or suspension of the permit as noted in 64.3(11)“f.”

**64.16(2)** Payment of fees. Fees shall be paid by check or money order made payable to the “Iowa Department of Natural Resources.”

For facilities needing coverage under both a storm water only permit and a non-storm water NPDES permit, separate payments shall be made according to the fee schedule in 64.16(3).

**64.16(3)** Fee schedule. The following fees have been adopted:

a. For coverage under the NPDES general permits, the following fees apply:

(1) Storm Water Discharges Associated with Industrial Activity, NPDES General Permit No. 1.

Annual Permit Fee . . . . . \$175(per year)

or

Five-year Permit Fee . . . . . \$700  
Four-year Permit Fee . . . . . \$525  
Three-year Permit Fee . . . . . \$350

All fees are to be submitted with the Notice of Intent for coverage under the general permit.

(2) Storm Water Discharge Associated with Industrial Activity for Construction Activities, NPDES General Permit No. 2. The fees are the same as those specified for General Permit No. 1 in subparagraph (1) of this paragraph.

(3) Storm Water Discharge Associated with Industrial Activity from Asphalt Plants, Concrete Batch Plants, and Rock Crushing Plants, NPDES General Permit No. 3. The fees are the same as those specified for General Permit No. 1 in subparagraph (1) of this paragraph.

(4) Discharge from Onsite Wastewater Treatment and Disposal Systems, NPDES Permit No. 4. No fees shall be assessed.

(5) Discharge from Mining and Processing Facilities, NPDES General Permit No. 5. Fees as established in 2006 Iowa Acts, House File 2540, section 25, are to be submitted by August 30 of every year unless a multiyear fee payment was received in an earlier year. New facilities seeking General Permit No. 5 coverage in any month but August shall submit fees with the Notice of Intent for coverage. Coverage provided by the five-year, four-year, or three-year permit fees expires no later than the expiration date of the general permit. Maximum coverage is five years, four years, and three years, respectively. In the event a facility is no longer eligible to be covered under General Permit No. 5, the remainder of the fees previously paid by the facility shall be applied toward its individual permit fees.

b. Individual NPDES and operation permit fees. The following fees are applicable for the described individual NPDES permit:

(1) For permits that authorize the discharge of only storm water associated with industrial activity and any allowable non-storm water, a five-year permit fee of \$1,250 must accompany the application.

(2) For permits that authorize the discharge of only storm water from municipal separate storm sewer systems and any allowable non-storm water, a five-year permit fee of \$1,250 must accompany the application.

(3) For permits not subject to subparagraphs (1) and (2), a single application fee of \$85 as established in 2006 Iowa Acts, House File 2540, section 25, is due at the time of application. The

application fee is to be submitted with the application form (Form 30 for municipal and semipublic facilities; Form 1, 2, 2F, 3, or 4 for industrial facilities) at the time of a new application, renewal application, or amendment application. Before an approved amendment request submitted by a facility holding a non-storm water NPDES permit can be processed by the department, the application fee must be submitted. Application fees will not be charged to facilities holding non-storm water NPDES permits when an amendment request is submitted by DNR staff, or when the requested amendment is to correct an error in the permit.

(4) For every major and minor municipal facility, every semipublic facility, every major and minor industrial facility, every facility that holds an operation permit (no wastewater discharge into surface waters), and every open feedlot animal feeding operation required to hold a non-storm water NPDES permit, an annual fee as established in 2006 Iowa Acts, House File 2540, section 25, is due by August 30 of each year.

(5) For every municipal water treatment facility with a non-storm water NPDES permit, no fee is charged (as established in 2006 Iowa Acts, House File 2540, section 25).

(6) For a new facility, an annual fee as established in 2006 Iowa Acts, House File 2540, section 25, is due 30 days after the new permit is issued.

c. Wastewater construction permit fees. A single construction permit fee as established in 2006 Iowa Acts, House File 2540, section 25, is due at the time of construction permit application submission.

**64.16(4)** Fee refunds for storm water general permit coverage—pilot project. Rescinded IAB 10/16/02, effective 11/20/02.

**567—64.17(455B) Validity of rules.** If any section, paragraph, sentence, clause, phrase or word of these rules, or any part thereof, be declared unconstitutional or invalid for any reason, the remainder of said rules shall not be affected thereby and shall remain in full force and effect.

**567—64.18(455B) Applicability.** This chapter shall apply to all waste disposal systems treating or intending to treat sewage, industrial waste, or other waste except waste resulting from livestock or poultry operations. All livestock and poultry operations constituting animal feeding operations as defined in 567—Chapter 65 shall be governed by the requirements contained in Chapter 65. However, if an animal feeding operation is required to apply for and obtain an NPDES permit, the provisions of this chapter relating to notice and public participation, to the terms and conditions of the permit, to the reissuance of the permit and to monitoring, reporting and record-keeping activities shall apply.

These rules are intended to implement Iowa Code chapter 455B, division III, part 1.

<sup>1</sup> Effective date of 64.2(9) "c" delayed 70 days by the Administrative Rules Review Committee. The 70-day delay of effective date of 64.2(9) "c" was lifted by the Administrative Rules Review Committee on 7/31/86.

### RAINFALL INTENSITY - DURATION - FREQUENCY CURVES Appendix A

CHAPTER 65  
ANIMAL FEEDING OPERATIONS

[Prior to 7/1/83, DEQ Ch 20]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

DIVISION I  
CONFINEMENT FEEDING OPERATIONS

**567—65.1(455B) Definitions.** In addition to the definitions in Iowa Code sections 455B.101 and 455B.171 and Iowa Code section 459.102, the following definitions shall apply to Division I of this chapter:

*“Abandoned confinement feeding operation structure”* means the confinement feeding operation structure has been razed, removed from the site of a confinement feeding operation, filled in with earth, or converted to uses other than a confinement feeding operation structure so that it cannot be used as a confinement feeding operation structure without significant reconstruction.

*“Adjacent”* means, for the purpose of determining separation distance requirements pursuant to 65.11(455B), that two or more confinement feeding operations are adjacent if they have animal feeding operation structures that are separated at their closest points by less than the following:

1. 1,250 feet for confinement feeding operations with animal weight capacity less than 1,250,000 pounds for animals other than bovine, or less than 4,000,000 pounds for bovine.

2. 1,500 feet for confinement feeding operations with animal weight capacity from 1,250,000 pounds to less than 2,000,000 pounds for animals other than bovine; from 1,250,000 pounds to less than 2,500,000 pounds for swine in a farrow-to-finish operation; or 4,000,000 pounds to less than 6,000,000 pounds for bovine.

3. 2,500 feet for confinement feeding operations with animal weight capacity of 2,000,000 or more pounds for animals other than bovine; 2,500,000 or more pounds for swine in a farrow-to-finish operation; or 6,000,000 or more pounds for bovine.

4. These distances shall only be used to determine that two or more confinement feeding operations are adjacent if the animal feeding operation structure is constructed after March 20, 1996.

5. To determine if two or more confinement feeding operations are adjacent, the animal weight capacity of each individual operation shall be used. If two or more confinement feeding operations are not in the same animal weight capacity category, the greater animal weight capacity shall be used to determine the separation distance.

*“Adjacent”* means, for the purpose of determining whether a permit is required pursuant to 65.7(455B), that two or more confinement feeding operations are adjacent if they have animal feeding operation structures that are separated at their closest points by less than the following:

1. 1,250 feet for confinement feeding operations with combined animal weight capacity less than 625,000 pounds for animals other than bovine, or less than 1,600,000 pounds for bovine.

2. 2,500 feet for confinement feeding operations with combined animal weight capacity of 625,000 or more pounds for animals other than bovine, or 1,600,000 or more pounds for bovine.

3. These distances shall only be used to determine that two or more confinement feeding operations are adjacent if the animal feeding operation structure is constructed or expanded on or after May 21, 1998.

*“Aerobic structure”* means an animal feeding operation structure other than an egg washwater storage structure which relies on aerobic bacterial action which is maintained by the utilization of air or oxygen and which includes aeration equipment to digest organic matter. Aeration equipment shall be used and shall be capable of providing oxygen at a rate sufficient to maintain an average of 2 milligrams per liter dissolved oxygen concentration in the upper 30 percent of the depth of manure in the structure at all times.

*“Agricultural drainage well”* means a vertical opening to an aquifer or permeable substratum which is constructed by any means including but not limited to drilling, driving, digging, boring, augering, jetting, washing, or coring and which is capable of intercepting or receiving surface or subsurface drainage water from land directly or by a drainage system.

*“Agricultural drainage well area”* means an area of land where surface or subsurface water drains into an agricultural drainage well directly or through a drainage system connecting to the agricultural drainage well.

*“Anaerobic lagoon”* means an unformed manure storage structure, if the primary function of the structure is to store and stabilize manure, the structure is designed to receive manure on a regular basis, and the structure’s design waste loading rates provide that the predominant biological activity is anaerobic. An anaerobic lagoon does not include the following:

1. A runoff control basin which collects and stores only precipitation-induced runoff from an animal feeding operation in which animals are confined to areas which are unroofed or partially roofed and in which no crop, vegetation, or forage growth or residue cover is maintained during the period in which animals are confined in the operation.

2. An anaerobic treatment system that includes collection and treatment facilities for all off gases.

*“Animal”* means a species classified as cattle, swine, horses, sheep, chickens or turkeys.

*“Animal capacity”* means the maximum number of animals which the owner or operator will confine in an animal feeding operation at any one time. In a confinement feeding operation, the animal capacity of all confinement buildings will be included in the determination of the animal capacity of the operation, unless the building has been abandoned in accordance with the definition of “abandoned animal feeding operation structure.”

*“Animal feeding operation”* means a lot, yard, corral, building, or other area in which animals are confined and fed and maintained for 45 days or more in any 12-month period, and all structures used for the storage of manure from animals in the operation. An animal feeding operation does not include a livestock market. Open feedlots and confinement feeding operations are considered to be separate animal feeding operations.

1. For purposes of water quality regulation, Iowa Code section 455B.200B as amended by 2002 Iowa Acts, chapter 1137, section 31, provides that two or more animal feeding operations under common ownership or management are deemed to be a single animal feeding operation if they are adjacent or utilize a common area or system for manure disposal. For purposes of the separation distances in Iowa Code section 455B.162, Iowa Code section 455B.161A as amended by 2002 Iowa Acts, chapter 1137, section 9, provides that two or more animal feeding operations under common ownership or management are deemed to be a single animal feeding operation if they are adjacent or utilize a common system for manure storage. The distinction is due to regulation of animal feeding operations for water quality purposes under the federal Clean Water Act. The Code of Federal Regulations at 40 CFR §122.23 (1995) sets out the requirements for an animal feeding operation and requires that two or more animal feeding operations under common ownership be considered a single operation if they adjoin each other or if they use a common area or system for manure disposal. However, this federal regulation does not control regulation of animal feeding operations for the purposes of the separation distances in Iowa Code section 455B.162, and therefore the definition is not required by federal law to include common areas for manure disposal.

2. To determine if two or more animal feeding operations are deemed to be one animal feeding operation, the first test is whether the animal feeding operations are under common ownership or management. If they are not under common ownership or management, they are not one animal feeding operation. For purposes of water quality regulation, the second test is whether the two animal feeding operations are adjacent or utilize a common area or system for manure disposal. If the two operations are not adjacent and do not use a common area or system for manure disposal, they are not one animal feeding operation. For purposes of the separation distances in Iowa Code section 455B.162, the second test is whether the two animal feeding operations are adjacent or utilize a common system for manure storage. If the two operations are not adjacent and do not use the same system for manure storage, they are not one animal feeding operation.

*“Animal feeding operation structure”* means a confinement building, manure storage structure, or egg washwater storage structure.

*“Animal unit”* means a unit of measurement based upon the product of multiplying the number of animals of each category by a special equivalency factor, as follows:

1. Slaughter and feeder cattle . . . . .	1.000
2. Immature dairy cattle . . . . .	1.000
3. Mature dairy cattle . . . . .	1.400
4. Butcher or breeding swine weighing more than 55 pounds . . . . .	0.400
5. Swine weighing 15 pounds or more but not more than 55 pounds . . . . .	0.100
6. Sheep or lambs . . . . .	0.100
7. Horses . . . . .	2.000
8. Turkeys . . . . .	0.018
9. Broiler or layer chickens . . . . .	0.010

“*Animal unit capacity*” means a measurement used to determine the maximum number of animal units that may be maintained as part of an animal feeding operation at any one time, including as provided in Iowa Code sections 455B.161A as amended by 2002 Iowa Acts, chapter 1137, section 9, and 455B.200B as amended by 2002 Iowa Acts, chapter 1137, sections 3 to 32.

“*Animal weight capacity*” means the sum of the average weight of all animals in a confinement feeding operation when the operation is at full animal capacity. For confinement feeding operations with only one species, the animal weight capacity is the product of multiplying the animal capacity by the average weight during a production cycle. For operations with more than one species, the animal weight capacity of the operation is the sum of the animal weight capacities for all species.

EXAMPLE 1. Bill wants to construct a confinement feeding operation with two confinement buildings and an earthen manure storage basin. The capacity of each building will be 900 market hogs. The hogs enter the building at 40 pounds and leave at 250 pounds. The average weight during the production cycle is then 145 pounds for this operation. The animal weight capacity of the operation is 145 pounds multiplied by 1800 for a total of 261,000 pounds.

EXAMPLE 2. Howard is planning to build a confinement feeding operation with eight confinement buildings and an egg washwater storage lagoon. The capacity of each building will be 125,000 laying hens. The hens enter the building at around 2.5 pounds and leave at around 3.5 pounds. The average weight during the production cycle for these laying hens is 3.0 pounds. Manure will be handled in dry form. The animal weight capacity of the operation is 3.0 pounds multiplied by 1,000,000 for a total of 3,000,000 pounds.

EXAMPLE 3. Carol has an animal feeding operation with four confinement buildings with below floor formed concrete manure storage tanks and one open feedlot. One confinement building is a farrowing building with a capacity of 72 sows. One confinement building is a nursery building with a capacity of 1,450 pigs. The open feedlot contains 425 sows. Two of the confinement buildings are finishing buildings with a capacity of 1,250 market hogs. The farrowing building contains 72 sows at an average weight of 400 pounds for an animal weight capacity of 28,800 pounds. The nursery building contains 1,450 pigs with an average weight over the production cycle of 25 pounds for an animal weight capacity of 36,250 pounds. The two finishing buildings contain 2,500 market hogs (combined) with an average weight over the production cycle of 150 pounds for an animal weight capacity of 375,000 pounds. The total animal weight capacity of the confinement feeding operation is 440,050 pounds. The weights of the animals in open lots are not included in the calculation of the animal weight capacity of the confinement feeding operation.

“*Applicant*” means the person applying for a construction or operation permit for an animal feeding operation. The applicant shall be the owner or owners of the animal feeding operation.

“*Business*” means a commercial enterprise.

“*Cemetery*” means a space held for the purpose of permanent burial, entombment or interment of human remains that is owned or managed by a political subdivision or private entity, or a cemetery regulated pursuant to Iowa Code chapter 523I or 566A. A cemetery does not include a pioneer cemetery where there have been six or fewer burials in the preceding fifty years.

“*Church*” means a religious institution.

“*Commercial enterprise*” means a building which is used as a part of a business that manufactures goods, delivers services, or sells goods or services, which is customarily and regularly used by the general

public during the entire calendar year and which is connected to electric, water, and sewer systems. A commercial enterprise does not include a farm operation.

*“Commercial manure service”* means a sole proprietor or business association engaged in the business of transporting, handling, storing, or applying manure for a fee.

*“Commercial manure service representative”* means a manager, employee, agent, or contractor of a commercial manure service, if the person is engaged in transporting, handling, storing, or applying manure on behalf of the service.

*“Common management”* means significant control by a person of the management of the day-to-day operations of each of two or more animal feeding operations.

*“Common ownership”* means the ownership of an animal feeding operation as a sole proprietor, or a majority ownership interest held by a person, in each of two or more animal feeding operations as a joint tenant, tenant in common, shareholder, partner, member, beneficiary, or other equity interest holder. The majority ownership interest is a common ownership interest when it is held directly, indirectly through a spouse or dependent child, or both.

*“Confinement feeding operation”* means an animal feeding operation in which animals are confined to areas which are totally roofed.

*“Confinement feeding operation building”* or *“confinement building”* means a building used in conjunction with a confinement feeding operation to house animals.

*“Confinement feeding operation structure”* means an animal feeding operation structure that is part of a confinement feeding operation.

*“Confinement site”* means a site where there is located a manure storage structure which is part of a confinement feeding operation, other than a small animal feeding operation.

*“Confinement site manure applicator”* means a person, other than a commercial manure service or a commercial manure service representative, who applies manure on land if the manure originates from a manure storage structure.

*“Construction permit”* means a written approval of the department to construct an animal feeding operation structure.

*“Controlling interest”* means ownership of a confinement feeding operation as a sole proprietor or a majority ownership interest held by a person in a confinement feeding operation as a joint tenant, tenant in common, shareholder, partner, member, beneficiary, or other equity interest holder. The majority ownership interest is a controlling interest when it is held directly, indirectly through a spouse or dependent child, or both. The majority ownership interest must be a voting interest or otherwise control management of the confinement feeding operation.

*“Covered”* means organic or inorganic material, placed upon an animal feeding operation structure used to store manure, which significantly reduces the exchange of gases between the stored manure and the outside air. Organic materials include, but are not limited to, a layer of chopped straw, other crop residue, or a naturally occurring crust on the surface of the stored manure. Inorganic materials include, but are not limited to, wood, steel, aluminum, rubber, plastic, or Styrofoam. The materials shall shield at least 90 percent of the surface area of the stored manure from the outside air. Cover shall include an organic or inorganic material which current scientific research shows reduces detectable odor by at least 75 percent. A formed manure storage structure directly beneath a floor where animals are housed in a confinement feeding operation is deemed to be covered.

*“Critical public area”* means land that is owned or managed by the federal government, by the department, or by a political subdivision and that has unique scenic, cultural, archaeological, scientific, or historic significance or contains a rare or valuable ecological system. Critical public areas include:

- State wildlife refuges listed in 571—subrule 52.1(2);
- Recreation areas, state parks, state parks managed by another governmental agency, and state preserves as listed in 571—61.2(461A);
- County parks and recreation areas listed in “Outdoor Adventure Guide,” May 2002, Iowa Association of County Conservation Boards, which is incorporated by reference and is on file in the state law library;

- National wildlife refuges listed on the “Iowa Map Page,” June 24, 2002, which is incorporated by reference; this document is on file at the state law library where it is also available via the Internet at <http://midwest.fws.gov/maps/iowa.htm>;

- National monuments and national historic sites listed on the “National Park Service Guide for Iowa,” June 24, 2002, which is incorporated by reference; this document is on file at the state law library where it is also available via the Internet at <http://165.83.219.77/parksearch/state/state.cfm?statevar=ia>;

- Parks in Iowa that are under the jurisdiction of the U.S. Army Corps of Engineers and listed in “Lakeside Recreation for the Upper Mississippi Basin States,” June 24, 2002, which is incorporated by reference; this document is on file at the state law library where it is also available via the Internet at <http://www.usace.army.mil/inet/functions/cw/cecwo/uppermis.htm>.

“*Cropland*” means any land suitable for use in agricultural production including, but not limited to, feed, grain and seed crops, fruits, vegetables, forages, sod, trees, grassland, pasture and other similar crops.

“*Deep well*” means a well located and constructed in such a manner that there is a continuous layer of low permeability soil or rock at least 5 feet thick located at least 25 feet below the normal ground surface and above the aquifer from which water is to be drawn.

“*Designated area*” means a known sinkhole, or a cistern, abandoned well, unplugged agricultural drainage well, agricultural drainage well surface tile inlet, drinking water well, designated wetland, lake, or water source. A designated area does not include a terrace tile inlet or surface tile inlet other than an agricultural drainage well surface tile inlet.

“*Designated wetland*” means land designated as a protected wetland by the United States Department of the Interior or the department of natural resources, including but not limited to a protected wetland as defined in Iowa Code section 456B.1, if the land is owned and managed by the federal government or the department of natural resources. However, a designated wetland does not include land where an agricultural drainage well has been plugged causing a temporary wetland or land within a drainage district or levee district. Designated wetlands in the state are listed in “Designated Wetlands in Iowa,” effective August 23, 2006, which is incorporated by reference; this document is on file at the state law library where it is also available via the Internet at <http://www.iowadnr.gov/afo/files/deswetlands.pdf>.

“*Discontinued animal feeding operation*” means an animal feeding operation whose structures have been abandoned or whose use has been discontinued as evidenced by the removal of all animals and the owner or operator has no immediate plans to repopulate.

“*Discontinued animal feeding operation structure*” means an animal feeding operation structure that has been abandoned or whose use has been discontinued as evidenced by the removal of all animals from the structure and the owner or operator has no immediate plans to repopulate.

“*Document*” means any form required to be processed by the department under this chapter regulating animal feeding operations, including but not limited to applications or related materials for permits as provided in Iowa Code section 455B.200A as amended by 2002 Iowa Acts, chapter 1137, sections 28 and 29, manure management plans as provided in Iowa Code section 455B.203 as amended by 2002 Iowa Acts, chapter 1137, sections 38 to 41, comment or evaluation by a county board of supervisors considering an application for a construction permit, the department’s analysis of the application including using and responding to a master matrix pursuant to 2002 Iowa Acts, chapter 1137, section 35, and notices required under those sections.

“*Earthen manure storage basin*” means an earthen cavity, either covered or uncovered, which, on a regular basis, receives manure discharges from a confinement feeding operation if accumulated manure from the basin is completely removed at least once each year.

“*Earthen waste slurry storage basin*” means an uncovered and exclusively earthen cavity which, on a regular basis, receives manure discharges from a confinement animal feeding operation if accumulated manure from the basin is completely removed at least twice each year and which was issued a permit, constructed or expanded on or after July 1, 1990, but prior to May 31, 1995.

“*Educational institution*” means a building in which an organized course of study or training is offered to students enrolled in kindergarten through grade 12 and served by local school districts,

accredited or approved nonpublic schools, area educational agencies, community colleges, institutions of higher education under the control of the state board of regents, and accredited independent colleges and universities.

*“Egg washwater storage structure”* means an aerobic or anaerobic structure used to store the wastewater resulting from the washing and in-shell packaging of eggs. It does not include a structure also used as a manure storage structure.

*“Enforcement action”* means an action against a confinement feeding operation initiated by the department or the attorney general to enforce the provisions of Iowa Code chapter 455B or rules adopted pursuant to the chapter. An enforcement action begins when the department issues an administrative order to the person, when the department notifies a person in writing of intent to recommend referral or the commission refers the action to the attorney general pursuant to Iowa Code section 455B.141 or 455B.191, or when the attorney general institutes proceedings pursuant to section 455B.112, whichever occurs first. An enforcement action is pending until final resolution of the action by satisfaction of an administrative order; rescission or other final resolution of an administrative order or satisfaction of a court order, for which all administrative and judicial appeal rights are exhausted, expired, or waived.

*“Family”* means persons related to each other as spouse, parent, grandparent, sibling, and other lineal descendants of the grandparents or their spouses.

*“Family farm member”* means a person who participates in the same agricultural operation with a spouse, parent, grandparent, child, grandchild or sibling.

*“Family member”* means a person related to another person as parent, grandparent, child, grandchild, sibling, or a spouse of such related person.

*“Formed manure storage structure”* means a covered or uncovered impoundment used to store manure from an animal feeding operation, which has walls and a floor constructed of concrete, concrete block, wood, steel, or similar materials. Similar materials may include, but are not limited to, plastic, rubber, fiberglass, or other synthetic materials. Materials used in a formed manure storage structure shall have the structural integrity to withstand expected internal and external load pressures.

*“Freeboard”* means the difference in elevation between the liquid level and the top of the lowest point of animal feeding operation structure’s berm or the lowest external outlet from a formed manure storage structure. However, for a formed manure storage structure meeting the requirements of 65.15(20), “freeboard” means the difference in elevation between the liquid level and the structure’s overflow level.

*“Grassed waterway”* means a natural or constructed channel that is shaped or graded to required dimensions and established in suitable vegetation for the stable conveyance of runoff.

*“Highly erodible land”* means a field that has one-third or more of its acres or 50 acres, whichever is less, with soils that have an erodibility index of eight or more, as determined by rules promulgated by the United States Department of Agriculture.

*“Human sanitary waste”* means wastewater derived from domestic uses including bathroom and laundry facilities generating wastewater from toilets, baths, showers, lavatories and clothes washing.

*“Incidental”* means a duty which is secondary or subordinate to a primary job or function.

*“Incorporation”* means a soil tillage operation following the surface application of manure which mixes the manure into the upper four inches or more of soil.

*“Indemnity fund”* means the manure storage indemnity fund created in Iowa Code section 455J.2.

*“Injection”* means the application of manure into the soil surface using equipment that discharges it beneath the surface.

*“Interest”* means ownership of a confinement feeding operation as a sole proprietor or a 10 percent or more ownership interest held by a person in a confinement feeding operation as a joint tenant, tenant in common, shareholder, partner, member, beneficiary, or other equity interest holder. The ownership interest is an interest when it is held directly, indirectly through a spouse or dependent child, or both.

*“Internet”* means the federated international system that is composed of allied electronic communication networks linked by telecommunication channels that uses standardized protocols, and that facilitates electronic communication services, including but not limited to use of the World Wide Web; the transmission of electronic mail or messages; the transfer of files and data or other electronic information; and the transmission of voice, image, and video.

*“Karst terrain”* means land having karst formations that exhibit surface and subterranean features of a type produced by the dissolution of limestone, dolomite, or other soluble rock and characterized by closed depressions, sinkholes, or caves. If a 25-foot vertical separation distance can be maintained between the bottom of an unformed manure storage structure and limestone, dolomite, or other soluble rock, then the structure is not considered to be in karst terrain.

*“Livestock market”* means any place where animals are assembled from two or more sources for public auction, private sale, or on a commission basis, which is under state or federal supervision, including a livestock sale barn or auction market, if such animals are kept for ten days or less.

*“Low-pressure irrigation system”* means spray irrigation equipment which discharges manure from a maximum height of 9 feet in a downward direction, and which utilizes spray nozzles which discharge manure at a maximum pressure of 25 pounds per square inch.

*“Major water source”* means a water source that is a lake, reservoir, river or stream located within the territorial limits of the state, or any marginal river area adjacent to the state, if the water source is capable of supporting a floating vessel capable of carrying one or more persons during a total of a six-month period in one out of ten years, excluding periods of flooding. Major water sources in the state are listed in Table 1 and Table 2 at the end of this chapter.

*“Manager”* means a person who is actively involved in the operation of the service and makes management decisions in the operation of a commercial manure service.

*“Man-made manure drainage system”* means a drainage ditch, flushing system, or other drainage device which was constructed by human beings and is used for the purpose of transporting manure.

*“Manure”* means animal excreta or other commonly associated wastes of animals including, but not limited to, bedding, litter, or feed losses. Manure does not include wastewater resulting from the washing and in-shell packaging of eggs.

*“Manure storage structure”* means a formed manure storage structure or an unformed manure storage structure. A manure storage structure does not include an egg washwater storage structure.

*“New animal feeding operation”* means an animal feeding operation whose construction was begun after July 22, 1987, or whose operation is resumed after having been discontinued for a period of 12 months or more.

*“Nonpublic water supply”* means a water system that has fewer than 15 service connections or serves fewer than 25 people, or one that has more than 15 service connections or serves more than 25 people for less than 60 days a year.

*“One hundred year flood plain”* means the land adjacent to a major water source, if there is at least 1 percent chance that the land will be inundated in any one year, according to calculations adopted by rules adopted pursuant to Iowa Code section 459.103. In making the calculations, the department shall consider available maps or data compiled by the Federal Emergency Management Agency.

*“Operation permit”* means a written permit of the department authorizing the operation of a manure control facility or part of one.

*“Owner”* means the person who has title to the property where the animal feeding operation is located or the person who has title to the animal feeding operation structures. It does not include a person who has a lease to use the land where the animal feeding operation is located or to use the animal feeding operation structures.

*“Permanent vegetation cover”* means land which is maintained in perennial vegetative cover consisting of grasses, legumes, or both, and includes, but is not limited to, pastures, grasslands or forages.

*“Primary highway”* means a road designated as an interstate, U.S. highway or state highway in the 2002 Iowa Transportation Map, including streets in municipalities under the jurisdiction of the department of transportation.

*“Professional engineer”* means a person engaged in the practice of engineering as defined in Iowa Code section 542B.2 who is issued a certificate of licensure as a professional engineer pursuant to Iowa Code section 542B.17.

*“Public thoroughfare”* means a road, street, or bridge that is constructed or maintained by the state or a political subdivision.

*“Public use area”* means that portion of land owned by the United States, the state, or a political subdivision with facilities which attract the public to congregate and remain in the area for significant periods of time. Facilities include, but are not limited to, picnic grounds, campgrounds, cemeteries, lodges, shelter houses, playground equipment, lakes as listed in Table 2 at the end of this chapter, and swimming beaches. It does not include a highway, road right-of-way, parking areas, recreational trails or other areas where the public passes through, but does not congregate or remain in the area for significant periods of time.

*“Public water supply”* (also referred to as a system or a water system) means a system for the provision to the public of piped water for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Such term includes (1) any collection, treatment, storage, and distribution facilities under control of the supplier of water and used primarily in connection with such system, and (2) any collection (including wells) or pretreatment storage facilities not under such control which are used primarily in connection with such system. A public water supply system is either a “community water system” or a “noncommunity water system.”

*“Q100,”* as defined in 567—70.2(455B,481A), means a flood having a 1 percent chance of being equaled or exceeded in any one year as determined by the department.

*“Qualified confinement feeding operation”* means a confinement feeding operation which has an animal unit capacity of:

1. 5,333 or more for animals other than swine as part of a farrowing and gestating operation or farrow-to-finish operation or cattle as part of a cattle operation;
2. 2,500 or more for a swine farrowing and gestating operation;
3. 5,400 or more for a swine farrow-to-finish operation;
4. 8,500 or more for a confinement feeding operation maintaining cattle.

*“Release”* means an actual, imminent or probable discharge of manure from an animal feeding operation structure to surface water, groundwater, drainage tile line or intake, or to a designated area resulting from storing, handling, transporting or land-applying manure.

*“Religious institution”* means a building in which an active congregation is devoted to worship.

*“Research college”* means an accredited public or private college or university, including but not limited to a university under control of the state board of regents as provided in Iowa Code chapter 262, or a community college under the jurisdiction of a board of directors for a merged area as provided in Iowa Code chapter 260C, if the college or university performs research or experimental activities regarding animal agriculture or agronomy.

*“Residence”* means a house or other building, including all structures attached to the building, not owned by the owner of the animal feeding operation, which meets all of the following criteria at the location of the intended residence:

1. Used as a place of habitation for humans on a permanent and frequent basis.
2. Not readily mobile.
3. Connected to a permanent source of electricity, a permanent private water supply or a public water supply system and a permanent domestic sewage disposal system including a private, semipublic or public sewage disposal system.
4. Assessed and taxed as real property.

If a house or other building has not been occupied by humans for more than six months in the last two years, or if a house or other building has been constructed or moved to its current location within six months, the owner of the intended residence has the burden of proving that the house or other building is a residence. Paragraph “3” shall not apply to a house or other building inhabited by persons who are exempt from the compulsory education standards of Iowa Code section 299.24 and whose religious principles or tenets prohibit the use of the utilities listed.

*“Restricted spray irrigation equipment”* means spray irrigation equipment which disperses manure through an orifice at a rate of 80 pounds per square inch or more.

*“School”* means an educational institution.

*“Seasonal high water table”* means the part of the soil profile closest to the soil surface that becomes saturated (usually in the spring) as observed in a monitoring well or determined by recognition of soil redoxomorphic features.

NOTE: “Redoxomorphic features” refers to the gleying or mottling or both that occur under saturated conditions within the soil profile.

*“Secondary containment barrier”* means a structure used to retain accidental manure overflow from a manure storage structure.

*“Shallow well”* means a well located and constructed in such a manner that there is not a continuous layer of low permeability soil or rock (or equivalent retarding mechanism acceptable to the department) at least 5 feet thick, the top of which is located at least 25 feet below the normal ground surface and above the aquifer from which water is to be drawn.

*“Small animal feeding operation”* means an animal feeding operation which has an animal unit capacity of 500 or fewer animal units.

*“Spray irrigation equipment”* means mechanical equipment used for the aerial application of manure, if the equipment receives manure from a manure storage structure during application via a pipe or hose connected to the structure, and includes a type of equipment customarily used for aerial application of water to aid the growing of general farm crops.

*“Substantial improvements”* means increasing the animal unit capacity of a facility by 1 percent through 150 percent.

*“Substantial labor”* means providing 50 percent or more of the total annual hours of physical work necessary to maintain animals in a confinement feeding operation.

*“Swine farrow-to-finish operation”* means a confinement feeding operation in which porcine are produced and in which a primary portion of the phases of the production cycle is conducted at one confinement feeding operation. Phases of the production cycle include, but are not limited to, gestation, farrowing, growing and finishing. At a minimum, farrowing, growing, and finishing shall be conducted at the operation with a majority of the pigs farrowed at the site finished to market weight in order to qualify as a farrow-to-finish operation.

*“Thoroughfare”* means a road, street, bridge or highway open to the public and constructed or maintained by the state or a political subdivision.

*“Unformed manure storage structure”* means a covered or uncovered impoundment used to store manure, other than a formed manure storage structure, which includes an anaerobic lagoon, aerobic structure, or earthen manure storage basin.

*“Watercourse”* means any lake, river, creek, ditch, or other body of water or channel having definite banks and bed with water flow or the occurrence of water, except lakes or ponds without outlet to which only one landowner is riparian. Watercourse does not include water flow or the occurrence of water in a terrace, grassed waterway, solids settling basin, road ditch, areas subject to rill erosion, or other similar areas.

*“Water of the state”* means any stream, lake, pond, marsh, watercourse, waterway, well, spring, reservoir, aquifer, irrigation system, drainage system, and any other body or accumulation of water, surface or underground, natural or artificial, public or private, which are contained within, flow through or border upon the state or any portion thereof.

*“Water source”* means a lake, river, reservoir, creek, stream, ditch, or other body of water or channel having definite banks and a bed with water flow, except lakes or ponds without outlet to which only one landowner is riparian.

*“Wetted perimeter”* means the outside edge of land where the direct discharge of manure occurs from spray irrigation equipment.

**567—65.2(455B) Minimum manure control requirements and reporting of releases.** Water pollution control facilities shall be constructed and maintained to meet the minimum manure control requirements stated in subrules 65.2(1) to 65.2(8) of this rule. A release shall be reported to the department as provided in subrule 65.2(9) of this rule.

**65.2(1)** Rescinded IAB 9/14/05, effective 9/14/05.

**65.2(2)** Rescinded IAB 9/14/05, effective 9/14/05.

**65.2(3)** The minimum level of manure control for a confinement feeding operation shall be the retention of all manure produced in the confinement enclosures between periods of manure application. In no case shall manure from a confinement feeding operation be discharged directly into a water of the state or into a tile line that discharges to waters of the state.

*a.* Control of manure from confinement feeding operations may be accomplished through use of manure storage structures or other manure control methods. Sufficient capacity shall be provided in the manure storage structure to store all manure between periods of manure application. Additional capacity shall be provided if precipitation, manure or wastes from other sources can enter the manure storage structure.

*b.* Manure shall be removed from the control facilities as necessary to prevent overflow or discharge of manure from the facilities. Manure stored in unformed manure storage structures or earthen waste slurry storage basins shall be removed from the structures as necessary to maintain a minimum of two feet of freeboard in the structure, unless a greater level of freeboard is required to maintain the structural integrity of the structure or prevent manure overflow. Manure stored in unroofed formed manure storage structures shall be removed from the structures as necessary to maintain a minimum of one foot of freeboard in the structure unless a greater level of freeboard is required to maintain the structural integrity of the structure or prevent manure overflow.

*c.* To ensure that adequate capacity exists in the manure storage structure to retain all manure produced during periods when manure application cannot be conducted (due to inclement weather conditions, lack of available land disposal areas, or other factors), the manure shall be removed from the manure storage structure as needed prior to these periods.

**65.2(4)** If site topography, operation procedures, experience, or other factors indicate that a greater or lesser level of manure control than that specified in subrule 65.2(1), 65.2(2), or 65.2(3) is required to provide an adequate level of water pollution control for a specific animal feeding operation, the department may establish different minimum manure control requirements for that operation.

**65.2(5)** In lieu of using the manure control methods specified in subrule 65.2(1), 65.2(2), or 65.2(3), the department may allow the use of manure treatment or other methods of manure control if it determines that an adequate level of manure control will result.

**65.2(6)** No direct discharge shall be allowed from an animal feeding operation into a publicly owned lake, a sinkhole, or an agricultural drainage well.

**65.2(7)** All manure removed from an animal feeding operation or its manure control facilities shall be land-applied in a manner which will not cause surface or groundwater pollution. Application in accordance with the provisions of state law, and the rules and guidelines in this chapter, shall be deemed as compliance with this requirement.

**65.2(8)** As soon as practical but not later than six months after the use of an animal feeding operation is discontinued, all manure shall be removed from the discontinued animal feeding operation and its manure control facilities and be land-applied.

**65.2(9)** A release, as defined in rule 65.1(455B), shall be reported to the department as provided in this subrule. This subrule does not apply to land application of manure in compliance with these rules.

*a. Notification.* A person storing, handling, transporting, or land-applying manure from a confinement feeding operation who becomes aware of a release shall notify the department of the occurrence of release as soon as possible but not later than six hours after the onset or discovery of the release by contacting the department at (515)281-8694. The local police department or the office of the sheriff of the affected county shall also be contacted within the same time period if the spill involves a public roadway and public safety could be threatened. Reports made pursuant to this rule shall be confirmed in writing as provided in 65.2(9)“c.”

*b. Verbal report.* The verbal report of such a release should provide information on as many items listed in 65.2(9)“c” as available information will allow.

*c. Written report.* The written report of a release shall be submitted at the request of the department within 30 days after the verbal report of the release and contain at a minimum the following information:

- (1) The approximate location of alleged release (including at a minimum the quarter-quarter section, township and county in which the release occurred or was discovered).
- (2) The time and date of onset of the alleged release, if known, and the time and date of the discovery of the alleged release.
- (3) The time and date of the verbal report to the department of the release.
- (4) The name, mailing address and telephone number of the person reporting the release.
- (5) The name, mailing address and telephone number of any other person with knowledge of the event who can be contacted for further information.
- (6) The source of the manure allegedly released (e.g., formed storage, earthen storage).
- (7) The estimated or known volume of manure allegedly released.
- (8) The weather conditions at the time of the onset or discovery of the release.
- (9) If known, the circumstances under which the alleged release occurred or exists (e.g., overflow, storage structure breach, equipment malfunction or breakdown, land runoff).
- (10) The approximate location of the nearest stream or other water body which is or could be impacted by the alleged release, and the approximate location to the alleged release of any known tile intakes or tile lines which could be a direct conveyance to a surface water or groundwater.
- (11) A description of any containment or remedial measures taken to minimize the impact of the release.

(12) Any information that may assist the department in evaluating the release.

*d. Reporting of subsequent findings.* All subsequent findings and laboratory results should be reported and submitted in writing to the department as soon as they become available.

*e. Waiver of notification requirement.* A waiver from the notification requirement of paragraph "a" of this subrule may be granted by the department for a release to a specific drainage tile line or intake if sufficient information is provided to demonstrate that the drainage tile line or intake will not result in a discharge to a water of the state.

#### **567—65.3(455B) Requirements and recommended practices for land application of manure.**

**65.3(1)** *Application rate based on crop nitrogen use.* A confinement feeding operation that is required to submit a manure management plan to the department under rule 65.16(455B) shall not apply manure in excess of the nitrogen use levels necessary to obtain optimum crop yields. Calculations to determine the maximum manure application rate allowed under this subrule shall be performed pursuant to rule 65.17(455B).

**65.3(2)** *General requirements for application rates and practices.*

*a.* For confinement feeding operations required to submit a manure management plan to the department under rule 65.16(455B), application rates and practices shall be determined pursuant to rule 65.17(455B).

*b.* For manure originating from an anaerobic lagoon or aerobic structure, application rates and practices shall be used to minimize groundwater or surface water pollution resulting from application, including pollution caused by runoff or other manure flow resulting from precipitation events. In determining appropriate application rates and practices, the person land-applying the manure shall consider the site conditions at the time of application including anticipated precipitation and other weather factors, field residue and tillage, site topography, the existence and depth of known or suspected tile lines in the application field, and crop and soil conditions, including a good-faith estimate of the available water holding capacity given precipitation events, the predominant soil types in the application field and planned manure application rate.

*c.* Spray irrigation equipment shall be operated in a manner and with an application rate and timing that does not cause runoff of the manure onto the property adjoining the property where the spray irrigation equipment is being operated.

*d.* For manure from an earthen waste slurry storage basin, earthen manure storage basin, or formed manure storage structure, restricted spray irrigation equipment shall not be used unless the manure has been diluted with surface water or groundwater to a ratio of at least 15 parts water to 1 part manure.

Emergency use of spray irrigation equipment without dilution shall be allowed to minimize the impact of a release as approved by the department.

**65.3(3)** *Separation distance requirements for land application of manure.* Land application of manure shall be separated from objects and locations as specified in this subrule.

*a.* For liquid manure from a confinement feeding operation, the required separation distance from a residence not owned by the titleholder of the land, a business, a church, a school, or a public use area is 750 feet, as specified in Iowa Code section 455B.162. The separation distance for application of manure by spray irrigation equipment shall be measured from the actual wetted perimeter and the closest point of the residence, business, church, school, or public use area.

*b.* The separation distance specified in paragraph 65.3(3) “*a*” shall not apply if any of the following apply:

(1) The liquid manure is injected into the soil or incorporated within the soil not later than 24 hours after the original application.

(2) The titleholder of the land benefitting from the separation distance requirement executes a written waiver with the titleholder of the land where the manure is applied.

(3) The liquid manure originates from a small animal feeding operation.

(4) The liquid manure is applied by low-pressure spray irrigation equipment pursuant to paragraph 65.3(3) “*d*.”

*c.* Separation distance for spray irrigation from property boundary line. Spray irrigation equipment shall be set up to provide for a minimum distance of 100 feet between the wetted perimeter as specified in the spray irrigation equipment manufacturer’s specifications and the boundary line of the property where the equipment is being operated. The actual wetted perimeter, as determined by wind speed and direction and other operating conditions, shall not exceed the boundary line of the property where the equipment is being operated. For property which includes a road right-of-way, railroad right-of-way or an access easement, the property boundary line shall be the boundary line of the right-of-way or easement.

*d.* Distance from structures for low-pressure irrigation systems. Low-pressure irrigation systems shall have a minimum separation distance of 250 feet between the actual wetted perimeter and the closest point of a residence, a business, church, school or public use area.

*e.* Variances. Variances to paragraph “*c*” of this subrule may be granted by the department if sufficient and proposed alternative information is provided to substantiate the need and propriety for such action. Variances may be granted on a temporary or permanent basis. The request for a variance shall be in writing and include information regarding:

(1) The type of manure storage structure from which the manure will be applied by spray irrigation equipment.

(2) The spray irrigation equipment to be used in the application of manure.

(3) Other information as the department may request.

*f.* Agricultural drainage wells. Manure shall not be applied by spray irrigation equipment on land located within an agricultural drainage well area.

*g.* Designated areas. A person shall not apply manure on land within 200 feet from a designated area, or in the case of a high quality water resource, within 800 feet, unless one of the following applies:

(1) The manure is land-applied by injection or incorporation on the same date as the manure was land-applied.

(2) An area of permanent vegetation cover, including filter strips and riparian forest buffers, exists for 50 feet surrounding the designated area other than an unplugged agricultural drainage well or surface intake to an unplugged agricultural drainage well, and the area of permanent vegetation cover is not subject to manure application.

**65.3(4)** *Recommended practices.* Except as required by rule in this chapter, the following practices are recommended:

*a.* *Nitrogen application rates.* To minimize the potential for leaching to groundwater or runoff to surface waters, nitrogen application from all sources, including manure, legumes, and commercial

fertilizers, should not be in excess of the nitrogen use levels necessary to obtain optimum crop yields for the crop being grown.

*b. Phosphorous application rates.* To minimize phosphorous movement to surface waters, manure should be applied at rates equivalent to crop uptake when soil tests indicate adequate phosphorous levels. Phosphorous application more than crop removal can be used to obtain maximum crop production when soil tests indicate very low or low phosphorous levels.

*c. Manure application on frozen or snow-covered cropland.* Manure application on frozen or snow-covered cropland should be avoided where possible. If manure is spread on frozen or snow-covered cropland, application should be limited to areas on which:

- (1) Land slopes are 4 percent or less, or
- (2) Adequate erosion control practices exist. Adequate erosion control practices may include such practices as terraces, conservation tillage, cover crops, contour farming or similar practices.

*d. Manure application on cropland subject to flooding.* Manure application on cropland subject to flooding more than once every ten years should be injected during application or incorporated into the soil after application. Manure should not be spread on such areas during frozen or snow-covered conditions.

*e. Manure application on land adjacent to water bodies.* Unless adequate erosion controls exist on the land and manure is injected or incorporated into the soil, manure application should not be done on land areas located within 200 feet of and draining into a stream or surface intake for a tile line or other buried conduit. No manure should be spread on waterways except for the purpose of establishing seedings.

*f. Manure application on steeply sloping cropland.* Manure application on tilled cropland with greater than 10 percent slopes should be limited to areas where adequate soil erosion control practices exist. Injection or soil incorporation of manure is recommended where consistent with the established soil erosion control practices.

**567—65.4(455B) Operation permit required.** A confinement feeding operation shall apply for and obtain an operation permit if the department notifies the operation in writing that, in accordance with the departmental evaluation provisions of 65.5(2)“a,” application for an operation permit is required.

**567—65.5(455B) Departmental evaluation.**

**65.5(1)** The department may evaluate any animal feeding operation to determine if any of the following conditions exist:

*a.* Manure from the operation is being discharged into a water of the state and the operation is not providing the applicable minimum level of manure control as specified in subrule 65.2(1), 65.2(2), or 65.2(3);

*b.* Manure from the operation is causing or may reasonably be expected to cause pollution of a water of the state; or

*c.* Manure from the operation is causing or may reasonably be expected to cause a violation of state water quality standards.

**65.5(2)** If departmental evaluation determines that any of the conditions listed in subrule 65.5(1) exist, the operation shall:

*a.* Apply for an operation permit if the operation receives a written notification from the department that it is required to apply for an operation permit. However, no operation with an animal capacity less than that specified in the following subparagraphs shall be required to apply for a permit unless manure from the operation is discharged into a water of the state through a man-made manure drainage system or is discharged into a water of the state which traverses the operation:

- (1) 300 beef cattle.
- (2) 200 dairy cattle.
- (3) 750 butcher and breeding swine (over 55 lbs.).
- (4) 3000 sheep or lambs.
- (5) 16,500 turkeys.

- (6) 30,000 broiler or layer chickens.
- (7) 150 horses.
- (8) 300 animal units.

*b.* Institute necessary remedial actions to eliminate the conditions if the operation receives a written notification from the department of the need to correct the conditions. This paragraph shall apply to all permitted and unpermitted animal feeding operations, regardless of animal capacity.

**65.5(3)** The department may evaluate any proposed confinement feeding operation or proposed expansion of a confinement feeding operation that requires a construction permit or manure management plan with respect to its potential adverse impacts on natural resources or the environment.

*a.* In conducting the evaluation, the department shall consider the following factors:

- (1) The likelihood manure will be applied to frozen or snow-covered cropland.
- (2) The proximity of the structures or manure application areas to sensitive areas, including but not limited to publicly owned land, designated areas, trout streams and karst terrain.
- (3) Topography, slope, vegetation, potential means or routes of conveyance of manure spilled or land-applied. This factor includes but is not limited to whether the manure application areas involve cropland with predominant slopes greater than 9 percent without a conservation plan approved by the local soil and water conservation district or its equivalent and whether manure for land application is hauled or otherwise transported more than five miles.

(4) Whether the operation or manure application area is or will be located in a two-year capture zone for a public water supply.

*b.* In addition to the requirements in rules 65.9(455B), 65.10(455B), 65.11(455B), 65.15(455B) and 65.17(459), the department may deny a construction permit, disapprove a manure management plan or prohibit construction of the proposed operation at the proposed location if the director determines from the evaluation conducted pursuant to this subrule that the operation would reasonably be expected to result in any of the following impacts:

- (1) Manure from the operation will cause pollution of a water of the state.
- (2) Manure from the operation will cause a violation of state water quality standards.
- (3) An adverse effect on natural resources or the environment will occur in a specific area due to the current concentration of animal feeding operations or the associated manure application areas.

*c.* The department also may establish permit conditions or require amendments to the manure management plan in addition to the minimum requirements established for such operations, on the location of structures or manure application, or other operational conditions necessary to avoid or minimize the adverse impacts.

*d.* A construction permit denial or condition, a manure management plan disapproval or required amendment, or a prohibition of construction pursuant to this subrule may be appealed according to the contested case procedures set forth in 561—Chapter 7.

<sup>1</sup> Objection to 65.5(3) filed by the Administrative Rules Review Committee October 10, 2006. See text of Objection at end of Chapter 65.

### **567—65.6(455B) Operation permits.**

**65.6(1)** *Existing animal feeding operations holding an operation permit.* Animal feeding operations which hold a valid operation permit issued prior to July 22, 1987, are not required to reapply for an operation permit. However, the operations are required to apply for permit renewal in accordance with subrule 65.6(10).

**65.6(2)** *Existing animal feeding operations not holding an operation permit.* Animal feeding operations in existence on July 22, 1987, which are covered by the operation-permit provisions of subrule 65.4(1) or 65.4(2) but have not obtained a permit, shall apply for an operation permit prior to January 22, 1988. Once application has been made, the animal feeding operation is authorized to continue to operate without an operation permit until the application has either been approved or disapproved by the department.

**65.6(3) Expansion of existing animal feeding operations.** A person intending to expand an existing animal feeding operation which, upon completion of the expansion, will be covered by the operation-permit provisions of subrule 65.4(1) or 65.4(2) shall apply for an operation permit at least 180 days prior to the date operation of the expanded facility is scheduled. Operation of the expanded portion of the facility shall not begin until an operation permit has been obtained.

**65.6(4) New animal feeding operations.** A person intending to begin a new animal feeding operation which, upon completion, will be covered by the operation-permit provisions of subrule 65.4(1) or 65.4(2) shall apply for an operation permit at least 180 days prior to the date operation of the new animal feeding facility is scheduled. Operation of the new facility shall not begin until an operation permit has been obtained.

**65.6(5) Permits required as a result of departmental evaluation.** An animal feeding operation which is required to apply for an operation permit as a result of departmental evaluation (in accordance with the provisions of 65.5(2)“a”) shall apply for an operation permit within 90 days of receiving written notification of the need to obtain a permit. Once application has been made, the animal feeding operation is authorized to continue to operate without a permit until the application has either been approved or disapproved by the department.

**65.6(6) Voluntary operation permit applications.** Applications for operation permits received from animal feeding operations not meeting the operation-permit requirements of subrules 65.4(1) to 65.4(3) will be acknowledged by the department and returned to the applicant. Operation permits will not be issued for facilities not meeting the permit requirements of subrules 65.4(1) to 65.4(3).

**65.6(7) Application forms.** An application for an operation permit shall be made on a form provided by the department. The application shall be complete and shall contain detailed information as deemed necessary by the department. The application shall be signed by the person who is legally responsible for the animal feeding operation and its associated manure control system.

**65.6(8) Compliance schedule.** When necessary to comply with a present standard or a standard which must be met at a future date, an operation permit shall include a schedule for modification of the permitted facility to meet the standard. The schedule shall not relieve the permittee of the duty to obtain a construction permit pursuant to subrule 65.7(1).

**65.6(9) Permit conditions.** Operation permits shall contain conditions considered necessary by the department to ensure compliance with all applicable rules of the department, to ensure that the manure-control system is properly operated and maintained, to protect the public health and beneficial uses of state waters, and to prevent water pollution from manure storage or application operations. Self-monitoring and reporting requirements which may be imposed on animal feeding operations are specified in 567—subrule 63.5(1).

**65.6(10) Permit renewal.** An operation permit may be issued for any period of time not to exceed five years. An application for renewal of an operation permit must be submitted to the department at least 180 days prior to the date the permit expires. Each permit to be renewed shall be subject to the provisions of those rules of the department which apply to the facility at the time of renewal.

A permitted animal feeding operation which does not meet the operation-permit requirements of subrules 65.4(1) to 65.4(3) will be exempted from the need to retain that permit at the time of permit renewal, and the existing operation permit will not be renewed.

**65.6(11) Permit modification, suspension or revocation.** The department may modify, suspend, refuse to renew or revoke in whole or part any operation permit for cause. Cause for modification, suspension or revocation of a permit may include the following:

- a. Violation of any term or condition of the permit.
- b. Obtaining a permit by misrepresentation of fact or failure to disclose fully all material facts.
- c. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.
- d. Failure to submit the records and information that the department requires in order to ensure compliance with the operation and discharge conditions of the permit.
- e. A determination by the department that the continued operation of a confinement feeding operation constitutes a clear, present and impending danger to public health or the environment.

**65.6(12)** *Concentrated animal feeding operation registration program.* Rescinded IAB 4/12/06, effective 5/17/06.

**567—65.7(455B) Construction permits.**

**65.7(1)** *Animal feeding operations required to obtain a construction permit.*

*a.* An animal feeding operation covered by the operation permit provisions of subrules 65.4(1) to 65.4(3) shall obtain a construction permit prior to constructing, installing, or modifying a manure control system for that operation or reopening the operation if it was discontinued for 24 months or more.

*b.* Except as provided in subrule 65.7(2), a confinement feeding operation shall obtain a construction permit prior to any of the following:

(1) Constructing or modifying any unformed manure storage structure, or constructing or modifying a confinement building that uses an unformed manure storage structure.

(2) Constructing, installing or modifying a confinement building or a formed manure storage structure at a confinement feeding operation if, after construction, installation or expansion, the animal unit capacity of the operation is 1,000 animal units or more. This subparagraph also applies to confinement feeding operations that store manure exclusively in a dry form.

(3) Initiating a change that would result in an increase in the volume of manure or a modification in the manner in which manure is stored in any unformed manure storage structure, even if no construction or physical alteration is necessary. Increases in the volume of manure due to an increase in animal capacity, animal weight capacity or animal unit capacity up to the limits specified in a previously issued construction permit do not require a new construction permit.

(4) Initiating a change, even if no construction or physical alteration is necessary, that would result in an increase in the volume of manure or a modification in the manner in which manure is stored in a formed manure storage structure if, after the change, the animal unit capacity of the operation is 1,000 animal units or more. Increases in the volume of manure due to an increase in animal capacity, animal weight capacity or animal unit capacity up to the limits specified in a previously issued construction permit do not require a new construction permit.

(5) Constructing or modifying any egg washwater storage structure or a confinement building at a confinement feeding operation that includes an egg washwater storage structure.

(6) Initiating a change that would result in an increase in the volume of egg washwater or a modification in the manner in which egg washwater is stored, even if no construction or physical alteration is necessary. Increases in the volume of egg washwater due to an increase in animal capacity, animal weight capacity or animal unit capacity up to the limits specified in a previously issued construction permit do not require a new construction permit.

(7) Repopulating a confinement feeding operation if it was closed for 24 months or more and if any of the following apply:

1. The confinement feeding operation uses an unformed manure storage structure or egg washwater storage structure;

2. The confinement feeding operation includes only confinement buildings and formed manure storage structures and has an animal unit capacity of 1,000 animal units or more.

(8) Installing a permanent manure transfer piping system, unless the department determines that a construction permit is not required.

Repairs to a confinement building or additions such as fans, slats, gates, roofs, or covers do not require a construction permit. In some instances, the department may determine that a construction permit is not required to increase the volume of manure or egg washwater or a modification in the manner in which manure or egg washwater is stored if the increase or modification is deemed insignificant. Plans for repairs or modifications to a manure storage structure shall be submitted to the department to determine if a permit is required.

**65.7(2)** *Animal feeding operations not required to obtain a construction permit.*

*a.* A construction permit shall not be required for an animal feeding operation structure used in conjunction with a small animal feeding operation.

b. A construction permit shall not be required for an animal feeding operation structure related to research activities and experiments performed under the authority and regulations of a research college.

**65.7(3) Operations that shall not be issued construction permits.**

a. The department shall not issue a construction permit to a person if an enforcement action by the department, relating to a violation of this chapter concerning a confinement feeding operation in which the person has an interest, is pending.

b. The department shall not issue a construction permit to a person for five years after the date of the last violation committed by a person or confinement feeding operation in which the person holds a controlling interest during which the person or operation was classified as a habitual violator under Iowa Code section 455B.191.

c. The department shall not issue a construction permit to expand or modify a confinement feeding operation for one year after completion of the last construction or modification at the operation, if a permit was not required for the last construction or modification. The department, upon good cause demonstrated by the applicant, shall grant a waiver to this rule.

d. The department shall not issue a construction permit for a confinement feeding operation structure that is proposed to be located on the one hundred year flood plain. Placing fill material on flood plain land to elevate the land above the one hundred year flood level will not be considered as removing the land from the one hundred year flood plain for the purpose of this subrule.

**65.7(4) Plan review criteria.** Review of plans and specifications shall be conducted to determine the potential of the proposed manure control system to achieve the level of manure control being required of the animal feeding operation. In conducting this review, applicable criteria contained in federal law, state law, these rules, natural resource conservation service design standards and specifications unless inconsistent with federal or state law or these rules, and department of commerce precipitation data shall be used. If the proposed facility plans are not adequately covered by these criteria, applicable criteria contained in current technical literature shall be used.

**65.7(5) Expiration of construction permits.** A construction permit issued prior to June 15, 2005, shall expire if construction, as defined in rule 65.8(455B), is not begun within one year of the date of issuance and shall expire on June 15, 2012, if construction is not completed by June 14, 2012. A construction permit issued on or after June 15, 2005, shall expire if construction, as defined in rule 65.8(455B), is not begun within one year and completed within four years of the date of issuance. The director may grant an extension of time to begin or complete construction if it is necessary or justified, upon showing of such necessity or justification to the director, unless a person who has an interest in the proposed operation is the subject of a pending enforcement action or a person who has a controlling interest in the proposed operation has been classified as a habitual violator.

**65.7(6) Revocation of construction permits.** The department may revoke a construction permit or refuse to renew a permit expiring according to subrule 65.7(5) if it determines that the operation of the confinement feeding operation constitutes a clear, present and impending danger to public health or the environment.

**65.7(7) Permit prior to construction.** An applicant for a construction permit shall not begin construction at the location of a site planned for the construction of an animal feeding operation structure, including an aerobic structure, until the person has been granted a permit for the construction of the structure by the department.

**567—65.8(455B) Construction.** For purposes of these rules:

**65.8(1)** Construction of an animal feeding operation structure begins or an animal feeding operation structure is constructed when any of the following occurs:

a. Excavation for a proposed animal feeding operation structure, or excavation for footings for a proposed animal feeding operation structure.

b. Installation of forms for concrete for an animal feeding operation structure.

c. Installation of piping for movement of manure within or between animal feeding operation structures.

**65.8(2)** Construction does not begin upon occurrence of any of the following:

- a. Removal of trees, brush, or other vegetative growth.
- b. Construction of driveways or roads.
- c. General earth moving for leveling or compacting at the site.
- d. Installation of temporary utility services.

**65.8(3) Prohibition on construction.**

a. A person shall not construct or expand an animal feeding operation structure which is part of a confinement feeding operation, if the person is either of the following:

(1) A party to a pending action for a violation of this chapter concerning a confinement feeding operation in which the person has a controlling interest and the action is commenced in district court by the attorney general.

(2) A habitual violator.

b. A person shall not construct or expand an animal feeding operation structure which is part of a confinement feeding operation for five years after the date of the last violation committed by a person or a confinement feeding operation in which the person holds a controlling interest during which the person or operation was classified as a habitual violator under Iowa Code section 455B.191.

c. Paragraphs "a" and "b" shall not prohibit a person from completing the construction or expansion of an animal feeding operation structure, if either of the following applies:

(1) The person has an unexpired permit for the construction or expansion of the animal feeding operation structure.

(2) The person is not required to obtain a permit for the construction or expansion of the animal feeding operation structure.

d. A confinement feeding operation structure shall not be constructed on the one hundred year flood plain. Placing fill material on flood plain land to elevate the land above the one hundred year flood level will not be considered as removing the land from the one hundred year flood plain for the purpose of this paragraph.

e. A person shall not construct a confinement feeding operation structure on land that contains alluvial soils, according to the Soil Survey published by the Natural Resources Conservation Service of the United States Department of Agriculture, unless the person has received a declaratory order or a determination from the department of natural resources that the proposed location of the structure is not on the one hundred year flood plain. The declaratory order or determination may be obtained as follows:

(1) If the person does not apply for a construction permit as provided in Iowa Code section 459.303 and rule 567—65.9(455B), the person must petition the department for a declaratory order pursuant to Iowa Code section 17A.9 and 561—Chapter 6 to determine whether the location of the proposed confinement feeding operation structure is on the one hundred year flood plain. The person is strongly encouraged to contact the department prior to submitting the petition to determine the nature and extent of information required for the petition to be considered complete. To be considered complete, the petition must include all information pursuant to 567—Chapters 70 to 76 necessary to determine if the confinement feeding operation structure is proposed to be located on a one hundred year flood plain. This information may include land surveys to determine elevations of the land within the footprint of the planned operation as well as flood plain and channel geometry. The department shall issue a declaratory order in response to a complete petition, notwithstanding any other provision provided in Iowa Code section 17A.9 to the contrary, within 30 days from the date that the complete petition is filed with the department. The declaratory order shall state whether or not the proposed location is on the one hundred year flood plain.

(2) If the person does apply for a construction permit as provided in Iowa Code section 459.303, the person must identify in the application whether or not the land contains alluvial soils. The department shall determine if the confinement feeding operation structure is proposed to be located on the one hundred year flood plain. If the proposed location of the confinement feeding operation structure is on the one hundred year flood plain, the department shall disapprove the construction permit. In the event that the proposed location of the confinement feeding operation structure is not on the one hundred year flood plain, the department may issue a construction permit as provided in Iowa Code section 459.303 and rule 567—65.9(455B) if all other applicable criteria are satisfied.

**567—65.9(455B) Construction permit application.**

**65.9(1) Confinement feeding operations.** Application for a construction permit for a confinement feeding operation shall be made on a form provided by the department. The application shall include all of the information required. At the time the department receives a complete application, the department shall make a determination regarding the approval or denial of the permit within 60 days. However, the 60-day requirement shall not apply to an application if the applicant is not required to obtain a permit. A construction permit application for a confinement feeding operation shall include at least the following:

- a. The owner and the name of the confinement feeding operation, including mailing address and telephone number.
- b. The contact person for the confinement feeding operation, including mailing address and telephone number.
- c. The location of the confinement feeding operation.
- d. Whether the application is for the expansion of an existing or the construction of a proposed confinement feeding operation.
- e. The animal weight capacity by animal species of the current confinement feeding operation to be expanded, if applicable, and of the proposed confinement feeding operation.
- f. For a manure storage structure in which manure is stored in a liquid or semiliquid form or for an egg washwater storage structure, an engineering report, construction plans and specifications, prepared by a licensed professional engineer or by Natural Resources Conservation Service personnel, that detail the proposed structures.
- g. A report on soil corings in the area of the aerobic structure, anaerobic lagoon, egg washwater storage structure, or manure storage basin, as described in subrule 65.17(6), if an earthen lagoon, structure or basin is being constructed.
- h. Payment to the department of the indemnity fund fee as required in Iowa Code section 455J.3.
- i. If the confinement feeding operation contains three or more animal feeding operation structures, a licensed professional engineer shall certify that either the construction of the structure will not impede the drainage through established drainage tile lines which cross property boundary lines or that if the drainage is impeded during construction, the drainage tile will be rerouted to reestablish the drainage prior to operation of the structure.
- j. Information (e.g., maps, drawings, aerial photos) that clearly shows the proposed location of the animal feeding operation structures, any locations or objects from which a separation distance is required by Iowa Code sections 455B.162 and 455B.204 and that the structures will meet all applicable separation distances.
- k. The names of all parties with an interest or controlling interest in the confinement feeding operation who also have an interest or controlling interest in at least one other confinement feeding operation in Iowa, and the names and locations of such other operations.
- l. Documentation that a copy of the permit application and manure management plan has been provided to the county board of supervisors or county auditor in the county where the operation or structure subject to the permit is to be located, and documentation of the date received by the county.
- m. A fee of \$500, consisting of a construction permit application fee of \$250 and the manure management plan filing fee of \$250 as required in 65.16(6).
- n. Rescinded IAB 2/19/03, effective 3/1/03.
- o. Information necessary for the department to determine: (1) if the confinement feeding operation is proposed to be located on a one hundred year flood plain; (2) if a flood plain development permit for the operation is required; and (3) if a flood plain development permit may be issued if one is required, pursuant to 567—Chapters 70 to 76. This information may include land surveys to determine elevations of the land within the footprint of the planned operation as well as flood plain and channel geometry.
- p. A copy of any master matrix evaluation provided to the county.

**65.9(2) Open feedlots.** Rescinded IAB 9/14/05, effective 9/14/05.

**567—65.10(455B) Construction permit application review process, site inspections and complaint investigations.**

**65.10(1) Delivery of application to county.** The applicant for a construction permit for a confinement feeding operation or related animal feeding operation structure shall deliver in person or by certified mail a copy of the permit application and manure management plan to the county board of supervisors of the county where the confinement feeding operation or related animal feeding operation structure is proposed to be constructed. Receipt of the application and manure management plan by the county auditor or other county official or employee designated by the county board of supervisors is deemed receipt of the application and manure management plan by the county board of supervisors. Documentation of the delivery or mailing of the permit application and manure management plan shall be forwarded to the department.

**65.10(2) Public notice and county comment.**

*a. Public notice.* The county board of supervisors shall publish a notice that the board has received the construction permit application in a newspaper having general circulation in the county. The county board shall publish the notice as soon as possible but no later than 14 days after receiving the permit application. The notice shall include all of the following:

- (1) The name of the person applying to receive the construction permit;
- (2) The name of the township where the confinement feeding operation structure is to be constructed;
- (3) Each type of confinement feeding operation structure proposed to be constructed;
- (4) The animal unit capacity of the confinement feeding operation if the construction permit were to be approved;
- (5) The time when and the place where the application may be examined as provided in Iowa Code section 22.2;
- (6) Procedures for providing public comments to the board as provided by the board.

The county shall submit to the department, within 30 days of receipt of the construction permit application, proof of publication to verify that the county provided public notice as required in this paragraph.

*b. County comment.* Regardless of whether the county board of supervisors has adopted a construction evaluation resolution, the board may submit to the department comments by the board and the public regarding compliance of the construction permit application and manure management plan with the requirements in this chapter and Iowa Code chapter 455B for obtaining a construction permit. Comments may include, but are not limited to, the following:

- (1) The existence of an object or location not included in the construction permit application which benefits from a separation distance requirement as provided in Iowa Code section 455B.162 or 455B.204.
- (2) The suitability of soils and the hydrology of the site where construction or expansion of a confinement feeding operation or related animal feeding operation structure is proposed.
- (3) The availability of land for the application of manure originating from the confinement feeding operation.
- (4) Whether the construction or expansion of a proposed animal feeding operation structure will impede drainage through established tile lines, laterals, or other improvements which are constructed to facilitate the drainage of land not owned by the person applying for the construction permit.

**65.10(3) Master matrix.** A county board of supervisors may adopt a construction evaluation resolution relating to the construction of a confinement feeding operation structure. The board must submit such resolution to the director of the department for filing. Adoption and filing of a construction evaluation resolution authorizes a county board of supervisors to conduct an evaluation of a construction permit application using the master matrix as follows:

*a. Enrollment periods.*

- (1) For evaluation of construction permit applications filed during the period March 1, 2003, through January 31, 2004, the county board of supervisors must file an adopted construction evaluation resolution with the department between February 1, 2003, and February 28, 2003.

(2) For evaluation of construction permit applications filed during the period February 1, 2004, through January 31, 2005, the county board of supervisors must file an adopted construction evaluation resolution with the department between January 1, 2004, and January 31, 2004.

(3) For evaluation of construction permit applications filed during subsequent annual periods, each beginning on February 1 and ending on January 31 one calendar year later, the county board of supervisors must file an adopted construction evaluation resolution with the department between January 1 and January 31 immediately prior to the commencement of the applicable annual period.

(4) Filed construction evaluation resolutions shall remain in effect until the applicable enrollment period expires or until such time as the county board of supervisors files with the department a resolution rescinding the construction evaluation resolution, whichever is earlier.

(5) Filing of an adopted construction evaluation resolution requires a county board of supervisors to conduct an evaluation of a construction permit application using the master matrix. However, if the board fails to submit an adopted recommendation to the department, the department shall disregard any adopted recommendation from that board until the board timely submits a new construction evaluation resolution.

*b. Use of the master matrix.* If a county board of supervisors has adopted and filed with the department a construction evaluation resolution, as provided in paragraph 65.10(3)“a,” the board shall evaluate all construction permit applications filed during the applicable period using the master matrix as follows:

(1) In completing the master matrix, the board shall not score criteria on a selective basis. The board must score all criteria which are part of the master matrix according to the terms and conditions relating to construction as specified in the application or commitments for manure management that are to be incorporated into a manure management plan as provided in Iowa Code section 455B.203.

(2) The board shall include with the adopted recommendation a copy of the master matrix analysis, calculations, and scoring for the application. The board’s adopted recommendation submitted to the department may be based on the master matrix or on comments received by the board. The adopted recommendation shall include the specific reasons and any supporting documentation for the decision to recommend approval or disapproval of the application.

(3) The board shall not use the master matrix to evaluate a construction permit application for the construction or expansion of a confinement feeding operation structure if the construction is for expansion of a confinement feeding operation structure constructed prior to April 1, 2002, and, after the expansion of the confinement feeding operation, its animal unit capacity is 1,666 animal units or less. The board may still submit comments regarding the application.

**65.10(4) Inspection of proposed construction site.** The department may conduct an inspection of the site on which construction of the confinement feeding operation is proposed after providing a minimum of 24 hours’ notice to the construction permit applicant or sooner with the consent of the applicant. If the county in which the proposed facility is located has adopted and submitted a construction evaluation resolution pursuant to subrule 65.10(3) and has not failed subsequently to submit an adopted recommendation, the county may designate a county employee to accompany a department official during the site inspection. In such cases, the department shall notify the county board of supervisors or county designee at least three days prior to conducting an inspection of the site where construction of the confinement feeding operation is proposed. The county designee shall have the same right to access to the site’s real estate on which construction of the confinement feeding operation is proposed as the departmental official conducting the inspection during the period that the county designee accompanies the departmental official. The departmental official and the county designee shall comply with standard biosecurity requirements customarily required by the owner of the confinement feeding operation that are necessary in order to control the spread of disease among an animal population.

**65.10(5) Determination by the department.** The department must receive the county board of supervisors’ comments or evaluation for approval or disapproval of an application for a construction permit not later than 30 days following the applicant’s delivery of the application to the department. Regardless of whether the department receives comments or an evaluation by a county board of supervisors, the department must render a determination or a preliminary determination to approve or

disapprove an application for a construction permit within 60 days following the applicant's delivery of an application to the department. However, the applicant may deliver a notice requesting a continuance. Upon receipt of a notice, the time required for the county or department to act upon the application shall be suspended for the period provided in the notice, but for not more than 30 days after the department's receipt of the notice. The applicant may submit more than one notice. However, the department may terminate an application if no action is required by the department for one year following delivery of the application to the board. The department may also provide for a continuance when it considers the application. The department shall provide notice to the applicant and the board of the continuance. The time required for the department to act upon the application shall be suspended for the period provided in the notice, but for not more than 30 days. However, the department shall not provide for more than one continuance. If review of the application is delayed because the application is incomplete, and the applicant fails to supply requested information within a reasonable time prior to the deadline for action on the application, the permit may be denied and a new application will be required if the applicant wishes to proceed.

The department will approve or disapprove an application as follows:

*a.* If the county board of supervisors does not submit a construction evaluation resolution to the department, fails to submit an adopted recommendation, submits only comments, or fails to submit comments, the department shall approve the application if the application meets the requirements of this chapter and Iowa Code chapter 455B. The department will disapprove the application if it does not meet such requirements.

*b.* If the board of supervisors for the county in which the confinement feeding operation is proposed to be constructed has filed a county construction evaluation resolution and submits an adopted recommendation to approve the construction permit application, which may be based on a satisfactory rating produced by the master matrix, to the department, the department shall preliminarily approve an application for a construction permit if the department determines that the application meets the requirements of this chapter and Iowa Code chapter 455B. The department shall preliminarily disapprove an application that does not satisfy the requirements of this chapter and Iowa Code chapter 455B regardless of the adopted recommendation of the board of supervisors. The department shall consider any timely filed comments made by the board as provided in this subrule to determine if an application meets the requirements of this chapter and Iowa Code chapter 455B.

*c.* If the board submits to the department an adopted recommendation to disapprove an application for a construction permit that is based on a rating produced by the master matrix, the department shall first determine if the application meets the requirements of this chapter and Iowa Code chapter 455B. The department shall preliminarily disapprove an application that does not satisfy the requirements of this chapter and Iowa Code chapter 455B regardless of any result produced by using the master matrix. If the application meets the requirements of this chapter and Iowa Code chapter 455B, the department shall conduct an independent evaluation of the application using the master matrix. The department shall preliminarily approve the application if it achieves a satisfactory rating according to the department's evaluation. The department shall preliminarily disapprove the application if it produces an unsatisfactory rating regardless of whether the application satisfies the requirements of this chapter and Iowa Code chapter 455B. The department shall consider any timely filed comments made by the board as provided in this subrule to determine if an application meets the requirements of this chapter and Iowa Code chapter 455B.

**65.10(6)** *Departmental notification of permit application decision.* Within three days following the department's determination or preliminary determination to approve or disapprove the application for a construction permit, the department shall deliver a notice of the decision to the applicant.

*a.* If the county board of supervisors has submitted to the department an adopted recommendation for the approval or disapproval of a construction permit application, the department shall notify the board of the department's preliminary decision to approve or disapprove the application at the same time. For a preliminary decision to approve an application, the notice shall consist of a copy of the draft construction permit. For a preliminary decision to disapprove an application, the notice shall consist of a copy of the department's letter of preliminary denial. The preliminary decision to approve or disapprove an

application becomes final without further proceedings if neither the county board of supervisors nor the applicant demands a hearing before the commission or appeals pursuant to 65.10(7) and 65.10(8).

*b.* If the county board of supervisors has not submitted to the department an adopted recommendation for the approval or disapproval of a construction permit application, the department notice shall include the construction permit or letter of denial. The applicant may appeal the permit or denial as provided in 65.10(8).

**65.10(7) County demand for hearing.** A county board of supervisors that has submitted an adopted recommendation to the department may contest the department's preliminary decision to approve or disapprove an application by filing a written demand for a hearing before the commission. Due to the need for expedited scheduling, the county board of supervisors shall, as soon as possible but not later than 14 days following receipt of the department's notice of preliminary decision, notify the chief of the department's water quality bureau by facsimile transmission to (515)281-8895 that the board intends to file a demand for hearing. The demand for hearing shall be mailed to Director, Department of Natural Resources, Henry A. Wallace Building, 502 East Ninth Street, Des Moines, Iowa 50319, and must be postmarked within 14 days following receipt of the department's notice of preliminary decision. The demand shall include a statement providing all reasons why the application should be approved or disapproved according to legal requirements in this chapter and Iowa Code chapter 455B; legal briefs and any other documents to be considered by the commission or a statement indicating that no other documents will be submitted for consideration by the commission; and a statement indicating whether oral argument before the commission is desired.

**65.10(8) Applicant demand for hearing; appeal.** The applicant may contest the department's decision or preliminary decision to approve or disapprove an application by filing a written demand for a hearing. The applicant may elect to have the hearing conducted as a contested case before an administrative law judge pursuant to 561—Chapter 7, or before the commission pursuant to subrule 65.10(9). The demand for hearing shall indicate which procedure the applicant elects.

*a. Applicant demand for hearing before the commission.* Due to the need for expedited scheduling, the applicant shall, as soon as possible but not later than 14 days following receipt of the department's notice of preliminary decision, notify the chief of the department's water quality bureau by facsimile transmission to (515)281-8895 that the applicant intends to file a demand for hearing; however, in cases in which the applicant would not demand a hearing unless the county demanded one, the applicant will be allowed an additional three working days to file a demand. It is the responsibility of the applicant to communicate with the department to determine if a county demand has been filed. The demand for hearing shall be mailed to Director, Department of Natural Resources, Henry A. Wallace Building, 502 East Ninth Street, Des Moines, Iowa 50319, and must be postmarked within 14 days following receipt of the department's notice of preliminary decision, or such longer time as authorized in this paragraph. The demand shall include a statement providing all reasons why the application should be approved or disapproved without specified conditions according to legal requirements in this chapter and Iowa Code chapter 455B; legal briefs and any other documents to be considered by the commission or a statement indicating that no other documents will be submitted for consideration by the commission; and a statement indicating whether oral argument before the commission is desired. If both the applicant and a county board of supervisors are contesting the department's preliminary decision, the applicant may request that the commission conduct the hearing on a consolidated basis.

*b. Applicant contested case appeal.* The applicant may appeal a permit or letter of denial according to the contested case procedures set forth in 561—Chapter 7; however, if the county has demanded a hearing pursuant to subrule 65.10(7), a demand for hearing must be filed within the time frames set forth in paragraph "a." If both the applicant and a county board of supervisors are contesting the department's preliminary decision, the applicant may request that the hearings be consolidated and conducted as a contested case.

**65.10(9) Decision by the commission.** The director shall schedule a hearing on a demand pursuant to 65.10(7) or 65.10(8) "a" for consideration at the next regular meeting of the commission and notify the county board of supervisors and the applicant of the time and place. However, if the next regular meeting of the commission will take place more than 35 days after receipt of the demand for hearing, the director

shall schedule a special in-person meeting or an electronic meeting of the commission pursuant to Iowa Code section 21.8. The director shall provide the applicant with copies of all documents submitted by the county board of supervisors and a copy of the department's file on the permit application within three days after receipt of the county board of supervisors' comments. The applicant may submit responses or other documents for consideration by the commission postmarked or hand-delivered at least 14 days prior to the date of consideration by the commission. Consideration by the commission is not a contested case. Oral participation before the commission will be limited to time periods specified by the commission and, unless otherwise determined by the commission, to argument by representatives from the county board of supervisors, the applicant and the department. The decision by the commission shall be stated on the record and shall be final agency action pursuant to Iowa Code chapter 17A. If the commission reverses or modifies the department's decision, the department shall issue the appropriate permit or letter of denial to the applicant. The letter of decision shall contain the reasons for the action regarding the permit.

**65.10(10) *Complaint investigations.*** Complaints of violations of Iowa Code chapter 455B and this rule, which are received by the department or are forwarded to the department by a county, following a county board of supervisors' determination that a complainant's allegation constitutes a violation, shall be investigated by the department if it is determined that the complaint is legally sufficient and an investigation is justified.

*a.* If after evaluating a complaint to determine whether the allegation may constitute a violation, without investigating whether the facts supporting the allegation are true or untrue, the county board of supervisors shall forward its finding to the department director.

*b.* A complaint is legally sufficient if it contains adequate information to investigate the complaint and if the allegation constitutes a violation, without investigating whether the facts supporting the allegation are true or untrue, of rules adopted by the department, Iowa Code chapter 455B or environmental standards in regulations subject to federal law and enforced by the department.

*c.* The department in its discretion shall determine the urgency of the investigation, and the time and resources required to complete the investigation, based upon the circumstances of the case, including the severity of the threat to the quality of surface water or groundwater.

*d.* The department shall notify the complainant and the alleged violator if an investigation is not conducted specifying the reason for the decision not to conduct an investigation.

*e.* The department will notify the county board of supervisors where the violation is alleged to have occurred before doing a site investigation unless the department determines that a clear, present and impending danger to the public health or environment requires immediate action.

*f.* The county board of supervisors may designate a county employee to accompany the department on the investigation of any site as a result of a complaint.

*g.* A county employee accompanying the department on a site investigation has the same right of access to the site as the department official conducting the investigation during the period that the county designee accompanies the department official. The county shall not have access to records required in subrule 65.17(12) or the current manure management plan maintained at the facility.

*h.* Upon completion of an investigation, the department shall notify the complainant of the results of the investigation, including any anticipated, pending or complete enforcement action arising from the investigation. The department shall deliver a copy of the notice to the animal feeding operation that is the subject of the complaint, any alleged violators if different from the animal feeding operation and the county board of supervisors of the county where the violation is alleged to have occurred.

*i.* When a person who is a department official, an agent of the department, or a person accompanying the department official or agent enters the premises of an animal feeding operation, both of the following shall apply:

(1) The person may enter at any reasonable time in and upon any private or public property to investigate any actual or possible violation of this chapter or the rules or standards adopted under this chapter. However, the owner or person in charge shall be notified.

1. If the owner or occupant of any property refuses admittance to the operation, or if prior to such refusal the director demonstrates the necessity for a warrant, the director may make application under

oath or affirmation to the district court of the county in which the property is located for the issuance of a search warrant.

2. In the application the director shall state that an inspection of the premises is mandated by the laws of this state or that a search of certain premises, areas, or things designated in the application may result in evidence tending to reveal the existence of violations of public health, safety, or welfare requirements imposed by statutes, rules or ordinances established by the state or a political subdivision thereof. The application shall describe the area, premises, or thing to be searched, give the date of the last inspection if known, give the date and time of the proposed inspection, declare the need for such inspection, recite that notice of desire to make an inspection has been given to affected persons and that admission was refused if that be the fact, and state that the inspection has no purpose other than to carry out the purpose of the statute, ordinance, or regulation pursuant to which inspection is to be made. If an item of property is sought by the director, it shall be identified in the application.

3. If the court is satisfied from the examination of the applicant, and of other witnesses, if any, and of the allegations of the application of the existence of the grounds of the application, or that there is probable cause to believe their existence, the court may issue such search warrant.

4. In making inspections and searches pursuant to the authority of this rule, the director must execute the warrant:

- Within ten days after its date.
- In a reasonable manner, and any property seized shall be treated in accordance with the provisions of Iowa Code chapters 808, 809, and 809A.
- Subject to any restrictions imposed by the statute, ordinance or regulation pursuant to which inspection is made.

(2) The person shall comply with standard biosecurity requirements customarily required by the animal feeding operation which are necessary in order to control the spread of disease among an animal population.

**567—65.11(455B) Confinement feeding operation separation distance requirements.** All animal feeding operation structures shall be separated from locations and objects as specified in this rule regardless of whether a construction permit is required. Exceptions are allowed to the extent provided in 567—65.12(455B).

**65.11(1)** Separation from residences, businesses, churches, schools, public use areas, and thoroughfares shall be as specified in Iowa Code section 455B.162 and summarized in Table 6 at the end of this chapter. The residence, business, church, school, public use area or thoroughfare must exist at the time an applicant submits an application for a construction permit to the department or at the time a manure management plan is submitted if a construction permit is not required, or at the time construction of the animal feeding operation structure begins if a construction permit or manure management plan is not required.

**65.11(2)** Separation from surface intakes, wellheads or cisterns of agricultural drainage wells, known sinkholes, water sources and major water sources shall be as specified in Iowa Code section 459.310 and summarized in Table 6 at the end of this chapter. For the required separation distance to a major water source to apply, the major water source must be included in Table 1 at the end of this chapter at the time an applicant submits an application for a construction permit to the department or at the time a manure management plan is submitted if a construction permit is not required, or at the time construction of the animal feeding operation structure begins (as defined in 65.8(1)) if a construction permit or manure management plan is not required.

**65.11(3)** A confinement feeding operation structure shall not be constructed closer than 2,500 feet away from a “designated wetland” as defined and referenced in rule 567—65.1(455B). This requirement shall not apply to a confinement feeding operation structure if any of the following occur before the wetland is included in “Designated Wetlands in Iowa,” effective August 23, 2006:

*a.* The confinement feeding operation structure already exists. This exemption also applies to additional confinement feeding operation structures constructed at the site of such an existing

confinement feeding operation structure after a wetland is included in “Designated Wetlands in Iowa,” effective August 23, 2006.

*b.* Construction of a confinement feeding operation structure has begun as provided in subrule 65.8(1).

*c.* An application for a permit to construct a confinement feeding operation structure has been submitted to the department.

*d.* A manure management plan concerning a proposed confinement feeding operation structure for which a construction permit is not required has been submitted to the department.

**65.11(4)** For structures constructed after March 20, 1996, the separation to wells shall be as specified in Table 6 at the end of this chapter.

**65.11(5)** Unformed manure storage structures shall not be constructed or expanded in an agricultural drainage well area as specified in Iowa Code section 455I.5.

**65.11(6)** The distance between animal feeding operation structures and locations or objects from which separation is required shall be measured horizontally by standard survey methods between the closest point of the location or object (not a property line) and the closest point of the animal feeding operation structure.

*a.* Measurement to an anaerobic lagoon or earthen manure storage basin shall be to the point of maximum allowable level of manure pursuant to paragraph 65.2(3) “*b.*”

*b.* Measurement to a public use area shall be to the facilities which attract the public to congregate and remain in the area for significant periods of time, not to the property line.

*c.* Measurement to a major water source or watercourse shall be to the top of the bank of the stream channel of a river or stream or the ordinary high water mark of a lake or reservoir.

*d.* Measurement to a thoroughfare shall be to the closest point of the right-of-way.

*e.* The separation distance for an animal feeding operation structure qualifying for the exemption to separation distances under 65.12(3) “*b*”(1) shall be measured from the closest point of the animal feeding operation structure which is constructed or expanded after December 31, 1998.

**567—65.12(455B) Exemptions to confinement feeding operation separation distance requirements.**

**65.12(1)** As specified in Iowa Code section 455B.165, the separation required from residences, businesses, churches, schools, public use areas and thoroughfares specified in Iowa Code section 455B.162 and summarized in Table 6 at the end of this chapter shall not apply to the following:

*a.* A confinement feeding operation structure which stores manure exclusively in a dry form.

*b.* A confinement feeding operation structure, other than an unformed manure storage structure, if the structure is part of a small animal feeding operation.

*c.* An animal feeding operation structure which is constructed or expanded, if the titleholder of the land benefiting from the distance separation requirement executes a written waiver with the titleholder of the land where the structure is located, under such terms and conditions that the parties negotiate. The written waiver becomes effective only upon the recording of the waiver in the office of the recorder of deeds of the county in which the benefited land is located. The benefited land is the land upon which is located the residence, business, church, school or public use area from which separation is required. The filed waiver shall preclude enforcement by the department of the separation distance requirements of Iowa Code section 455B.162.

*d.* An animal feeding operation structure closer than the distances in Table 6 at the end of this chapter from a residence, business, church, school or public use area, if the residence, business, church, school or public use area was constructed or expanded after the date that the animal feeding operation commenced operating. An animal feeding operation commences operating when it is first occupied by animals. A change in ownership or expansion of the animal feeding operation does not change the date the operation commenced operating.

**65.12(2)** As specified in Iowa Code section 455B.165(4), the separation required from thoroughfares specified in Iowa Code section 455B.162(5) and summarized in Table 6 at the end of this chapter shall not apply if permanent vegetation stands between the animal feeding operation structure and that part of the right-of-way from which separation is required. The permanent vegetation must be at least seedlings

of plants with mature height of at least 20 feet and stand along the full length of the structure. The minimum vegetation requirement shall be a single row of conifers or columnar deciduous trees on 12- to 16-foot spacing. It is recommended that the advice of a professional forester or nursery stock expert, a department district forester or the Natural Resource Conservation Service be sought to identify tree species for a specific site.

**65.12(3)** As specified in Iowa Code section 455B.163, the separation required from residences, businesses, churches, schools, public use areas and thoroughfares specified in Iowa Code section 455B.162 and summarized in Table 6 at the end of this chapter shall not apply to confinement feeding operations constructed before the effective date of the separation distance in the following cases:

*a.* The confinement feeding operation continues to operate, but does not expand.  
*b.* The animal feeding operation structure as constructed or expanded prior to January 1, 1999, complies with the distance requirements applying to that structure at the time of construction or expansion.

*c.* The confinement feeding operation expands on or after January 1, 1999, and any of the following apply:

(1) The animal feeding operation structure as constructed or expanded complies with the separation requirements. The separation required shall be based on the animal weight capacity of the entire confinement feeding operation, including existing and proposed structures.

(2) All of the following apply to the expansion:

1. No portion of the confinement feeding operation after expansion is closer than before expansion to a location or object for which separation is required.

2. The animal weight capacity of the confinement feeding operation which did not comply with a separation requirement that went into effect on May 31, 1995, after expansion is not more than the lesser double its capacity on May 31, 1995, or of 625,000 pounds for animals other than bovine, or 1,600,000 pounds for bovine.

3. The animal weight capacity of a confinement feeding operation which complied with the separation requirements that went into effect on May 1, 1995, but did not comply with a separation requirement that went into effect on January 1, 1999, after expansion is not more than the lesser of double its capacity on January 1, 1999, or 625,000 pounds for animals other than bovine, or 1,600,000 pounds for bovine.

(3) The confinement feeding operation is expanded by replacing one or more unformed manure storage structures with one or more formed manure storage structures and all of the following apply:

1. The animal weight capacity of the portion of the operation that changes from unformed to formed manure storage does not increase.

2. Use of the replaced unformed manure storage structures is discontinued within one year after construction of the replacement formed manure storage structures.

3. The replacement formed manure storage structures do not provide more than 14 months of manure storage.

4. No portion of the operation after expansion is closer than before expansion to a location or object for which separation is required.

(NOTE: A construction permit is not required to construct the replacement formed manure storage structures if a permit would not be required for the construction if the unformed manure storage structures did not exist.)

**65.12(4)** As specified in Iowa Code section 455B.165(7), the separation required from a cemetery shall not apply to animal feeding operations structures on which construction or expansion began before January 1, 1999.

**65.12(5)** As specified in Iowa Code section 455B.204(3), the separation required from surface intakes, wellheads or cisterns of agricultural drainage wells, known sinkholes, major water sources and watercourses specified in Iowa Code section 455B.204 and summarized in Table 6 at the end of this chapter shall not apply to a farm pond, privately owned lake or a manure storage structure constructed with a secondary containment barrier according to subrule 65.15(17).

**65.12(6)** Variances to the well separation requirements may be granted by the director if the applicant provides an alternative that is substantially equivalent to the required separation or provides improved or greater protection for the well. Requests for a variance shall be made in writing at the time an application is submitted. The denial of a variance request may be appealed to the environmental protection commission.

**567—65.13(455B) Separation distances from certain lakes, rivers and streams.** Rescinded IAB 4/7/99, effective 5/12/99.

**567—65.14(455B) Well separation distances for open feedlots.** Rescinded IAB 4/12/06, effective 5/17/06.

**567—65.15(455B) Manure storage structure design requirements.** The requirements in this rule apply to all animal feeding operation structures unless specifically stated otherwise.

**65.15(1)** Drainage tile removal for new construction of a manure storage structure. Prior to constructing a manure storage structure, other than storage of manure in an exclusively dry form, the site for the animal feeding operation structure shall be investigated for drainage tile lines as provided in this subrule. All applicable records of known drainage tiles shall be examined for the existence of drainage tile lines.

*a.* Prior to excavation for the berm of an unformed manure storage structure, the owner of the unformed manure storage structure shall follow any one of the following procedures:

(1) An inspection trench of at least ten inches wide shall be dug around the structure to a depth of at least 6 feet from the original grade and at least 50 feet from the projected outside edge of the berm.

(2) A core trench shall be dug to a depth of at least 6 feet from grade at the projected center of the berm. After investigation for tile lines and any discovered tile lines are removed, an additional containment barrier shall be constructed underneath the center of the berm. The secondary containment shall meet the same percolation standards as the lagoon or basin with the lateral flow potential restricted to one-sixteenth of an inch per day.

*b.* The drainage tile lines discovered near an unformed manure storage structure shall be removed within 50 feet of the projected outside edge of the berm and within the projected site of the structure including under the berm. Drainage tile lines discovered upgrade from the structure shall be rerouted outside of 50 feet from the berm to continue the flow of drainage. Drainage tile lines installed at the time of construction to lower a groundwater table may remain where located. A device to allow monitoring of the water in the drainage tile lines installed to lower the groundwater table and a device to allow shutoff of the drainage tile lines shall be installed if the drainage tile lines do not have a surface outlet accessible on the property where the unformed manure storage structure is located. All other drainage tile lines discovered shall be rerouted, capped, plugged with concrete, Portland cement concrete grout or similar materials, or reconnected to upgrade tile lines.

*c.* The applicant for a construction permit for a formed manure storage structure shall investigate for tile lines during excavation for the structure. Drainage tile lines discovered upgrade from the structure shall be rerouted around the formed manure storage structure to continue the flow of drainage. All other drainage tile lines discovered shall be rerouted, capped, plugged with concrete, Portland cement concrete grout or similar materials or reconnected to upgrade tile lines. Drainage tile lines installed at the time of construction to lower a groundwater table may remain where located. A device to allow monitoring of the water in the drainage tile lines installed to lower the groundwater table and a device to allow shutoff of the drainage tile lines shall be installed if the drainage tile lines do not have a surface outlet accessible on the property where the formed manure storage structure is located.

*d.* An owner of a confinement feeding operation may utilize other proven methods approved by the department to discover drainage tile lines.

*e.* Variances to this subrule may be granted by the director if the owner of the confinement feeding operation provides an alternative that is substantially equivalent to the subrule or provides improved effectiveness or protection as required by the subrule. A request for a variance shall be made in writing

at the time the application is submitted or prior to investigating for drainage tile, whichever is earlier. The denial of a variance may be appealed to the commission.

*f.* A waiver to this subrule may be granted by the director if sufficient information is provided that the location does not have a history of drainage tile.

**65.15(2)** Drainage tile removal around an existing manure storage structure. The owner of an aerobic structure, anaerobic lagoon or earthen manure storage basin or earthen waste slurry storage basin, other than an egg washwater storage structure, that is part of a confinement feeding operation with a construction permit granted before March 20, 1996, but after December 31, 1992, shall inspect by March 20, 1997, for drainage tile lines as provided in this subrule, and all applicable records of known drainage tiles shall be examined. The owner of an aerobic structure, anaerobic lagoon, earthen manure storage basin or earthen waste slurry storage basin, other than an egg washwater storage structure, that is part of a confinement feeding operation with a construction permit granted before January 1, 1993, but after May 31, 1985, shall have an inspection conducted by July 1, 2000, for drainage tiles as provided in this subrule, and all applicable records of known drainage tiles shall be examined.

*a.* Inspection shall be by digging an inspection trench of at least ten inches wide around the structure to a depth of at least 6 feet from the original grade and at least 50 feet from the outside edge of the berm. The owner first shall inspect the area where trenching is to occur and manure management records to determine if there is any evidence of leakage and, if so, shall contact the department for further instructions as to proper inspection procedures. The owner of a confinement feeding operation shall either obtain permission from an adjoining property owner or trench up to the boundary line of the property if the distance of 50 feet would require the inspection trench to go onto the adjoining property.

*b.* The owner of the confinement feeding operation may utilize other proven methods approved by the department to discover drainage tile lines.

*c.* The drainage tile lines discovered near an aerobic structure, anaerobic lagoon, earthen manure storage basin or earthen waste slurry storage basin, other than an egg washwater storage structure, shall be removed within 50 feet of the outside edge of the berm. Drainage tile lines discovered upgrade from the aerobic structure, anaerobic lagoon or earthen manure storage basin shall be rerouted outside of 50 feet from the berm to continue the flow of drainage. All other drainage tile lines discovered shall be rerouted, capped, plugged with concrete, Portland cement concrete grout or similar materials, or reconnected to upgrade tile lines. Drainage tile lines that were installed at the time of construction to lower a groundwater table may either be avoided if the location is known or may remain at the location if discovered.

*d.* The owner of an aerobic structure, anaerobic lagoon, earthen manure storage structure or an earthen waste slurry storage basin with a tile drainage system to artificially lower the groundwater table shall have a device to allow monitoring of the water in the drainage tile lines that lower the groundwater table and to allow shutoff of the drainage tile lines if the drainage tile lines do not have a surface outlet accessible on the property where the aerobic structure, anaerobic lagoon, earthen manure storage basin or earthen waste slurry storage basin is located.

*e.* If the owner of the confinement feeding operation discovers drainage tile that projects underneath the berm, it shall follow one of the following options:

(1) Contact the department to obtain permission to remove the drainage tile under the berm. The manure in the structure must be lowered to a point below the depth of the tile prior to removing the drainage tile from under the berm. Prior to using the structure, a new percolation test must be submitted to the department and approval received from the department.

(2) Grout the length of the tile under the berm to the extent possible. The material used to grout shall include concrete, Portland cement concrete grout or similar materials.

*f.* Variances to this subrule may be granted by the director if the applicant provides an alternative that is substantially equivalent to the subrule or provides improved effectiveness or protection as required by the subrule. A request for a variance shall be made in writing. The denial of a variance may be appealed to the commission.

*g.* A waiver to this subrule may be granted by the director if sufficient information is provided that the location does not have a history of drainage tile.

*h.* A written record describing the actions taken to determine the existence of tile lines, the findings, and actions taken to comply with this subrule shall be prepared and maintained as part of the manure management plan records.

**65.15(3)** Guidelines for drainage tile removal around an existing manure storage structure.

*a.* It is recommended that a manure storage structure, other than the storage of manure in an exclusively dry form, that is part of a confinement feeding operation with a construction permit granted before May 31, 1985, be inspected for drainage tile lines as provided in this subrule, and all applicable records of known drainage tiles may be examined. For an aerobic structure, anaerobic lagoon, earthen manure storage basin or earthen waste slurry storage basin, inspection may be by digging an inspection trench of at least ten inches wide around the structure at a depth of at least 6 feet from the original grade and at least 50 feet from the projected outside edge of the berm. The owner first should inspect the area where trenching is to occur and manure management records to determine if there is any evidence of leakage and, if so, shall contact the department for further instructions as to proper inspection procedures.

*b.* The drainage tile lines discovered may be removed within 50 feet of the outside edge of the berm. Drainage tile lines discovered upgrade from the structure may be rerouted outside of 50 feet from the berm to continue the flow of drainage. Drainage tile lines that were installed at the time of construction to lower a groundwater table may either be avoided if the location is known or may remain at the location if discovered. All other drainage tile lines discovered may be rerouted, capped, plugged with concrete, Portland cement concrete grout or similar materials or reconnected to upgrade tile lines. The owner of a confinement feeding operation should either obtain permission from an adjoining property owner or trench up to the boundary line of the property if the distance of 50 feet would require the inspection trench to go onto the adjoining property.

*c.* If the owner of a confinement feeding operation discovers drainage tile that projects underneath the berm, it may follow one of the following options:

(1) Contact the department to obtain permission to remove the drainage tile under the berm. The manure in the structure must be lowered to a point below the depth of the tile prior to removing the drainage tile from under the berm. Prior to using the structure, a new percolation test must be submitted to the department and approval received from the department.

(2) Grout the length of the tile under the berm to the extent possible. The material used to grout may include concrete, Portland cement concrete grout or similar materials.

*d.* The owner of a confinement feeding operation with a formed manure storage structure other than dry manure storage may inspect for tile lines. Drainage tile lines discovered upgrade from the structure may be rerouted around the formed manure storage structure to continue the flow of drainage. Drainage tile lines put in place during or after construction of the formed manure storage structure to relieve hydrologic pressure may remain where located. All other drainage tile lines discovered may be rerouted, capped, plugged with concrete, Portland cement concrete grout or similar materials or reconnected to upgrade tile line.

**65.15(4)** Earthen waste slurry storage basins. An earthen waste slurry storage basin shall have accumulated manure removed at least twice each year unless there is sufficient basin capacity to allow removal of manure once each year and maintain freeboard as determined pursuant to 65.2(3)“*b.*”

**65.15(5)** Earthen manure storage basins. An earthen manure storage basin shall have accumulated manure removed at least once each year. An earthen manure storage basin may have enough manure storage capacity to contain the manure from the confinement feeding operation for up to 14 months and maintain freeboard as determined pursuant to 65.2(3)“*b.*”

**65.15(6)** Soil testing for earthen structures. Applicants for construction permits for earthen manure storage structures shall submit soils information according to this subrule for the site of the proposed structure. All subsurface soil classification shall be based on American Society for Testing and Materials Designations D 2487-92 or D 2488-90. Soil corings shall be taken to determine subsurface soil characteristics and groundwater elevation and direction of flow of the proposed site for an anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin. Soil corings shall be conducted by a qualified person normally engaged in soil testing activities. Data from the soil corings shall be submitted with a construction permit application and shall include a

description of the geologic units encountered, and a discussion of the effects of the soil and groundwater elevation and direction of flow on the construction and operation of the anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin. All soil corings shall be taken by a method that identifies the continuous soil profile and does not result in the mixing of soil layers. The number and location of the soil corings will vary on a case-by-case basis as determined by the designing engineer and accepted by the department. The following are minimum requirements:

*a.* A minimum of four soil corings reflecting the continuous soil profile is required for each anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin. Corings which are intended to represent soil conditions at the corner of the structure must be located within 50 feet of the bottom edge of the structure and spaced so that one coring is as close as possible to each corner. Should there be no bottom corners, corings shall be equally spaced around the structure to obtain representative soil information for the site. An additional coring will be required if necessary to ensure that one coring is at the deepest point of excavation. For an anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin larger than 4 acres water surface area, one additional coring per acre is required for each acre above 4 acres surface area.

*b.* All corings shall be taken to a minimum depth of ten feet below the bottom elevation of the anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin.

*c.* At least one coring shall be taken to a minimum depth of 25 feet below the bottom elevation of the anaerobic lagoon, aerobic structure, earthen egg washwater storage structure, or earthen manure storage basin or into bedrock, whichever is shallower.

*d.* Upon abandonment of the soil core holes, all soil core holes including those developed as temporary water level monitoring wells shall be plugged with concrete, Portland cement concrete grout, bentonite, or similar materials.

#### **65.15(7) Hydrology.**

*a. Groundwater table.* A minimum separation of four feet between the top of the liner on any earthen aerobic structure, anaerobic lagoon, or earthen manure storage basin floor and the groundwater table is recommended; however, in no case shall the top of the liner on an earthen aerobic structure, anaerobic lagoon, or earthen manure storage basin floor be below the groundwater table. If the groundwater table is less than two feet below the top of the liner on an earthen aerobic structure, anaerobic lagoon, or earthen manure storage basin floor, the aerobic structure, anaerobic lagoon, or earthen manure storage basin shall be provided with a synthetic liner as described in 65.15(12)“f.”

*b. Permanent artificial lowering of groundwater table.* The groundwater table around an anaerobic lagoon, aerobic structure, or earthen manure storage basin may be artificially lowered to levels required in paragraph “a” by using a gravity flow tile drainage system or other permanent nonmechanical system for artificial lowering of the groundwater table. For a permitted animal feeding operation, detailed engineering and soil drainage information shall be provided with a construction permit application for an earthen aerobic structure, anaerobic lagoon or earthen manure storage basin to confirm the adequacy of the proposed permanent system to provide the required drainage without materially increasing the seepage potential of the site. (See 65.15(1)“b” for monitoring and shutoff requirements for drainage tile lines installed to lower the groundwater table.) For formed manure storage structures partially or completely constructed below the normal soil surface, a tile drainage system or other permanent system for artificial lowering of groundwater levels shall be installed around the structure if the groundwater table is above the bottom of the structure.

*c. Determination of groundwater table.* For purposes of this rule, groundwater table is the seasonal high water table determined by a licensed professional engineer, a groundwater professional certified pursuant to 567—Chapter 134, or qualified staff from the department or Natural Resources Conservation Service (NRCS). If a construction permit is required, the department must approve the groundwater table determination.

(1) Current groundwater levels shall be measured using at least one of the following for either formed or unformed structures:

1. Temporary monitoring wells. Each of the three temporary monitoring wells shall be developed according to 567—subrule 110.11(8). The top of the well screen shall be within 5 feet of the ground surface. Each well shall be extended to at least 2 feet below the bottom of the liner of an unformed manure storage structure, or to at least 2 feet below the footings of a formed manure storage structure.

- Unformed structures. For an unformed manure storage structure, each monitoring well may be installed in the existing boreholes resulting from the corings required in subrule 65.15(6).

- Formed structures. For a formed manure storage structure, at least three temporary monitoring wells shall be installed as close as possible to three corners of the structure, with one of the wells close to the corner of deepest excavation. If the formed structure is circular, the three monitoring wells shall be equally spaced and one well shall be placed at the point of deepest excavation.

2. Test pits. The department may allow use of test pits in lieu of temporary monitoring wells if seasonal variation in climatic patterns, soil and geologic conditions prevent accurate determination of the seasonal high water table or prior to the construction of an unformed manure storage structure liner to ensure that the required separation distance to the groundwater table is being met. Test pits will be configured 3 feet × 4 feet × 4 feet, or equivalent volume, and the bottom of each pit shall be 2 feet below the floor of the proposed anaerobic lagoon, earthen manure storage basin, earthen aerobic structure or settled open feedlot effluent basin. Each pit shall be allowed to remain open and unaltered for a minimum of seven days for viewing by the department or NRCS qualified staff for the determination of soil characteristics and related groundwater influence. Adequate protection (temporary berms and covers) shall be provided to prevent surface runoff from entering the test pits. One test pit shall be located in each corner and one in the center of the proposed manure control structure, unless otherwise specified by the department. A description of the materials present in the test pit shall be documented by all of the following:

- Digital photos;
- Description of soils including mottling;
- Construction specifications; and
- Weather conditions both prior to and during the period in which test pits are open.

(2) The seasonal high water table shall be determined by measuring the groundwater level in the temporary monitoring wells not earlier than seven days following installation and shall include consideration of NRCS soil survey information, soil characteristics such as color and mottling, other existing water table data, and other pertinent information. If a drainage system for artificially lowering the groundwater table will be installed in accordance with the requirements of paragraph 65.15(7)“b,” the level to which the groundwater table will be lowered will be considered to represent the seasonal high water table.

**65.15(8)** Karst features. The anaerobic lagoon or earthen manure storage basin shall not be located on a site that exhibits Karst features such as sinkholes, or solution channeling generally occurring in areas underlain by limestone or dolomite.

**65.15(9)** Bedrock separation. A minimum of four feet of separation between an unformed manure storage structure bottom and any bedrock formation is required. A ten-foot separation is recommended. A synthetic liner shall be required if the unformed structure is to be located less than ten feet above a carbonate or limestone formation.

**65.15(10)** Flooding protection.

*a.* An animal feeding operation structure proposed to be constructed on land that would be inundated by Q100 shall meet requirements as specified in 567—Chapters 70 to 76, unless otherwise prohibited according to 65.15(10)“b.”

*b.* A confinement feeding operation structure shall not be constructed on the one hundred year flood plain.

**65.15(11)** Seals for anaerobic lagoons, aerobic structures, and earthen manure storage basins. A lagoon or basin shall be sealed such that seepage loss through the seal is as low as practically possible. The percolation rate shall not exceed 1/16 inch per day at the design depth of the lagoon or basin. Following construction of the lagoon or basin, the results of a testing program which indicates the adequacy of the seal shall be provided to this department in writing prior to start-up of a permitted

operation. The owner of a confinement feeding operation not required to obtain a construction permit shall keep a record of the construction methods and materials used to provide the seal and any test results available on the adequacy of the seal.

**65.15(12)** Aerobic structure, anaerobic lagoon, or earthen manure storage basin liner design and construction standards. An aerobic structure, anaerobic lagoon or earthen manure storage basin which receives a construction permit after January 21, 1998, shall comply with the following minimum standards in addition to subrule 65.15(11).

*a.* If the location of the proposed aerobic structure, anaerobic lagoon or earthen manure storage basin contains suitable materials as determined by the soil corings taken pursuant to subrule 65.15(6), those materials shall be compacted to establish a minimum of a 12-inch liner. A minimum initial overexcavation of 6 inches of material shall be required. The underlying material shall be scarified, reworked and compacted to a depth of 6 inches. The overexcavated materials shall be replaced and compacted.

*b.* If the location of the proposed aerobic structure, anaerobic lagoon or earthen manure storage basin does not contain suitable materials as determined by the soil corings taken in subrule 65.15(6), suitable materials shall be compacted to establish a minimum of a 24-inch liner.

*c.* Where sand seams, gravel seams, organic soils or other materials that are not suitable are encountered during excavation, the area where they are discovered shall be overexcavated a minimum of 24 inches and replaced with suitable materials and compacted.

*d.* All loose lift material must be placed in lifts of nine inches or less and compacted. The material shall be compacted at or above optimum moisture content and meet a minimum of 95 percent of the maximum density as determined by the Standard Proctor test after compaction.

*e.* For purposes of this rule, suitable materials means soil, soil combinations or other similar material that is capable of meeting the permeability and compaction requirements. Sand seams, gravel seams, organic soils or other materials generally not suitable for anaerobic lagoon, aerobic structure, or earthen manure storage basin construction are not considered suitable materials.

*f.* As an alternative to the above standards, a synthetic liner may be used. If the use of a synthetic liner is planned for an earthen aerobic structure, an anaerobic lagoon, or earthen manure storage basin, the permit application shall outline how the site will be prepared for placement of the liner, the physical, chemical, and other pertinent properties of the proposed liner, and information on the procedures to be used in liner installation and maintenance. In reviewing permit applications which involve use of synthetic liners, DNR will consider relevant synthetic liner standards adopted by industry, governmental agencies, and professional organizations as well as technical information provided by liner manufacturers and others.

**65.15(13)** Anaerobic lagoon design standards. An anaerobic lagoon shall meet the requirements of this subrule.

*a. General.*

(1) Depth. Liquid depth shall be at least 8 feet but 15 to 20 feet is preferred if soil and other site conditions allow.

(2) Inlet. One subsurface inlet at the center of the lagoon or dual (subsurface and surface) inlets are preferred to increase dispersion. If a center inlet is not provided, the inlet structure shall be located at the center of the longest side of the anaerobic lagoon.

(3) Shape. Long, narrow anaerobic lagoon shapes decrease manure dispersion and should be avoided. Anaerobic lagoons with a length-to-width ratio of greater than 3:1 shall not be allowed.

(4) Aeration. Aeration shall be treatment as an "add-on process" and shall not eliminate the need for compliance with all anaerobic lagoon criteria contained in these rules.

(5) Manure loading frequency. The anaerobic lagoon shall be loaded with manure and dilution water at least once per week.

(6) Design procedure. Total anaerobic lagoon volume shall be determined by summation of minimum stabilization volume; minimum dilution volume (not less than 50 percent of minimum stabilization volume); manure storage between periods of disposal; and storage for 8 inches of precipitation.

(7) Manure storage period. Annual or more frequent manure removal from the anaerobic lagoon, preferably prior to May 1 or after September 15 of the given year, shall be practiced to minimize odor production. Design manure storage volume between disposal periods shall not exceed the volume required to store 14 months' manure production. Manure storage volume shall be calculated based on the manure production values found in Table 5 at the end of this chapter.

*b. Minimum stabilization volume and loading rate.*

(1) For all animal species other than beef cattle, there shall be 1000 cubic feet minimum design volume for each 5 pounds of volatile solids produced per day if the volatile solids produced per day are 6000 pounds or fewer and for each 4 pounds if the volatile solids produced per day are more than 6000 pounds. For beef cattle, there shall be 1000 cubic feet minimum design volume for each 10 pounds of volatile solids produced per day.

(2) In Lyon, Sioux, Plymouth, Woodbury, Osceola, Dickinson, Emmet, Kossuth, O'Brien, Clay, Palo Alto, Cherokee, Buena Vista, Pocahontas, Humboldt, Ida, Sac, Calhoun, and Webster counties for all animal species other than beef there shall be 1000 cubic feet minimum design volume for each 4.5 pounds of volatile solids per day if the volatile solids produced per day are 6000 pounds or fewer. However, if a water analysis as required in 65.15(3) "c"(2) below indicates that the sulfate level is below 500 milligrams per liter, then the rate is 1000 cubic feet for each 5.0 pounds of volatile solids per day.

(3) Credit shall be given for removal of volatile solids from the manure stream prior to discharge to the lagoon. The credit shall be in the form of an adjustment to the volatile solids produced per day. The adjustments shall be at the rate of 0.50 pound for each pound of volatile solids removed. For example, if a swine facility produces 7000 pounds of volatile solids per day, and if 2000 pounds of volatile solids per day are removed, the volatile solids produced per day would be reduced by 1000 pounds, leaving an adjusted pounds of volatile solids produced per day of 6000 pounds (for which the loading rate would be 5 pounds according to subparagraph (1) above).

(4) Credit shall be given for mechanical aeration if the upper one-third of the lagoon volume is mixed by the aeration equipment and if at least 50 percent of the oxygen requirement of the manure is supplied by the aeration equipment. The credit shall be in the form of an increase in the maximum loading rate (which is the equivalent of a decrease in the minimum design volume) in accordance with Table 8.

(5) If a credit for solids removal is given in accordance with subparagraph (3) above, the credit for qualified aeration shall still be given. The applicant shall submit evidence of the five-day biochemical oxygen demand (BOD5) of the manure after the solids removal so that the aeration credit can be calculated based on an adjustment rate of 0.50 pound for each pound of solids removed.

(6) American Society of Agricultural Engineers (ASAE) standards, "Manure Production and Characteristics," D384.1, or Midwest Plan Service-18 (MWPS-18), Table 2-1, shall be used in determining the BOD5 production and volatile solid production of various animal species.

*c. Water supply.*

(1) The source of the dilution water discharged to the anaerobic lagoon shall be identified.

(2) The sulfate concentration of the dilution water to be discharged to the anaerobic lagoon shall be identified. The sulfate concentration shall be determined by standard methods as defined in 567—60.2(455B).

(3) A description of available water supplies shall be provided to prove that adequate water is available for dilution. It is recommended that, if the sulfate concentration exceeds 250 mg/l, then an alternate supply of water for dilution should be sought.

*d. Initial lagoon loading.* Prior to the discharge of any manure to the anaerobic lagoon, the lagoon shall be filled to a minimum of 50 percent of its minimum stabilization volume with fresh water.

*e. Lagoon manure and water management during operation.* Following initial loading, the manure and water content of the anaerobic lagoon shall be managed according to either of the following:

(1) For single cell lagoons or multicell lagoons without a site-specific lagoon operation plan. The total volume of fresh water for dilution added to the lagoon annually shall equal one-half the minimum stabilization volume. At all times, the amount of fresh water added to the lagoon shall equal or exceed the amount of manure discharged to the lagoon.

(2) For a two or three cell anaerobic lagoon. The manure and water content of the anaerobic lagoon may be managed in accordance with a site-specific lagoon operation plan approved by the department. The lagoon operation plan must describe in detail the operational procedures and monitoring program to be followed to ensure proper operation of the lagoon. Operational procedures shall include identifying the amounts and frequencies of planned additions of manure, fresh water and recycle water, and amount and frequencies of planned removal of solids and liquids. Monitoring information shall include locations and intervals of sampling, specific tests to be performed, and test parameter values used to indicate proper lagoon operation. As a minimum, annual sampling and testing of the first lagoon cell for electrical conductivity (EC) and either chemical oxygen demand (COD) or total ammonia (NH<sub>3</sub> + NH<sub>4</sub>) shall be required.

*f. Manure removal.* If the anaerobic lagoon is to be dewatered once a year, manure should be removed to approximate the annual manure volume generated plus the dilution water used. If the anaerobic lagoon is to be dewatered more frequently, the anaerobic lagoon liquid level should be managed to maintain adequate freeboard.

**65.15(14)** Concrete standards. A formed manure storage structure which is constructed of concrete on or after March 24, 2004, that is part of a confinement feeding operation other than a small animal feeding operation shall meet the following minimum standards. For the purpose of this subrule, a "PE" is a professional engineer licensed in the state of Iowa and an "NRCS engineer" is an engineer working for the USDA Natural Resources Conservation Service (NRCS). (CAVEAT: These standards are not intended to address other site-related engineering and construction considerations beyond the department's jurisdiction).

*a. Nondry manure storage.* The following minimum concrete standards are required for a formed manure storage structure other than that used for the storage of manure exclusively in a dry form. A formed manure storage structure must be designed in accordance with one of the following design methods:

(1) Engineering report, plans and specifications prepared and sealed by a PE or an NRCS engineer. Design considerations shall be in conformance with the American Concrete Institute (ACI) Building Code ACI 318, ACI 360 or ACI 350; or Portland Cement Association (PCA) publication EB075, EB001 or IS072; or MidWest Plan Service (MWPS) publication MWPS-36 or MWPS TR-9, and shall include all of the following:

1. The floors shall be a minimum of 5 inches thick. Nondestructive methods to verify the floor slab thickness may be required by the department. The results shall indicate that at least 95 percent of the floor slab area meets the minimum required thickness. In no case shall the floor slab thickness be less than 4½ inches.

2. Wire mesh shall not be used as primary reinforcement for a formed manure storage structure with a depth of 4 feet or more. Fiber shall not be used as reinforcement.

3. Waterstops shall be installed in all areas where fresh concrete meets hardened concrete. Waterstops shall be made of plastic, rolled bentonite or similar materials approved by the department.

4. The vertical steel of all walls shall be extended into the footing and be bent at 90° or a separate dowel shall be installed. As an alternate to the 90° bend, the dowel may be extended at least 12 inches into the footing, with a minimum concrete cover of 3 inches at the bottom. In lieu of dowels, mechanical means or alternate methods may be used as anchorage of interior walls to footings.

(2) If a formed manure storage structure is not designed and sealed by a PE or an NRCS engineer, the design and specifications shall be in conformance with MWPS-36 (for a belowground rectangular tank) or MWPS TR-9 (for a circular tank); or in accordance with Appendix D at the end of this chapter (for a belowground, laterally braced rectangular tank). In addition, all of the following concrete standards shall apply:

1. The finished subgrade of a formed manure storage structure shall be graded and compacted to provide a uniform and level base and shall be free of vegetation, manure and debris. For the purpose of this subrule, "uniform" means a finished subgrade with similar soils.

2. When the groundwater table, as determined in 65.15(7) "c," is above the bottom of the formed structure, a drain tile shall be installed along the footings to artificially lower the groundwater table

pursuant to 65.15(7)“b.” The drain tile shall be placed within 3 feet of the footings as indicated in Appendix D, Figure D-1, at the end of this chapter and shall be covered with a minimum of 2 inches of gravel, granular material, fabric or a combination of these materials to prevent plugging the drain tile.

3. All concrete shall have the following minimum as-placed compressive strengths and shall meet American Society for Testing and Materials (ASTM) standard ASTM C 94:

- 4,000 pounds per square inch (psi) for walls, floors, beams, columns and pumpouts;
- 3,000 psi for the footings.

The average concrete strength by testing shall not be below design strength. No single test result shall be more than 500 psi less than the minimum compressive strength.

4. Cementitious materials shall consist of portland cement conforming to ASTM C 150. Aggregates shall conform to ASTM C 33. Blended cements in conformance with ASTM C 595 are allowed only for concrete placed between March 15 and October 15. Portland-pozzolan cement or portland blast furnace slag blended cements shall contain at least 75 percent, by mass, of portland cement.

5. All concrete placed for walls shall be consolidated or vibrated, by manual or mechanical means, or a combination, in a manner which meets ACI 309.

6. All rebar used shall be a minimum of grade 40 steel. All rebar, with the exception of rebar dowels connecting the walls to the floor or footings, shall be secured and tied in place prior to the placing of concrete.

7. All wall reinforcement shall be placed so as to have a rebar cover of 2 inches from the inside face of the wall for a belowground manure storage structure. Vertical wall reinforcement should be placed closest to the inside face. Rebar placement shall not exceed tolerances specified in ACI 318.

8. The floor slab shall be a minimum of 5 inches thick. The floor slab of any formed manure storage structure with a depth of 4 feet or more shall have primary reinforcement consisting of a minimum of #4 rebar placed a maximum of 18 inches on center in each direction placed in a single mat. The floor slab of any formed manure storage structure with a depth less than 4 feet shall have shrinkage reinforcement consisting of a minimum of 6 × 6-W1.4 × W1.4 welded wire fabric. Floor slab reinforcement shall be located in the middle of the thickness of the floor slab. Nondestructive methods to verify the floor slab thickness may be required by the department. The results shall indicate that at least 95 percent of the floor slab area meets the minimum required thickness. In no case shall the floor slab thickness be less than 4½ inches.

9. The footing or the area where the floor comes in contact with the walls and columns shall have a thickness equal to the wall thickness, but in no case be less than 8 inches, and the width shall be at least twice the thickness of the footing. All exterior walls shall have footings below the frostline. Tolerances shall not exceed -½ inch of the minimum footing dimensions.

10. The vertical steel of all walls shall be extended into the footing, and be bent at 90° or a separate dowel shall be installed as a #4 rebar that is bent at 90° with at least 20 inches of rebar in the wall and extended into the footing within 3 inches of the bottom of the footing and extended at least 3 inches horizontally, as indicated in Appendix D, Figure D-1, at the end of this chapter. As an alternative to the 90° bend, the dowel may be extended at least 12 inches into the footing, with a minimum concrete cover of 3 inches at the bottom. Dowel spacing (bend or extended) shall be the same as the spacing for the vertical rebar. In lieu of dowels, mechanical means or alternate methods may be used as anchorage of interior walls to footings.

11. All walls shall be formed with rigid forming systems and shall not be earth-formed.

12. All concrete shall be cured for at least seven days after placing, in a manner which meets ACI 308, by maintaining adequate moisture or preventing evaporation. Proper curing shall be done by ponding, spraying or fogging water; or by using a curing compound that meets ASTM C 309; or by using wet burlap, plastic sheets or similar materials.

13. All construction joints in exterior walls shall be constructed to prevent discontinuity of steel and have properly spliced rebar placed through the joint. Waterstops shall be installed in all areas where fresh concrete will meet hardened concrete as indicated in Appendix D, Figures D-1 and D-2, at the end of this chapter. The waterstops shall be made of plastic, rolled bentonite or similar materials approved by the department.

14. Backfilling of the walls shall not start until the floor slats or permanent bracing have been installed. Backfilling shall be performed with material free of vegetation, large rocks or debris.

15. A formed manure storage structure with a depth greater than 12 feet shall be designed by a PE or an NRCS engineer.

*b. Dry manure storage.* A formed structure for the storage of manure exclusively in a dry form shall be designed and constructed in accordance with one of the following:

(1) Engineering report, plans and specifications prepared and sealed by a PE or an NRCS engineer. Design considerations shall be in conformance with the American Concrete Institute (ACI) Building Code ACI 318 or ACI 360; or Portland Cement Association (PCA) publication EB075, EB001 or IS072; or MidWest Plan Service (MWPS) publication MWPS-36.

(2) If a formed manure storage structure that stores manure exclusively in a dry form is to be constructed aboveground and the design is not prepared and sealed by a PE or an NRCS engineer, the requirements set forth in 65.15(14) "a"(2), numbered paragraphs "1," "3," "4," "5," "6," "8" and "12," shall apply. Consideration shall be given to internal and external loads including, but not limited to, wind loads, building load, manure pile and equipment vehicle loads.

(3) If the formed structure that stores manure exclusively in a dry form is to be constructed below or partially below the ground and the design is not prepared and sealed by a PE or an NRCS engineer, the requirements set forth in 65.15(14) "a"(2), numbered paragraphs "1" through "15," shall apply. Wall design shall be in accordance with Appendix D at the end of this chapter or in accordance with MWPS-36. Consideration shall be given to internal and external loads including, but not limited to, lateral earth pressures, hydrostatic pressures, wind loads, manure pile and equipment vehicle loads.

*c. Karst terrain—upgraded standards.* If the site of the proposed formed manure storage structure is located in an area that exhibits karst terrain or an area that drains into a known sinkhole, the minimum concrete standards set forth in 65.15(14) "a" or "b" shall apply. In addition, the following requirements apply to all formed manure storage structures that store nondry or dry manure:

(1) A minimum 5-foot vertical separation distance between the bottom of a formed manure storage structure and limestone, dolomite, or other soluble rock is required if the formed manure storage structure is not designed by a PE or an NRCS engineer.

(2) If the vertical separation distance between the bottom of the proposed formed manure storage structure and limestone, dolomite, or other soluble rock is less than 5 feet, the structure shall be designed and sealed by a PE or an NRCS engineer who certifies the structural integrity of the structure. A 2-foot-thick layer of compacted clay liner material shall be constructed underneath the floor of the formed manure storage structure. However, it is recommended that any formed manure storage structure be constructed aboveground if the vertical separation distance between the bottom of the structure and the limestone, dolomite, or other soluble rock is less than 5 feet.

(3) In addition, in an area that exhibits karst terrain or an area that drains into a known sinkhole, a PE, an NRCS engineer or a qualified organization shall submit a soil exploration study based on the results from soil borings or test pits to determine the vertical separation between the bottom of the formed structure and limestone, dolomite, or other soluble rock. A minimum of two soil borings or two test pits, equally spaced within each formed structure, are required. After soil exploration is completed, each soil boring and pit shall be properly plugged with concrete grout, bentonite, or similar materials.

(4) Groundwater monitoring shall be performed as specified by the department.

(5) Backfilling shall not start until the floor slats have been placed or permanent bracing has been installed, and shall be performed with material free of vegetation, large rocks, or debris.

**65.15(15) Berm erosion control.**

*a.* The following requirements shall apply to any anaerobic lagoons, earthen aerobic structures, or earthen manure storage basins constructed after May 12, 1999.

(1) Concrete, riprap, synthetic liners or similar erosion control materials or measures shall be used on the berm surface below pipes where manure will enter the anaerobic lagoon, aerobic structure, or earthen manure storage basin.

(2) Concrete, riprap, synthetic liners or similar erosion control materials or measures of sufficient thickness and area to accommodate manure removal equipment and to protect the integrity of the liner

shall be placed at all locations on the berm, side slopes, and base of the anaerobic lagoon, aerobic structure, or earthen manure storage basin where agitation or pumping may cause damage to the liner.

(3) Erosion control materials or measures shall be used at the corners of the anaerobic lagoon, aerobic structure, or earthen manure storage basin.

*b.* The owner of a confinement feeding operation with an anaerobic lagoon, earthen aerobic structure, earthen manure storage basin, earthen waste slurry storage basin, or earthen egg washwater storage structure shall inspect the structure berms at least semiannually for evidence of erosion. Erosion problems found which may impact either structural stability or liner integrity shall be corrected in a timely manner.

**65.15(16)** Agricultural drainage wells. After May 29, 1997, a person shall not construct a new or expand an existing earthen aerobic structure, earthen anaerobic lagoon, earthen manure storage basin, earthen waste slurry storage basin, or earthen egg washwater storage structure within an agricultural drainage well area.

**65.15(17)** Secondary containment barriers for manure storage structures. Secondary containment barriers used to qualify any operation for the exemption provision in subrule 65.12(5) shall meet the following:

*a.* A secondary containment barrier shall consist of a structure surrounding or downslope of a manure storage structure that is designed to contain 120 percent of the volume of manure stored above the manure storage structure's final grade. If the containment barrier does not surround the manure storage structure, upland drainage must be diverted.

*b.* The barrier may be constructed of earth, concrete, or a combination of both and shall not have a relief outlet or valve.

*c.* The base shall slope to a collecting area where storm water can be pumped out. If storm water is contaminated with manure, it shall be land-applied at normal fertilizer application rates in compliance with rule 65.3(455B).

*d.* Secondary containment barriers constructed entirely or partially of earth shall comply with the following requirements:

(1) The soil surface, including dike, shall be constructed to prevent downward water movement at rates greater than  $1 \times 10^{-6}$  cm/sec and shall be maintained to prevent downward water movement at rates greater than  $1 \times 10^{-5}$  cm/sec.

(2) Dikes shall not be steeper than 45 degrees and shall be protected against erosion. If the slope is 19 degrees or less, grass can be sufficient protection, provided it does not interfere with the required soil seal.

(3) The top width of the dike shall be no less than 3 feet.

*e.* Secondary containment barriers constructed of concrete shall be watertight and comply with the following requirements:

(1) The base of the containment structure shall be designed to support the manure storage structure and its contents.

(2) The concrete shall be routinely inspected for cracks, which shall be repaired with a suitable sealant.

**65.15(18)** Human sanitary waste shall not be directed to a manure storage structure or egg washwater storage structure.

**65.15(19)** Requirements for qualified operations. A confinement feeding operation that meets the definition of a qualified operation shall only use an aerobic structure for manure storage and treatment. This requirement does not apply to a confinement feeding operation that only handles manure in a dry form or to an egg washwater storage structure or to a confinement feeding operation which was constructed before May 31, 1995, and does not expand.

**65.15(20)** Aboveground formed manure storage structures with external outlet or inlet below the liquid level. A formed manure storage structure which is constructed to allow the storage of manure wholly or partially above ground and which has an external outlet or inlet below the liquid level shall have all of the following:

- a.* Two or more shutoff valves on any external outlet or inlet below the liquid level. At least one shutoff valve shall be located inside the structure and be operable if the external valve becomes inoperable or broken off.
- b.* All external outlets or inlets below the liquid level shall be barricaded, encased in concrete, or otherwise protected to minimize accidental destruction.
- c.* Construction shall be in compliance with the manufacturer's requirements.
- d.* An emergency response plan for retaining manure at the site and cleanup if the manure storage structure fails or there is any other type of accidental discharge. The plan shall consist of telephone numbers to comply with 65.2(9) and list of contractors, equipment, equipment technical support, and alternative manure storage or land application sites which can be used during inclement weather.

**567—65.16(455B) Manure management plan requirements.**

**65.16(1)** In accordance with Iowa Code section 455B.203 as amended by 2002 Iowa Acts, chapter 1137, section 38, the following persons are required to submit manure management plans to the department, including an original manure management plan and an updated manure management plan, as required by this rule:

- a.* An applicant for a construction permit for a confinement feeding operation. However, a manure management plan shall not be required of an applicant for an egg washwater storage structure.
- b.* The owner of a confinement feeding operation, other than a small animal feeding operation, if one of the following applies:
  - (1) The confinement feeding operation was constructed or expanded after May 31, 1985, regardless of whether the confinement feeding operation structure was required to have a construction permit.
  - (2) The owner constructs a manure storage structure, regardless of whether the person is required to be issued a permit for the construction pursuant to Iowa Code section 455B.200A as amended by 2002 Iowa Acts, chapter 1137, sections 28 and 29, or whether the person has submitted a prior manure management plan.
- c.* A person who applies manure in Iowa that was produced in a confinement feeding operation, other than a small operation, located outside of Iowa.
- d.* A research college is exempt from this subrule and the manure management plan requirements of rule 65.17(459) for research activities and experiments performed under the authority of the research college and related to animal feeding operations.

**65.16(2)** Effective February 13, 2002, an owner of a proposed confinement feeding operation who is required to file a manure management plan pursuant to paragraph 65.16(1)“*b*” shall submit the confinement feeding operation's manure management plan to the department at least 30 days before the construction of an animal feeding operation structure begins, as that term is defined in subrules 65.8(1) and 65.8(2). After the manure management plan has been received by the department, the department will date-stamp the plan as received and provide written confirmation of receipt to the owner. In addition to the content requirements specified in rule 65.17(459), the owner shall include:

- a.* Documentation that the board of supervisors or auditor of the county where the confinement feeding operation is proposed to be located received a copy of the plan.
- b.* Information (e.g., maps, drawings, aerial photos) that clearly shows the intended location of the animal feeding operation structures and locations and animal weight capacities of any other confinement feeding operations within a distance of 2,500 feet in which the owner has an ownership interest or which the owner manages.

**65.16(3)** Scope of manure management plan; updated plans; annual compliance fee.

- a.* Each confinement feeding operation required to submit a manure management plan shall be covered by a separate manure management plan.
- b.* The owner of a confinement feeding operation who is required to submit a manure management plan under this rule shall submit an updated manure management plan on an annual basis to the department. The updated plan must reflect all amendments made during the period of time since the previous manure management plan submission. The owner of the animal feeding operation shall also submit the updated manure management plan on an annual basis to the board of supervisors of each

county where the confinement feeding operation is located and to the board of supervisors of each county where manure from the confinement feeding operation is land-applied. If the owner of the animal feeding operation has not previously submitted a manure management plan to the board of supervisors of each county where the confinement feeding operation is located and each county where manure is land-applied, the owner must submit a complete manure management plan to each required county. The county auditor or other county official or employee designated by the county board of supervisors may accept the updated plan on behalf of the board. The updated plan shall include documentation that the county board of supervisors or other designated county official or employee received the manure management plan update. The department will stagger the dates by which the updated manure management plans are due and will notify each confinement feeding operation owner of the date on which the updated manure management plan is due. To satisfy the requirements of an updated manure management plan, an owner of a confinement feeding operation must submit one of the following:

- (1) A complete manure management plan;
- (2) A department-approved document stating that the manure management plan submitted in the prior year has not changed; or
- (3) A department-approved document listing all the changes made since the previous manure management plan was submitted and approved.

c. An annual compliance fee of \$0.15 per animal unit at the animal feeding operation shall accompany an annual manure management plan update submitted to the department for approval. The annual compliance fee is based on the animal unit capacity of the confinement feeding operation stated in the updated annual manure management plan submission. If the person submitting the manure management plan is a contract producer, as provided in Iowa Code chapter 202, the active contractor shall pay the annual compliance fee.

**65.16(4)** The department shall review and approve or disapprove all complete manure management plans within 60 days of the date they are received.

**65.16(5)** Manure shall not be removed from a manure storage structure, which is part of a confinement feeding operation required to submit a manure management plan, until the department has approved the plan. As an exception to this requirement, until July 1, 2002, the owner of a confinement feeding operation may remove and apply manure from a manure storage structure in accordance with a manure management plan submitted to the department prior to September 18, 2001, but which has not been approved within the required 60-day period. Manure shall be applied in compliance with rule 65.2(455B).

**65.16(6)** All persons required to submit a manure management plan to the department shall also pay to the department an indemnity fee as required in Iowa Code section 455J.3 except those operations constructed prior to May 31, 1995, which were not required to obtain a construction permit.

**65.16(7)** Any person submitting an original manure management plan must also pay to the department a manure management plan filing fee of \$250. This fee shall be included with each original manure management plan being submitted. If the confinement feeding operation is required to obtain a construction permit and to submit an original manure management plan as part of the construction permit requirements, the applicant must pay the manure management plan filing fee together with the construction permit application fee, which total \$500.

**567—65.17(459) Manure management plan content requirements.** All manure management plans are to be submitted on forms or electronically as prescribed by the department. The plans shall include all of the information specified in Iowa Code section 459.312 and as described below.

**65.17(1) General.**

a. A confinement feeding operation that is required to submit a manure management plan to the department shall not apply manure in excess of the nitrogen use levels necessary to obtain optimum crop yields. When a phosphorus index is required in a manure management plan as provided in 65.17(1)“d,” a confinement feeding operation shall not apply manure in excess of the rates determined in conjunction with the phosphorus index. Information to complete the required calculations may be obtained from the tables in this chapter, actual testing samples or from other credible sources including, but not limited to,

Iowa State University, the United States Department of Agriculture (USDA), a licensed professional engineer, or an individual certified as a crop consultant under the American Registry of Certified Professionals in Agronomy, Crops, and Soils (ARCPACS) program, the Certified Crop Advisors (CCA) program, or the Registry of Environmental and Agricultural Professionals (REAP) program.

*b.* Manure management plans shall comply with the minimum manure control requirements of 65.2(455B) and the requirements for land application of manure in 65.3(455B).

*c.* Manure management plans shall include all of the following:

(1) The name of the owner and the name of the confinement feeding operation, including mailing address and telephone number.

(2) The name of the contact person for the confinement feeding operation, including mailing address and telephone number.

(3) The location of the confinement feeding operation identified by county, township, section, 1/4 section and, if available, the 911 address.

(4) The animal unit capacity of the confinement feeding operation and, if applicable, the animal weight capacity.

*d.* A person who submits a manure management plan shall include a phosphorus index as part of the manure management plan as follows:

(1) A person who submitted an original manure management plan prior to April 1, 2002, shall submit a phosphorus index with the first manure management plan update on and after August 25, 2008.

(2) A person who submitted an original manure management plan on or after April 1, 2002, but prior to October 25, 2004, shall submit a phosphorus index with the first manure management plan update on and after August 25, 2006.

(3) A person who submits an original manure management plan on and after October 25, 2004, shall include the phosphorus index as part of the original manure management plan and manure management plan updates.

**65.17(2)** *Manure management plans for sales of manure.* Selling manure means the transfer of ownership of the manure for monetary or other valuable consideration. Selling manure does not include a transaction where the consideration is the value of the manure, or where an easement, lease or other agreement granting the right to use the land only for manure application is executed.

*a.* Confinement feeding operations that will sell dry manure as a commercial fertilizer or soil conditioner regulated by the Iowa department of agriculture and land stewardship (IDALS) under Iowa Code chapter 200 or 200A shall submit a copy of their site-specific IDALS license or documentation that manure will be sold pursuant to Iowa Code chapter 200 or 200A, along with the department-approved manure management plan form for sales of dry manure. Operations completely covered by this paragraph are not required to meet other manure management plan requirements in this rule.

*b.* A confinement feeding operation not fully covered by paragraph “*a*” above and that has an established practice of selling manure, or a confinement feeding operation that contains an animal species for which selling manure is a common practice, shall submit a manure management plan that includes the following:

(1) Until a phosphorus index is required as part of the manure management plan, an estimate of the number of acres required for manure application shall be calculated by dividing the total nitrogen available to be applied from the confinement feeding operation by the crop usage rate. Crop usage rate may be estimated by using a corn crop usage rate factor and an estimate of the optimum crop yield for the property in the vicinity of the confinement feeding operation.

(2) When a phosphorus index is required as part of the manure management plan, an estimate of the number of acres required for manure application shall be calculated by one of the following methods:

1. Dividing the total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available to be applied from the confinement feeding operation by the corn crop removal of phosphorus. The corn crop removal of phosphorus may be estimated by using the phosphorus removal rate in Table 4a at the end of this chapter and an estimate of the optimum crop yield for the property in the vicinity of the operation.

2. Totaling the quantity of manure that can be applied to each available field based on application rates determined in conjunction with the phosphorus index in accordance with 65.17(17), and ensuring

that the total quantity that can be applied is equal to or exceeds the manure annually generated at the operation.

- (3) The total nitrogen available to be applied from the confinement feeding operation.
- (4) The total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available to be applied from the confinement feeding operation if the phosphorus index is required in accordance with 65.17(1)“d.”
- (5) An estimate of the annual animal production and manure volume or weight produced.
- (6) A manure sales form, if manure will be sold, shall include the following information:
  1. A place for the name and address of the buyer of the manure.
  2. A place for the quantity of manure purchased.
  3. The planned crop schedule and optimum crop yields.
  4. A place for the manure application methods and the timing of manure application.
  5. A place for the location of the field including the number of acres where the manure will be applied.
  6. A place for the manure application rate.
  7. When a phosphorus index is required as part of a manure management plan in accordance with 65.17(1)“d,” a place for a phosphorus index of each field receiving manure, as defined in 65.17(17)“a,” including the factors used in the calculation. A copy of the NRCS phosphorus index detailed report shall satisfy the requirement to include the factors used in the calculation.
  - (7) Statements of intent if the manure will be sold. The number of acres indicated in the statements of intent shall be sufficient according to the manure management plan to apply the manure from the confinement feeding operation. The permit holder for an existing confinement feeding operation with a construction permit may submit past records of manure sales instead of statements of intent. The statements of intent shall include the following information:
    1. The name and address of the person signing the statement.
    2. A statement indicating the intent of the person to purchase the confinement feeding operation’s manure.
    3. The location of the farm where the manure can be applied including the total number of acres available for manure application.
    4. The signature of the person who may purchase the confinement feeding operation’s manure.
  - (8) The owner shall maintain in the owner’s records a current manure management plan and copies of all of the manure sales forms; the sales forms must be completed and signed by each buyer of the manure and the applicant, and the copies must be maintained in the owner’s records for three years after each sale. Effective August 25, 2006, the owner shall maintain in the owner’s records copies of all of the manure sales forms for five years after each sale. An owner of a confinement feeding operation shall not be required to maintain current statements of intent as part of the manure management plan.

**65.17(3) Manure management plan for nonsales of manure.** Confinement feeding operations that will not sell all of their manure shall submit the following for that portion of the manure which will not be sold:

- a. Calculations to determine the land area required for manure application.
- b. The total nitrogen available to be applied from the confinement feeding operation.
- c. The planned crop schedule and optimum crop yields.
- d. Manure application methods and timing of the application.
- e. The location of manure application.
- f. An estimate of the annual animal production and manure volume or weight produced.
- g. Methods, structures or practices that will be used to reduce soil loss and prevent surface water pollution.
- h. Methods or practices that will be utilized to reduce odor if spray irrigation equipment is used to apply manure.
- i. When a phosphorus index is required as part of the manure management plan in accordance with 65.17(1)“d,” the following are required:
  - (1) The total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available to be applied from the confinement feeding operation.

(2) A phosphorus index of each field in the manure management plan, as defined in 65.17(17)“a,” including the factors used in the calculation. A copy of the NRCS phosphorus index detailed report shall satisfy the requirement to include the factors used in the calculation.

**65.17(4)** *Manure management plan calculations to determine land area required for manure application.*

a. The number of acres needed for manure application for each year of the crop schedule shall be determined as follows:

(1) Until a phosphorus index is required in accordance with 65.17(1)“d,” the requirements of 65.17(18) shall be followed.

(2) When a phosphorus index is required in accordance with 65.17(1)“d,” the requirements of 65.17(17) shall be followed.

b. Operations evaluated with the master matrix pursuant to 65.10(3) that claim points for additional separation distance for the land application of manure must maintain those distances for each year of the manure management plan.

c. Nitrogen in addition to that allowed in the manure management plan may be applied up to the amounts, indicated by soil or crop nitrogen test results, necessary to obtain the optimum crop yield.

**65.17(5)** *Total nitrogen and total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available from the confinement feeding operation.*

a. To determine the nitrogen available to be applied per year, the factors in Table 3, “Annual Pounds of Nitrogen Per Space of Capacity,” multiplied by the number of spaces shall be used. To determine total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available to be applied per year, the factors in Table 3a, “Annual Pounds of Phosphorus Per Space of Capacity,” multiplied by the number of spaces shall be used. If the tables are not used to determine the nitrogen or phosphorus available to be applied, other credible sources for standard table values or the actual nitrogen and phosphorus content of the manure may be used. The actual nitrogen and phosphorus content shall be determined by a laboratory analysis along with measured volume or weight of manure from the manure storage structure or from a manure storage structure with design and management similar to the confinement feeding operation’s manure storage structure.

b. If an actual sample is used to represent the nutrient content of manure, the sample shall be taken in accordance with Iowa State University extension publication PM 1558, “Management Practices: How to Sample Manure for Nutrient Analysis.” The department may require documentation of the manure sampling protocol or take a split sample to verify the nutrient content of the operation’s manure.

**65.17(6)** *Optimum crop yield and crop schedule.*

a. To determine the optimum crop yield, the applicant may either exclude the lowest crop yield for the period of the crop schedule in the determination or allow for a crop yield increase of 10 percent. In using these methods, adjustment to update yield averages to current yield levels may be made if it can be shown that the available yield data is not representative of current yields. The optimum crop yield shall be determined using any of the following methods for the cropland where the manure is to be applied:

(1) Soil survey interpretation record. The plan shall include a map showing soil map units for the fields where manure will be applied. The optimum crop yield for each field shall be determined by using the weighted average of the soil interpretation record yields for the soils on the cropland where the manure is to be applied. Soil interpretation records from the Natural Resources Conservation Service shall be used to determine yields based on soil map units.

(2) USDA county crop yields. The plan shall use the county yield data from the USDA Iowa Agricultural Statistics Service.

(3) Proven yield methods. Proven yield methods may only be used if a minimum of the most recent three years of yield data for the crop is used. These yields can be proven on a field-by-field or farm-by-farm basis. Crop disaster years may be excluded when there is a 30 percent or more reduction in yield for a particular field or farm from the average yield over the most recent five years. Excluded years shall be replaced by the most recent nondisaster years. Proven yield data used to determine application rates shall be maintained with the current manure management plan. Any of the following proven yield methods may be used:

1. Proven yields for USDA Farm Service Agency. The plan shall use proven yield data or verified yield data for Farm Service Agency programs.

2. Proven yields for multiperil crop insurance. Yields established for the purpose of purchasing multiperil crop insurance shall be used as proven yield data.

3. Proven yields from other methods. The plan shall use the proven yield data and indicate the method used in determining the proven yield.

*b.* Crop schedule. Crop schedules shall include the name and total acres of the planned crop on a field-by-field or farm-by-farm basis where manure application will be made. A map may be used to indicate crop schedules by field or farm. The planned crop schedule shall name the crop(s) planned to be grown for the length of the crop rotation beginning with the crop planned or actually grown during the year this plan is submitted or the first year manure will be applied. The confinement feeding operation owner shall not be penalized for exceeding the nitrogen or phosphorus application rate for an unplanned crop, if crop schedules are altered because of weather, farm program changes, market factor changes, or other unforeseeable circumstances.

**65.17(7)** *Manure application methods and timing.*

*a.* The manure management plan shall identify the methods that will be used to land-apply the confinement feeding operation's manure. Methods to land-apply the manure may include, but are not limited to, surface-apply dry with no incorporation, surface-apply liquids with no incorporation, surface-apply liquid or dry with incorporation within 24 hours, surface-apply liquid or dry with incorporation after 24 hours, knifed in or soil injection of liquids, or irrigated liquids with no incorporation.

*b.* The manure management plan shall identify the approximate time of year that land application of manure is planned. The time of year may be identified by season or month.

**65.17(8)** *Location of manure application.*

*a.* The manure management plan shall identify each farm where the manure will be applied, the number of acres that will be available for the application of manure from the confinement feeding operation, and the basis under which the land is available.

*b.* A copy of each written agreement executed with the owner of the land where manure will be applied shall be maintained with the current manure management plan. The written agreement shall indicate the acres on which manure from the confinement feeding operation may be applied and the length of the agreement. A written agreement is not required if the land is owned or rented for crop production by the owner of the confinement feeding operation.

*c.* If a present location becomes unavailable for manure application, additional land for manure application shall be identified in the current manure management plan prior to the next manure application period.

**65.17(9)** *Estimate of annual animal production and manure volume or weight produced.* Volumes or weights of manure produced shall be estimated based on the numbers of animals, species, and type of manure storage used. The plan shall list the annually expected number of production animals by species. The volume of manure may be estimated based on the values in Table 5 at the end of this chapter and submitted as a part of the plan. If the plan does not use the table to determine the manure volume, other credible sources for standard table values or the actual manure volume from the confinement feeding operation may be used.

**65.17(10)** *Methods to reduce soil loss and potential surface water pollution.* The manure management plan shall include an identification of the methods, structures or practices that will be used to prevent or diminish soil loss and potential surface water pollution during the application of manure. Until a phosphorus index is required in accordance with 65.17(1) "d," the current manure management plan shall maintain a summary or copy of the conservation plan for the cropland where manure from the animal feeding operation will be applied if the manure will be applied on highly erodible cropland. The conservation plan shall be the conservation plan approved by the local soil and water conservation district or its equivalent. The summary of the conservation plan shall identify the methods, structures or practices that are contained in the conservation plan. When a phosphorus index is required in accordance with 65.17(1) "d," the manure management plan shall indicate for each field in the plan the

crop rotation, tillage practices and supporting practices used to calculate sheet and rill erosion for the phosphorus index. A copy of the NRCS RUSLE2 profile erosion calculation record shall satisfy the requirement to indicate the crop rotation, tillage practices and supporting practices to calculate sheet and rill erosion. The plan shall also identify the highly erodible cropland where manure will be applied. The manure management plan may include additional information such as whether the manure will be injected or incorporated or the type of manure storage structure.

**65.17(11) *Spray irrigation.*** Requirements contained in subrules 65.3(2) and 65.3(3) regarding the use of spray irrigation equipment to apply manure shall be followed. A plan which has identified spray irrigation equipment as the method of manure application shall identify any additional methods or practices to reduce potential odor, if any other methods or practices will be utilized.

**65.17(12) *Current manure management plan.*** The owner of a confinement feeding operation who is required to submit a manure management plan shall maintain a current manure management plan at the site of the confinement feeding operation or at a residence or office of the owner or operator of the operation within 30 miles of the site. The plan shall include completed manure sales forms for a confinement feeding operation from which manure is sold. If manure management practices change, a person required to submit a manure management plan shall make appropriate changes consistent with this rule. If values other than the standard table values are used for manure management plan calculations, the source of the values used shall be identified.

**65.17(13) *Record keeping.*** Records shall be maintained by the owner of a confinement feeding operation who is required to submit a manure management plan. This recorded information shall be maintained for three years following the year of application or for the length of the crop rotation, whichever is greater. Effective August 25, 2006, records shall be maintained for five years following the year of application or for the length of the crop rotation, whichever is greater. Records shall be maintained at the site of the confinement feeding operation or at a residence or office of the owner or operator of the facility within 30 miles of the site. Records to demonstrate compliance with the manure management plan shall include the following:

- a. Factors used to calculate the manure application rate:
  - (1) Optimum yield for the planned crop.
  - (2) Types of nitrogen credits and amounts.
  - (3) Remaining crop nitrogen needed.
  - (4) Nitrogen content and first-year nitrogen availability of the manure.
  - (5) Phosphorus content of the manure if required in accordance with 65.17(3) "i." If an actual sample is used, documentation shall be provided.
- b. If phosphorus-based application rates are used, the following shall be included:
  - (1) Crop rotation.
  - (2) Phosphorus removed by crop harvest of that crop rotation.
- c. Maximum allowable manure application rate.
- d. Actual manure application information:
  - (1) Methods of application when manure from the confinement feeding operation was applied.
  - (2) Date(s) when the manure from the confinement feeding operation was applied.
  - (3) Location of the field where the manure from the confinement feeding operation was applied, including the number of acres.
  - (4) The manure application rate.
- e. Effective August 25, 2005, date(s) and application rate(s) of commercial nitrogen and phosphorus on fields that received manure. However, if the date and application rate information is for fields which are not owned for crop production or which are not rented or leased for crop production by the person required to keep records pursuant to this subrule, an enforcement action for noncompliance with a manure management plan or the requirements of this subrule shall not be pursued against the person required to keep records pursuant to this subrule or against any other person who relied on the date and application rate in records required to be kept pursuant to this subrule, unless that person knew or should have known that nitrogen or phosphorus would be applied in excess of maximum levels set forth in paragraph 65.17(1) "a." If manure is applied to fields not owned, rented or leased for crop

production by the person required to keep records pursuant to this subrule, that person shall obtain from the person who owns, rents or leases those fields a statement specifying the planned commercial nitrogen and phosphorus fertilizer rates to be applied to each field receiving the manure.

*f.* When a phosphorus index is required in accordance with 65.17(1) “*d*,” a copy of the current soil test lab results for each field in the manure management plan.

*g.* For sales of manure under 65.17(2) “*b*,” record-keeping requirements of 65.17(2) “*b*”(8) shall be followed.

**65.17(14) Record inspection.** The department may inspect a confinement feeding operation at any time during normal working hours and may inspect the manure management plan and any records required to be maintained. As required in Iowa Code section 459.312(12), Iowa Code chapter 22 shall not apply to the records which shall be kept confidential by the department and its agents and employees. The contents of the records are not subject to disclosure except as follows:

*a.* Upon waiver by the owner of the confinement feeding operation.

*b.* In an action or administrative proceeding commenced under this chapter. Any hearing related to the action or proceeding shall be closed.

*c.* When required by subpoena or court order.

**65.17(15) Enforcement action.** An owner required to provide the department a manure management plan pursuant to this rule who fails to provide the department a plan or who is found in violation of the terms and conditions of the plan shall not be subject to an enforcement action other than assessment of a civil penalty pursuant to Iowa Code section 455B.191.

**65.17(16) Soil sampling requirements for fields where the phosphorus index must be used.** Soil samples shall be obtained from each field in the manure management plan at least once every four years. Each soil sample shall be analyzed for phosphorus and pH. The soil sampling protocol shall meet all of the following requirements:

*a.* Acceptable soil sampling strategies include, but are not limited to, grid sampling, management zone sampling, and soil type sampling. Procedural details can be taken from Iowa State University extension publication PM 287, “Take a Good Soil Sample to Help Make Good Decisions,” NCR-13 Report 348, “Soil Sampling for Variable-Rate Fertilizer and Lime Application,” or other credible soil sampling publications.

*b.* Each soil sample must be a composite of at least ten soil cores from the sampling area, with each core containing soil from the top six inches of the soil profile.

*c.* Each soil sample shall represent no more than ten acres. For fields less than or equal to 15 acres, only one soil sample is necessary.

*d.* Soil analysis must be performed by a lab enrolled in the IDALS soil testing certification program.

*e.* The soil phosphorus test method must be an appropriate method for use with the phosphorus index. If soil pH is greater than or equal to 7.4, soil phosphorus data from the Bray-1 extraction method is not acceptable for use with the phosphorus index.

**65.17(17) Use of the phosphorus index.** Manure application rates shall be determined in conjunction with the use of the Iowa Phosphorus Index as specified by the USDA Natural Resources Conservation Service (NRCS) Iowa Technical Note No. 25.

*a.* The phosphorus index shall be used on each individual field in the manure management plan. The fields must be contiguous and shall not be divided by a public thoroughfare or a water source as each is defined in this chapter. Factors to be considered when a field is defined may include, but are not limited to, cropping system, erosion rate, soil phosphorus concentration, nutrient application history, and the presence of site-specific soil conservation practices.

*b.* When sheet and rill erosion is calculated for the phosphorus index, the soil type used for the calculation shall be the most erosive soil map unit that is at least 10 percent of the total field area.

*c.* The average (arithmetic mean) soil phosphorus concentration of a field shall be used in the phosphorus index.

*d.* Soil phosphorus concentration data is considered valid for use in the phosphorus index if the data is four years old or less and meets the requirements of 65.17(16).

*e.* For an original manure management plan, previous soil sampling data that does not meet the requirements of 65.17(16) may be used in the phosphorus index if the data is four years old or less. In the case of fields for which soil sampling data is used that does not meet the requirements of 65.17(16), the fields must be soil-sampled according to the requirements of 65.17(16) no more than one year after the manure management plan is approved.

*f.* The following are the manure application rate requirements for fields that are assigned the phosphorus index site vulnerability ratings below as determined by the NRCS Iowa Technical Note No. 25 to the NRCS 590 standard rounded to the nearest one-hundredth:

(1) Very Low (0-1).

1. Manure shall not be applied in excess of a nitrogen-based rate in accordance with 65.17(18).

2. If, pursuant to 65.17(19), manure is applied at phosphorus-based rates within soil sampling periods on fields in the Very Low risk category, each soil sample may represent up to 20 acres for the next required soil sampling.

(2) Low (>1-2).

1. Manure shall not be applied in excess of a nitrogen-based rate in accordance with 65.17(18).

2. If, pursuant to 65.17(19), manure is applied at phosphorus-based rates within soil sampling periods on fields in the Low risk category, each soil sample may represent up to 20 acres for the next required soil sampling.

(3) Medium (>2-5).

1. Manure may be applied at a nitrogen-based rate in accordance with 65.17(18) if current or planned soil conservation and phosphorus management practices predict the rating of the field to be not greater than 5 for the next determination of the phosphorus index as required by 65.17(17) "h"(3).

2. Manure shall not be applied in excess of two times the phosphorus removed with crop harvest over the period of the crop rotation.

3. If, pursuant to 65.17(19), manure is applied at phosphorus-based rates within soil sampling periods on fields in the Medium risk category, each soil sample may represent up to 20 acres for the next required soil sampling.

(4) High (>5-15). Manure shall not be applied on a field with a rating greater than 5 and less than or equal to 15 until practices are adopted which reduce the phosphorus index to at least the Medium risk category. However, prior to December 31, 2008, fields with a phosphorus index greater than 5 and less than or equal to 10 may receive manure at a phosphorus-based rate in accordance with 65.17(19) if practices will be adopted to reduce the phosphorus index to the Medium risk category.

(5) Very High (>15). Manure shall not be applied on a field with a rating greater than 15.

*g.* Additional commercial fertilizer may be applied as follows on fields receiving manure:

(1) Phosphorus fertilizer may be applied in addition to phosphorus provided by the manure up to amounts recommended by soil tests and Iowa State University extension publication PM 1688, "General Guide for Crop Nutrient Recommendations in Iowa."

(2) Nitrogen fertilizer may be applied in addition to nitrogen provided by the manure to meet the remaining nitrogen need of the crop as calculated in the current manure management plan. Additional nitrogen fertilizer may be applied up to the amounts indicated by soil test nitrogen results or crop nitrogen test results as necessary to obtain the optimum crop yield.

*h.* Updating the phosphorus index.

(1) When any inputs to the phosphorus index change, an operation shall recalculate the phosphorus index and adjust the application rates if necessary.

(2) If additional land becomes available for manure application, the phosphorus index shall be calculated to determine the manure application rate before manure is applied.

(3) An operation must submit a complete manure management plan using a new phosphorus index for each field in the manure management plan a minimum of once every four years.

**65.17(18) Requirements for application of a nitrogen-based manure rate to a field.**

*a.* Nitrogen-based application rates shall be based on the total nitrogen content of the manure unless the calculations are submitted to show that nitrogen crop usage rates based on plant-available nitrogen have not been exceeded for the crop schedule submitted.

b. The correction factor for nitrogen losses shall be determined for the method of application by the following or from other credible sources for nitrogen volatilization correction factors.

Knifed in or soil injection of liquids	0.98
Surface-apply liquid or dry with incorporation within 24 hours	0.95
Surface-apply liquid or dry with incorporation after 24 hours	0.80
Surface-apply liquids with no incorporation	0.75
Surface-apply dry with no incorporation	0.70
Irrigated liquids with no incorporation	0.60

c. Nitrogen-based application rates shall be based on the optimum crop yields as determined in 65.17(6) and crop nitrogen usage rate factor values in Table 4 at the end of this chapter or other credible sources. However, subject to the prohibition in 65.17(20), liquid manure applied to land that is currently planted to soybeans or to land where the current crop has been harvested and that will be planted to soybeans the next crop season shall not exceed 100 pounds of available nitrogen per acre. Further, the 100 pounds per acre application limitation in the previous sentence does not apply on or after June 1 of each year; in that event 65.17(6) and Table 4 would apply as provided in the first sentence of this paragraph.

d. A nitrogen-based manure rate shall account for legume production in the year prior to growing corn or other grass crops and shall account for any planned commercial fertilizer application.

**65.17(19) Requirements for application of a phosphorus-based manure rate to a field.**

a. Phosphorus removal by harvest for each crop in the crop schedule shall be determined using the optimum crop yield as determined in 65.17(6) and phosphorus removal rates of the harvested crop from Table 4a at the end of this chapter or other credible sources. Phosphorus crop removal shall be determined by multiplying optimum crop yield by the phosphorus removal rate of the harvested crop.

b. Phosphorus removal by the crop schedule shall be determined by summing the phosphorus crop removal values determined in 65.17(19)“a” for each crop in the crop schedule.

c. The phosphorus applied over the duration of the crop schedule shall be less than or equal to the phosphorus removed with harvest during that crop schedule as calculated in 65.17(19)“b” unless additional phosphorus is recommended by soil tests and Iowa State University extension publication PM 1688, “General Guide for Crop Nutrient Recommendations in Iowa.”

d. Additional requirements for phosphorus-based rates.

(1) No single manure application shall exceed the nitrogen-based rate of the planned crop receiving the particular manure application.

(2) No single manure application shall exceed the rate that applies to the expected amount of phosphorus removed with harvest by the next four anticipated crops in the crop schedule.

e. If the actual crop schedule differs from the planned crop schedule, then any surplus or deficit of phosphorus shall be accounted for in the subsequent manure application.

f. Phosphorus in manure should be considered 100 percent available unless soil phosphorus concentrations are below optimum levels for crop production. If soil phosphorus concentrations are below optimum levels for crop production phosphorus availability, values suggested in Iowa State University extension publication PM 1811, “Managing Manure Nutrients for Crop Production” or other credible sources shall be used.

**65.17(20) Liquid manure on land planted to soybeans.** Effective May 14, 2013, the owner of a confinement feeding operation that is required to submit a manure management plan shall not apply liquid manure to land that is currently planted to soybeans or to land where the current crop has been harvested and that will be planted to soybeans the next crop season. Not later than November 14, 2012, the commission shall review the available scientific evidence and determine whether any further or alternative action is necessary. The prohibition on applying liquid manure shall not become effective unless the commission publishes a notice in the Iowa Administrative Bulletin confirming that it has reviewed the available scientific evidence and that the prohibition shall take effect on May 14, 2013.

**567—65.18(455B) Construction certification.** A confinement feeding operation which obtains a construction permit after March 20, 1996, shall submit to the department a certification from a licensed professional engineer that the manure storage structure in which manure is stored in a liquid or semiliquid form or the egg washwater storage structure was:

1. Constructed in accordance with the design plan. If actual construction deviates from the approved plans, identify all changes and certify that the changes were consistent with the standards of these rules or statute;
2. Supervised by the licensed professional engineer or a designee of the engineer during critical points of the construction. A designee shall not be the permittee, owner of the confinement feeding operation, a direct employee of the permittee or owner, or the contractor or an employee of the contractor;
3. Inspected by the licensed professional engineer after completion of construction and before commencement of operation; and
4. Constructed in accordance with the drainage tile removal standards of subrule 65.15(1), and including a report of the findings and actions taken to comply with this subrule.

**567—65.19(455B) Manure applicators certification.**

**65.19(1)** A commercial manure service, a commercial manure service representative or a confinement site manure applicator shall not apply dry or liquid manure to land, unless the person is certified. A person is not required to be certified as a confinement site manure applicator if the person applies manure which originates from a manure storage structure which is part of a small animal feeding operation. Certification of a commercial manure service representative under this rule will also satisfy the commercial license requirement under 567—Chapter 68 only as it applies to manure removal and application. Each person who operates a manure applying vehicle or equipment must be certified individually except as allowed in subrule 65.19(7).

**65.19(2) Fees.**

*a. Commercial manure service.* Effective January 1, 2004, the fee for a new or renewed certification of a service is \$200. The commercial manure service shall designate one manager for the service and shall provide the department with documentation of the designation.

*b. Commercial manure service representative.* Effective January 1, 2004, the fee for a new or renewed representative certification is \$75. The manager of a commercial manure service must be certified as a commercial manure service representative, but is exempt from paying the \$75 certification fee.

*c. Confinement site manure applicator.* Effective January 1, 2003, the fee for a new or renewed certification is \$100. However, the fee is not required if all of the following apply:

- (1) The person indicates that the person is a family member as defined in this chapter by submitting a completed form provided by the department;
- (2) The person is certified as a confinement site manure applicator within one year of the date another family member was certified or whose certification as a confinement site manure applicator was renewed;
- (3) The other family member certified as a confinement site manure applicator has paid the certification fee.

*d. Educational fee.* Effective May 30, 2003, commercial manure service representatives, managers and confinement site manure applicators shall pay an educational fee to be determined annually by the department.

*e. Late fee.* Renewal applications received after March 1 require that an additional \$12.50 fee be paid before the certification is renewed. An application is considered to be received on the date it is postmarked.

*f. Duplicate certificate.* The fee for a duplicate certificate is \$15.

**65.19(3)** Certification requirements. To be certified by the department as a commercial manure service, a commercial manure service representative or a confinement site manure applicator, a person must do all of the following:

- a.* Apply for certification on a form provided by the department.

- b. Pay the required fees set forth in subrule 65.19(2).
- c. Pass the examination given by the department or, in lieu of the examination, attend continuing instruction courses as described in subrule 65.19(6).

**65.19(4) Certification term, renewal and grace period.**

a. *Certification term.* Certification for a commercial manure service and commercial manure service representative shall be for a period of one year and shall expire on March 1 of each year. Certification for a confinement site manure applicator shall be for a period of three years and shall expire on December 31 of the third year. After June 30, 2001, the expiration dates of confinement site manure applicator certifications that currently expire on a date other than December 31 are automatically extended to December 31 of the year the certification expires.

b. *Renewal.* Application for renewal of a commercial manure service certification or a commercial manure service representative certification must be received by the department no later than March 1 of the year the certification expires. Application for renewal of a confinement site manure applicator certification must be received by the department or postmarked no later than March 1 after the year the certification expires. Application shall be on forms provided by the department and shall include:

- (1) Certification renewal and educational fees.
- (2) A passing grade on the certification examination or proof of attending the required hours of continuing instructional courses.

c. *Substitution of employees.* If a commercial manure service pays the certification fee for a representative, the service may substitute representatives. The substituted representative must be certified pursuant to 65.19(3). The service shall provide documentation to the department, on forms provided by the department, that the substitution is valid.

d. *Grace period.* Except as provided in this paragraph, a commercial manure service, a commercial manure service representative or a confinement site manure applicator may not continue to apply manure after expiration of a certificate. A confinement site manure applicator may continue to apply manure until March 1 following the year the certification expires, provided a complete renewal application, as provided in paragraph "b," is postmarked or received by the department prior to March 1. Commercial manure services and representatives must submit an application for certification renewal by March 1 of each year.

**65.19(5) Examinations.**

a. A person wishing to take the examination required to become a certified commercial manure service representative or certified confinement site manure applicator may request a listing of dates and locations of examinations. The applicant must have a photo identification card at the time of taking the examination.

b. If a person fails the examination, the person may retake the examination, but not on the same business day.

c. Upon written request by an applicant, the director will consider the presentation of an oral examination on an individual basis when the applicant has failed the written examination at least twice; and the applicant has shown difficulty in reading or understanding written questions but may be able to respond to oral questioning.

**65.19(6) Continuing instruction courses in lieu of examination.**

a. To establish or maintain certification, between March 1 and March 1 of the next year, a commercial manure service representative must each year either pass an examination or attend three hours of continuing instructional courses.

b. To establish or maintain certification, a confinement site manure applicator must either pass an examination every three years or attend two hours of continuing instructional courses each year.

**65.19(7) Exemption from certification.**

a. Certification as a commercial manure service representative is not required of a person who is any of the following:

- (1) Actively engaged in farming and who trades work with another such person.
- (2) Employed by a person actively engaged in farming not solely as a manure applicator but who applies manure as an incidental part of the person's general duties.

(3) Engaged in applying manure as an incidental part of a custom farming operation.

(4) Engaged in applying manure as an incidental part of the person's duties.

(5) Applying, transporting, handling or storing manure within a period of 30 days from the date of initial employment as a commercial manure service representative if the person applying the manure is acting under direct instructions and control of a certified commercial manure service representative who is physically present at the manure application site by being in sight or immediate communication distance of the supervised person where the certified commercial service representative can communicate with the supervised person at all times.

(6) Employed by a research college to apply manure from animal feeding operations that are part of the research activities or experiments of the research college.

*b.* Certification as a confinement site manure applicator is not required of a person who is either of the following:

(1) A part-time employee or family member of a confinement site manure applicator and is acting under direct instruction and control of a certified confinement site manure applicator who is physically present at the manure application site by being in sight or hearing distance of the supervised person where the certified confinement site manure applicator can physically observe and communicate with the supervised person at all times.

(2) Employed by a research college to apply manure from an animal feeding operation that is part of the research activities or experiments of the research college.

**65.19(8)** Certified commercial manure services have the following obligations:

*a.* Maintain the following records of manure disposal operations for a period of three years:

(1) A copy of instructions for manure application provided by the owner of the animal feeding operation.

(2) Dates that manure was applied or sold.

(3) The manure application rate.

(4) Location of fields where manure was applied.

*b.* Comply with the provisions of the manure management plan (MMP) prepared for the animal feeding operation and the requirements of 65.2(455B) and 65.3(455B). If a manure management plan does not exist, the requirements of 65.2(455B) and 65.3(455B) must still be met.

*c.* Any tanks or equipment used for hauling manure shall not be used for hauling hazardous or toxic wastes, as defined in 567—Chapter 131, or other wastes detrimental to land application and shall not be used in a manner that would contaminate a potable water supply or endanger the food chain or public health.

*d.* Pumps and associated piping on manure handling equipment shall be installed with watertight connections to prevent leakage.

*e.* Any vehicle used by a certified commercial manure service or commercial manure service representative to transport manure on a public road shall display the certification number of the commercial manure service with three-inch or larger letters and numbers on the side of the tank or vehicle. The name and address of the certified commercial manure service representative designated as the manager shall also be prominently displayed on the side of the tank or vehicle.

*f.* Direct connection shall not be made between a potable water source and the tank or equipment on the vehicle.

**65.19(9)** Discipline of certified applicators.

*a.* Disciplinary action may be taken against a certified commercial manure service, a commercial manure service representative or a confinement site manure applicator on any of the following grounds:

(1) Violation of state law or rules applicable to a certified commercial manure service, a commercial manure service representative, or a confinement site manure applicator or the handling or application of manure.

(2) Failure to maintain required records of manure application or other reports required by this rule.

(3) Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

*b.* Disciplinary sanctions allowable are:

- (1) Revocation of a certificate.
- (2) Probation under specified conditions relevant to the specific grounds for disciplinary action.

Additional training or reexamination may be required as a condition of probation.

*c.* The procedure for discipline is as follows:

(1) The director shall initiate disciplinary action.

(2) Written notice shall be given to an applicator against whom disciplinary action is being considered. The notice shall state the informal and formal procedures available for determining the matter. The applicator shall be given 20 days to present any relevant facts and indicate the person's position in the matter and to indicate whether informal resolution of the matter may be reached.

(3) An applicator who receives notice shall communicate verbally or in writing or in person with the director, and efforts shall be made to clarify the respective positions of the applicator and director.

(4) Failure to communicate facts and position relevant to the matter by the required date may be considered when determining appropriate disciplinary action.

(5) If agreement as to appropriate disciplinary sanction, if any, can be reached with the applicator and the director, a written stipulation and settlement between the department and the applicator shall be entered. The stipulation and settlement shall recite the basic facts and violations alleged, any facts brought forth by the applicator, and the reasons for the particular sanctions imposed.

(6) If an agreement as to appropriate disciplinary action, if any, cannot be reached, the director may initiate formal hearing procedures. Notice and formal hearing shall be in accordance with 561—Chapter 7 related to contested and certain other cases pertaining to license discipline.

**65.19(10)** Revocation of certificates.

*a.* Upon revocation of a certificate, application for commercial manure service representative or confinement site applicator certification may be allowed after two years from the date of revocation. Any such applicant must successfully complete an examination and be certified in the same manner as a new applicant.

*b.* Upon revocation of a certificate, application for a commercial manure service certification may be allowed after three years from the date of revocation. Any such applicant must successfully complete an examination and be certified in the same manner as a new applicant.

**65.19(11)** Record inspection. The department may inspect, with reasonable notice, the records maintained by a commercial manure service. If the records are for an operation required to maintain records to demonstrate compliance with a manure management plan, the confidentiality provisions of subrule 65.17(14) and Iowa Code section 459.312 shall extend to the records maintained by the commercial manure service.

**567—65.20(455B) Manure storage indemnity fund.** The manure storage indemnity fund created in Iowa Code chapter 455J will be administered by the department. Moneys in the fund shall be used for the exclusive purpose of administration of the fund and the cleanup of eligible facilities at confinement feeding operation sites.

**65.20(1)** *Eligible facility site.* The site of a confinement feeding operation which contains one or more animal feeding operation structures is an eligible site for reimbursement of cleanup costs if one of the following conditions exists:

*a.* A county has acquired title to real estate containing the confinement feeding operation following nonpayment of taxes and the site includes a manure storage structure which contains stored manure or site contamination originating from the confinement feeding operation.

*b.* A county or the department determines that the confinement feeding operation has caused a clear, present and impending danger to the public health or environment.

**65.20(2)** *Site cleanup.* Site cleanup includes the removal and land application or disposal of manure from an eligible facility site according to manure management procedures approved by the department. Cleanup may include remediation of documented contamination which originates from the confinement feeding operation. Cleanup may also include demolishing and disposing of animal feeding operation structures if their existence or further use would contribute to further environmental contamination and

their removal is included in a cleanup plan approved by the department. Buildings and equipment must be demolished or disposed of according to rules adopted by the department in 567—Chapter 101 which apply to the disposal of farm buildings or equipment by an individual or business organization.

**65.20(3) Claims against the fund.** Claims for cleanup costs may be made by a county which has acquired real estate containing an eligible facility site pursuant to a tax deed. A county claim shall be signed by the chairperson of the county board of supervisors. Cleanup may be initiated by the department or may be authorized by the department based on a claim by a county.

*a. Advance notice of claim.* Prior to or after acquiring a tax deed to an eligible facility site, a county shall notify the department in writing of the existence of the facility and the title acquisition. The county shall request in this notice that the department evaluate the site to determine whether the department will order or initiate cleanup pursuant to its authority under Iowa Code chapter 455B.

*b. Emergency cleanup condition.* If a county determines that there exists at a confinement feeding operation site a clear, present and impending danger to the public health or environment, the county shall notify the department of the condition. The danger should be documented as to its presence and the necessity to avoid delay due to its increasing threat. If no cleanup action is initiated by the department within 24 hours after being notified of an emergency condition requiring cleanup, the county may provide cleanup and submit a claim against the fund.

**65.20(4) Contents of a claim against the fund.**

*a.* A county claim against the fund for an eligible site acquired by a county following nonpayment of taxes shall be submitted to the department for approval prior to the cleanup action and shall contain the following information:

(1) A copy of the advance notice of claim as described in paragraph 65.20(3) “a.”

(2) A copy of a bid by a qualified person, other than a governmental entity, to perform a site cleanup. The bid shall include a summary of the qualifications of the bidder including but not limited to prior experience in removal of hazardous substances or manure, experience in construction of confinement feeding operation facilities or manure storage structures, equipment available for conducting the cleanup, or any other qualifications bearing on the ability of the bidder to remove manure from a site. The bid must reference complying with a cleanup plan. The bid shall include a certification that the bidder has liability insurance in an amount not less than \$1 million.

(3) A copy of the tax deed to the real estate containing the eligible facility site.

(4) Name and address, if known, of the former owner(s) of the site. The claim shall also include a description of any efforts to contact the former owner regarding the removal of manure and any other necessary cleanup at the site.

(5) A response to the request in the advance notice described in paragraph 65.20(3) “a” that the department will not initiate cleanup action at the site, or that 60 days have passed from the advance notice and request.

(6) A proposed cleanup plan describing all necessary activity including manure to be removed, application rates and sites, any planned remediation of site contamination, and any structure demolition and justification.

*b.* A county claim against the fund for an emergency cleanup condition may be submitted following the cleanup and shall contain the following information:

(1) A copy of a bid as described in subparagraph 65.20(4) “a”(2).

(2) Name and address of the owner(s), or former owner(s), of the site or any other person who may be liable for causing the condition.

(3) Information on the response from the department to the notice given as described in paragraph 65.20(3) “b,” or if none was received, documentation of the time notice was given to the department.

(4) A cleanup plan or description of the cleanup activities performed.

**65.20(5) Department processing of claims against the fund.**

*a.* Processing of claims. The department will process claims in the order they are received.

*b.* The cleanup plan will be reviewed for acceptability to accomplish necessary actions according to subrule 65.20(2).

c. Review of bid. Upon receipt of a claim, the department will review the bid accompanying the claim. The department may consult with any person in reviewing the bid. Consideration will be given to the experience of the bidder, the bid amount, and the work required to perform the cleanup plan. If the department is satisfied that the bidder is qualified to perform the cleanup and costs are reasonable, the department will provide written approval to the county within 60 days from the date of receipt of the claim.

d. Obtaining a lower bid. If the department determines that it should seek a lower bid to perform the cleanup, it may obtain the names of qualified persons who may be eligible to perform the cleanup. One or more of those persons will be contacted and invited to view the site and submit a bid for the cleanup. If a lower bid is not received, the original bid may be accepted. If a bid is lower than the original bid submitted by the county, the department will notify the county that it should proceed to contract with that bidder to perform the cleanup.

**65.20(6) Certificate of completion.** Upon completion of the cleanup, the county shall submit a certificate of completion to the department. The certificate of completion shall indicate that the manure has been properly land-applied according to the cleanup plan and that any site contamination identified in the approved cleanup plan has been remediated and any approved structure demolition has been performed.

**65.20(7) Payment of claims.** Upon receipt of the certificate of completion, the department shall promptly authorize payment of the claim as previously approved. Payments will be made for claims in the order of receipt of certificates of completion.

**65.20(8) Subrogation.** The fund is subrogated to all county rights regarding any claim submitted or paid as provided in Iowa Code section 455J.5(5).

**567—65.21(455B) Transfer of legal responsibilities or title.** If title or legal responsibility for a permitted animal feeding operation and its animal feeding operation storage structure is transferred, the person to whom title or legal responsibility is transferred shall be subject to all terms and conditions of the permit and these rules. The person to whom the permit was issued and the person to whom title or legal responsibility is transferred shall notify the department of the transfer of legal responsibility or title of the operation within 30 days of the transfer. Within 30 days of receiving a written request from the department, the person to whom legal responsibility is transferred shall submit to the department all information needed to modify the permit to reflect the transfer of legal responsibility. A person who has been classified as a habitual violator under Iowa Code section 455B.191 shall not acquire legal responsibility or a controlling interest to any additional permitted confinement feeding operations for the period that the person is classified as a habitual violator. A person who has an interest in a confinement feeding operation that is the subject of a pending enforcement action shall not acquire legal responsibility or an interest to any additional permitted confinement feeding operations for the period that the enforcement action is pending.

**567—65.22(455B) Validity of rules.** If any part of these rules is declared unconstitutional or invalid for any reason, the remainder of said rules shall not be affected thereby and shall remain in full force and effect, and to that end, these rules are declared to be severable.

These rules are intended to implement Iowa Code sections 455B.104, 455B.134(3) “e,” 455B.171 to 455B.188, and 455B.191; Iowa Code chapter 459; and 1998 Iowa Acts, chapter 1209, sections 41 and 44 to 47.

**567—65.23 to 65.99** Reserved.

DIVISION II  
OPEN FEEDLOT OPERATIONS

**567—65.100(455B,459,459A) Definitions.** In addition to the definitions in Iowa Code sections 455B.101 and 455B.171 and 2005 Iowa Code Supplement section 459A.102, the following definitions shall apply to Division II of this chapter:

“*Abandoned*” means an open feedlot operation structure that has been razed, removed from the site of an open feedlot operation, filled in with earth, or converted to uses other than an open feedlot operation structure so that it cannot be used as an open feedlot operation structure without significant reconstruction.

“*Adjacent.*” Two or more open feedlot operations are defined as adjacent if both of the following occur:

1. At least one open feedlot operation structure is constructed on or after July 17, 2002.
2. An open feedlot operation structure which is part of one open feedlot operation is separated by less than 1250 feet from an open feedlot operation structure which is part of the other open feedlot operation.

“*Alternative technology settled open feedlot effluent control system*” or “*AT system*” means use of an open feedlot effluent control technology other than a conventional runoff containment system to control and dispose of settled open feedlot effluent. The department may allow an open feedlot operation covered by the NPDES permit application requirements of 65.102(455B,459A) or 65.103(455B,459A) to use an AT system, provided the open feedlot operation satisfactorily demonstrates the AT system will provide an equivalent level of performance to that achieved by a runoff containment system that is designed and operated as required by statute, 567—subrule 62.4(12) and Division II of this chapter. Demonstration of equivalent performance must include submitting results of computer modeling which compares the predicted performance of the proposed system with that of a conventional runoff containment system over the same period. The specific requirements which must be met for an open feedlot operation to qualify for use of an AT system and the information which must be submitted to the department are outlined in rule 65.110(459A).

Design requirements have been established for two types of AT systems. These are a vegetative infiltration basin (VIB) followed by a vegetative treatment area (VTA) and a stand-alone vegetative treatment area (VTA). If other AT systems are developed that meet the equivalent performance standard established under EPA’s CAFO rules, the department will consider their acceptance on a case-by-case basis.

“*Animal*” means a species classified as cattle, swine, horses, sheep, chickens or turkeys.

“*Animal capacity*” means the maximum number of animals which the owner or operator will confine in an open feedlot operation at any one time.

“*Animal feeding operation*” or “*AFO*” means a lot, yard, corral, building, or other area in which animals are confined and fed and maintained for 45 days or more in any 12-month period, and all structures used for the storage of manure from animals in the operation. An animal feeding operation does not include a livestock market.

Pursuant to federal regulations, a livestock market could satisfy the definitions of an AFO and a CAFO and thus be subject to NPDES permit requirements. In order to implement the federal NPDES permit program, the commission must adopt rules which are no less stringent than federal regulations. Therefore, for the purposes of the NPDES permit program, an AFO can include a livestock market.

“*Animal unit*” means a unit of measurement based upon the product of multiplying the number of animals of each category by a special equivalency factor, as follows:

1. Slaughter and feeder cattle	1.000
2. Immature dairy cattle	1.000
3. Mature dairy cattle	1.400
4. Butcher or breeding swine weighing more than 55 pounds	0.400
5. Swine weighing 15 pounds or more but not more than 55 pounds	0.100
6. Sheep or lambs	0.100
7. Horses	2.000
8. Turkeys weighing 112 ounces or more	0.018
9. Turkeys weighing less than 112 ounces	0.0085
10. Chickens weighing 48 ounces or more	0.010
11. Chickens weighing less than 48 ounces	0.0025

*“Animal unit capacity”* means a measurement used to determine the maximum number of animal units that may be maintained as part of an open feedlot operation.

*“Common management”* means significant control by a person of the management of the day-to-day operations of each of two or more open feedlot operations. “Common management” does not include control over a contract livestock facility by a contractor, as defined in Iowa Code section 202.1.

*“Common ownership”* means to hold an interest in each of two or more open feedlot operations as any of the following:

1. A sole proprietor.
2. A joint tenant or tenant in common.
3. A holder of a majority equity interest in a business association as defined in Iowa Code section 202B.102, including as a shareholder, partner, member, beneficiary, or other equity interest holder.

An interest in an open feedlot operation under “2” or “3” above is a common ownership interest when it is held directly or indirectly through a spouse or dependent child, or both.

*“Concentrated animal feeding operation”* or *“CAFO”* means an AFO that is defined as a large CAFO, a medium CAFO, or a designated CAFO.

*“Deep well”* means a well located and constructed in such a manner that there is a continuous layer of low permeability soil or rock at least 5 feet thick located at least 25 feet below the normal ground surface and above the aquifer from which water is to be drawn.

*“Designated area”* means a known sinkhole, or a cistern, abandoned well, unplugged agricultural drainage well, agricultural drainage well surface tile inlet, drinking water well, designated wetland, lake, or water source. A designated area does not include a terrace tile inlet or surface tile inlet other than an agricultural drainage well surface tile inlet.

*“Designated CAFO”* means an AFO that has been designated as a CAFO pursuant to rule 65.103(455B,459A).

*“Discontinued open feedlot operation”* means an open feedlot operation in which the open feedlot operation structures have been abandoned or the use of the open feedlot operation structures has been discontinued as evidenced by the removal of all animals, and the owner or operator has no immediate plans to repopulate the structures.

*“Formed settled open feedlot effluent basin”* means a settled open feedlot effluent basin which has walls and a floor constructed of concrete, concrete block, wood, steel, or similar materials. Similar materials may include, but are not limited to, plastic, rubber, fiberglass, or other synthetic materials. Materials used in a formed settled open feedlot effluent basin shall have the structural integrity to withstand expected internal and external load pressures.

*“Karst terrain”* means land having karst formations that exhibit surface and subterranean features of a type produced by the dissolution of limestone, dolomite, or other soluble rock and characterized by closed depressions, sinkholes, losing streams, or caves. If a 25-foot vertical separation distance can be maintained between the bottom of an open feedlot operation structure and limestone, dolomite, or other soluble rock, then the structure is not considered to be in karst terrain. Assistance in identifying karst terrain or potential karst terrain may be obtained by referring to: [http://csbweb.igsb.uiowa.edu/imsgate/maps/afo\\_siting\\_atlas.asp](http://csbweb.igsb.uiowa.edu/imsgate/maps/afo_siting_atlas.asp).

*“Large concentrated animal feeding operation”* or *“large CAFO.”* An AFO is defined as a large CAFO if it stables or confines as many as or more than the numbers of animals specified in any of the following categories:

1. 700 mature dairy cows, whether milked or dry;
2. 1,000 cattle, including but not limited to heifers, steers, bulls, veal calves and cow/calf pairs;
3. 2,500 swine each weighing 55 pounds or more;
4. 10,000 swine each weighing less than 55 pounds;
5. 500 horses;
6. 10,000 sheep or lambs;
7. 55,000 turkeys;
8. 30,000 laying hens or broilers, if the AFO uses a liquid manure handling system;

9. 125,000 chickens (other than laying hens), if the AFO uses other than a liquid manure handling system;
10. 82,000 laying hens, if the AFO uses other than a liquid manure handling system;
11. 1,000 animal units, where more than one category of animals is maintained using the same type of operation.

“*Manure*” means animal excreta or other commonly associated wastes of animals including, but not limited to, bedding, compost, litter, feed losses, raw materials or other materials commingled with manure or set aside for disposal.

“*Medium concentrated animal feeding operation*” or “*medium CAFO*.” The term medium CAFO includes any AFO with the type and number of animals that fall within any of the ranges listed in paragraph “a” of this definition and which has been defined or designated as a CAFO. An AFO is defined as a medium CAFO if:

- a. The type and number of animals that it stables or confines fall within any of the following ranges:
  - (1) 200 to 699 mature dairy cows, whether milked or dry;
  - (2) 300 to 999 cattle, including but not limited to heifers, steers, bulls, veal calves and cow/calf pairs;
  - (3) 750 to 2,499 swine each weighing 55 pounds or more;
  - (4) 3,000 to 9,999 swine each weighing less than 55 pounds;
  - (5) 150 to 499 horses;
  - (6) 3,000 to 9,999 sheep or lambs;
  - (7) 16,500 to 54,999 turkeys;
  - (8) 9,000 to 29,999 laying hens or broilers, if the AFO uses a liquid manure handling system;
  - (9) 37,500 to 124,999 chickens (other than laying hens), if the AFO uses other than a liquid manure handling system;
  - (10) 25,000 to 81,999 laying hens, if the AFO uses other than a liquid manure handling system;
  - (11) 300 to 999 animal units, where more than one category of animals is maintained using the same type of operation; and
- b. Either one of the following conditions is met:
  - (1) Manure or process wastewater is discharged into waters of the United States through a man-made ditch, flushing system, or other similar man-made device; or
  - (2) Manure or process wastewater is discharged directly into waters of the United States which originate outside of and pass over, across or through the facility or otherwise come into direct contact with animals confined in the operation.

“*NPDES permit*” means a written permit of the department pursuant to the National Pollutant Discharge Elimination System (NPDES) program, to authorize and regulate the operation of a CAFO.

“*Nutrient management plan*” or “*NMP*” means a plan which provides for the management of manure, process wastewater, settled open feedlot effluent, settleable solids, open feedlot effluent, including the application of effluent, as provided in 65.112(459A).

“*Open feedlot*” means a lot, yard, corral, building, or other area used to house animals in conjunction with an open feedlot operation.

“*Open feedlot effluent*” means a combination of manure, precipitation-induced runoff, or other runoff from an open feedlot before its settleable solids have been removed.

“*Open feedlot operation*” means an unroofed or partially roofed animal feeding operation if crop, vegetation, or forage growth or residue is not maintained as part of the animal feeding operation during the period that animals are confined in the animal feeding operation.

2005 Iowa Code Supplement section 459A.103 provides that two or more open feedlot operations under common ownership or management are deemed to be a single open feedlot operation if they are adjacent or utilize a common area or system for open feedlot effluent disposal. To determine if two or more open feedlot operations are deemed to be one open feedlot operation, the first test is whether the open feedlot operations are under common ownership or management. If they are not under common ownership or management, they are not one open feedlot operation. The second test is whether the two open feedlot operations are adjacent or utilize a common area or system for open feedlot effluent disposal.

If the two operations are not adjacent and do not use a common area or system for open feedlot effluent disposal, they are not one open feedlot operation.

*“Open feedlot operation structure”* means an open feedlot, settled open feedlot effluent basin, a solids settling facility, or an AT system. “Open feedlot operation structure” does not include a manure storage structure as defined in Iowa Code section 459.102.

*“Owner”* means the person who has title to the property where the animal feeding operation is located or the person who has title to the animal feeding operation structures. “Owner” does not include a person who has a lease to use the land where the animal feeding operation is located or to use the animal feeding operation structures.

*“Permanent vegetation cover”* means land which is maintained in perennial vegetation cover consisting of grasses, legumes, or both, and includes, but is not limited to, pastures, grasslands or forages.

*“Process wastewater”* means water directly or indirectly used in the operation of the AFO for any or all of the following: spillage or overflow from animal or poultry watering systems; washing, cleaning, or flushing pens, barns, manure pits, or other AFO facilities; direct contact swimming, washing, or spray cooling of animals; or dust control. Process wastewater also includes any water which comes into contact with any raw materials, products, or byproducts including manure, litter, feed, milk, eggs or bedding.

*“Production area”* means that part of an AFO that includes the area in which animals are confined, the manure storage area, the raw materials storage area, and the waste containment areas. The area in which animals are confined includes, but is not limited to, open lots, housed lots, feedlots, stall barns, free stall barns, milk rooms, milking centers, cow yards, barnyards, medication pens, walkers, animal walkways, and stables. The manure storage area includes, but is not limited to, lagoons, solids settling facilities, settled open feedlot effluent basins, storage sheds, stockpiles, under house or pit storages, liquid impoundments, static piles, and composting piles. The raw materials storage area includes, but is not limited to, feed silos, silage bunkers, and bedding materials. The waste containment area includes, but is not limited to, settling basins and areas within berms and diversions which separate uncontaminated storm water. Also included in the definition of production area is any area used in the storage, handling, treatment, or disposal of mortalities.

*“Professional engineer”* means a person engaged in the practice of engineering as defined in Iowa Code section 542B.2 who is issued a certificate of licensure as a professional engineer pursuant to Iowa Code section 542B.17.

*“Release”* means an actual, imminent or probable discharge of process wastewater, manure, open feedlot effluent, settled open feedlot effluent, or settleable solids from an open feedlot operation structure to surface water, groundwater, or an actual, imminent or probable discharge directly to a drainage tile line or intake resulting from storing, handling, transporting or land-applying process wastewater, manure, open feedlot effluent, settled open feedlot effluent or settleable solids.

*“Settleable solids”* means that portion of open feedlot effluent that meets all the following requirements:

1. The solids do not flow perceptibly under pressure.
2. The solids are not capable of being transported through a mechanical pumping device designed to move a liquid.
3. The constituent molecules of the solids do not flow freely among themselves but do show the tendency to separate under stress.

*“Settled open feedlot effluent”* means a combination of manure, precipitation-induced runoff, or other runoff originating from an open feedlot after its settleable solids have been removed.

*“Settled open feedlot effluent basin”* or *“runoff control basin”* means a covered or uncovered impoundment which is part of an open feedlot operation, if the primary function of the impoundment is to collect and store settled open feedlot effluent.

*“Shallow well”* means a well located and constructed in such a manner that there is not a continuous layer of low permeability soil or rock (or equivalent retarding mechanism acceptable to the department) at least 5 feet thick, the top of which is located at least 25 feet below the normal ground surface and above the aquifer from which water is to be drawn.

“*Solids settling facility*” means a basin, terrace, diversion, or other structure or solids removal method which is part of an open feedlot operation and which is designed and operated to remove settleable solids from open feedlot effluent. A “solids settling facility” does not include a basin, terrace, diversion, or other structure or solids removal method which retains the liquid portion of open feedlot effluent for more than seven consecutive days following a precipitation event.

“*Stockpile*” means any accumulation of manure, scraped solids, settleable solids or combination of manure and solids located outside of the open feedlot, where the scraped manure or solids are stored for less than six months.

“*Unformed settled open feedlot effluent basin*” means a settled open feedlot effluent basin, other than a formed settled open feedlot effluent basin.

“*Vegetative infiltration basin*” or “*VIB*” means an open feedlot operation structure in which settled open feedlot effluent is discharged into a relatively flat basin area which is bermed to prevent entry or discharge of surface water flows and is planted to permanent vegetation. An extensive tile system installed at a depth of three to five feet is used to collect infiltrated settled open feedlot effluent from the VIB and discharge it into a VTA for further treatment. As opposed to wetlands, which are designed to maintain a permanent water level, a VIB is designed to maximize water infiltration into the soil and thus normally will have standing water for only short periods of time. Removal of settleable solids is required prior to discharge of open feedlot effluent into the VIB. Soil suitability is essential to ensure adequate filtration and treatment of pollutants. Periodic harvesting of vegetation is required.

“*Vegetative treatment area*” or “*VTA*” means an open feedlot operation structure in which settled open feedlot effluent is discharged into areas which are level in one dimension and have a slight slope (less than 5 percent) in the other dimension and are planted to relatively dense permanent vegetation. Settled open feedlot effluent must be discharged evenly across the top width of the VTA and allowed to slowly flow downslope through the VTA. Level spreaders or other practices may be required to maintain even flow throughout the length of the VTA. Management to maintain a dense vegetation cover is required, as is periodic harvesting of vegetation.

“*Water of the state*” means any stream, lake, pond, marsh, watercourse, waterway, well, spring, reservoir, aquifer, irrigation system, drainage system, and any other body or accumulation of water, surface or underground, natural or artificial, public or private, which are contained within, flow through or border upon the state or any portion thereof.

“*Waters of the United States*” means the same as defined in 40 CFR 122.2 as that section existed on July 1, 2005.

**567—65.101(459A) Minimum open feedlot effluent control requirements and reporting of releases.** An open feedlot operation shall provide for the management of manure, process wastewater, settled open feedlot effluent, settleable solids and open feedlot effluent by using an open feedlot control method as provided in subrules 65.101(1) to 65.101(8). A release shall be reported to the department as provided in subrule 65.101(9).

**65.101(1)** All settleable solids from open feedlot effluent shall be removed prior to discharge into a water of the state.

*a.* The settleable solids shall be removed by use of a solids settling facility. The construction of a solids settling facility is not required where existing site conditions provide for removal of settleable solids prior to discharge into a water of the state.

*b.* The removal of settleable solids shall be deemed to have occurred when the velocity of flow of the open feedlot effluent has been reduced to less than 0.5 feet per second for a minimum of five minutes. A solids settling facility shall have sufficient capacity to store settleable solids between periods of land application and to provide required flow-velocity reduction for open feedlot effluent flow volumes resulting from a precipitation event of less intensity than a ten-year, one-hour frequency event. A solids settling facility which receives open feedlot effluent shall provide a minimum of one square foot of surface area for each eight cubic feet of open feedlot effluent per hour resulting from a ten-year, one-hour frequency precipitation event.

**65.101(2)** This subrule shall apply to an open feedlot operation which has obtained an NPDES permit pursuant to 65.102(455B,459A) or 65.103(455B,459A).

*a.* An open feedlot operation may discharge manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent into any waters of the United States due to a precipitation event, if any of the following apply:

(1) For an open feedlot operation that houses cattle, other than veal calves, the operation is designed, constructed, operated, and maintained to comply with the requirements of 567—subrule 62.4(12) and not to discharge manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent resulting from precipitation events less than or equal to the 25-year, 24-hour precipitation event into any waters of the United States.

(2) For an open feedlot operation that houses veal calves, swine, chickens, or turkeys, the operation is designed, constructed, operated, and maintained not to discharge manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent resulting from precipitation events less than or equal to the 100-year, 24-hour precipitation event into any waters of the United States.

*b.* If the open feedlot operation is designed, constructed, and operated in accordance with the requirements of 567—subrule 62.4(12) and in accordance with any of the manure control alternatives listed in Appendix A of these rules or the AT system requirements in rule 65.110(459A), the operation shall be considered to be in compliance with this rule, unless a discharge from the operation causes a violation of state water quality standards. If water quality standards violations occur, the department may impose additional open feedlot effluent control requirements upon the operation, as specified in subrule 65.101(3).

**65.101(3)** An open feedlot operation which has an animal unit capacity of 1,000 animal units or more, or an open feedlot operation which is a large CAFO, or a medium CAFO as defined in rule 65.100(455B,459,459A) or a designated CAFO pursuant to rule 65.103(455B,459A) shall not discharge manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent from an open feedlot operation structure or production area into any waters of the United States, unless the discharge is pursuant to an NPDES permit. The control of manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent originating from the open feedlot operation may be accomplished by the use of a solids settling facility, settled open feedlot effluent basin, AT system, or any other open feedlot effluent control structure or practice approved by the department. The department may require the diversion of surface drainage prior to contact with an open feedlot operation structure. Settleable solids shall be settled from open feedlot effluent before the effluent enters a settled open feedlot effluent basin or AT system.

**65.101(4)** Alternative control practices. If, because of topography or other factors related to the site of an open feedlot operation, it is economically or physically impractical to comply with open feedlot effluent control requirements using an open feedlot control method in subrule 65.101(2), the department shall allow an open feedlot operation covered by the NPDES permit application requirements of 65.102(455B,459A) or 65.103(455B,459A) to use other open feedlot effluent control practices, provided the open feedlot operation satisfactorily demonstrates by appropriate methods that those practices will provide an equivalent level of open feedlot effluent control that would be achieved by using an open feedlot control method as provided in 65.101(2).

**65.101(5)** No direct discharge of open feedlot effluent shall be allowed from an open feedlot operation into a publicly owned lake, a known sinkhole, or an agricultural drainage well.

**65.101(6)** Land application.

*a. General requirements.* Open feedlot effluent shall be land-applied in a manner which will not cause pollution of surface water or groundwater. Application in accordance with the provisions of state law and the rules in this chapter shall be deemed as compliance with this requirement.

*b. Designated areas.* A person shall not apply manure on land within 200 feet from a designated area or, in the case of a high quality water resource, within 800 feet, unless one of the following applies:

(1) The manure is land-applied by injection or incorporation on the same date as the manure was land-applied.

(2) An area of permanent vegetation cover, including filter strips and riparian forest buffers, exists for 50 feet surrounding the designated area other than an unplugged agricultural drainage well or surface intake to an unplugged agricultural drainage well, and the area of permanent vegetation cover is not subject to manure application.

*c. CAFOs.* The discharge of manure, process wastewater, settled open feedlot effluent, settleable solids and open feedlot effluent to waters of the United States from a CAFO as a result of the application of that manure, process wastewater, settled open feedlot effluent, settleable solids and open feedlot effluent by the CAFO to land areas under its control is a discharge from that CAFO subject to NPDES permit requirements, except where the discharge is an agricultural storm water discharge as provided in 33 U.S.C. 1362(14). For the purpose of this paragraph, where the manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent has been applied in accordance with site-specific nutrient management practices that ensure appropriate agricultural utilization of the nutrients in the manure, process wastewater, settled open feedlot effluent, settleable solids and open feedlot effluent as specified in 65.112(8), a precipitation-related discharge of manure, process wastewater, settled open feedlot effluent, settleable solids and open feedlot effluent from land areas under the control of a CAFO is an agricultural storm water discharge.

**65.101(7)** The owner of an open feedlot operation who discontinues the use of the operation shall remove and land-apply in accordance with state law all manure, process wastewater and open feedlot effluent from the open feedlot operation structures as soon as practical but not later than six months following the date the open feedlot operation is discontinued. The owner of a CAFO shall maintain compliance with all requirements in the CAFO's NPDES permit until all manure, process wastewater and open feedlot effluent has been removed and land-applied pursuant to the CAFO's NMP.

**65.101(8)** Stockpiling of scraped manure and settleable solids. A CAFO must manage stockpiles as required by 65.101(2) or 65.101(3). Stockpiles of manure scraped from open feedlot operations and stockpiles of settleable solids shall comply with the following requirements.

*a.* Stockpiles must be land-applied in accordance with 65.101(6) as soon as possible but not later than six months after they are established.

*b.* Stockpiles shall not be located within 200 feet from a designated area or, in the case of a high quality water resource, within 800 feet, and areas of concentrated flow located downslope of and within 200 feet of the stockpile shall be planted to permanent vegetation cover, including filter strips and riparian forest buffers.

*c.* Stockpiles shall not be located in areas where water ponds or has concentrated flow.

*d.* Stockpiles shall not be located within 200 feet of a drainage tile line intake or known sinkhole unless the stockpile is located so that any runoff from the stockpile will not reach the intake or sinkhole.

**65.101(9)** A release, as defined in rule 65.100(455B,459,459A), shall be reported to the department as provided in this subrule. This subrule does not apply to land application of manure, process wastewater, open feedlot effluent, settled open feedlot effluent or settleable solids in compliance with these rules, or to precipitation- or snowmelt-induced runoff from open feedlots in compliance with the minimum control requirements set forth in this rule.

*a. Notification.* A person storing, handling, transporting, or land-applying manure, process wastewater, open feedlot effluent, settled open feedlot effluent or settleable solids from an open feedlot operation who becomes aware of a release shall notify the department of the occurrence of release as soon as possible but not later than six hours after the onset or discovery of the release by contacting the department at (515)281-8694. The local police department or the office of the sheriff of the affected county shall also be contacted within the same time period if the release involves a public roadway and public safety could be threatened. Reports made pursuant to this rule shall be confirmed in writing as provided in 65.101(9) "c."

*b. Verbal report.* The verbal report of such a release should provide information on as many items listed in 65.101(9) "c" as available information will allow.

*c. Written report.* The written report of a release shall be submitted at the request of the department within 30 days after the verbal report of the release and contain at a minimum the following information:

- (1) The approximate location of the alleged release (including at a minimum the quarter-quarter section, township and county in which the release occurred or was discovered).
- (2) The time and date of onset of the alleged release, if known, and the time and date of the discovery of the alleged release.
- (3) The time and date of the verbal report to the department of the release.
- (4) The name, mailing address and telephone number of the person reporting the release.
- (5) The name, mailing address and telephone number of any other person with knowledge of the event who can be contacted for further information.
- (6) The source of the manure, process wastewater, open feedlot effluent, settled open feedlot effluent or settleable solids allegedly released (e.g., settled open feedlot effluent basin).
- (7) The estimated or known volume of manure, process wastewater, open feedlot effluent, settled open feedlot effluent, or settleable solids allegedly released.
- (8) The weather conditions at the time of the onset or discovery of the release.
- (9) If known, the circumstances under which the alleged release occurred or exists (e.g., overflow, storage structure breach, equipment malfunction or breakdown, land runoff).
- (10) The approximate location of the nearest stream or other water body which is or could be impacted by the alleged release, and the approximate location to the alleged release of any known tile intakes or tile lines which could be a direct conveyance to a surface water or groundwater.
- (11) A description of any containment or remedial measures taken to minimize the impact of the release.
- (12) Any information that may assist the department in evaluating the release.
  - d. Reporting of subsequent findings.* All subsequent findings and laboratory results should be reported and submitted in writing to the department as soon as they become available.
  - e. Waiver of notification requirement.* A waiver from the notification requirement of paragraph "a" of this subrule may be granted by the department for a release to a specific drainage tile line or intake if sufficient information is provided to demonstrate that the drainage tile line or intake will not result in a discharge to a water of the state.

**567—65.102(455B,459A) NPDES permits required for CAFOs.** Concentrated animal feeding operations (CAFOs) are point sources that require NPDES permits.

**65.102(1) Duty to apply.** Each CAFO owner or operator must apply for an NPDES permit, except as provided in subrule 65.102(2). The owner or operator of a CAFO that includes an open feedlot must apply for an individual NPDES permit. The application procedures are prescribed in rule 65.104(455B,459A).

**65.102(2) Exception.** An open feedlot operation shall not be required to obtain an NPDES permit if the operation does not discharge manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent into any waters of the United States.

**567—65.103(455B,459A) Departmental evaluation; CAFO designation; remedial actions.**

**65.103(1)** The department may evaluate any animal feeding operation that is not defined as a large or medium CAFO, and designate it as a CAFO if, after an on-site inspection, it is determined to be a significant contributor of manure or process wastewater to waters of the United States. In making this determination, the department shall consider the following factors:

- a.* The size of the operation and the amount of manure or process wastewater reaching waters of the United States;
- b.* The location of the operation relative to waters of the United States;
- c.* The means of conveyance of manure or process wastewater to waters of the United States;
- d.* The slope, vegetation, rainfall, and other factors affecting the likelihood or frequency of discharge of manure or process wastewater into waters of the United States; and
- e.* Other relevant factors.

**65.103(2)** No animal feeding operation with an animal capacity less than that specified for a medium CAFO shall be designated as a CAFO unless manure or process wastewater from the operation is discharged into a water of the United States:

- a.* Through a man-made ditch, flushing system, or other similar man-made device; or
- b.* Which originates outside of and passes over, across or through the facility or otherwise comes into direct contact with animals confined in the operation.

**65.103(3)** The owner or operator of a designated CAFO shall apply for an NPDES permit no later than 90 days after receiving written notice of the designation.

**65.103(4)** If departmental evaluation determines that any of the conditions listed in paragraph 65.103(4) “*a*,” “*b*,” or “*c*” exist, the open feedlot operation shall institute necessary remedial actions within a time specified by the department to eliminate the conditions warranting the determination, if the operation receives a written notification from the department of the need to correct the conditions.

*a.* Settled open feedlot effluent, settleable solids from the open feedlot operation, or open feedlot effluent is being discharged into a water of the state and the operation is not providing the applicable minimum level of manure control as specified in rule 65.101(459A);

*b.* Settled open feedlot effluent, settleable solids from the open feedlot operation, or open feedlot effluent is causing or may reasonably be expected to cause pollution of a water of the state; or

*c.* Settled open feedlot effluent, settleable solids from the open feedlot operation, or open feedlot effluent is causing or may reasonably be expected to cause a violation of state water quality standards.

**65.103(5)**<sup>1</sup> The department may evaluate any proposed open feedlot operation or proposed expansion of an open feedlot operation that requires a construction permit with respect to its potential adverse impacts on natural resources or the environment. For the purpose of this subrule, open feedlot effluent includes manure, process wastewater, settled open feedlot effluent and settleable solids.

*a.* In conducting the evaluation, the department shall consider the following factors:

(1) The likelihood open feedlot effluent will be applied to frozen or snow-covered cropland.

(2) The proximity of the open feedlot operation structures or open feedlot effluent application areas to sensitive areas, including but not limited to publicly owned land, designated areas, trout streams and karst terrain.

(3) Topography, slope, vegetation, potential means or routes of conveyance of open feedlot effluent spilled or land-applied. This factor includes but is not limited to whether the open feedlot effluent application areas involve cropland with predominant slopes greater than 9 percent without a conservation plan approved by the local soil and water conservation district or its equivalent and whether open feedlot effluent for land application is hauled or otherwise transported more than five miles.

(4) Whether the operation or open feedlot effluent application area is or will be located in a two-year capture zone for a public water supply.

*b.* In addition to the requirements in rules 65.105(459A), 65.109(459A) and 65.112(459A), the department may deny a construction permit, disapprove a nutrient management plan or prohibit construction of the proposed operation at the proposed location if the director determines from the evaluation conducted pursuant to this subrule that the operation would reasonably be expected to result in any of the following impacts:

(1) Open feedlot effluent from the operation will cause pollution of a water of the state.

(2) Open feedlot effluent from the operation will cause a violation of state water quality standards.

(3) An adverse effect on natural resources or the environment will occur in a specific area due to the current concentration of animal feeding operations or the associated open feedlot effluent application areas.

*c.* The department also may establish permit conditions or require amendments to the nutrient management plan in addition to the minimum requirements established for such operations, on the location of structures or open feedlot effluent application, or other operational conditions necessary to avoid or minimize the adverse impacts.

*d.* A construction permit denial or condition, a nutrient management plan disapproval or required amendment, or a prohibition of construction pursuant to this subrule may be appealed according to the contested case procedures set forth in 561—Chapter 7.

<sup>1</sup> Objection to 65.103(5) filed by the Administrative Rules Review Committee October 10, 2006. See text of Objection at end of Chapter 65.

**567—65.104(455B,459A) NPDES permits.**

**65.104(1)** *Existing animal feeding operations holding an NPDES permit.* Animal feeding operations which hold a valid NPDES permit issued prior to September 14, 2005, are not required to reapply for an NPDES permit. However, the operations are required to apply for permit renewal in accordance with subrule 65.104(10).

**65.104(2)** *Existing animal feeding operations not holding an NPDES permit.* Animal feeding operations in existence prior to April 14, 2003, which were defined as CAFOs under rules that were in effect prior to April 14, 2003, but which have not obtained a permit, should have applied for an NPDES permit by April 14, 2003. Animal feeding operations in existence on April 14, 2003, which were not defined as CAFOs under rules that were in effect prior to April 14, 2003, shall apply for an NPDES permit no later than July 31, 2007.

**65.104(3)** *Expansion of existing animal feeding operations.* A person intending to expand an existing animal feeding operation which, upon completion of the expansion, will be defined as a CAFO shall apply for an NPDES permit at least 90 days prior to the scheduled expansion. Operation of the expanded portion of the facility shall not begin until an NPDES permit has been obtained.

**65.104(4)** *New animal feeding operations.* A person intending to begin a new animal feeding operation which, upon completion, will be defined as a CAFO shall apply for an NPDES permit at least 180 days prior to the date operation of the new animal feeding facility is scheduled. Operation of the new facility shall not begin until an NPDES permit has been obtained.

**65.104(5)** *Permits required as a result of departmental designation.* An animal feeding operation which is required to apply for an NPDES permit as a result of departmental designation (in accordance with the provisions of 65.103(455B,459A)) shall apply for an NPDES permit within 90 days of receiving written notification of the need to obtain a permit. Once application has been made, the animal feeding operation is authorized to continue to operate without a permit until the application has either been approved or disapproved by the department, provided that the owner or operator has submitted all requested information and promptly taken all steps necessary to obtain coverage.

**65.104(6)** *Voluntary permit applications.* Applications for NPDES permits received from animal feeding operations which are not defined as CAFOs will be acknowledged and returned to the applicant. NPDES permits will not be issued for facilities which are not defined or designated as CAFOs.

**65.104(7)** *Application forms.* An application for an NPDES permit shall be made on a form provided by the department. The application shall be complete and shall contain information required by the department. Applications submitted after September 30, 2006, shall include a nutrient management plan as required in rule 65.112(459A). The application shall be signed by the person who is legally responsible for the animal feeding operation and its associated manure or process wastewater control system.

**65.104(8)** *Compliance schedule.* When necessary to comply with a standard which must be met at a future date, an NPDES permit shall include a schedule for modification of the permitted facility to meet the standard. The schedule shall not relieve the permittee of the duty to obtain a construction permit pursuant to rule 65.105(459A).

**65.104(9)** *Permit conditions.* NPDES permits shall contain conditions required by 40 CFR Section 122.41 and conditions considered necessary by the department to ensure compliance with all applicable rules of the department, to ensure that the production area and land application areas are operated and maintained as required by Iowa law, to protect the public health and beneficial uses of waters of the United States, and to prevent water pollution from manure storage or application operations. Any more stringent conditions of 2005 Iowa Code Supplement chapter 459A, 567—subrule 62.4(12), and this chapter that apply to animal feeding operations shall govern. For CAFOs that maintain cattle, swine, or poultry, the following conditions shall be included:

*a. Nutrient management plan.* Open feedlot CAFOs shall comply with the requirements of 65.112(459A) and any additional nutrient management plan requirements for CAFOs in these rules by December 31, 2006. CAFOs that seek to obtain coverage under an NPDES permit issued after December 31, 2006, shall have a nutrient management plan developed and implemented upon the date of permit coverage.

*b. Inspections and record keeping.*

(1) Visual inspections. Routine visual inspections of the CAFO production area must be conducted. At a minimum the following must be visually inspected:

1. Weekly inspections of all storm water diversion, runoff diversion structures, and devices channelling contaminated storm water to the open feedlot structure.

2. Daily inspection of water lines, including drinking water or cooling water lines.

(2) Corrective actions. Any deficiencies found as a result of the inspections required in 65.104(9)“b”(1) or as a result of the liquid level reporting required in 65.104(9)“e” must be corrected as soon as possible.

(3) The following records must be maintained on site for a period of five years from the date they are created and must be made available to the department upon request:

1. Records documenting the inspections required in 65.104(9)“b”(1).

2. Records of weekly liquid level observations as required in 65.104(9)“e.”

3. Records documenting any actions taken to correct deficiencies as required in 65.104(9)“b”(2).

c. *Large CAFOs—transfer of manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent.* Prior to transferring manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent to other persons, a large CAFO must provide the recipient of the manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent with the most current nutrient analysis. A large CAFO must retain for five years records of the date, recipient name and address, nutrient analysis and approximate amount of manure, process wastewater, settled open feedlot effluent, settleable solids or open feedlot effluent transferred to another person.

d. *Minimum monitoring requirements for AT systems.* During the first two years of operation of an AT system, the following minimum monitoring will be required:

(1) Discharge monitoring. An effluent collection point must be established at the outlet of the AT system, and the flow volume recorded and an effluent sample collected on each day a discharge from the AT system occurs. Discharge samples must be submitted to a certified laboratory and analyzed for: total Kjeldahl N, NH<sub>4</sub> N, total P, COD, total suspended solids, and chloride.

(2) Discharge monitoring—tile lines. If the AT system includes a tile system installed to enhance infiltration within the VTA in accordance with 65.110(6)“h” or 65.110(7)“h,” water samples shall be collected from a sampling point located downgradient of the VTA on each individual tile line or combination of tile lines on the following schedule:

1. Quarterly sampling. One sample shall be taken from each sampling point once each quarter (January - March, April - June, July - September, October - December), and the level of flow in the tile system recorded at the time of sampling. The sample shall be collected at least ten days after a rainfall event of one inch or greater; and samples must be taken at least two, but not more than four, months apart. If there is no discharge from the tile line at a time that meets these requirements, documentation on appropriate department forms can be substituted for the sample and analysis. Collected samples shall be submitted to a certified laboratory and analyzed for: total Kjeldahl N, NH<sub>4</sub> N, total P, COD, total suspended solids, and chloride.

2. Event sampling. Each year, two rainfall event related tile flow samples shall be collected from each sampling point. For each sampling event, one sample shall be taken from each sampling point three to five days following a rainfall event of one inch or greater, and the level of flow in the tile system recorded at the time of sampling. Collected samples shall be submitted to a certified laboratory and analyzed for: total Kjeldahl N, NH<sub>4</sub> N, total P, COD, total suspended solids, and chloride.

(3) Groundwater monitoring. A minimum of two groundwater monitoring wells or piezometers (one upgradient and one downgradient) must be established at each AT system. Additional wells or piezometers may be required if the department determines they are necessary to adequately assess the impacts the AT system is having on groundwater. Samples must be collected from these wells quarterly and analyzed for: NH<sub>4</sub> N, NO<sub>3</sub> N, and chloride.

(4) Soil sampling.

1. Initial and permit renewal sampling. Soil sampling shall be conducted prior to initial discharge of open feedlot effluent into the AT system and repeated prior to renewal of the NPDES permit, as outlined below:

- VTA. A minimum of two sampling sites shall be established within each VTA cell, one located where runoff enters the VTA and one where runoff is discharged from the VTA. Soil samples shall be taken from these sites to a depth of 4 feet, with separate samples taken to represent the 0 to 6-inch depth, the 6- to 12-inch depth, and in one-foot increments thereafter. All samples shall be analyzed for NO<sub>3</sub> N, NH<sub>4</sub> N, P by either the Olsen or Mehlich-3 method, and pH.

If the length of effluent flow through the VTA exceeds 400 feet, an additional soil sample representing the 0 to 6-inch depth should be taken for each additional 200 feet of VTA length. Samples shall be analyzed for NO<sub>3</sub> N, NH<sub>4</sub> N, P by either the Olsen or Mehlich-3 method, and pH.

- VIB. One sampling site shall be established where open feedlot effluent enters the VIB. Soil samples at this site shall be taken to a depth of 4 feet, with separate samples taken to represent the 0 to 6-inch depth, the 6- to 12-inch depth, and in one-foot increments thereafter. These samples shall be analyzed for NO<sub>3</sub> N, NH<sub>4</sub> N, P by either the Olsen or Mehlich-3 method, and pH.

An additional sampling site shall be established where open feedlot effluent is discharged from the VIB through the tile system. Soil samples shall be taken at this site to represent the 0 to 6-inch depth, and analyzed for NO<sub>3</sub> N, NH<sub>4</sub> N, P by either the Olsen or Mehlich-3 method, and pH.

2. Annual sampling. One sampling site shall be established in each cell of a VTA and VIB in an area which is expected to receive the greatest amount of open feedlot effluent. Soil samples shall be taken from each site prior to initiating discharge of open feedlot effluent into the VTA or VIB and shall be repeated annually. Each sample shall represent a composite of 10 to 12 individual samples taken to a 6-inch depth, and analyzed for P using either the Olsen or Mehlich-3 method and for pH.

Monitoring requirements for an AT system following the initial two-year operation period will be determined at the time the NPDES permit for the operation is due for renewal.

*e. Quarterly reporting requirements for CAFOs with outside liquid impoundments.* A permittee with outside liquid impoundments must submit quarterly reports by April 10, July 10, October 10, and January 10, following the respective calendar quarters, documenting daily precipitation, weekly impoundment liquid levels, volume of liquid removed from the impoundments, and the date, time, duration, and estimated volume of any overflow. Liquid levels must be obtained by observing a depth marker which clearly indicates the minimum capacity necessary to contain the runoff and direct precipitation of the 25-year, 24-hour precipitation event or the 100-year, 24-hour precipitation event as applicable pursuant to 65.101(2)“a.”

*f. Annual reporting requirements for all CAFOs with systems other than AT systems.* All permittees must submit an annual report to the department by January 10 of the following year. The annual report must include:

- (1) The number and type of animals in the open feedlot operation;
- (2) Estimated amount of manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent generated by the CAFO in the previous 12 months (tons/gallons);
- (3) Estimated amount of total manure transferred to other persons by the CAFO in the previous 12 months (tons/gallons);
- (4) Total number of acres for land application covered by the nutrient management plan and the total number of acres under control of the CAFO that were used for land application of manure in the previous 12 months;
- (5) Summary of all manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent discharges from the production area that have occurred in the previous 12 months, including date, time, and approximate volume; and
- (6) A statement indicating whether the current version of the CAFO's nutrient management plan was developed or approved by a certified nutrient management planner.

*g. Quarterly reporting requirements for CAFOs with AT systems.* A permittee with an AT system must submit quarterly reports by April 10, July 10, October 10, and January 10, following the respective calendar quarters. The quarterly reports shall provide all of the following information:

- (1) Daily precipitation.
  - (2) Dates on which manure, process wastewater, settled open feedlot effluent, open feedlot effluent, or settleable solids were removed from the production area and estimated amounts of manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent removed (tons/gallons).
  - (3) Dates on which discharges from the production area or the AT system occurred and the estimated duration and volume of discharge on each discharge date.
  - (4) Results of laboratory analyses of discharge samples for each date a discharge from the production area or the AT system occurred. If the results of laboratory analyses are not available by the due date of the quarterly report, the results shall be provided with the following quarter's report.
  - (5) Results of laboratory analyses of samples taken from the groundwater monitoring wells or piezometers. If the results of laboratory analyses are not available by the due date of the quarterly report, the results shall be provided with the following quarter's report.
- h. Annual reporting requirements for CAFOs with AT systems.* A permittee shall submit an annual report by January 10 of the following year. The annual report must include all of the following:
- (1) The number and type of animals in the open feedlot operation.
  - (2) Estimated amount of total manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent generated by the CAFO in the previous 12 months (tons/gallons).
  - (3) Estimated amount of total manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent transferred to other persons by the CAFO in the previous 12 months (tons/gallons).
  - (4) Total number of acres for land application covered by the nutrient management plan and the total number of acres under control of the CAFO that were used for land application of manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent in the previous 12 months.
  - (5) Summary of all manure, process wastewater, settled open feedlot effluent, settleable solids, or open feedlot effluent discharges from the production area or AT system that have occurred in the previous 12 months, including date, time, and approximate volume.
  - (6) Harvest dates and estimated amounts of forage removed from the AT system during the previous 12 months.
  - (7) Results of soil and groundwater sampling within the AT system during the previous 12 months.
  - (8) A statement indicating whether the current version of the CAFO's nutrient management plan was developed or approved by a certified nutrient management planner.

**65.104(10) Permit renewal.**

*a. General requirements.* An NPDES permit may be issued for any period of time not to exceed five years. An application for renewal of an NPDES permit must be submitted to the department at least 180 days prior to the date the permit expires. Each permit to be renewed shall be subject to the rules of the department in effect at the time of renewal. A permitted animal feeding operation which ceases to be a CAFO will be exempted from the need to retain an NPDES permit if the permittee can demonstrate to the satisfaction of the department that there is no remaining potential for a discharge of manure that was generated while the operation was a CAFO, other than agricultural storm water from land application areas.

*b. Permits involving use of AT systems.*

(1) During the first two years of operation of an AT system, a permittee will be issued a two-year NPDES permit. Renewal of this permit is contingent upon proper operation and maintenance of the AT system, submittal of all required records and reports, and demonstration that the AT system is providing an equivalent level of performance to that achieved by a containment system that is designed and operated as required by statute, 567—subrule 62.4(12) and Division II of this chapter.

(2) If departmental review of an AT system indicates the system is not meeting the equivalent performance standard, the permittee may either be required to make needed system modifications to enable compliance with this standard or be required to install a conventional runoff containment system.

Open feedlot operations found to be in compliance with the equivalent performance standard will be issued a five-year NPDES permit which allows continued use of the AT system.

**65.104(11) *Permit modification, suspension or revocation.*** The department may modify, suspend, refuse to renew or revoke in whole or part any NPDES permit for cause. Any more stringent requirement pursuant to 40 CFR Section 122.62, 122.63 or 122.64 shall control. Cause for modification, suspension or revocation of a permit may include the following:

- a. Violation of any term or condition of the permit.
- b. Obtaining a permit by misrepresentation of fact or failure to disclose fully all material facts.
- c. A change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.
- d. Failure to retain, make available, or submit the records and information that the department requires in order to ensure compliance with the operation and discharge conditions of the permit.
- e. A determination by the department that the continued operation of a CAFO constitutes a clear, present and impending danger to public health or the environment.

**567—65.105(459A) Construction permits.**

**65.105(1) *Open feedlot operations required to obtain a construction permit.*** An open feedlot operation must obtain a construction permit prior to any of the following:

- a. Constructing or expanding a settled open feedlot effluent basin or AT system or installing a settled open feedlot effluent transfer piping system if the open feedlot operation is required to be issued an NPDES permit.
- b. Increasing the animal unit capacity of the open feedlot operation to more than the animal unit capacity approved by the department in a previous construction permit.
- c. Increasing the volume of settled open feedlot effluent, settleable solids or open feedlot effluent stored at the open feedlot operation to more than the volume approved by the department in a previous construction permit.
- d. Repopulating the open feedlot operation if it was discontinued for 24 months or more and the animal unit capacity will be 1,000 animal units or more.

**65.105(2) *When a construction permit is not required.***

- a. *Research colleges.* A construction permit is not required for construction of a settled open feedlot effluent basin or AT system if the basin or system is part of an open feedlot operation which is owned by a research college conducting research activities as provided in 2005 Iowa Code Supplement section 459A.105.
- b. *Solids settling facilities.* A construction permit is not required for construction of a solids settling facility.

**65.105(3) *Applications that cannot be approved.*** The department shall not approve an application for a construction permit unless the applicant submits all of the following:

- a. For an open feedlot operation submitting an application for a construction permit on or after September 30, 2006, a nutrient management plan as provided in rule 65.112(459A).
- b. An engineering report, construction plans, and specifications prepared by a professional engineer or the Natural Resources Conservation Service of the United States Department of Agriculture certifying that the construction of the settled open feedlot effluent basin or AT system complies with the construction design standards required in Division II of chapter 65.

**65.105(4) *Plan review criteria; time for approval or disapproval.***

- a. *Plan review criteria.* Review of plans and specifications shall be conducted by the department to determine the potential of the settled open feedlot effluent basin or AT system to achieve the level of control being required of the open feedlot operation. Applicable criteria contained in federal law, state law, these rules, Natural Resources Conservation Service design standards and specifications, unless inconsistent with federal or state law or these rules, and United States Department of Commerce precipitation data will be used in the review. If the proposed facility plans are not adequately covered by these criteria, applicable criteria contained in current technical literature shall be used.

*b. Time for approval or disapproval.* The department shall approve or disapprove an application for a construction permit within 60 days after receiving the permit application. However, the applicant may deliver a notice requesting a continuance. Upon receipt of a notice, the time required for the department to act upon the application shall be suspended for the period provided in the notice, but for not more than 30 days after the department's receipt of the notice. The applicant may submit more than one notice. If review of the application is delayed because the application is incomplete, and the applicant fails to supply requested information within a reasonable time prior to the deadline for action on the application, the permit may be denied and a new application will be required if the applicant wishes to proceed. The department may also provide for a continuance when it considers the application. The department shall provide notice to the applicant of the continuance. The time required for the department to act upon the application shall be suspended for the period provided in the notice, but for not more than 30 days. However, the department shall not provide for more than one continuance.

**65.105(5) Expiration of construction permits.** The construction permit shall expire if construction, as defined in rule 65.106(459A), is not begun within one year and completed within three years of the date of issuance. A construction permit issued prior to September 14, 2005, shall expire if construction, as defined in rule 65.106(459A), is not begun within one year of the date of issuance and shall expire on September 15, 2012, if construction is not completed by September 14, 2012. The director may grant an extension of time to begin or complete construction if it is necessary or justified, upon showing of such necessity or justification to the director.

**65.105(6) Revocation of construction permits.** The department may suspend or revoke a construction permit, modify the terms or conditions of a construction permit, or refuse to renew a permit expiring according to subrule 65.105(5) if it determines that the operation of the open feedlot operation constitutes a clear, present and impending danger to public health or the environment.

**65.105(7) Permit prior to construction.** An applicant for a construction permit shall notify the department prior to the start of construction for any open feedlot operation structure not required to be covered by a construction permit. The applicant shall not begin construction of a settled open feedlot effluent basin or AT system, or begin installation of a settled open feedlot effluent transfer piping system until the person has been granted a permit for the construction by the department.

**567—65.106(459A) Construction.** For purposes of these rules:

**65.106(1)** Construction of an animal feeding operation structure begins or an animal feeding operation structure is constructed when any of the following occurs:

- a.* Excavation commences for a proposed open feedlot operation structure or proposed expansion of an existing open feedlot operation structure.
- b.* Installation of forms for concrete for a proposed open feedlot operation structure or the proposed expansion of an existing open feedlot operation structure.
- c.* Installation of piping for movement of settled open feedlot effluent or open feedlot effluent within or between open feedlot operation structures as proposed or proposed to be expanded.

**65.106(2)** Construction does not begin upon occurrence of any of the following:

- a.* Removal of trees, brush, or other vegetative growth.
- b.* Construction of driveways or roads.
- c.* General earth moving for leveling or compacting at the site.
- d.* Installation of temporary utility services.

**567—65.107(459A) Construction permit application.** An open feedlot operation required to obtain a construction permit in accordance with the provisions of 65.105(1) shall apply for a construction permit at least 90 days before the date that construction, installation, or modification is scheduled to start.

**65.107(1)** Conceptual design. Prior to submitting an application for a construction permit, the applicant may submit a conceptual design and site investigation report to the department for review and comment.

**65.107(2)** Application for a construction permit for an open feedlot shall be made on a form provided by the department. The application shall include all of the information necessary to enable the department

to determine the potential of the proposed settled open feedlot effluent basin or AT system to achieve the level of control required of the open feedlot. A construction permit application shall include the following:

- a.* The name of the owner of the open feedlot operation and the name of the open feedlot operation, including the owner's mailing address and telephone number.
- b.* The name of the contact person for the open feedlot operation, including the person's mailing address and telephone number.
- c.* The location of the open feedlot operation.
- d.* A statement providing that the application is for any of the following:
  - (1) The construction or expansion of a settled open feedlot effluent basin or AT system for an existing open feedlot operation which is not expanding;
  - (2) The construction or expansion of a settled open feedlot effluent basin or AT system for an existing open feedlot operation which is expanding;
  - (3) The construction of a settled open feedlot effluent basin or AT system for a proposed new open feedlot operation.
- e.* The animal unit capacity for each animal species in the open feedlot operation before and after the proposed construction.
- f.* An engineering report, construction plans and specifications prepared by a professional engineer or by Natural Resources Conservation Service personnel for the settled open feedlot effluent basin or AT system.
- g.* A report on the soil and hydrogeologic information for the site, as described in subrules 65.109(2) and 65.110(4).
- h.* Information including, but not limited to, maps, drawings and aerial photos that clearly show the location of all the following:
  - (1) The open feedlot operation and all existing and proposed settled open feedlot effluent basins or AT systems, clean water diversions, and other pertinent features or structures.
  - (2) Any other open feedlot operation under common ownership or common management and located within 1,250 feet of the open feedlot operation.
  - (3) Any public water supply system as defined in Iowa Code section 455B.171 or drinking water well which is located less than the distance from the open feedlot operation required by rule 65.108(455B,459A). Information shall also be provided as to whether the proposed settled open feedlot effluent basin or AT system will meet all applicable separation distances.

**567—65.108(455B,459A) Well separation distances for open feedlot operations.**

**65.108(1)** *Settled open feedlot effluent basins.* Settled open feedlot effluent basins shall be separated from wells as follows:

- a. Public wells.* 1,000 feet from shallow wells and 400 feet from deep wells;
- b. Private wells.* 400 feet from both shallow and deep wells.

**65.108(2)** *Open feedlots, solids settling facilities and AT systems.* Open feedlots, solids settling facilities and AT systems shall be separated from wells as follows: for both public and private wells, 200 feet from shallow wells and 100 feet from deep wells.

**65.108(3)** *Variances.* Variances to this rule may be granted by the director if the applicant provides an alternative that is substantially equivalent to the rule or provides improved effectiveness or protection as required by the rule. Variance requests shall be made in writing at the time the construction permit application is submitted. The denial of a variance may be appealed to the commission.

**567—65.109(459A) Settled open feedlot effluent basins—investigation, design and construction requirements.** A settled open feedlot effluent basin required to be constructed pursuant to a construction permit issued pursuant to 2005 Iowa Code Supplement section 459A.205 shall meet the design and construction requirements set forth in this rule.

**65.109(1)** *Drainage tile investigation and removal.* Prior to constructing a settled open feedlot effluent basin, the owner of the open feedlot operation shall investigate the site for the basin for a

drainage tile line. The investigation shall be made by digging a core trench to a depth of at least six feet deep from ground level at the projected center of the berm of the basin. A written record of the investigation shall be submitted as part of the construction certification required in rule 65.111(459A). If a drainage tile line is discovered, one of the following solutions shall be implemented:

*a.* The drainage tile line shall be rerouted around the perimeter of the basin at a distance of least 25 feet horizontally separated from the outside toe of the berm of the basin. For an area of the basin where there is not a berm, the drainage tile line shall be rerouted at least 50 feet horizontally separated from the edge of the basin.

*b.* The drainage tile line shall be replaced with a nonperforated tile line under the basin floor. The nonperforated tile line shall be continuous and without connecting joints. There must be a minimum of three feet between the nonperforated tile line and the basin floor.

**65.109(2) Soils and hydrogeologic report.** A settled open feedlot effluent basin required to be constructed pursuant to a construction permit issued pursuant to rule 65.105(459A) shall meet design standards as required by a soils and hydrogeologic report. The report shall be submitted with the construction permit application as provided in rule 65.107(459A). The report shall include all of the following:

*a.* A description of the steps taken to determine the soils and hydrogeologic conditions at the proposed construction site, a description of the geologic units encountered, and a description of the effects of the soil and groundwater elevation and direction of flow on the construction and operation of the basin.

*b.* The subsurface soil classification of the site. A subsurface soil classification shall be based on ASTM international designation D 2487-92 or D 2488-90.

*c.* The results of a soils investigation conducted at a minimum of three locations within the area of the basin reflecting the continuous soil profile existing within the area of the basin. The soils investigation results shall be used in determining subsurface soil characteristics and groundwater elevation and direction of flow at the proposed site. The soils investigation shall be conducted and utilized as follows:

(1) By a qualified person ordinarily engaged in the practice of performing soils investigations.

(2) At locations that reflect the continuous soil profile conditions existing within the area of the proposed basin, including conditions found near the corners and the deepest point of the proposed basin. The soils investigation shall be conducted to a minimum depth of ten feet below the proposed bottom elevation of the basin.

(3) By methods which identify the continuous soil profile and do not result in mixing of soil layers. Soil corings using hollow stem augers and other suitable methods may be used.

(4) If located in karst terrain, at least one soil coring shall be taken to a minimum depth of 25 feet below the bottom elevation of the settled open feedlot effluent basin or into bedrock, whichever is shallower. The department may accept information from the department's Geosam database in lieu of the coring. If bedrock is encountered, adequate investigation of the bedrock formation shall be made to determine if it consists of limestone, dolomite, or other soluble rock.

(5) Soil corings may be used to determine current groundwater levels by completing the corings as temporary monitoring wells as provided in 65.109(3) "a"(1) and measuring the water levels in these wells no earlier than seven days after installation as provided in 65.109(3) "a"(2).

(6) Upon abandonment of soil core holes, all soil core holes including those developed as temporary water level monitoring wells shall be plugged with concrete, Portland cement concrete grout, bentonite, or similar materials.

(7) If excavation methods are used in conducting the soils investigation, upon closure these excavations must be filled with suitable materials and adequately compacted to ensure they will not compromise the integrity of the basin liner.

**65.109(3) Hydrology.**

*a. Determination of groundwater table.* For purposes of this rule, groundwater table is the seasonal high-water table determined by a professional engineer, a groundwater professional certified pursuant to 567—Chapter 134, or qualified staff from the department or Natural Resources Conservation

Service (NRCS). If a construction permit is required, the department must approve the groundwater table determination.

(1) Current groundwater levels shall be measured as provided in this subparagraph for either a formed settled open feedlot effluent basin or an unformed settled open feedlot effluent basin. Three temporary monitoring wells shall be developed according to 567—subrule 110.11(8). The top of the well screen shall be within five feet of the ground surface. Each well shall be extended to at least two feet below the proposed top of the liner of an unformed settled open feedlot effluent basin, or to at least two feet below the proposed bottom of the footings of a formed settled open feedlot effluent basin. In addition, the wells must be installed as follows:

1. Unformed basins. For an unformed settled open feedlot effluent basin, the monitoring wells may be installed in the soil core holes developed as part of conducting the soils investigation required in paragraph 65.109(2) “c.”

2. Formed basins. For a formed settled open feedlot effluent basin, at least three temporary monitoring wells shall be installed as close as possible to three corners of the structure, with one of the wells close to the corner of deepest excavation. If the formed settled open feedlot effluent basin is circular, the three monitoring wells shall be equally spaced and one well shall be placed at the point of deepest excavation.

(2) The seasonal high-water table shall be determined by considering all relevant data, including the groundwater levels measured in the temporary monitoring wells not earlier than seven days following installation, NRCS soil survey information, soil characteristics such as color and mottling, other existing water table data, and other pertinent information. If a drainage system for artificially lowering the groundwater table will be installed in accordance with the requirements of paragraph 65.109(3) “c,” the level to which the groundwater table will be lowered will be considered to represent the seasonal high-water table.

b. The settled open feedlot effluent basin shall be constructed with a minimum separation of two feet between the top of the liner of the basin and the seasonal high-water table.

c. If a drainage tile line around the perimeter of the basin is installed a minimum of two feet below the top of the basin liner to artificially lower the seasonal high-water table, the top of the basin’s liner may be a maximum of four feet below the seasonal high-water table which existed prior to installation of the perimeter tile system. The seasonal high-water table may be artificially lowered by gravity flow tile lines or other similar system. However, the following shall apply:

(1) Except as provided in subparagraph (2), an open feedlot operation shall not use a nongravity mechanical system that uses pumping equipment.

(2) If the open feedlot operation was constructed before July 1, 2005, the operation may continue to use its existing nongravity mechanical system that uses pumping equipment, or it may construct a new nongravity mechanical system that uses pumping equipment. However, an open feedlot operation that expands the area of its open feedlot on or after April 1, 2011, shall not use a nongravity mechanical system that uses pumping equipment.

(3) Drainage tile lines may be installed to artificially lower the seasonal high-water table at a settled open feedlot effluent basin, if all of the following conditions are satisfied:

1. A device to allow monitoring of the water in the drainage tile lines and a device to allow shutoff of the flow in the drainage tile lines are installed, if the drainage tile lines do not have a surface outlet accessible on the property where the settled open feedlot effluent basin is located.

2. Drainage tile lines are installed horizontally at least 25 feet away from the outside toe of the berm of the settled open feedlot effluent basin. Drainage tile lines shall be placed in a vertical trench and encased in granular material which extends upward to the level of the seasonal high-water table which existed prior to installation of the perimeter tile system.

**65.109(4) Karst terrain.**

a. Construction prohibited. Settled open feedlot effluent basins shall not be constructed in areas which drain to known sinkholes or in karst terrain. Structure sites located within one mile of karst terrain shall be considered to be located in karst terrain, unless site-specific geologic information is submitted

documenting that 25 feet of suitable materials exist between the structure bottom and carbonated bedrock or limestone or dolomite.

*b.* The use of formed structures is required to store liquid or dry manure in karst terrain.

(1) Formed structures constructed of concrete in karst terrain shall comply with the provisions of 65.15(14).

(2) The use of formed structures constructed of materials other than concrete and located in areas which drain to known sinkholes or located in karst terrain may be approved by the department if the proposed structures are designed by a professional engineer, a minimum of five feet vertical separation is maintained between the structure bottom and carbonated bedrock, and the engineer certifies and provides data showing the permeability of the geologic material below the structure's base is sufficiently low to provide an adequate barrier to prevent percolation into carbonated bedrock or groundwater.

*c.* Construction of settled open feedlot effluent basins is allowed in areas identified as karst terrain if site-specific geologic information is submitted documenting that 25 feet of suitable materials exist between the structure bottom and carbonated bedrock or limestone or dolomite.

**65.109(5) *Bedrock separation.*** A settled open feedlot effluent basin shall be constructed with at least four feet of separation between the bottom of the basin and a bedrock formation.

**65.109(6) *Floodplain requirements.***

*a. Construction in floodplains.* Open feedlot operation structures located on a floodplain or within a floodway of a river or stream may be required to obtain DNR permits and provide protection from inundation by flood waters, as specified in 567—Chapters 71 and 72.

*b. Permits for dam construction.* Open feedlot operation structures exceeding storage capacity or dam height thresholds may be required to obtain DNR permits, as specified in 567—71.3(455B) and 72.3(455B).

**65.109(7) *Liner design and construction.*** The liner of a settled open feedlot effluent basin shall comply with all of the following:

*a.* The liner shall comply with any of the following permeability standards:

(1) The liner shall be constructed to have a percolation rate that shall not exceed one-sixteenth inch per day at the design depth of the basin as determined by percolation tests conducted by the professional engineer. If a clay soil liner is used, the liner shall be constructed with a minimum thickness of 12 inches or the minimum thickness necessary to comply with the percolation rate in this paragraph, whichever is greater.

(2) The liner shall be constructed to have a percolation rate that shall not exceed one-sixteenth inch per day at the design depth of the basin. The design of the liner will specify a moisture content, compaction requirement, and liner thickness that will comply with the maximum allowable percolation requirement, and will be based on moisture content and percentage of maximum density as determined by a standard 5 point proctor test performed in accordance with ASTM D698 (Method A). The liner thickness will be based on laboratory tests of the compacted material, with a minimum liner thickness of 12 inches. Appropriate field or laboratory testing during construction shall be provided to verify the design requirements are met.

*b.* If a synthetic liner is used, the liner shall be installed to comply with the percolation rate required in 65.109(7)“a”(1).

**65.109(8) *Berm erosion inspection and repair.*** The owner of an open feedlot operation using a settled open feedlot effluent basin shall inspect the berms of the basin at least semiannually for evidence of erosion. If the inspection reveals erosion which may impact the basin's structural stability or the integrity of the basin's liner, the owner shall repair the berms.

#### **567—65.110(459A) AT systems—design requirements.**

**65.110(1) *Containment volume.***

*a.* Adequate capacity must be provided within the AT system or within the solids settling facility for the open feedlot operation to contain expected open feedlot effluent from November 1 to March 30 or to hold the precipitation event as required by 65.101(2)“a,” whichever is greater. Controls on the solids

settling facility or the AT system shall prevent release of collected open feedlot effluent to waters of the United States during the period from November 1 to March 30.

*b.* If the containment volume required in 65.110(1)“*a*” is provided in an open feedlot operation structure whose primary purpose is to remove settleable solids from open feedlot effluent prior to discharge into an AT system, the basin shall not be required to comply with the liner design and construction requirements of 65.109(7), provided the basin does not retain collected open feedlot effluent for more than seven consecutive days following a precipitation event during the period from March 30 to November 1.

**65.110(2) Solids settling.** Settleable solids shall be removed from open feedlot effluent prior to discharge of the effluent into an AT system. Solids settling shall be conducted in conformance with the requirements of paragraph 65.101(1)“*b.*”

**65.110(3) Drainage tile investigation and removal.** Prior to constructing an AT system, the owner of the open feedlot operation shall investigate the site for the AT system for drainage tile lines. The investigation shall be made by digging a core trench to a depth of at least six feet from ground level at the projected center of the berm of the AT system. A written record of the investigation shall be submitted as part of the construction certification required in rule 65.111(459A). If a drainage tile line is discovered, one of the following solutions shall be implemented:

*a.* The drainage tile line shall be rerouted around the perimeter of the AT system at a distance of least 25 feet horizontally separated from the toe of the outside berm of the AT system. For an area of the system where there is not a berm, the drainage tile line shall be rerouted at least 50 feet horizontally separated from the edge of the system.

*b.* The drainage tile line shall be replaced with a nonperforated tile line under the AT system. The nonperforated tile line shall be continuous and without connecting joints. There must be a minimum of three feet of separation between the nonperforated tile line and the soil surface of the AT system.

**65.110(4) Soils and hydrogeologic report.** An AT system constructed pursuant to a construction permit issued pursuant to rule 65.105(459A) shall meet design standards as required by a soils and hydrogeologic report. The report shall be submitted with the construction permit application as provided in rule 65.107(459A). The report shall include all of the following:

*a.* A description of the steps taken to determine the soils and hydrogeologic conditions at the proposed construction site, a description of the geologic units encountered, and a description of the effects of the soil and groundwater elevation and direction of flow on the construction and operation of the AT system.

*b.* Subsurface soil classification of the site. A subsurface soil classification shall be based on ASTM international designation D 2487-92 or D 2488-90.

*c.* The results of a soils investigation conducted at a minimum of three locations within the area of the proposed AT system for AT systems of five acres or less, with one additional soils investigation site utilized for each additional three acres of surface area or fraction thereof. The soils investigation results shall be used in determining subsurface soil characteristics and groundwater elevation and direction of flow at the proposed AT system site. The soils investigation shall be conducted and utilized as follows:

(1) By a qualified person ordinarily engaged in the practice of performing soils investigations.

(2) At locations that reflect the continuous soil profile conditions existing within the area of the proposed AT system. The soils investigation shall be conducted to a minimum depth of ten feet below the elevation of the soil surface of the proposed AT system.

(3) By methods which identify the continuous soil profile and do not result in mixing of soil layers. Investigation methods may include soil corings using hollow stem augers, soil test pits, or other suitable methods.

(4) If located in karst terrain, at least one soil coring shall be taken to a minimum depth of 25 feet below the elevation of the soil surface of the proposed AT system or into bedrock, whichever is shallower. The department may accept well log information from the department’s Geosam database in lieu of the coring. If bedrock is encountered, adequate investigation of the bedrock formation shall be made to determine if it consists of limestone, dolomite, or other soluble rock.

(5) Soil core holes may be used to determine current groundwater levels by completing the core holes as temporary monitoring wells and measuring the water levels in these wells not earlier than seven days after installation.

(6) Upon abandonment of the soil core holes, all soil core holes, including those developed as temporary water level monitoring wells, shall be plugged with concrete, Portland cement concrete grout, bentonite, or similar materials.

(7) If soil test pits or other excavation methods are used in conducting the soils investigation, upon closure these excavations must be filled with suitable materials and adequately compacted to ensure they will not compromise the integrity of the AT system.

**65.110(5) Hydrology—groundwater table.** For purposes of this rule, groundwater table is the seasonal high-water table determined by a professional engineer, a groundwater professional certified pursuant to 567—Chapter 134, or qualified staff from the department or Natural Resources Conservation Service (NRCS). If a construction permit is required, the department must approve the groundwater table determination.

*a. Groundwater level measurements.* Groundwater levels shall be measured using at least one of the following methods:

(1) Temporary monitoring wells. Three temporary monitoring wells shall be developed to a minimum of ten feet below the surface of the proposed AT system and constructed in accordance with requirements of 567—subrule 110.11(8). The top of the well screen shall be within five feet of the ground surface. These monitoring wells may be installed in the soil core holes developed as part of conducting the soils investigation required in paragraph 65.110(4) “c.”

(2) Test pits. Test pits may be used in lieu of temporary monitoring wells to determine the seasonal high-water table or prior to the construction of an AT system to ensure the required separation distance to the seasonal high-water table is being met. The bottom of each pit shall be a minimum of five feet below the proposed surface of the AT system. However, if the test pit is also being used to conduct the soils investigation required in 65.110(4) “c,” the bottom of the pit shall be a minimum of ten feet below the surface of the proposed AT system. Each pit shall be allowed to remain open and unaltered for a minimum of seven days for viewing by the department or NRCS qualified staff. Adequate protection (temporary berms and covers) shall be provided to prevent surface runoff from entering the test pits. Test pits shall be located as needed to provide an accurate assessment of soil materials and seasonal high groundwater levels throughout the area of the proposed AT system. A description of the materials present in the test pit shall be documented by all of the following:

- Digital photos;
- Description of soils including mottling;
- Weather conditions both prior to and during the period in which test pits are open.

*b. Determination of seasonal high-water table.* The seasonal high-water table shall be determined by considering all relevant data, including the groundwater levels measured in the temporary monitoring wells or test pits not earlier than seven days following installation, NRCS soil survey information, soil characteristics such as color and mottling found in soil cores and test pits, other existing water table data, and other pertinent information. If a drainage system for artificially lowering the groundwater table will be installed in accordance with the requirements of paragraph 65.110(6) “g” or 65.110(7) “g,” the level to which the groundwater table will be lowered will be considered to represent the seasonal high-water table.

**65.110(6) Vegetative infiltration basin followed by vegetative treatment area.**

*a. Computer modeling.* Results of predictive computer modeling for the proposed AT system shall be used to determine suitability of the proposed site for the AT system and to predict performance of the AT system as compared to the use of a 25-year, 24-hour runoff containment system, over a 25-year period. A summary of the computer modeling results shall be provided to the department.

*b. Size.* The computer model used to determine if the proposed AT system will meet the equivalent performance standard shall also be used to establish the minimum required size of the VIB and VTA. However, the size of the VIB shall not be less than 30 percent of the total drainage area (feedlot and

other) served by the basin, and the size of the VTA shall not be less than 30 percent of the surface area of the VIB.

*c. Slope.* The following slope requirements apply to the constructed system components.

(1) VIB. The maximum slope of the constructed VIB shall not exceed 1 percent.

(2) VTA. The constructed VTA shall be level in one dimension and have a slight slope (maximum of 5 percent) in the other dimension.

*d. Berming.*

(1) VIB. The VIB must be bermed to prevent inflow of surface water from outside the VIB and prevent surface outflow of feedlot effluent from the VIB.

(2) VTA. The VTA must be bermed to prevent inflow of surface water from outside areas.

*e. Spreaders.* Settled open feedlot effluent must be discharged evenly across the top width of the VTA and allowed to slowly flow downslope through the VTA. Level spreaders or other practices may be required to maintain uniform flow of settled open feedlot effluent across the width of the VTA as flow moves downslope through the VTA.

*f. Soil permeability.* Soil permeability within the VIB and VTA must be from 0.6 to 2.0 inches per hour throughout the soil profile to a depth of five feet. Soil permeability must be verified by conducting on-site or laboratory soil permeability testing.

*g. Groundwater lowering system.* The seasonal high-water table within the VIB and the VTA must be capable of being lowered to a depth of four to five feet with a perimeter tile system installed outside of the VIB or VTA. Design information must be provided which demonstrates the adequacy of the proposed groundwater lowering system. The tile system must satisfy the following requirements:

(1) If the tile system does not have a surface outlet accessible on the property where the AT system is located, a device to allow monitoring of the water in the tile system and a device to allow shutoff of the flow in the tile system must be installed.

(2) Tile lines in the system must be installed horizontally at least 25 feet away from the outside toe of the berm of the VIB or VTA.

*h. Tile system to enhance infiltration within the VTA.* A tile system may be installed at the perimeter of the VTA cells to enhance infiltration within the VTA. The tile system must satisfy the following requirements:

(1) Tile lines shall be installed at the centerline of the berms of the VTA cells.

(2) The tile lines shall be constructed such that no settled open feedlot effluent can enter the lines except through infiltration through the soil profile.

(3) A shutoff valve and sampling point located downslope of the VTA cell shall be provided for each individual tile line. However, if multiple tile lines are brought together into a common tile line, a single shutoff valve and sampling point may be utilized.

(4) Monitoring of the tile lines must be conducted in accordance with the requirements of 65.104(9)“d”(2).

*i. Depth to sands, gravels, or glacial outwash.*

(1) VIB. A VIB is not allowed if the depth to sands, gravels, or glacial outwash is less than ten feet.

(2) VTA. A VTA is not allowed if the depth to sands, gravels, or glacial outwash is less than six feet.

(3) A soils investigation that documents sands found are in isolated sand lenses that will not have a significant impact on subsurface water flow or groundwater quality shall not prohibit use of the site.

*j. Depth to bedrock.* A minimum of ten feet of overburden or loose material must exist between the surface of the constructed VIB or VTA and underground bedrock.

*k. Flooding.* Both the VIB and the VTA must be constructed in areas which are not subject to flooding more frequently than once in 25 years.

*l. Distance to water bodies.* The following distances, measured along the path of water flow, shall be provided between the point of discharge from the VTA and the receiving water body.

(1) Designated use streams referenced in 567—subrule 61.3(5). A minimum distance of 500 feet or one-half foot distance per animal unit capacity of the open feedlot area which drains to the VTA, whichever is greater, shall be provided.

(2) All other uncrossable intermittent streams. A minimum distance of 200 feet shall be provided.

**65.110(7) Stand-alone VTA.**

a. *Computer modeling.* Results of predictive computer modeling for the proposed alternative technology system shall be used to determine suitability of the proposed site for the system and to predict performance of the alternative technology system as compared to the use of a 25-year, 24-hour runoff containment system, over a 25-year period. A summary of the computer modeling results shall be provided to the department.

b. *Size.* The computer model used to determine if the proposed AT system will meet the equivalent performance standard shall also be used to establish the minimum required size of the VTA. However, in no case shall the size of the VTA be less than the following:

(1) 50 percent of the total drainage area (feedlot and other) served if the soil permeability is from 0.6 to 2.0 inches per hour.

(2) 100 percent of the total drainage area (feedlot and other) served if the soil permeability is from 0.2 to 0.6 inches per hour.

c. *Slope.* The constructed VTA shall be level in one dimension and have a slight slope (maximum of 5 percent) in the other dimension.

d. *Berming.* The VTA must be bermed to prevent inflow of surface water from outside areas.

e. *Spreaders.* Settled open feedlot effluent must be discharged evenly across the top width of the VTA and allowed to slowly flow downslope through the VTA. Level spreaders or other practices may be required to maintain uniform flow of settled open feedlot effluent across the width of the VTA as flow moves downslope through the VTA.

f. *Soil permeability.* Soil permeability within the VTA must be from 0.2 to 2.0 inches per hour throughout the soil profile to a depth of five feet. Soil permeability must be verified by conducting on-site or laboratory soil permeability testing.

g. *Groundwater lowering system.* The seasonal high-water table within the VTA must be capable of being lowered to a depth of four to five feet with a perimeter tile system installed outside of the VTA. Design information must be provided which demonstrates the adequacy of the proposed groundwater lowering system. The tile system must satisfy the following requirements:

(1) If the tile system does not have a surface outlet accessible on the property where the AT system is located, a device to allow monitoring of the water in the tile system and a device to allow shutoff of the flow in the tile system must be installed.

(2) Tile lines in the system must be installed horizontally at least 25 feet away from the outside toe of the berm of the VTA.

h. *Tile system to enhance infiltration within the VTA.* A tile system may be installed at the perimeter of the VTA cells to enhance infiltration within the VTA. The tile system must satisfy the following requirements:

(1) Tile lines shall be installed at the centerline of the berms of the VTA cells.

(2) The tile lines shall be constructed such that no settled open feedlot effluent can enter the lines except through infiltration through the soil profile.

(3) A shutoff valve and sampling point located downslope of the VTA cell shall be provided for each individual tile line. However, if multiple tile lines are brought together into a common tile line, a single shutoff valve and sampling point may be utilized.

(4) Monitoring of the tile lines must be conducted in accordance with the requirements of 65.104(9)“d”(2).

i. *Depth to sands, gravels, or glacial outwash.* A VTA is not allowed if the depth to sands, gravels, or glacial outwash is less than six feet. A soils investigation that documents sands found are in isolated sand lenses that will not have a significant impact on subsurface water flow or groundwater quality shall not prohibit use of the site.

j. *Depth to bedrock.* A minimum of ten feet of overburden or loose material must exist between the surface of the constructed VTA and underground bedrock.

k. *Flooding.* The VTA must be constructed in areas which are not subject to flooding more frequently than once in 25 years.

*l. Distance to water bodies.* The following distances, measured along the path of water flow, shall be provided between the point of discharge from the VTA and the receiving water body.

(1) Designated use streams referenced in 567—subrule 61.3(5). A minimum distance of 500 feet or one-half foot distance per animal unit capacity of the feedlot area which drains to the VTA, whichever is greater, shall be provided.

(2) All other uncrossable intermittent streams. A minimum distance of 200 feet shall be provided.

**567—65.111(459A) Construction certification.**

**65.111(1)** The owner of an open feedlot operation who is issued a construction permit for a settled open feedlot effluent basin or AT system as provided in rule 65.105(459A) on or after July 1, 2005, shall submit to the department a construction certification from a professional engineer certifying all of the following:

*a.* The basin or AT system was constructed in accordance with the design plans submitted to the department as part of an application for a construction permit pursuant to rule 65.107(459A). If the actual construction deviates from the approved design plans, the construction certification shall identify all changes and certify that the changes were consistent with all applicable standards of these rules.

*b.* The basin or AT system was inspected by the professional engineer after completion of construction and before commencement of operation.

**65.111(2)** A written record of an investigation for drainage tile lines, including the findings of the investigation and actions taken to comply with 65.109(1) or 65.110(3), shall be submitted as part of the construction certification.

**567—65.112(459A) Nutrient management plan requirements.**

**65.112(1)** The owner of an open feedlot operation which has an animal unit capacity of 1,000 animal units or more or which is required to be issued an NPDES permit shall develop and implement a nutrient management plan meeting the requirements of this rule by December 31, 2006. For the purpose of this rule, requirements pertaining to open feedlot effluent also apply to settled open feedlot effluent and settleable solids.

**65.112(2)** Not more than one open feedlot operation shall be covered by a single nutrient management plan.

**65.112(3)** A person shall not remove manure, process wastewater or open feedlot effluent from an open feedlot operation structure which is part of an open feedlot operation for which a nutrient management plan is required under this rule, unless the department approves a nutrient management plan as required in this rule.

**65.112(4)** The department shall not approve an application for a permit to construct a settled open feedlot effluent basin or AT system unless the owner of the open feedlot operation applying for approval submits a nutrient management plan together with the application for the construction permit as provided in rule 65.105(459A). The owner shall also submit proof that the owner has published a notice for public comment as provided in 65.112(7).

**65.112(5)** If a construction permit is required as provided in rule 65.105(459A), the department shall approve or disapprove the nutrient management plan as part of the construction permit application. If a construction permit is not required, the department shall approve or disapprove the nutrient management plan within 60 days from the date that the department receives the nutrient management plan.

**65.112(6)** Prior to approving or disapproving a nutrient management plan as required in this rule, the department may receive comments exclusively to determine whether the nutrient management plan is submitted according to procedures required by the department and that the nutrient management plan complies with the provisions of this rule.

**65.112(7)** Public notice.

*a.* The owner of the open feedlot operation shall publish a notice for public comment in a newspaper having a general circulation in the county where the open feedlot operation is or is proposed to be located and in the county where manure, process wastewater, or open feedlot effluent which

originates from the open feedlot operation may be applied under the terms and conditions of the nutrient management plan.

*b.* The notice for public comment shall include all of the following:

(1) The name of the owner of the open feedlot operation submitting the nutrient management plan.

(2) The name of the township where the open feedlot operation is or is proposed to be located and the name of the township where manure, process wastewater, or open feedlot effluent originating from the open feedlot operation may be applied.

(3) The animal unit capacity of the open feedlot operation.

(4) The time when and the place where the nutrient management plan may be examined as provided in Iowa Code section 22.2.

(5) Procedures for providing public comment to the department. The notice shall also include procedures for requesting a public hearing conducted by the department. The department is not required to conduct a public hearing if it does not receive a request for the public hearing within ten days after the first publication of the notice for public comment as provided in this subrule. If such a request is received, the public hearing must be conducted within 30 days after the first date that the notice for public comment was published.

(6) A statement that a person may acquire information relevant to making comments under this subrule by accessing the department's Internet Web site. The notice for public comment shall include the address of the department's Internet Web site as required by the department.

**65.112(8)** A nutrient management plan shall include all of the following:

*a.* Restrictions on the application of open feedlot effluent based on all of the following:

(1) A phosphorus index of each field in the nutrient management plan, as defined in 65.17(17) "a," including the factors used in the calculation. A copy of the NRCS phosphorus index detailed report shall satisfy the requirement to include the factors used in the calculation. In addition, total phosphorus (as P<sub>2</sub>O<sub>5</sub>) available to be applied from the open feedlot operation shall be included.

(2) Calculations necessary to determine the land area required for the application of manure, process wastewater and open feedlot effluent from an open feedlot operation based on nitrogen or phosphorus use levels (as determined by phosphorus index) in order to obtain optimum crop yields according to a crop schedule specified in the nutrient management plan, and according to requirements specified in 65.17(4). The 100 pounds of available nitrogen per acre limitation specified in 65.17(18) "c" (applicable to open feedlot operations because of requirements in 65.17(4)) pertaining to liquid manure applied to land currently planted to soybeans or to land where a soybean crop is planned applies only to liquid manure, process wastewater or settled open feedlot effluent.

*b.* Information relating to the application of the manure, process wastewater and open feedlot effluent, including all of the following:

(1) Nutrient levels of the manure, process wastewater and open feedlot effluent.

(2) Application methods, the timing of the application, and the location of the land where the application occurs.

*c.* If the application is on land other than land owned or rented for crop production by the owner of the open feedlot operation, the plan shall include a copy of each written agreement executed by the owner of the open feedlot operation and the landowner or the person renting the land for crop production where the manure, process wastewater or open feedlot effluent may be applied.

*d.* An estimate of the manure, process wastewater and open feedlot effluent volume or weight produced by the open feedlot operation.

*e.* Information which shows all of the following:

(1) There is adequate storage for manure, process wastewater, stockpiled manure and open feedlot effluent, including procedures to ensure proper operation and maintenance of the storage structures.

(2) The proper management of animal mortalities to prevent discharge of pollutants to surface water and to ensure that animals are not disposed of in an open feedlot operation structure or a treatment system that is not specifically designed to treat animal mortalities.

(3) Surface drainage prior to contact with an open feedlot structure is diverted, as appropriate, from the open feedlot operation.

(4) Animals kept in the open feedlot operation do not have direct contact with any waters of the United States.

(5) Chemicals or other contaminants handled on site are not disposed of in manure, process wastewater, an open feedlot operation structure or a treatment system that is not specifically designed to treat such chemicals or contaminants.

(6) Equipment used for the land application of manure, process wastewater or open feedlot effluent must be periodically inspected for leaks.

(7) Identification of specific records that will be maintained to document the implementation and management of the requirements in this subrule.

**65.112(9)** If an open feedlot operation uses an alternative technology system as provided in rule 65.110(459A), the nutrient management plan is not required to provide for settled open feedlot effluent that enters the AT system.

**65.112(10)** Current nutrient management plan, record keeping and inspections.

*a. Current nutrient management plan.* The owner of an open feedlot operation who is required to submit a nutrient management plan shall maintain a current nutrient management plan at the site of the open feedlot operation and shall make the current nutrient management plan available to the department upon request. If nutrient management practices change, a person required to submit a nutrient management plan shall make appropriate changes consistent with this rule. If values other than the standard table values are used for nutrient management plan calculations, the source of the values used shall be identified.

*b. Record keeping.* Records shall be maintained by the owner of a open feedlot operation who is required to submit a nutrient management plan. This recorded information shall be maintained for five years following the year of application or for the length of the crop rotation, whichever is greater. Records shall be maintained at the site of the open feedlot operation and shall be made available to the department upon request. Records to demonstrate compliance with the nutrient management plan shall include the following:

(1) Factors used to calculate the manure, process wastewater and open feedlot effluent application rate:

1. Optimum yield for the planned crop.
2. Types of nitrogen credits and amounts.
3. Remaining crop nitrogen needed.
4. Nitrogen content and first-year nitrogen availability of the manure, process wastewater and open feedlot effluent.
5. Phosphorus content of the manure, process wastewater and open feedlot effluent as required in 65.17(3) "i"(1) and (2). If an actual sample is used, documentation shall be provided.

(2) If phosphorus-based application rates are used, the following shall be included:

1. Crop rotation.
2. Phosphorus removed by crop harvest of that crop rotation.
- (3) Maximum allowable manure, process wastewater and open feedlot effluent application rate.
- (4) Actual manure, process wastewater and open feedlot effluent application information:
  1. Method(s) of application when manure, process wastewater or open feedlot effluent from the open feedlot operation was applied.
  2. Date(s) when the manure, process wastewater or open feedlot effluent from the open feedlot operation was applied.
  3. Weather conditions at time of application and for 24 hours prior to and following the application.
  4. Location of the field where the manure, process wastewater or open feedlot effluent from the open feedlot operation was applied, including the number of acres.
  5. The manure, process wastewater or open feedlot effluent application rate.
  6. Dates when application equipment was inspected.

(5) Date(s) and application rate(s) of commercial nitrogen and phosphorus on fields that received manure, process wastewater or open feedlot effluent. However, if the date and application rate information is for fields which are not owned for crop production or which are not rented or leased for

crop production by the person required to keep records pursuant to this subrule, an enforcement action for noncompliance with a nutrient management plan or the requirements of this subrule shall not be pursued against the person required to keep records pursuant to this subrule or against any other person who relied on the date and application rate in records required to be kept pursuant to this subrule, unless that person knew or should have known that nitrogen or phosphorus would be applied in excess of maximum levels set forth in paragraph 65.17(1)“a.” If nutrients are applied to fields not owned, rented or leased for crop production by the person required to keep records pursuant to this subrule, that person shall obtain from the person who owns, rents or leases those fields a statement specifying the planned commercial nitrogen and phosphorus fertilizer rates to be applied to each field receiving the nutrients.

(6) A copy of the current soil test laboratory results for each field in the nutrient management plan.

(7) All applicable records identified in 65.112(8)“e”(7).

*c. Record inspection.* The department may inspect an open feedlot operation at any time during normal working hours and may inspect the nutrient management plan and any records required to be maintained.

**65.112(11)** Settled open feedlot effluent on land planted to soybeans. Effective May 14, 2013, the owner of an open feedlot operation that is required to submit a nutrient management plan shall not apply liquid manure, process wastewater or settled open feedlot effluent to land that is currently planted to soybeans or to land where the current crop has been harvested that will be planted to soybeans the next crop season. Not later than November 14, 2012, the commission shall review the available scientific evidence and determine whether any further or alternative action is necessary. The prohibition on applying liquid manure, process wastewater or settled open feedlot effluent shall not become effective unless the commission publishes a notice in the Iowa Administrative Bulletin confirming that it has reviewed the available scientific evidence and that the prohibition shall take effect on May 14, 2013.

**567—65.113(459A) Complaint investigations.** Complaints of violations of Iowa Code chapter 455B or 459, or 2005 Iowa Code Supplement chapter 459A, or these rules, which are received by the department or are forwarded to the department by a county, following a county board of supervisors’ determination that a complainant’s allegation constitutes a violation, shall be investigated by the department if it is determined that the complaint is legally sufficient and an investigation is justified.

**65.113(1)** If after evaluating a complaint to determine whether the allegation may constitute a violation, without investigating whether the facts supporting the allegation are true or untrue, the county board of supervisors shall forward its finding to the department director.

**65.113(2)** A complaint is legally sufficient if it contains adequate information to investigate the complaint and if the allegation constitutes a violation, without an investigation of whether the facts supporting the allegation are true or untrue, of department rules, Iowa Code chapter 455B or 459, or 2005 Iowa Code Supplement chapter 459A, or environmental standards in regulations subject to federal law and enforced by the department.

**65.113(3)** The department in its discretion shall determine the urgency of the investigation, and the time and resources required to complete the investigation, based upon the circumstances of the case, including the severity of the threat to the quality of surface water or groundwater.

**65.113(4)** The department shall notify the complainant and the alleged violator if an investigation is not conducted specifying the reason for the decision not to conduct an investigation.

**65.113(5)** The department will notify the county board of supervisors where the violation is alleged to have occurred before doing a site investigation unless the department determines that a clear, present and impending danger to the public health or environment requires immediate action.

**65.113(6)** The county board of supervisors may designate a county employee to accompany the department on the investigation of any site as a result of a complaint.

**65.113(7)** A county employee accompanying the department on a site investigation has the same right of access to the site as the department official conducting the investigation during the period that the county designee accompanies the department official.

**65.113(8)** Upon completion of an investigation, the department shall notify the complainant of the results of the investigation, including any anticipated, pending or complete enforcement action arising

from the investigation. The department shall deliver a copy of the notice to the open feedlot operation that is the subject of the complaint, any alleged violators if different from the open feedlot operation and the county board of supervisors of the county where the violation is alleged to have occurred.

**65.113(9)** When a person who is a department official, an agent of the department, or a person accompanying the department official or agent enters the premises of an open feedlot operation, both of the following shall apply:

*a.* The person may enter at any reasonable time in and upon any private or public property to investigate any actual or possible violation of Iowa Code chapter 455B or 459, or 2005 Iowa Code Supplement chapter 459A, or these rules. However, the owner or person in charge shall be notified.

(1) If the owner or occupant of any property refuses admittance to the operation, or if prior to such refusal the director demonstrates the necessity for a warrant, the director may make application under oath or affirmation to the district court of the county in which the property is located for the issuance of a search warrant.

(2) In the application the director shall state that an inspection of the premises is mandated by the laws of this state or that a search of certain premises, areas, or things designated in the application may result in evidence tending to reveal the existence of violations of public health, safety, or welfare requirements imposed by statutes, rules or ordinances established by the state or a political subdivision thereof. The application shall describe the area, premises, or thing to be searched, give the date of the last inspection if known, give the date and time of the proposed inspection, declare the need for such inspection, recite that notice of desire to make an inspection has been given to affected persons and that admission was refused if that be the fact, and state that the inspection has no purpose other than to carry out the purpose of the statute, ordinance, or regulation pursuant to which inspection is to be made. If an item of property is sought by the director, it shall be identified in the application.

(3) If the court is satisfied from the examination of the applicant, and of other witnesses, if any, and of the allegations of the application of the existence of the grounds of the application, or that there is probable cause to believe their existence, the court may issue such search warrant.

(4) In making inspections and searches pursuant to the authority of this rule, the director must execute the warrant:

1. Within ten days after its date.

2. In a reasonable manner, and any property seized shall be treated in accordance with the provisions of Iowa Code chapters 808, 809, and 809A.

3. Subject to any restrictions imposed by the statute, ordinance or regulation pursuant to which inspection is made.

*b.* The person shall comply with standard biosecurity requirements customarily required by the open feedlot operation which are necessary in order to control the spread of disease among an animal population.

**567—65.114(455B,459A) Transfer of legal responsibilities or title.** If title or legal responsibility for a permitted open feedlot operation and its open feedlot operation structure is transferred, the person to whom title or legal responsibility is transferred shall be subject to all terms and conditions of the permit and these rules. The person to whom the permit was issued and the person to whom title or legal responsibility is transferred shall notify the department of the transfer of legal responsibility or title of the operation within 30 days of the transfer. Within 30 days of receiving a written request from the department, the person to whom legal responsibility is transferred shall submit to the department all information needed to modify the permit to reflect the transfer of legal responsibility.

These rules are intended to implement Iowa Code sections 455B.171 to 455B.191, 459.314, and 459.601 and 2005 Iowa Code Supplement chapter 459A.

## APPENDIX A

OPEN FEEDLOT EFFLUENT CONTROL ALTERNATIVES FOR  
OPEN FEEDLOT OPERATIONS

Introduction: Water pollution control requirements for animal feeding operations are given in 567—65.101(459A). Under these rules, open feedlots meeting the NPDES permit application requirements of rule 567—65.104(455B,459A) must also comply with the minimum open feedlot effluent control requirements of subrule 65.101(2). Subrule 65.101(2) requires that all feedlot runoff and other open feedlot effluent flows resulting from precipitation events less than or equal to the 25-year, 24-hour rainfall event be collected and land-applied. For the purpose of this appendix, open feedlot effluent includes manure, process wastewater, settled open feedlot effluent and settleable solids.

This appendix describes five feedlot runoff control systems that meet the requirements of subrule 65.101(2). The systems differ in the volume of open feedlot effluent storage provided and in the frequency of open feedlot effluent application. In general, the time interval between required applications increases with increased storage volume.

A feedlot operator who constructs and operates an open feedlot effluent control facility in accordance with the requirements of any of these five systems will not have additional open feedlot effluent control requirements imposed, unless open feedlot effluent discharges from the facility cause state water quality standards violations. In describing the five systems, the major features of each are first reviewed, followed by detailed information on the construction and operation requirements of the system. The system descriptions are presented in this appendix as follows:

## System

- |           |  |
|-----------|--|
| System 1: | One Open Feedlot Effluent Application Period Per Year            |
| System 2: | July and October Open Feedlot Effluent Application               |
| System 3: | April, July, and October Open Feedlot Effluent Application       |
| System 4: | Application After Each Significant Precipitation Event           |
| System 5: | April/May and October/November Open Feedlot Effluent Application |
- Figures 1-4

## SYSTEM 1: ONE OPEN FEEDLOT EFFLUENT APPLICATION PERIOD PER YEAR

## MAJOR SYSTEM FEATURES:

- Adequate capacity must be provided to collect and store the average annual runoff from all feedlot and nonfeedlot areas which drain into the open feedlot effluent control system (additional storage is required if open feedlot effluent from other sources also drains into the control system).
- Collected open feedlot effluent must be removed from the control system and land-applied at least once annually (interval between successive applications cannot exceed 12 months).

## DETAILED SYSTEM REQUIREMENTS:

Open Feedlot Effluent Control System: The open feedlot effluent control system must be constructed to meet or exceed the following requirements:

1. Solids Settling Facilities: Solids settling facilities which meet or exceed the requirements of subrule 65.101(1) must precede the feedlot runoff control system.
2. Feedlot Runoff Control System: The feedlot runoff control system shall, as a minimum, have adequate capacity to store the total wastewater volume determined by summing the following:
  - A. The volume determined by multiplying the unpaved feedlot area which drains into the control system by the appropriate runoff value from Figure 1.
  - B. The volume determined by multiplying the paved feedlot area which drains into the control system by 1.5 times the appropriate runoff value from Figure 1.
  - C. The volume determined by multiplying the total area of cropland, pasture and woodland draining into the control system by the greater of the following:
    - The amount of runoff expected from these areas as a result of the 25-year, 24-hour precipitation event.\*
    - The average annual runoff expected from these areas.\*
  - D. The volume determined by multiplying the total roof, farmstead, and driveway area draining into the control system by the average annual runoff expected from these areas.\*
  - E. The volume of process wastewater which drains into the control system during a 12-month period.
  - F. The volume of open feedlot effluent from other sources which discharges into the control system during a 12-month period.

\*Expected 25-year, 24-hour and average annual runoff values shall be determined using runoff prediction methodologies of the NRCS (or equivalent methodologies).

Open Feedlot Effluent Application Requirements: Open feedlot effluent must be removed from the open feedlot effluent control system and land-applied in accordance with the following requirements:

1. Solids Settling Facilities: Collected settleable solids must be removed from the solids settling facilities as necessary to maintain adequate capacity to handle future runoff events. As a minimum, settleable solids shall be removed at least once annually.
2. Feedlot Runoff Control System: Accumulated open feedlot effluent shall be removed from the feedlot runoff control system and disposed of by land application at least once annually. The interval between successive application periods shall not exceed 12 months.

During application periods, land application shall be conducted at rates sufficient to ensure complete removal of accumulated open feedlot effluent from the runoff control system in ten or fewer application days. Open feedlot effluent removal is considered complete when the open feedlot effluent remaining in the runoff control system occupies less than 10 percent of the system's design open feedlot effluent storage volume.

Land application of open feedlot effluent shall be conducted on days when weather and soil conditions are suitable. Weather and soil conditions are normally considered suitable for open feedlot effluent application if:

- Land application areas are not frozen or snow-covered.
- Temperatures during application are greater than 32 degrees Fahrenheit.
- Precipitation has not exceeded 0.05 inch per day for each of the three days immediately preceding application and no precipitation is occurring on the day of application.

## SYSTEM 2: JULY AND OCTOBER OPEN FEEDLOT EFFLUENT APPLICATION

### MAJOR SYSTEM FEATURES:

- Adequate capacity must be provided to collect and store the average runoff expected to occur over the nine-month period from November 1 through July 31 from all feedlot and nonfeedlot areas which drain into the open feedlot effluent control system (additional storage is required if open feedlot effluent from other sources also drains into the control system).
- Collected open feedlot effluent may be removed from the control system and land-applied during any period of the year that conditions are suitable. While application during other periods will minimize the need for July and October application, sufficient open feedlot effluent must still be disposed of during July and October to reduce the volume of open feedlot effluent remaining in the control system during these months to less than 10 percent of the system's design open feedlot effluent storage volume.

### DETAILED SYSTEM REQUIREMENTS:

Open Feedlot Effluent Control System: The open feedlot effluent control system must be constructed to meet or exceed the following requirements:

1. Solids Settling Facilities: Open feedlot effluent solids settling facilities which meet or exceed the requirements of subrule 65.101(1) must precede the feedlot runoff control system.
2. Feedlot Runoff Control System: The feedlot runoff control system shall, as a minimum, have adequate capacity to store the total wastewater volume determined by summing the following:
  - A. The volume determined by multiplying the unpaved feedlot area which drains into the control system by the appropriate runoff value from Figure 2.
  - B. The volume determined by multiplying the paved feedlot area which drains into the control system by 1.5 times the appropriate runoff value from Figure 2.
  - C. The volume determined by multiplying the total area of cropland, pasture and woodland draining into the control system by the greater of the following:
    - The amount of runoff expected from these areas as a result of the 25-year, 24-hour precipitation event.\*
    - The average runoff expected to occur from these areas during the nine-month period from November 1 to July 31.\*

D. The volume determined by multiplying the total roof, farmstead and driveway area draining into the control system by the average runoff expected to occur from these areas during the nine-month period from November 1 to July 31.\*

E. The volume of process wastewater which drains into the control system during the nine-month period from November 1 through July 31.

F. The volume of open feedlot effluent from other sources which discharges into the control system during the nine-month period from November 1 through July 31.

\*Expected 25-year, 24-hour runoff and average runoff for the nine-month period from November 1 through July 31 shall be determined using runoff prediction methodologies of the NRCS (or equivalent methodologies).

Open Feedlot Effluent Application Requirements: Open feedlot effluent must be removed from the open feedlot effluent control system and land-applied in accordance with the following requirements:

1. Solids Settling Facilities: Collected settleable solids must be removed from the solids settling facilities as necessary to maintain adequate capacity to handle future runoff events. As a minimum, settleable solids shall be removed at least once annually.

2. Feedlot Runoff Control System:

A. A feedlot operator must comply with the following open feedlot effluent application requirements if application operations are limited to the months of July and October.

During these months, land application shall be conducted at rates sufficient to ensure complete removal of accumulated open feedlot effluent from the runoff control system in ten or fewer application days. Open feedlot effluent removal is considered complete when the open feedlot effluent remaining in the runoff control system occupies less than 10 percent of the system's design open feedlot effluent storage capacity.

During July and October, open feedlot effluent application operations shall be initiated on the first day that conditions are suitable for land application of open feedlot effluent, and application must continue on subsequent days that suitable conditions exist. If unfavorable weather conditions prevent complete application of open feedlot effluent to be accomplished during July or October, application must be continued into the following month. Open feedlot effluent application operations may cease when complete application has been achieved.

Weather and soil conditions are normally considered suitable for land application of open feedlot effluent if:

- Land application areas are not frozen or snow-covered.
- Temperatures during application are greater than 32 degrees Fahrenheit.
- Precipitation has not exceeded 0.05 inch per day for each of the three days immediately preceding application and no precipitation is occurring on the day of application.

B. A feedlot operator may dispose of accumulated open feedlot effluent during any period of the year that conditions are suitable. While application during other periods will minimize the need for application during July and October, the feedlot operator will still need to dispose of sufficient open

feedlot effluent during July and October to reduce the open feedlot effluent volume remaining in the runoff control system during these months to less than 10 percent of the system's design open feedlot effluent storage capacity.

A feedlot operator who does not limit open feedlot effluent application operations to the months of July and October is not required to comply with the specific open feedlot effluent application requirements which apply when application is limited to those months. However, this does not relieve the feedlot operator of the responsibility to conduct application operations at rates and times which are sufficient to ensure that the open feedlot effluent volume remaining in the runoff control system during July and October will be reduced to less than 10 percent of the system's design open feedlot effluent storage capacity.

### SYSTEM 3: APRIL, JULY AND OCTOBER OPEN FEEDLOT EFFLUENT APPLICATION

#### MAJOR SYSTEM FEATURES:

- Adequate capacity must be provided to collect and store the average runoff expected to occur during the six-month period from November 1 through April 30 from all feedlot and nonfeedlot areas which drain into the open feedlot effluent control system (additional storage is required if open feedlot effluent from other sources also drains into the control system).
- Collected open feedlot effluent may be removed from the control system and land-applied during any period of the year that conditions are suitable. While application during other periods will minimize the need for application during the specified application months, sufficient open feedlot effluent must still be disposed of during April, July and October to reduce the volume of open feedlot effluent remaining in the control system during these months to less than 10 percent of the system's design open feedlot effluent storage volume.

#### DETAILED SYSTEM REQUIREMENTS:

Open Feedlot Effluent Control System: The open feedlot effluent control system must be constructed to meet or exceed the following requirements:

1. Solids Settling Facilities: Solids settling facilities which meet or exceed the requirements of subrule 65.101(1) must precede the feedlot runoff control system.
2. Feedlot Runoff Control System: The feedlot runoff control system shall, as a minimum, have adequate capacity to store the total wastewater volume determined by summing the following:
  - A. The volume determined by multiplying the unpaved feedlot area which drains into the control system by the appropriate runoff value from Figure 3.
  - B. The volume determined by multiplying the paved feedlot area which drains into the control system by 1.5 times the appropriate runoff value from Figure 3.
  - C. The volume determined by multiplying the total area of cropland, pasture and woodland draining into the control system by the greater of the following:
    - The amount of runoff expected from these areas as a result of the 25-year, 24-hour precipitation event.\*

- The average annual runoff expected to occur from these areas during the six-month period from November 1 to April 30.\*

D. The volume determined by multiplying the total roof, farmstead, and driveway area draining into the control system by the average runoff expected to occur from these areas during the six-month period from November 1 to April 30.\*

E. The volume of process wastewater which drains into the control system during the six-month period from November 1 through April 30.

F. The volume of open feedlot effluent from other sources which discharges into the control system during the six-month period from November 1 through April 30.

\*Expected 25-year, 24-hour runoff and average runoff for the six-month period from November 1 through April 30 shall be determined using runoff prediction methodologies of the NRCS (or equivalent methodologies).

Open Feedlot Effluent Application Requirements: Open feedlot effluent must be removed from the open feedlot effluent control system and land-applied in accordance with the following requirements:

1. Solids Settling Facilities: Collected settleable solids must be removed from the solids settling facilities as necessary to maintain adequate capacity to handle future runoff events. As a minimum, settleable solids shall be removed at least once annually.

2. Feedlot Runoff Control System:

A. A feedlot operator must comply with the following open feedlot effluent application requirements if application operations are limited to the months of April, July and October.

During these months, land application shall be conducted at rates sufficient to ensure complete removal of accumulated open feedlot effluent from the runoff control system in ten or fewer application days. Open feedlot effluent removal is considered complete when the open feedlot effluent remaining in the runoff control system occupies less than 10 percent of the system's design open feedlot effluent storage capacity.

During April, July and October, open feedlot effluent application operations shall be initiated on the first day that conditions are suitable for land application of open feedlot effluent, and application must continue on subsequent days that suitable conditions exist. If unfavorable weather conditions prevent complete application of open feedlot effluent to be accomplished during any of these months, open feedlot effluent application must be continued into the following month. Open feedlot effluent application operations may cease when complete application has been achieved.

Weather and soil conditions are normally considered suitable for land application of open feedlot effluent if:

- Land application areas are not frozen or snow-covered.

- Temperatures during application are greater than 32 degrees Fahrenheit.

- Precipitation has not exceeded 0.05 inch per day for each of the three days immediately preceding application and no precipitation is occurring on the day of application.

B. A feedlot operator may dispose of accumulated open feedlot effluent during any period of the year that conditions are suitable. While application during other periods will minimize the need for application during April, July and October, the feedlot operator will still need to dispose of sufficient open feedlot effluent during April, July and October to reduce the open feedlot effluent volume remaining in the runoff control system during these months to less than 10 percent of the system's design open feedlot effluent storage capacity.

A feedlot operator who does not limit open feedlot effluent application operations to the months of April, July and October is not required to comply with the specific open feedlot effluent application requirements which apply when application is limited to those months. However, this does not relieve the feedlot operator of the responsibility to conduct application operations at rates and times which are sufficient to ensure that the open feedlot effluent volume remaining in the runoff control system during April, July and October will be reduced to less than 10 percent of the system's design open feedlot effluent storage capacity.

#### SYSTEM 4: OPEN FEEDLOT EFFLUENT APPLICATION AFTER EACH SIGNIFICANT PRECIPITATION EVENT

##### MAJOR SYSTEM FEATURES:

- Adequate capacity must be provided to collect and store the runoff expected to occur as a result of the 25-year, 24-hour precipitation event from all feedlot and nonfeedlot areas which drain into the open feedlot effluent control system (additional storage is required if open feedlot effluent from other sources also drains into the control system).
- Collected open feedlot effluent must be removed from the control system and land-applied whenever the available (unoccupied) storage capacity remaining in the control system is less than 90 percent of that needed to store runoff from the 25-year, 24-hour precipitation event; land application must begin on the first day that conditions are suitable and must continue until application is completed.

##### DETAILED SYSTEM REQUIREMENTS:

Open Feedlot Effluent Control System: The open feedlot effluent control system must be constructed to meet or exceed the following requirements:

1. Solids Settling Facilities: Solids settling facilities which meet or exceed the requirements of subrule 65.101(1) must precede the feedlot runoff control system.
2. Feedlot Runoff Control System: The feedlot runoff control system shall, as a minimum, have adequate capacity to store the total wastewater volume determined by summing the following:
  - A. The volume determined by multiplying the total feedlot area which drains into the control system by the amount of runoff expected to occur from this area as a result of the 25-year, 24-hour precipitation event.\*
  - B. The volume determined by multiplying the total area of cropland, pasture and woodland draining into the control system by the amount of runoff expected to occur from these areas as a result of the 25-year, 24-hour precipitation event.\*
  - C. The volume determined by multiplying the total roof, farmstead and driveway area draining into the control system by the amount of runoff expected to occur from these areas as a result of the 25-year, 24-hour precipitation event.\*

D. The volume of process wastewater which drains into the control system during the six-month period from November 1 through April 30.

E. The volume of open feedlot effluent from other sources which discharges into the control system during the six-month period from November 1 through April 30.

\*Expected 25-year, 24-hour runoff shall be determined by using runoff prediction methodologies of the NRCS (or equivalent methodologies).

Open Feedlot Effluent Application Requirements: Open feedlot effluent must be removed from the open feedlot effluent control system and land-applied in accordance with the following requirements:

1. Solids Settling Facilities: Collected settleable solids must be removed from the solids settling facilities as necessary to maintain adequate capacity to handle future runoff events. As a minimum, settleable solids shall be removed at least once annually.

2. Feedlot Runoff Control System: Accumulated open feedlot effluent shall be removed from the feedlot runoff control system and disposed of by land application following each precipitation or snowmelt runoff event which results in significant open feedlot effluent accumulations in the control system. Open feedlot effluent accumulations will be considered significant whenever the available (unoccupied) storage capacity remaining in the control system is less than 90 percent of that required to store the runoff from the 25-year, 24-hour precipitation event.

Once the available storage capacity remaining in the open feedlot effluent control system is reduced to the point that open feedlot effluent application is necessary, open feedlot effluent application operations must be initiated on the first day that conditions are suitable for land application of open feedlot effluent, and application must continue on subsequent days that suitable conditions exist. Application operations may cease when the storage capacity available in the control system has been restored to greater than 90 percent of that required to store runoff from the 25-year, 24-hour precipitation event.

During application periods, land application shall be conducted at rates sufficient to ensure complete removal of accumulated open feedlot effluent from the control system in ten or fewer application days.

Weather and soil conditions are normally considered suitable for land application of open feedlot effluent if:

- Land application areas are not frozen or snow-covered.
- Temperatures during application are greater than 32 degrees Fahrenheit.
- Precipitation has not exceeded 0.05 inch per day for each of the three days immediately preceding application and no precipitation is occurring on the day of application.

#### SYSTEM 5: APRIL/MAY AND OCTOBER/NOVEMBER OPEN FEEDLOT EFFLUENT APPLICATION

MAJOR SYSTEM FEATURES:

- Adequate capacity must be provided to collect and store the average runoff expected to occur over the eight-month period from October 1 through May 31 from all feedlot and nonfeedlot areas which drain into the open feedlot effluent control system (additional storage is required if open feedlot effluent from other sources also drains into the control system).
- Collected open feedlot effluent may be removed from the control system and land-applied during any period of the year that conditions are suitable. While application during other periods will minimize the need for application during the April/May and the October/November periods, sufficient open feedlot effluent must still be disposed of during each of these two-month periods to reduce the volume of open feedlot effluent remaining in the control system during these periods to less than 10 percent of the system's design open feedlot effluent storage volume.

#### DETAILED SYSTEM REQUIREMENTS:

Open Feedlot Effluent Control System: The open feedlot effluent control system must be constructed to meet or exceed the following requirements:

1. Solids Settling Facilities: Open feedlot effluent solids settling facilities which meet or exceed the requirements of subrule 65.101(1) must precede the feedlot runoff control system.
2. Feedlot Runoff Control System: The feedlot runoff control system shall, as a minimum, have adequate capacity to store the total open feedlot effluent volume determined by summing the following:
  - A. The volume determined by multiplying the unpaved feedlot area which drains into the control system by the appropriate runoff value from Figure 4.
  - B. The volume determined by multiplying the paved feedlot area which drains into the control system by 1.5 times the appropriate runoff value from Figure 4.
  - C. The volume determined by multiplying the total area of cropland, pasture and woodland draining into the control system by the greater of the following:
    - The amount of runoff expected from these areas as a result of the 25-year, 24-hour precipitation event.\*
    - The average runoff expected to occur from these areas during the eight-month period from October 1 to May 31.\*
  - D. The volume determined by multiplying the total roof, farmstead, and driveway draining into the control system by the average runoff expected to occur from these areas during the eight-month period from October 1 to May 31.\*
  - E. The volume of process wastewater which drains into the control system during the eight-month period from October 1 through May 31.
  - F. The volume of open feedlot effluent from other sources which discharges into the control system during the eight-month period from October 1 through May 31.

\*Expected 25-year, 24-hour runoff and average runoff for the eight-month period from October 1 through May 31 shall be determined using runoff prediction methodologies of the NRCS (or equivalent methodologies).

Open Feedlot Effluent Application Requirements: Open feedlot effluent must be removed from the open feedlot effluent control system and land-applied in accordance with the following requirements:

1. Solids Settling Facilities: Collected settleable solids must be removed from the solids settling facilities as necessary to maintain adequate capacity to handle future runoff events. As a minimum, settleable solids shall be removed at least once annually.
2. Feedlot Runoff Control System: At a minimum, accumulated open feedlot effluent shall be removed from the feedlot runoff control system and disposed of by land application during the periods April 1 through May 31 and October 1 through November 30.

During each of these periods, land application shall be conducted at rates sufficient to ensure complete removal of accumulated open feedlot effluent from the runoff control system in ten or fewer application days. Open feedlot effluent removal is considered complete when the open feedlot effluent remaining in the runoff control system occupies less than 10 percent of the system's design open feedlot effluent storage capacity.

A feedlot operator may dispose of accumulated open feedlot effluent during any period of the year that conditions are suitable. While application during other periods will minimize the need for application during the April/May and October/November periods, the feedlot operator will still need to dispose of sufficient open feedlot effluent during these periods to reduce the open feedlot effluent volume remaining in the runoff control system during these periods to less than 10 percent of the system's design open feedlot effluent storage capacity.

Land application of open feedlot effluent shall be conducted on days when weather and soil conditions are suitable. Weather and soil conditions are normally considered suitable for open feedlot effluent application if:

- Land application areas are not frozen or snow-covered.
- Temperatures during application are greater than 32 degrees Fahrenheit.
- Precipitation has not exceeded 0.05 inch per day for each of the three days immediately preceding application and no precipitation is occurring on the day of application.

APPENDIX B  
 LAND DISPOSAL OF ANIMAL MANURE  
 Rescinded IAB 2/14/96, effective 3/20/96

APPENDIX C  
MASTER MATRIX

**Proposed Site Characteristics**

**The following scoring criteria apply to the site of the proposed confinement feeding operation. Mark one score under each criterion selected by the applicant. The proposed site must obtain a minimum overall score of 440 and a score of 53.38 in the “air” subcategory, a score of 67.75 in the “water” subcategory and a score of 101.13 in the “community impacts” subcategory.**

1. Additional separation distance, above minimum requirements, from proposed confinement structure to the closest:
- \* Residence not owned by the owner of the confinement feeding operation,
  - \* Hospital,
  - \* Nursing home, or
  - \* Licensed or registered child care facility.

	Score	Air	Water	Community
250 feet to 500 feet	25	16.25		8.75
501 feet to 750 feet	45	29.25		17.50
751 feet to 1,000 feet	65	42.25		22.75
1,001 feet to 1,250 feet	85	55.25		29.75
1,251 feet or more	100	65.00		35.00

(A) Refer to the construction permit application package to determine the animal unit capacity (or animal weight capacity if an expansion) of the proposed confinement feeding operation. Then refer to Table 6 of 567—Chapter 65 to determine minimum required separation distances.

(B) The department will award points only for the single building, of the four listed above, closest to the proposed confinement feeding operation.

(C) “Licensed or registered child care facility” - a facility licensed or registered by the department of human services providing child care or preschool services for six or more children as provided in Iowa Code chapter 237A.

(D) A full listing of licensed and registered child care facilities is available at county offices of the department of human services.

2. Additional separation distance, above minimum requirements, from proposed confinement structure to the closest public use area.

	Score	Air	Water	Community
250 feet to 500 feet	5	2.00		3.00
501 feet to 750 feet	10	4.00		6.00
751 feet to 1,000 feet	15	6.00		9.00
1,001 feet to 1,250 feet	20	8.00		12.00
1,251 feet to 1,500 feet	25	10.00		15.00
1,501 feet or more	30	12.00		18.00

(A) Refer to the construction permit application package to determine the animal unit capacity (or animal weight capacity if an expansion) of the proposed confinement feeding operation. Then refer to Table 6 of 567—Chapter 65 to determine minimum required separation distances.

(B) “Public use area” - a portion of land owned by the United States, the state, or a political subdivision with facilities which attract the public to congregate and remain in the area for significant periods of time. Facilities include, but are not limited to, picnic grounds, campgrounds, cemeteries, lodges, shelter houses, playground equipment, lakes as listed in Table 2 of 567—Chapter 65, and swimming beaches. It does not include a highway, road right-of-way, parking areas, recreational trails or other areas where the public passes through, but does not congregate or remain in the area for significant periods of time.

3. Additional separation distance, above minimum requirements, from proposed confinement structure to the closest:

- \* Educational institution,
- \* Religious institution, or
- \* Commercial enterprise.

	Score	Air	Water	Community
250 feet to 500 feet	5	2.00		3.00
501 feet to 750 feet	10	4.00		6.00
751 feet to 1,000 feet	15	6.00		9.00
1,001 feet to 1,250 feet	20	8.00		12.00
1,251 feet to 1,500 feet	25	10.00		15.00
1,501 feet or more	30	12.00		18.00

(A) Refer to the construction permit application package to determine the animal unit capacity (or animal weight capacity if an expansion) of the proposed confinement feeding operation. Then refer to Table 6 of 567—Chapter 65 to determine minimum required separation distances.

(B) The department will award points only for the single building, of the three listed above, closest to the proposed confinement feeding operation.

(C) “Educational institution” - a building in which an organized course of study or training is offered to students enrolled in kindergarten through grade 12 and served by local school districts, accredited or approved nonpublic schools, area education agencies, community colleges, institutions of higher education under the control of the state board of regents, and accredited independent colleges and universities.

(D) “Religious institution” - a building in which an active congregation is devoted to worship.

(E) “Commercial enterprise” - a building which is used as a part of a business that manufactures goods, delivers services, or sells goods or services, which is customarily and regularly used by the general public during the entire calendar year and which is connected to electric, water, and sewer systems. A commercial enterprise does not include a farm operation.

4. Additional separation distance, above the minimum requirement of 500 feet, from proposed confinement structure to the closest water source.

	Score	Air	Water	Community
250 feet to 500 feet	5		5.00	
501 feet to 750 feet	10		10.00	
751 feet to 1,000 feet	15		15.00	
1,001 feet to 1,250 feet	20		20.00	
1,251 feet to 1,500 feet	25		25.00	
1,501 feet or more	30		30.00	

“Water source” - a lake, river, reservoir, creek, stream, ditch, or other body of water or channel having definite banks and a bed with water flow, except lakes or ponds without an outlet to which only one landowner is riparian.

5. Separation distance of 300 feet or more from the proposed confinement structure to the nearest thoroughfare.

	Score	Air	Water	Community
300 feet or more	30	9.00		21.00

(A) “Thoroughfare” - a road, street, bridge, or highway open to the public and constructed or maintained by the state or a political subdivision.

(B) The 300-foot distance includes the 100-foot minimum setback plus an additional 200 feet.

6. Additional separation distance, above minimum requirements, from proposed confinement structure to the closest critical public area.

	Score	Air	Water	Community
500 feet or more	10	4.00		6.00

(A) All critical public areas as defined in 567—65.1(455B) are public use areas and therefore subject to public use area minimum separation distances.

(B) Refer to the construction permit application package to determine the animal unit capacity (or animal weight capacity if an expansion) of the proposed confinement feeding operation. Then refer to Table 6 of 567—Chapter 65 to determine minimum required separation distances.

7. Proposed confinement structure is at least two times the minimum required separation distance from all private and public water wells.

	Score	Air	Water	Community
Two times the minimum separation distance	30		24.00	6.00

Refer to Table 6 of 567—Chapter 65 for minimum required separation distances to wells.

8. Additional separation distance, above the minimum requirement of 1,000 feet, from proposed confinement structure to the closest:
- \* Agricultural drainage well,
  - \* Known sinkhole, or
  - \* Major water source.

	Score	Air	Water	Community
250 feet to 500 feet	5	0.50	2.50	2.00
501 feet to 750 feet	10	1.00	5.00	4.00
751 feet to 1,000 feet	15	1.50	7.50	6.00
1,001 feet to 1,250 feet	20	2.00	10.00	8.00
1,251 feet to 1,500 feet	25	2.50	12.50	10.00
1,501 feet to 1,750 feet	30	3.00	15.00	12.00
1,751 feet to 2,000 feet	35	3.50	17.50	14.00
2,001 feet to 2,250 feet	40	4.00	20.00	16.00
2,251 feet to 2,500 feet	45	4.50	22.50	18.00
2,501 feet or more	50	5.00	25.00	20.00

- (A) The department will award points only for the single item, of the three listed above, closest to the proposed confinement feeding operation.  
 (B) "Agricultural drainage wells" - include surface intakes, cisterns and wellheads of agricultural drainage wells.  
 (C) "Major water source" - a lake, reservoir, river or stream located within the territorial limits of the state, or any marginal river area adjacent to the state which can support a floating vessel capable of carrying one or more persons during a total of a six-month period in one out of ten years, excluding periods of flooding. Major water sources in the state are listed in Tables 1 and 2 in 567—Chapter 65.

9. Distance between the proposed confinement structure and the nearest confinement facility that has a submitted department manure management plan.

	Score	Air	Water	Community
Three-quarters of a mile or more (3,960 feet)	25	7.50	7.50	10.00

Confinement facilities include swine, poultry, and dairy and beef cattle.

10. Separation distance from proposed confinement structure to closest:
- \* High quality (HQ) waters,
  - \* High quality resource (HQR) waters, or
  - \* Protected water areas (PWA)
- is at least two times the minimum required separation distance.

	Score	Air	Water	Community
Two times the minimum separation distance	30		22.50	7.50

- (A) The department will award points only for the single item, of the three listed above, closest to the proposed confinement feeding operation.  
 (B) HQ waters are identified in 567—Chapter 61.  
 (C) HQR waters are identified in 567—Chapter 61.  
 (D) A listing of PWAs is available at <http://www.state.ia.us/government/dnr/organiza/ppd/prowater.htm#Location%20of%20PWA's%20in>.

- 
11. Air quality modeling results demonstrating an annoyance level less than 2 percent of the time for residences within two times the minimum separation distance.

	Score	Air	Water	Community
University of Minnesota OFFSET model results demonstrating an annoyance level less than 2 percent of the time	10	6.00		4.00

- (A) OFFSET can be found at <http://www.extension.umn.edu/distribution/livestocksystems/DI7680.html>. For more information, contact Dr. Larry Jacobson, University of Minnesota, (612)625-8288, [jacob007@tc.umn.edu](mailto:jacob007@tc.umn.edu).
- (B) A residence that has a signed waiver for the minimum separation distance cannot be included in the model.
- (C) Only the OFFSET model is acceptable until the department recognizes other air quality models.
- 

12. Liquid manure storage structure is covered.

	Score	Air	Water	Community
Covered liquid manure storage	30	27.00		3.00

- (A) "Covered" - organic or inorganic material, placed upon an animal feeding operation structure used to store manure, which significantly reduces the exchange of gases between the stored manure and the outside air. Organic materials include, but are not limited to, a layer of chopped straw, other crop residue, or a naturally occurring crust on the surface of the stored manure. Inorganic materials include, but are not limited to, wood, steel, aluminum, rubber, plastic, or Styrofoam. The materials shall shield at least 90 percent of the surface area of the stored manure from the outside air. Cover shall include an organic or inorganic material which current scientific research shows reduces detectable odor by at least 75 percent. A formed manure storage structure directly beneath a floor where animals are housed in a confinement feeding operation is deemed to be covered.
- (B) The design, operation and maintenance plan for the manure cover must be in the construction permit application and made a condition in the approved construction permit.
- 

13. Construction permit application contains design, construction, operation and maintenance plan for emergency containment area at manure storage structure pump-out area.

	Score	Air	Water	Community
Emergency containment area	20		18.00	2.00

- (A) The emergency containment area must be able to contain at least 5 percent of the total volume capacity of the manure storage structure.
- (B) The emergency containment area must be constructed on soils that are fine-grained and have low permeability.
- (C) If manure is spilled into the emergency containment area, the spill must be reported to the department within six hours of onset or discovery.
- (D) The design, construction, operation and maintenance plan for the emergency containment area must be in the construction permit application and made a condition in the approved construction permit.
-

14. Installation of a filter(s) designed to reduce odors from confinement building(s) exhaust fan(s).

	Score	Air	Water	Community
Installation of filter(s)	10	8.00		2.00

The design, operation and maintenance plan for the filter(s) must be in the construction permit application and made a condition in the approved construction permit.

---

15. Utilization of landscaping around confinement structure.

	Score	Air	Water	Community
Utilization of landscaping	20	10.00		10.00

The design, operation and maintenance plan for the landscaping must be in the construction permit application and made a condition in the approved construction permit. The design should contain at least three rows of trees and shrubs, of both fast- and slow-growing species that are well suited for the site.

---

16. Enhancement, above minimum requirements, of structures used in stockpiling and composting activities, such as an impermeable pad and a roof or cover.

	Score	Air	Water	Community
Stockpile and compost facility enhancements	30	9.00	18.00	3.00

(A) The design, operation and maintenance plan for the stockpile or compost structure enhancements must be in the construction permit application and made a condition in the approved construction permit.

(B) The stockpile or compost structures must be located on land adjacent or contiguous to the confinement building.

---

17. Proposed manure storage structure is formed.

	Score	Air	Water	Community
Formed manure storage structure	30		27.00	3.00

(A) "Formed manure storage structure" - a covered or uncovered impoundment used to store manure from an animal feeding operation, which has walls and a floor constructed of concrete, concrete block, wood, steel, or similar materials. Similar materials may include, but are not limited to, plastic, rubber, fiberglass, or other synthetic materials. Materials used in a formed manure storage structure shall have the structural integrity to withstand expected internal and external load pressures.

(B) The design, operation and maintenance plan for the formed manure storage structure must be in the construction permit application and made a condition in the approved construction permit.

18. Manure storage structure is aerated to meet departmental standards as an aerobic structure, if aeration is not already required by the department.

	Score	Air	Water	Community
Aerated manure storage structure	10	8.00		2.00

(A) "Aerobic structure" - an animal feeding operation structure other than an egg washwater storage structure which relies on aerobic bacterial action which is maintained by the utilization of air or oxygen and which includes aeration equipment to digest organic matter. Aeration equipment shall be used and shall be capable of providing oxygen at a rate sufficient to maintain an average of 2 milligrams per liter dissolved oxygen concentration in the upper 30 percent of the depth of manure in the structure at all times.

(B) The design, operation and maintenance plan for the aeration equipment must be in the construction permit application and made a condition in the approved construction permit.

19. Proposed confinement site has a suitable truck turnaround area so that semitrailers do not have to back into the facility from the road.

	Score	Air	Water	Community
Truck turnaround	20			20.00

(A) The design, operation and maintenance plan for the truck turnaround area must be in the construction permit application and made a condition in the approved construction permit.

(B) The turnaround area should be at least 120 feet in diameter and be adequately surfaced for traffic in inclement weather.

20. Construction permit applicant's animal feeding operation environmental and worker protection violation history for the last five years at all facilities in which the applicant has an interest.

	Score	Air	Water	Community
No history of Administrative Orders in last five years	30			30.00

(A) "Interest" - ownership of a confinement feeding operation as a sole proprietor or a 10 percent or more ownership interest held by a person in a confinement feeding operation as a joint tenant, tenant in common, shareholder, partner, member, beneficiary or other equity interest holder. Ownership interest is an interest when it is held either directly, indirectly through a spouse or dependent child, or both.

(B) An environmental violation is a final Administrative Order (AO) from the department or final court ruling against the construction permit applicant for environmental violations related to an animal feeding operation. A Notice of Violation (NOV) does not constitute a violation.

21. Construction permit applicant waives the right to claim a Pollution Control Tax Exemption for the life of the proposed confinement feeding operation structure.

	Score	Air	Water	Community
Permanent waiver of Pollution Control Tax Exemption	5			5.00

- (A) Waiver of Pollution Control Tax Exemption is limited to the proposed structure(s) in the construction permit application.  
 (B) The department and county assessor will maintain a record of this waiver, and it must be in the construction permit application and made a condition in the approved construction permit.

22. Construction permit applicant can lawfully claim a Homestead Tax Exemption on the site where the proposed confinement structure is to be constructed  
 - OR -  
 the construction permit applicant is the closest resident to the proposed confinement structure.

	Score	Air	Water	Community
Site qualifies for Homestead Tax Exemption or permit applicant is closest resident to proposed structure	25			25.00

- (A) Proof of Homestead Tax Exemption is required as part of the construction permit application.  
 (B) Applicant includes persons who have ownership interests. "Interest" - ownership of a confinement feeding operation as a sole proprietor or a 10 percent or more ownership interest held by a person in a confinement feeding operation as a joint tenant, tenant in common, shareholder, partner, member, beneficiary or other equity interest holder. Ownership interest is an interest when it is held either directly, indirectly through a spouse or dependent child, or both.

23. Construction permit applicant can lawfully claim a Family Farm Tax Credit for agricultural land where the proposed confinement feeding operation is to be located pursuant to Iowa Code chapter 425A.

	Score	Air	Water	Community
Family Farm Tax Credit qualification	25			25.00

Applicant includes persons who have ownership interests. "Interest" - ownership of a confinement feeding operation as a sole proprietor or a 10 percent or more ownership interest held by a person in a confinement feeding operation as a joint tenant, tenant in common, shareholder, partner, member, beneficiary or other equity interest holder. Ownership interest is an interest when it is held either directly, indirectly through a spouse or dependent child, or both.

24. Facility size.

	Score	Air	Water	Community
1 to 2,000 animal unit capacity	20			20.00
2,001 to 3,000 animal unit capacity	10			10.00
3,001 animal unit capacity or more	0			0.00

- (A) Refer to the construction permit application package to determine the animal unit capacity of the proposed confinement structure at the completion of construction.
- (B) If the proposed structure is part of an expansion, animal unit capacity (or animal weight capacity) must include all animals confined in adjacent confinement structures.
- (C) Two or more animal feeding operations under common ownership or management are deemed to be a single animal feeding operation if they are adjacent or utilize a common area or system for manure disposal. In addition, for purposes of determining whether two or more confinement feeding operations are adjacent, all of the following must apply:
  - (a) At least one confinement feeding operation structure must be constructed on and after May 21, 1998.
  - (b) A confinement feeding operation structure which is part of one confinement feeding operation is separated by less than a minimum required distance from a confinement feeding operation structure which is part of the other confinement feeding operation. The minimum required distance shall be as follows:
    - (1) 1,250 feet for confinement feeding operations having a combined animal unit capacity of less than 1,000 animal units.
    - (2) 2,500 feet for confinement feeding operations having a combined animal unit capacity of 1,000 animal units or more.

25. Construction permit application includes livestock feeding and watering systems that significantly reduce manure volume.

	Score	Air	Water	Community
Wet/dry feeders or other feeding and watering systems that significantly reduce manure volume	25		12.50	12.50

The design, operation and maintenance plan for the feeding system must be in the construction permit application and made a condition in the approved construction permit.

**Proposed Site Operation and Manure Management Practices**

**The following scoring criteria apply to the operation and manure management characteristics of the proposed confinement feeding operation. Mark one score under each criterion that best reflects the characteristics of the submitted manure management plan.**

26. Liquid or dry manure (choose only one subsection from subsections “a” - “e” and mark only one score in that subsection).

	Score	Air	Water	Community
<b>a.</b> Bulk dry manure is sold under Iowa Code chapter 200A and surface-applied	15		15.00	
Bulk dry manure is sold under Iowa Code chapter 200A and incorporated on the same date it is land-applied	30	12.00	12.00	6.00
<b>b.</b> Dry manure is composted and land-applied under the requirements of a manure management plan	10	4.00	4.00	2.00
Dry manure is composted and sold so that no manure is applied under the requirements of a manure management plan	30	12.00	12.00	6.00

c.	Methane digester is used to generate energy from manure and remaining manure is surface-applied under the requirements of a manure management plan	10	3.00	3.00	4.00
	After methane digestion is complete, manure is injected or incorporated on the same date it is land-applied under the requirements of a manure management plan	30	12.00	12.00	6.00
d.	Dry manure is completely burned to generate energy and no remaining manure is applied under the requirements of a manure management plan	30	9.00	9.00	12.00
	Some dry manure is burned to generate energy, but remaining manure is land-applied and incorporated on the same date it is land-applied	30	12.00	12.00	6.00
e.	Injection or incorporation of manure on the same date it is land-applied	30	12.00	12.00	6.00

- (A) Choose only ONE line from subsection “a,” “b,” “c,” “d,” or “e” above and mark only one score in that subsection.
- (B) The injection or incorporation of manure must be in the construction permit application and made a condition in the approved construction permit.
- (C) If an emergency arises and injection or incorporation is not feasible, prior to land application of manure, the applicant must receive a written approval for an emergency waiver from a department field office to surface-apply manure.
- (D) Requirements pertaining to the sale of bulk dry manure pursuant to Iowa Code chapter 200A must be incorporated into the construction permit application and made a condition of the approved construction permit.
- (E) The design, operation and maintenance plan for utilization of manure as an energy source must be in the construction permit application and made a condition in the approved construction permit.
- (F) The design, operation and maintenance plan for composting facilities must be in the construction permit application and made a condition in the approved construction permit.

27. Land application of manure is based on a two-year crop rotation phosphorus uptake level.

	Score	Air	Water	Community
Two-year phosphorus crop uptake application rate	10		10.00	

- (A) Land application of manure cannot exceed phosphorus crop usage levels for a two-year crop rotation cycle.
- (B) The phosphorus uptake application rates must be in the construction permit application and made a condition in the approved construction permit.

28. Land application of manure to farmland that has USDA Natural Resources Conservation Service (NRCS)-approved buffer strips contiguous to all water sources traversing or adjacent to the fields listed in the manure management plan.

	Score	Air	Water	Community
Manure application on farmland with buffer strips	10		8.00	2.00

- (A) The department may request NRCS maintenance agreements to ensure proper design, installation and maintenance of filter strips. If a filter strip is present but not designed by NRCS, it must meet NRCS standard specifications.
- (B) The application field does not need to be owned by the confinement facility owner to receive points.
- (C) On current and future manure management plans, the requirement for buffer strips on all land application areas must be in the construction permit application and made a condition in the approved construction permit.

**29.** Land application of manure does not occur on highly erodible land (HEL), as classified by the USDA NRCS.

	Score	Air	Water	Community
No manure application on HEL farmland	10		10.00	

Manure application on non-HEL farmland must be in the construction permit application and made a condition in the approved construction permit.

**30.** Additional separation distance, above minimum requirements (0 or 750 feet, see below), for the land application of manure to the closest:

- \* Residence not owned by the owner of the confinement feeding operation,
- \* Hospital,
- \* Nursing home, or
- \* Licensed or registered child care facility.

	Score	Air	Water	Community
Additional separation distance of 200 feet	5	3.25		1.75
Additional separation distance of 500 feet	10	6.50		3.50

- (A) The department will award points only for the single building, of the four listed above, closest to the proposed confinement feeding operation.
- (B) Minimum separation distance for land application of manure injected or incorporated on the same date as application: 0 feet.
- (C) Minimum separation distance for land application of manure broadcast on soil surface: 750 feet.
- (D) The additional separation distances must be in the construction permit application and made a condition in the approved construction permit.
- (E) "Licensed or registered child care facility" - a facility licensed or registered by the department of human services providing child care or preschool services for six or more children as provided in Iowa Code chapter 237A.
- (F) A full listing of licensed and registered child care facilities is available at county offices of the department of human services.

**31.** Additional separation distance, above minimum requirements (0 or 750 feet, see below), for land application of manure to closest public use area.

	Score	Air	Water	Community
Additional separation distance of 200 feet	5	2.00		3.00

(A) "Public use area" - a portion of land owned by the United States, the state, or a political subdivision with facilities which attract the public to congregate and remain in the area for significant periods of time. Facilities include, but are not limited to, picnic grounds, campgrounds, cemeteries, lodges, shelter houses, playground equipment, lakes as listed in Table 2 in 567—Chapter 65, and swimming beaches. It does not include a highway, road right-of-way, parking areas, recreational trails or other areas where the public passes through, but does not congregate or remain in the area for significant periods of time.

(B) Minimum separation distance for land application of manure injected or incorporated on the same date as application: 0 feet.

(C) Minimum separation distance for land application of manure broadcast on soil surface: 750 feet.

(D) The additional separation distances must be in the construction permit application and made a condition in the approved construction permit.

**32.** Additional separation distance, above minimum requirements (0 or 750 feet, see below), for the land application of manure to the closest:

- \* Educational institution,
- \* Religious institution, or
- \* Commercial enterprise.

	Score	Air	Water	Community
Additional separation distance of 200 feet	5	2.00		3.00

(A) Minimum separation distance for land application of manure broadcast on soil surface: 750 feet.

(B) Minimum separation distance for land application of manure injected or incorporated on same date as application: 0 feet.

(C) The additional separation distances must be in the construction permit application and made a condition in the approved construction permit.

(D) "Educational institution" - a building in which an organized course of study or training is offered to students enrolled in kindergarten through grade 12 and served by local school districts, accredited or approved nonpublic schools, area education agencies, community colleges, institutions of higher education under the control of the state board of regents, and accredited independent colleges and universities.

(E) "Religious institution" - a building in which an active congregation is devoted to worship.

(F) "Commercial enterprise" - a building which is used as a part of a business that manufactures goods, delivers services, or sells goods or services, which is customarily and regularly used by the general public during the entire calendar year and which is connected to electric, water, and sewer systems. A commercial enterprise does not include a farm operation.

**33.** Additional separation distance of 50 feet, above minimum requirements (0 or 200 feet, see below), for the land application of manure to the closest private drinking water well or public drinking water well

- OR -

well is properly closed under supervision of county health officials.

	Score	Air	Water	Community
Additional separation distance of 50 feet or well is properly closed	10		8.00	2.00

(A) Minimum separation distance for land application of manure injected or incorporated on the same date as application or 50-foot vegetation buffer exists around well and manure is not applied to the buffer: 0 feet.

(B) Minimum separation distance for land application of manure broadcast on soil surface: 200 feet.

(C) If applicant chooses to close the well, the well closure must be incorporated into the construction permit application and made a condition in the approved construction permit.

34. Additional separation distance, above minimum requirements, for the land application of manure to the closest:
- \* Agricultural drainage well,
  - \* Known sinkhole,
  - \* Major water source, or
  - \* Water source.

	Score	Air	Water	Community
Additional separation distance of 200 feet	5	0.50	2.50	2.00
Additional separation distance of 400 feet	10	1.00	5.00	4.00

(A) "Agricultural drainage wells" - include surface intakes, cisterns and wellheads of agricultural drainage wells.

(B) "Major water source" - a lake, reservoir, river or stream located within the territorial limits of the state, or any marginal river area adjacent to the state, which can support a floating vessel capable of carrying one or more persons during a total of a six-month period in one out of ten years, excluding periods of flooding. Major water sources in the state are listed in Tables 1 and 2 in 567—Chapter 65.

(C) "Water source" - a lake, river, reservoir, creek, stream, ditch, or other body of water or channel having definite banks and a bed with water flow, except lakes or ponds without an outlet to which only one landowner is riparian.

(D) The additional separation distances must be in the construction permit application and made a condition in the approved construction permit.

35. Additional separation distance, above minimum requirements, for the land application of manure, to the closest:
- \* High quality (HQ) water,
  - \* High quality resource (HQR) water, or
  - \* Protected water area (PWA).

	Score	Air	Water	Community
Additional separation distance of 200 feet	5		3.75	1.25
Additional separation distance of 400 feet	10		7.50	2.50

(A) HQ waters are identified in 567—Chapter 61.

(B) HQR waters are identified in 567—Chapter 61.

(C) A listing of PWAs is available at <http://www.state.ia.us/government/dnr/organiza/ppd/prowater.htm#Location%20of%20PWA's%20in>.

36. Demonstrated community support.

	Score	Air	Water	Community
Written approval of 100 percent of the property owners within a one-mile radius	20			20.00

37. Worker safety and protection plan is submitted with the construction permit application.

	Score	Air	Water	Community
Submission of worker safety and protection plan	10			10.00

- (A) The worker safety and protection plan must be in the construction permit application and made a condition in the approved construction permit.  
 (B) The worker safety and protection plan and subsequent records must be kept on site with the manure management plan records.

- 38.** Applicant signs a waiver of confidentiality allowing the public to view confidential manure management plan land application records.

	Score	Air	Water	Community
Manure management plan confidentiality waiver	5			5.00

The waiver of confidentiality must be in the construction permit application and made a condition in the approved construction permit. The applicant may limit public inspection to reasonable times and places.

- 39.** Added economic value based on quality job development (number of full-time equivalent (FTE) positions), and salary equal to or above Iowa department of workforce development median (45-2093)  
 - OR -  
 the proposed structure increases commercial property tax base in the county.

	Score	Air	Water	Community
Economic value to local community	10			10.00

The Iowa department of workforce development regional profiles are available at <http://www.iowaworkforce.org/centers/regionalsites.htm>. Select the appropriate region and then select "Regional Profile."

- 40.** Construction permit application contains an emergency action plan.

	Score	Air	Water	Community
Emergency action plan	5		2.50	2.50

- (A) Iowa State University Extension publication PM 1859 lists the components of an emergency action plan. The emergency action plan submitted should parallel the components listed in the publication.  
 (B) The posting and implementation of an emergency action plan must be in the construction permit application and made a condition in the approved construction permit.  
 (C) The emergency action plan and subsequent records must be kept on site with the manure management plan records.

- 41.** Construction permit application contains a closure plan.

	Score	Air	Water	Community
Closure plan	5		2.50	2.50

- (A) The closure plan must be in the construction permit application and made a condition in the approved construction permit.  
 (B) The closure plan must be kept on site with the manure management plan records.

42. Adoption and implementation of an environmental management system (EMS) recognized by the department.

	Score	Air	Water	Community
EMS	15	4.50	4.50	6.00

- (A) The EMS must be in the construction permit application and made a condition in the approved construction permit.  
 (B) The EMS must be recognized by the department as an acceptable EMS for use with confinement operations.

43. Adoption and implementation of NRCS-approved Comprehensive Nutrient Management Plan (CNMP).

	Score	Air	Water	Community
CNMP	10	3.00	3.00	4.00

The implementation and continuation of a CNMP must be in the construction permit application and made a condition in the approved construction permit.

44. Groundwater monitoring wells installed near manure storage structure, and applicant agrees to provide data to the department.

	Score	Air	Water	Community
Groundwater monitoring	15		10.50	4.50

- (A) Monitoring well location, sampling and data submission must meet department requirements.  
 (B) The design, operation and maintenance plan for the groundwater monitoring wells, and data transfer to the department, must be in the construction permit application and made a condition in the approved construction permit.

	Total Score	Air	Water	Community
Minimum score to pass:	440	53.38	67.75	101.13

## APPENDIX D

## DESIGN SPECIFICATIONS—FORMED MANURE STORAGE STRUCTURES

The following design specifications apply to a formed manure storage structure that is constructed belowground, is laterally braced and is not designed using MWPS-36 or by a PE or an NRCS engineer:

(1) The walls of a rectangular formed structure with a depth up to 12 feet shall be designed in accordance with the tables provided in this appendix.

(2) Consideration shall be given to internal and external loads including, but not limited to, lateral earth pressures, hydrostatic pressures, wind loads, and floor or cover, building and equipment loads.

(3) Each wall shall be braced laterally at the top of the wall.

(4) The walls shall be constructed above the groundwater table, or a drain tile shall be installed to artificially lower the groundwater table.

(5) Each wall that includes a pumpout port shall be constructed under the design consideration that vehicles will be operating within 5 feet of the wall as provided in Tables D-2 and D-4.

(6) Minimum wall thickness and minimum vertical steel reinforcement shall be in accordance with one of the following:

(a) Table D-1, if **all** of the following conditions are met:

1. There will be NO VEHICLES operating within 5 feet of the wall.

2. Backfilling is performed with gravel, sand, silt, and clay mixtures (less than 50 percent fines), with coarse sand with silt or clay (less than 50 percent fines), or cleaner granular material (see NRCS Conservation Practice Standard, "Waste Storage Facility," Code 313, Table 2, for description and unified classification or ASTM D 2488 and D 653).

APPENDIX D, TABLE D-1

Minimum Wall Thickness and Vertical Steel Reinforcement

Wall height (feet)	Wall thickness (inches)	Steel Grade			
		Grade 40		Grade 60	
		Bar	Space o.c. (inches)	Bar	Space o.c. (inches)
4 or less	6	#4	16.5	#4	18.0
		#5	18.0	#5	18.0
4 or less	8	#4	12.0	#4	13.5

10	8	#4	6.5	#4	9.5
		#5	10.0	#5	13.5
10	10	#4	6.5	#4	9.5
		#5	10.0	#5	15.0
12	10	#4	5.0	#4	7.5
		#5	7.5	#5	11.5

(b) Table D-2, if **all** of the following conditions are met:

1. There will be VEHICLES operating within 5 feet of the wall.

2. Backfilling is performed with gravel, sand, silt, and clay mixtures (less than 50 percent fines), with coarse sand with silt or clay (less than 50 percent fines), or cleaner granular material (see NRCS Conservation Practice Standard, "Waste Storage Facility," Code 313, Table 2, for description and unified classification or ASTM D 2488 and D 653).

APPENDIX D, TABLE D-2  
Minimum Wall Thickness and Vertical Steel Reinforcement

Wall height (feet)	Wall thickness (inches)	Steel Grade			
		Grade 40		Grade 60	
		Bar	Space o.c. (inches)	Bar	Space o.c. (inches)
4 or less	6	#4	16.5	#4	18.0
		#5	18.0	#5	18.0
4 or less	8	#4	12.0	#4	13.5
		#5	18.0	#5	18.0
6	6	#4	10.5	#4	15.5
		#5	16.5	#5	18.0
6	8	#4	12.0	#4	13.5
		#5	18.0	#5	18.0
8	8	#4	6.5	#4	10.0
		#5	10.5	#5	16.0
8	10	#4	8.5	#4	11.0
		#5	13.5	#5	17.0
10	8	#4	4.5	#4	6.5
		#5	7.0	#5	10.5
10	10	#4	5.0	#4	7.5
		#5	8.0	#5	12.0
12	10	#4	3.5	#4	5.5
		#5	5.5	#5	8.5

(c) Table D-3, if **all** of the following conditions are met:

1. There will be **NO VEHICLES** operating within 5 feet of the wall.
2. Backfilling is performed with low plasticity silts and clays with some sand or gravel (50 percent or more fines); or fine sands with silt or clay (less than 50 percent fines); or low to medium plasticity silts and clays with little sand or gravel (50 percent or more fines); or high plasticity silts and clays (see NRCS Conservation Practice Standard, "Waste Storage Facility," Code 313, Table 2, for description and unified classification or ASTM D 2488 and D 653).

APPENDIX D, TABLE D-3  
Minimum Wall Thickness and Vertical Steel Reinforcement

Wall height (feet)	Wall thickness (inches)	Steel Grade			
		Grade 40		Grade 60	
		Bar	Space o.c. (inches)	Bar	Space o.c. (inches)
4 or less	6	#4	16.5	#4	18.0
		#5	18.0	#5	18.0
4 or less	8	#4	12.0	#4	13.5
		#5	18.0	#5	18.0
6	6	#4	10.5	#4	15.5
		#5	16.5	#5	18.0
6	8	#4	12.0	#4	13.5
		#5	18.0	#5	18.0
8	8	#4	6.5	#4	10.0
		#5	10.5	#5	16.0
8	10	#4	9.0	#4	11.0
		#5	14.0	#5	17.0
10	8	#4	4.5	#4	6.5
		#5	7.0	#5	10.0
10	10	#4	5.0	#4	7.5
		#5	8.0	#5	12.0
12	10	#4	3.5	#4	5.0
		#5	5.5	#5	8.0

(d) Table D-4, if **all** of the following conditions are met:

1. There will be VEHICLES operating within 5 feet of the wall.
2. Backfilling is performed with low plasticity silts and clays with some sand or gravel (50 percent or more fines); or fine sands with silt or clay (less than 50 percent fines); or low to medium plasticity silts and clays with little sand or gravel (50 percent or more fines); or high plasticity silts and clays (see NRCS Conservation Practice Standard, "Waste Storage Facility," Code 313, Table 2, for description and unified classification or ASTM D 2488 and D 653).

APPENDIX D, TABLE D-4  
Minimum Wall Thickness and Vertical Steel Reinforcement

Wall height (feet)	Wall thickness (inches)	Steel Grade			
		Grade 40		Grade 60	
		Bar	Space o.c. (inches)	Bar	Space o.c. (inches)
4 or less	6	#4	16.5	#4	18.0
		#5	18.0	#5	18.0
4 or less	8	#4	12.0	#4	13.5
		#5	18.0	#5	18.0
6	6	#4	8.0	#4	12.0
		#5	12.5	#5	16.5
6	8	#4	9.5	#4	13.5
		#5	15.0	#5	18.0
8	8	#4	6.0	#4	9.0
		#5	9.0	#5	11.5
8	10	#4	6.0	#4	9.0
		#5	9.5	#5	14.0
10	8	#4	3.0	#4	4.5
		#5	4.5	#5	7.0
10	10	#4	4.5	#4	6.5
		#5	6.5	#5	10.0
12	10	#4	2.5	#4	4.0
		#5	4.0	#5	6.0

(7) Minimum horizontal steel for a rectangular tank shall be selected and placed according to Table D-5, regardless of wall height, and shall be tied to the soil side of vertical steel:

APPENDIX D, TABLE D-5  
Minimum Wall Horizontal Steel Reinforcement

Wall thickness (inches)	Steel Grade			
	Grade 40		Grade 60	
	Bar	Space o.c. (inches)	Bar	Space o.c. (inches)
6	#4	16.5	#4	18.0
	#5	18.0	#5	18.0
8	#4	12.0	#4	13.5
	#5	18.0	#5	18.0
10	#4	9.5	#4	11.0
	#5	15.0	#5	17.0

### APPENDIX D, FIGURE D-1 MONOLITHIC FOOTING FLOOR DETAIL

NOTE: For a more detailed version of this figure, contact the department, animal feeding operations.

APPENDIX D, FIGURE D-2  
WALL AND FLOOR CONSTRUCTION JOINT

NOTE: For a more detailed version of this figure, contact the department, animal feeding operations.

TABLE 1  
Major Water Sources—Rivers and Streams

County	River/Stream	Location
Adair	Bush Branch	East county line (S13, T75N, R30W) to confluence with unnamed tributary (S13, T75N, R30W)
	Middle Nodaway River	South county line (S31, T74N, R33W) to Hwy. 92 (S14, T75N, R32W)
	Middle River	East county line (S36, T76N, R30W) to north county line (S1, T77N, R32W)
	North Turkey Creek	Mouth (S35, T77N, R31W) to confluence with South Turkey Creek (S33, T77N, R31W)
	Shanghai Creek	South county line (S34, T74N, R32W) to confluence with unnamed tributary (SW1/4, S34, T74N, R32W)
	Thompson River	East county line (S12, T74N, R30W) to confluence with Ninemile Creek (S35, T75N, R30W)
	West Fork Middle Nodaway River	Mouth (S33, T74N, R33W) to County Road N51 (S20, T76N, R33W)
Adams	East Nodaway River	South county line (S31, T71N, R35W) to confluence with Shanghai Creek (S16, T73N, R32W)
	Middle Nodaway River	West county line (S31, T72N, R35W) to north county line (S6, T73N, R33W)
	Platte River	East line (S24, T71N, R32W) to east line (S36, T72N, R32W)
	Shanghai Creek	Mouth (S16, T73N, R32W) to north county line (S3, T73N, R32W)
Allamakee	Bear Creek	Mouth (S1, T99N, R06W) to west county line (S30, T100N, R06W)
	Mississippi River	South county line (S34, T96N, R03W) to north county line (S8, T100N, R03W)
	Paint Creek	Mouth (S9, T99N, R06W) to west county line (S18, T99N, R06W)

County	River/Stream	Location
	Paint Creek	Mouth (S15, T96N, R03W) to road crossing (S18, T97N, R04W)
	Upper Iowa River	Mouth (S19, T100N, R03W) to west county line (S31, T99N, R06W)
	Village Creek	Mouth (S33, T99N, R03W) to confluence with Erickson Spring Branch (S23, T98N, R04W)
	Waterloo Creek	Mouth (S35, T100N, R06W) to north county line (S04, T100N, R06W)
	Winnebago Creek	Mouth (S12, T100N, R04W) to north county line (S1, T100N, R04W)
	Yellow River	Mouth (S34, T96N, R03W) to west county line (S18, T96N, R06W)
Appanoose	Chariton River	South county line (S21, T67N, R16W) to west county line (S6, T70N, R19W)
	Packard Creek	Mouth (S8, T67N, R16W) to confluence with Pigeon Creek (S6, T67N, R16W)
	Soap Creek	East county line (S13, T70N, R16W) to north county line (S4, T70N, R16W)
	South Fork Chariton River	Lake Rathbun (S14, T70N, R19W) to west county line (S31, T70N, R19W)
	South Soap Creek	East county line (S25, T70N, R16W) to Lake Sundown (S29, T70N, R16W)
	Walnut Creek	Mouth (S1, T69N, R18W) to confluence with Little Walnut Creek (S1, T69N, R18W)
Audubon	Brushy Creek	East county line (S1, T81N, R34W) to north county line (S1, T81N, R34W)
	East Branch West Nishnabotna River	West county line (S18, T80N, R36W) to confluence with unnamed tributary (NW 1/4, S19, T81N, R35W)
	East Nishnabotna River	South county line (S36, T78N, R36W) to confluence with unnamed tributary (NW 1/4, S12, T81N, R35W)
	Troublesome Creek	South county line (S35, T78N, R35W) to east county line (S36, T79N, R34W)
Benton	Bear Creek	North county line (S1, T86N, R10W) to mouth (S21, T86N, R10W)
	Bear Creek	East county line (S13, T84N, R09W) to confluence of Wildcat Creek and Opossum Creek (S8, T84N, R09W)
	Blue Creek	East county line (S24, T86N, R09W) to confluence with West Branch Blue Creek (S24, T86N, R09W)
	Cedar River	East county line (S13, T85N, R09W) to north county line (S6, T86N, R10W)
	Iowa River	South county line (S31, T82N, R12W) to west county line (S31, T82N, R12W)
	Prairie Creek	Confluence with unnamed tributary (middle of S 1/2, S13, T83N, R12W) to east county line (S12, T82N, R09W)
	Salt Creek	Mouth (S6, T82N, R12W) to west county line (S6, T82N, R12W)

County	River/Stream	Location
	Walnut Creek	Mouth (S6, T82N, R12W) to south county line (S6, T82N, R12W)
	Wolf Creek	North county line (S2, T86N, R12W) to west county line (S19, T86N, R12W)
Black Hawk	Beaver Creek	Mouth (S34, T90N, R14W) to west county line (S31, T90N, R14W)
	Black Hawk Creek	Mouth (S22, T89N, R13W) to west county line (S6, T87N, R14W)
	Buck Creek	East county line (S12, T90N, R11W) to north county line (S1, T90N, R11W)
	Cedar River	East county line (S36, T87N, R11W) to north county line (S2, T90N, R14W)
	Crane Creek	Mouth (S26, T90N, R11W) to north county line (S3, T90N, R12W)
	Miller Creek	Mouth (S2, T87N, R12W) to confluence with unnamed tributary (NE 1/4, S24, T87N, R13W)
	Shell Rock River	Mouth (S4, T90N, R14W) to north county line (S4, T90N, R14W)
	Spring Creek	Mouth (S34, T87N, R11W) to confluence with East Branch Spring Creek (S11, T87N, R11W)
	Wapsipinicon River	East county line (S1, T89N, R11W) to north county line (S4, T90N, R11W)
	West Fork Cedar River	Mouth (S16, T90N, R14W) to west county line (S7, T90N, R14W)
	Wolf Creek	Mouth (S29, T87N, R11W) to south county line (S35, T87N, R12W)
Boone	Beaver Creek	Confluence with Middle Beaver Creek (S21, T83N, R28W) to south county line (S35, T82N, R28W)
	Des Moines River	South county line (S34, T82N, R26W) to north county line (S3, T85N, R27W)
	Squaw Creek	North line (S9, T85N, R25W) to east county line (S12, T84N, R25W)
Bremer	Cedar River	South county line (S35, T91N, R14W) to north county line (S5, T93N, R14W)
	Crane Creek	South county line (S34, T91N, R12W) to north line (S9, T91N, R12W)
	Dry Run	Mouth (S33, T93N, R14W) to confluence with Horton Creek (S33, T93N, R14W)
	East Branch Wapsipinicon River	Mouth (S34, T93N, R12W) to north county line (S3, T93N, R12W)
	Little Wapsipinicon River	East county line (S13, T92N, R11W) to north line (S2, T92N, R11W)
	Quarter Section Run	Mouth (S19, T91N, R13W) to confluence with unnamed tributary (SW 1/4, S35, T91N, R13W)
	Shell Rock River	South county line (S33, T91N, R14W) to west county line (S18, T91N, R14W)
	Wapsipinicon River	South county line (S33, T91N, R11W) to north county line (S1, T93N, R13W)

County	River/Stream	Location
Buchanan	Buck Creek	Mouth (S32, T90N, R10W) to west county line (S7, T90N, R10W)
	Buffalo Creek	East county line (S13, T87N, R07W) to confluence of East and West Branches (S35, T90N, R08W)
	Cedar River	South county line (S31, T87N, R10W) to west county line (S31, T87N, R10W)
	Little Wapsipinicon River	Mouth (S9, T89N, R10W) to north county line (S5, T90N, R10W)
	Otter Creek	Mouth (S19, T89N, R09W) to north county line (S4, T90N, R09W)
	South Fork Maquoketa River	East county line (S24, T90N, R07W) to confluence with Lamont Creek (S23, T90N, R07W)
	Wapsipinicon River	South county line (S31, T87N, R07W) to west county line (S6, T89N, R10W)
Buena Vista	Little Sioux River	North county line (S2, T93N, R38W) to north county line (S5, T93N, R36W)
	North Raccoon River	South county line (S36, T90N, R36W) to north line (S15, T91N, R36W)
Butler	Beaver Creek	East county line (S36, T90N, R15W) to west county line (S31, T90N, R18W)
	Boylan Creek	Mouth (S1, T91N, R18W) to confluence with Parmenter Creek (S14, T92N, R18W)
	Coldwater Creek	Mouth (S29, T93N, R16W) to west line (S5, T93N, R17W)
	Flood Creek	Mouth (S27, T93N, R16W) to north county line (S3, T93N, R16W)
	Hartgrave Creek	Mouth (S34, T92N, R18W) to west county line (S30, T92N, R18W)
	Johnson Creek	West county line (S19, T91N, R18W) to mouth (S20, T90N, R16W)
	Maynes Creek	West county line (S18, T91N, R18W) to mouth (S7, T91N, R17W)
	Shell Rock River	East county line (S13, T91N, R15W) to north county line (S2, T93N, R17W)
	South Beaver Creek	Mouth (S25, T90N, R17W) to south county line (S35, T90N, R17W)
	West Fork Cedar River	East county line (S12, T90N, R15W) to west county line (S7, T92N, R18W)
Calhoun	Camp Creek	Mouth (S7, T86N, R34W) to west line (S25, T88N, R34W)
	Cedar Creek	South county line (S34, T86N, R32W) to confluence with West Cedar Creek (S31, T87N, R31W)
	Lake Creek	Mouth (S23, T86N, R34W) to north line (S25, T87N, R33W)
	North Raccoon River	South county line (S31, T86N, R33W) to west county line (S6, T86N, R34W)

County	River/Stream	Location
Carroll	Brushy Creek	South county line (S36, T82N, R34W) to confluence with Dedham Creek (S16, T82N, R34W)
	Middle Raccoon River	South county line (S34, T82N, R33W) to confluence with unnamed tributary (NW 1/4, NW 1/4, S6, T84N, R35W)
	North Raccoon River	East county line (S12, T84N, R33W) to north county line (S6, T85N, R33W)
	West Nishnabotna River	West county line (S31, T82N, R36W) to confluence with unnamed tributary (S34, T83N, R36W)
Cass	East Nishnabotna River	West county line (S31, T75N, R37W) to north county line (S1, T77N, R36W)
	Indian Creek	Mouth (S17, T75N, R37W) to north county line (S5, T77N, R37W)
	Sevenmile Creek	South county line (S31, T74N, R36W) to confluence with unnamed tributary (center of S32, T76N, R34W)
	Troublesome Creek	Mouth (S32, T77N, R36W) to north county line (S2, T77N, R35W)
	Turkey Creek	Mouth (S2, T75N, R37W) to confluence with Lone Tree Branch (S28, T76N, R36W)
	West Nodaway River	South county line (SW 1/4, S34, T74N, R36W) to confluence with Williams Creek (S35, T74N, R36W)
Cedar	Cedar River	South county line (S31, T79N, R02W) to west county line (S18, T81N, R04W)
	Mud Creek	South county line (S34, T79N, R01W) to south county line (S35, T79N, R01W)
	Rock Creek	Road crossing north line (S1, T81N, R03W) to mouth (S3, T79N, R03W)
	Sugar Creek	Road crossing north line (S29, T81N, R02W) to south county line (S34, T79N, R02W)
	Wapsipinicon River	East county line (S12, T82N, R01W) to north county line (S1, T82N, R01W)
	West Branch Wapsinonoc Creek	South county line (S33, T79N, R04W) to confluence with unnamed tributary (NE 1/4, S32, T79N, R04W)
Cerro Gordo	Beaverdam Creek	I-35 (S8, T95N, R21W) to south county line (S35, T94N, R20W)
	East Branch Beaverdam Creek	Hwy. 65 (S9, T94N, R20W) to mouth (S21, T94N, R20W)
	Shell Rock River	East county line (S12, T96N, R19W) to north county line (S5, T97N, R19W)
	Spring Creek	County Road B15 (S9, T97N, R20W) to mouth (S28, T97N, R20W)
	West Fork Cedar River	South county line (S35, T94N, R20W) to confluence of Beaverdam Creek and East Branch Beaverdam Creek (S21, T94N, R20W)

County	River/Stream	Location
Cherokee	Willow Creek	Hwy. 18 (S12, T96N, R21W) to mouth (S3, T96N, R20W)
	Winnebago River	East county line (S36, T96N, R19W) to west county line (S19, T97N, R22W)
	Gray Creek	North line (S22, T93N, R40W) to mouth (S10, T92N, R40W)
	Little Sioux River	South county line (S31, T90N, R41W) to north county line (S3, T93N, R39W)
	Maple Creek	Mouth (S5, T91N, R39W) to confluence with unnamed tributary (S1, T91N, R39W)
	Maple River	Confluence with Maple Creek (S5, T91N, R39W) to south county line (S34, T90N, R39W)
	Mill Creek	North county line (S3, T93N, R41W) to mouth (S14, T92N, R40W)
	Perry Creek	North line (S5, T91N, R40W) to mouth (S28, T91N, R40W)
	Rock Creek	East line (S4, T91N, R41W) to mouth (S10, T90N, R41W)
	Silver Creek	Mouth (S32, T91N, R40W) to north line (S34, T90N, R40W)
	West Fork Little Sioux River	North line (S12, T92N, R42W) to west county line (S31, T91N, R42W)
Chickasaw	Willow Creek	North line (S30, T91N, R41W) to mouth (S30, T90N, R41W)
	Cedar River	South county line (S32, T94N, R14W) to west county line (S7, T94N, R14W)
	Crane Creek	East county line (S25, T95N, R11W) to north county line (S21, T97N, R12W)
	East Branch Wapsipinicon River	South county line (S34, T94N, R12W) to confluence with Plum Creek (S15, T95N, R12W)
	Little Cedar River	Mouth (S20, T94N, R14W) to west county line (S6, T95N, R14W)
	Little Turkey River	East county line (S25, T96N, R11W) to north county line (S19, T97N, R11W)
	Little Wapsipinicon River	Mouth (S3, T94N, R13W) to north county line (S24, T97N, R14W)
	Wapsipinicon River	South county line (S36, T94N, R13W) to north county line (S20, T97N, R14W)
Clarke	Squaw Creek	North county line (S1, T73N, R25W) to confluence with Walnut Creek (S3, T73N, R25W)
	White Breast Creek	East county line (S1, T71N, R24W) to confluence with South White Breast Creek (S3, T71N, R24W)
Clay	Big Muddy Creek	Mouth (S15, T96N, R36W) to confluence with Little Muddy Creek (S10, T96N, R36W)
	Little Sioux River	West county line (S30, T94N, R38W) to north county line (S5, T97N, R37W)

County	River/Stream	Location
Clayton	Ocheyedan River	Mouth (S13, T96N, R37W) to west county line (S7, T97N, R38W)
	Stony Creek	Mouth (S7, T96N, R36W) to north county line (S3, T97N, R38W)
	Bloody Run	Mouth (S15, T95N, R03W) upstream to second road bridge crossing the stream in the western portion of Basil Giard Claim No. 1
	Cox Creek	Mouth (S21, T92N, R05W) to confluence with Kleinlein Creek (S36, T92N, R06W)
	Elk Creek	Mouth (S36, T92N, R04W) to south county line (S35, T91N, R04W)
	Howard Creek	Mouth (S25, T94N, R05W) to confluence with Dry Hollow (S19, T94N, R04W)
	Little Turkey River	Mouth (S10, T91N, R02W) to confluence with White Pine Hollow (S31, T91N, R02W)
	Maquoketa River	South county line (S32, T91N, R06W) to north line (S31, T91N, R06W)
	Mink Creek	Mouth (S30, T93N, R06W) to confluence with unnamed tributary (SW 1/4, S19, T93N, R06W)
	Mississippi River	East county line (S25, T91N, R01W) to north county line (S3, T95N, R03W)
	Roberts Creek	Mouth (S25, T93N, R05W) to confluence with Silver Creek (S16, T94N, R05W)
	Sny Magill Creek	Mouth (S23, T94N, R03W) upstream to confluence with North Cedar Creek (S8, T94N, R03W)
	South Cedar Creek	Mouth (S33, T92N, R03W) to confluence with unnamed tributary (SW 1/4, NE 1/4, SE 1/4, S7, T92N, R03W)
	Turkey River	Mouth (S12, T91N, R02W) to west county line (S18, T94N, R06W)
Volga River	Mouth (S36, T92N, R04W) to west county line (S30, T93N, R06W)	
Clinton	Brophys Creek	South line (S4, T81N, R05E) to mouth (S1, T80N, R04E)
	Deep Creek	North county line (S6, T83N, R05E) to confluence with Bear Creek (S8, T83N, R05E)
	Drainage Ditch 12	West line (S30, T82N, R02E) to mouth (S13, T81N, R01E)
	Elk River	South line (S5, T83N, R06E) to mouth (S20, T83N, R07E)
	Harts Mill Creek	East line (S8, T81N, R06E) to mouth (S15, T81N, R06E)
	Mill Creek	Confluence with Harts Mill Creek (S15, T81N, R06E) to mouth (S23, T81N, R06E)
	Mississippi River	South county line (S13, T80N, R05E) to north county line (S5, T83N, R07E)

County	River/Stream	Location
	Silver Creek	South line (S22, T82N, R03E) to mouth (S6, T80N, R04E)
	Wapsipinicon River	Mouth (S13, T80N, R05E) to west county line (S7, T82N, R01E)
Crawford	Boyer River	South county line (S34, T82N, R41W) to north county line (S6, T85N, R37W)
	East Boyer River	Mouth (S10, T83N, R39W) to confluence with unnamed tributary (NW 1/4, S15, T84N, R37W)
	East Soldier River	West county line (S31, T84N, R41W) to confluence with Emigrant Creek (S23, T84N, R41W)
	Soldier River	West county line (S30, T85N, R41W) to north county line (S1, T85N, R41W)
	West Fork West Nishnabotna River	South county line (S32, T82N, R38W) to confluence with unnamed tributary (NE 1/4, S14, T82N, R38W)
	West Nishnabotna River	South county line (S35, T82N, R37W) to east county line (S36, T82N, R37W)
Dallas	Beaver Creek	East county line (S13, T80N, R26W) to north county line (S2, T81N, R28W)
	Des Moines River	East county line (S25, T81N, R26W) to north county line (S3, T81N, R26W)
	Middle Raccoon River	Mouth (S9, T78N, R29W) to west county line (S31, T79N, R29W)
	Mosquito Creek	Mouth (S34, T79N, R29W) to west county line (NW 1/4, NW 1/4, S6, T80N, R29W)
	North Raccoon River	Mouth (S21, T78N, R27W) to north county line (S5, T81N, R29W)
	Raccoon River	East county line (S25, T78N, R26W) to confluence of North and South Raccoon Rivers (S21, T78N, R27W)
	South Raccoon River	Mouth (S21, T78N, R27W) to west county line (S7, T78N, R29W)
Davis	Chequest Creek	East county line (S12, T69N, R12W) to confluence with South Chequest Creek (S12, T69N, R12W)
	Des Moines River	East county line (S12, T70N, R12W) to north county line (S2, T70N, R12W)
	Fox River	East county line (S1, T68N, R12W) to confluence with South Fox Creek (S28, T69N, R15W)
	Soap Creek	Mouth (S2, T70N, R12W) to west county line (S18, T70N, R15W)
	South Chequest Creek	Mouth (S12, T69N, R12W) to confluence with Burr Oak Creek (S15, T69N, R12W)
	South Soap Creek	Mouth (S21, T70N, R15W) to west county line (S30, T70N, R15W)
Decatur	Elk Creek	Mouth (S18, T68N, R26W) to confluence with West Elk Creek (S34, T69N, R27W)
	Little River	South county line (S25, T67N, R25W) to confluence with West Little River (S31, T69N, R25W)

County	River/Stream	Location
	Long Creek	Mouth (S8, T69N, R26W) to confluence with Bee Creek (S9, T70N, R26W)
	Steel Creek	Mouth (S10, T67N, R24W) to confluence with Hog Creek (S26, T68N, R24W)
	Thompson River	South county line (S25, T67N, R26W) to west county line (S6, T70N, R27W)
	Weldon River	South county line (S27, T67N, R24W) to Hwy. 2 (S20, T69N, R24W)
	West Elk Creek	Mouth (S34, T69N, R27W) to confluence with unnamed tributary (NE 1/4, S32, T69N, R27W)
Delaware	Buck Creek	Mouth (S11, T87N, R04W) to confluence with Lime Creek (S17, T87N, R04W)
	Buffalo Creek	South county line (S33, T87N, R06W) to west county line (S18, T87N, R06W)
	Coffins Creek	Mouth (S19, T89N, R05W) to road crossing center (S26, T89N, R06W)
	Elk Creek	North county line (S2, T90N, R04W) to confluence with Schechtman Branch (S14, T90N, R04W)
	Honey Creek	Mouth (S19, T89N, R05W) to confluence with Lindsey Creek (S3, T89N, R05W)
	Maquoketa River	South county line (S31, T87N, R03W) to north county line (S5, T90N, R06W)
	North Fork Maquoketa River	East county line (S24, T87N, R03W) to east county line (S12, T88N, R03W)
	Plum Creek	Mouth (S11, T87N, R04W) to confluence with unnamed tributary (SE 1/4, S24, T89N, R04W)
	Sand Creek	Mouth (S9, T88N, R05W) to confluence with Todds Creek (S8, T88N, R05W)
	South Fork Maquoketa River	Mouth (S16, T90N, R06W) to west county line (S19, T90N, R06W)
Des Moines	Brush Creek	South line (S5, T69N, R03W) to mouth (S2, T68N, R03W)
	Cedar Fork	West line (S31, T72N, R03W) to mouth (S25, T71N, R04W)
	Cottonwood Drain	Mouth (S1, T70N, R02W) to confluence with unnamed tributary (middle S7, T71N, R01W)
	Flint Creek	West county line (S18, T71N, R04W) to mouth (S28, T70N, R02W)
	Hawkeye Creek	East line (S30, T72N, R02W) to mouth (S19, T72N, R01W)
	Hawkeye-Dolbee Channel	Confluence with Hawkeye Creek (S19, T72N, R01W) to mouth (S22, T72N, R01W)
	Honey Creek	North county line (NE 1/4, S5, T72N, R03W) to north county line (NW 1/4, S5, T72N, R03W)
	Knotty Creek	East line (S25, T71N, R03W) to mouth (S24, T70N, R03W)

County	River/Stream	Location
	Long Creek	South line (S3, T69N, R04W) to mouth (S30, T69N, R03W)
	Mississippi River	South county line (S8, T68N, R02W) to north county line (S3, T72N, R01W)
	Running Slough Drain	East line (S24, T72N, R02W) to mouth (S31, T71N, R01W)
	Skunk River	East county line (S8, T68N, R02W) to west county line (S2, T69N, R05W)
	Smith Creek	North county line (S6, T72N, R02W) to north county line (NW 1/4, NE 1/4, S1, T72N, R03W)
	Spring Creek	South line (S15, T69N, R03W) to mouth (S32, T69N, R02W)
	Unnamed Creek	South line (S27, T71N, R03W) to mouth (S4, T70N, R03W)
Dickinson	Little Sioux River	South county line (S32, T98N, R37W) to north county line (S10, T100N, R37W)
	Milford Creek	Middle (S12, T98N, R37W) to mouth (S14, T98N, R37W)
	Stony Creek	South county line (S34, T98N, R38W) to confluence with Drainage Ditch 41 (S27, T98N, R38W)
	West Branch Little Sioux River	South line (S27, T100N, R38W) to mouth (S36, T100N, R38W)
	West Fork Little Sioux River	South line (S24, T100N, R38W) to mouth (S7, T99N, R37W)
Dubuque	Catfish Creek	Mouth (S5, T88N, R03E) to north line (S16, T88N, R02E)
	Hewitt Creek	Mouth (S30, T89N, R02W) to confluence with Hickory Creek (S21, T89N, R02W)
	Little Maquoketa River	Mouth (S26, T90N, R02E) to confluence with North Fork Little Maquoketa River (S31, T90N, R02E)
	Lytle Creek	South county line (S31, T87N, R02E) to confluence with Prairie Creek (S24, T87N, R01E)
	Mississippi River	South county line (S34, T88N, R04E) to west county line (S30, T91N, R01E)
	North Fork Little Maquoketa River	Mouth (S31, T90N, R02E) to confluence with Middle Fork Little Maquoketa River (S35, T90N, R01E)
	North Fork Maquoketa River	South county line (S32, T87N, R01W) to confluence with Hewitt Creek (S29, T89N, R02W)
	Tetes Des Morts Creek	Mouth (S34, T88N, R04E) to south county line (S34, T88N, R04E)
	Whitewater Creek	South county line (S35, T87N, R01W) to confluence with Curran Creek (S12, T87N, R01W)
Emmet	Des Moines River	South county line (S33, T98N, R33W) to north county line (S7, T100N, R34W)
	East Branch Des Moines River	Tuttle Lake (S11, T100N, R32W) to east county line (S36, T99N, R31W)

County	River/Stream	Location
Fayette	Crane Creek	Mouth (S31, T95N, R09W) to west county line (S30, T95N, R10W)
	Little Turkey River	Mouth (S18, T95N, R08W) to north county line (S5, T95N, R10W)
	Little Volga River	Mouth (S2, T92N, R09W) to confluence with unnamed tributary (S2, T92N, R09W)
	Little Wapsipinicon River	South county line (S32, T91N, R10W) to west county line (S18, T92N, R10W)
	Otter Creek	South county line (S33, T91N, R09W) to confluence with unnamed tributary (S18, T91N, R09W)
	Turkey River	East county line (S13, T94N, R07W) to north county line (S3, T95N, R09W)
	Volga River	East county line (S25, T93N, R07W) to confluence with Little Volga River (S2, T92N, R09W)
Floyd	Cedar River	East county line (S12, T94N, R15W) to north county line (S24, T97N, R17W)
	Flood Creek	South county line (S34, T94N, R16W) to road crossing (S32, T96N, R17W)
	Little Cedar River	East county line (S1, T95N, R15W) to north county line (S24, T97N, R16W)
	Rock Creek	Mouth (S24, T97N, R17W) to north county line (S22, T97N, R17W)
	Shell Rock River	Mouth (S35, T94N, R17W) to west county line (S7, T96N, R18W)
	Winnebago River	Mouth (S14, T95N, R18W) to west county line (NW 1/4, S31, T96N, R18W)
Franklin	Bailey Creek	East line (S13, T93N, R20W) to mouth (S19, T93N, R19W)
	Beaverdam Creek	North county line (S2, T93N, R20W) to mouth (S19, T93N, R19W)
	Hartgrave Creek	Confluence of Otter Creek and Spring Creek (S29, T92N, R19W) to east county line (S25, T92N, R19W)
	Iowa River	South county line (S36, T90N, R22W) to west county line (S19, T91N, R22W)
	Maynes Creek	East line (S30, T91N, R20W) to east county line (S13, T91N, R19W)
	Otter Creek	East line (S31, T93N, R20W) to mouth (S29, T92N, R19W)
	Spring Creek	Beeds Lake Outlet (S20, T92N, R20W) to mouth (S29, T92N, R19W)
	West Fork Cedar River	Confluence of Bailey Creek and Beaverdam Creek (S19, T93N, R19W) to east county line (S12, T92N, R19W)
Fremont	East Nishnabotna River	Mouth (S2, T67N, R42W) to east county line (S13, T69N, R40W)
	Missouri River	South county line (S34, T67N, R43W) to north county line (S5, T70N, R43W)

County	River/Stream	Location
	Nishnabotna River	South county line (S35, T67N, R42W) to confluence of East and West Nishnabotna Rivers (S2, T67N, R42W)
	West Nishnabotna River	Mouth (S2, T67N, R42W) to north county line (S5, T70N, R41W)
Greene	Buttrick Creek	Mouth (S26, T83N, R30W) to confluence of East Branch and West Branch (S25, T84N, R30W)
	Cedar Creek	Mouth (S33, T85N, R32W) to north county line (S3, T85N, R32W)
	North Raccoon River	South county line (S32, T82N, R29W) to west county line (S18, T84N, R32W)
	Willow Creek	South county line (S31, T82N, R32W) to confluence with Drainage Ditch 117 (S21, T82N, R32W)
Grundy	Black Hawk Creek	East line (S35, T88N, R17W) to east county line (S1, T87N, R15W)
	Middle Fork South Beaver Creek	Mouth (S28, T89N, R17W) to confluence with North Fork South Beaver Creek (S28, T89N, R17W)
	North Black Hawk Creek	NE 1/4, S8, T88N, R15W to mouth (S1, T87N, R15W)
	South Beaver Creek	E 1/2, S3, T88N, R18W to north county line (S2, T89N, R17W)
	Wolf Creek	N 1/2, S31, T86N, R17W to east county line (S36, T86N, R17W)
Guthrie	Beaver Creek	Mouth (S5, T78N, R30W) to confluence with Spring Branch (S3, T78N, R31W)
	Brushy Creek	Mouth (S22, T79N, R31W) to west county line (S35, T81N, R33W)
	Middle Raccoon River	East county line (S36, T79N, R30W) to north county line (S3, T81N, R33W)
	Middle River	South county line (S36, T78N, R32W) to County Road N54 (S36, T79N, R33W)
	Mosquito Creek	East county line (SE 1/4, S1, T80N, R30W) to Hwy. 4 (S17, T81N, R30W)
	South Raccoon River	East county line (S12, T78N, R30W) to confluence with Frost Creek (S18, T80N, R32W)
	Troublesome Creek	West county line (S31, T79N, R33W) to confluence with North Branch Troublesome Creek (S20, T79N, R33W)
	Willow Creek	Mouth (S27, T81N, R32W) to north county line (S6, T81N, R32W)
Hamilton	Boone River	West county line (S30, T87N, R26W) to north county line (S3, T89N, R26W)
	Brewers Creek	Mouth (S6, T88N, R25W) to County Road R27 (S12, T88N, R26W)
	Eagle Creek	Mouth (S6, T89N, R25W) to north county line (S6, T89N, R25W)
	South Skunk River	South county line (S31, T86N, R23W) to County Road D41 (S36, T88N, R24W)

County	River/Stream	Location
Hancock	White Fox Creek	Mouth (S33, T89N, R25W) to north county line (S3, T89N, R25W)
	East Branch Iowa River	South county line (S32, T94N, R23W) to Hwy. 18 (S25, T96N, R24W)
	West Branch Iowa River	South county line (S35, T94N, R24W) to County Road B55 (S31, T95N, R24W)
Hardin	Winnebago River	East county line (S24, T97N, R23W) to north county line (S1, T97N, R24W)
	Elk Creek	Mouth (S28, T88N, R19W) to County Road D35 (S27, T88N, R19W)
	Honey Creek	South county line (S31, T86N, R19W) to County Road D65 (S24, T86N, R20W)
	Iowa River	South county line (SW 1/4, S35, T86N, R19W) to north county line (NW 1/4, NW 1/4, S1, T89N, R22W)
Harrison	South Fork Iowa River	Mouth (S4, T86N, R19W) to Hwy. 359 (S11, T88N, R22W)
	Boyer River	South county line (S33, T78N, R44W) to north county line (S3, T81N, R41W)
	Little Sioux River	Mouth (S27, T81N, R45W) to north county line (S5, T81N, R44W)
	Missouri River	South county line (S32, T78N, R45W) to north county line (S1, T81N, R46W)
	Monona Harrison Ditch	Mouth (S22, T81N, R45W) to north county line (S1, T81N, R45W)
Henry	Soldier River	Mouth (S16, T80N, R45W) to north county line (S1, T81N, R44W)
	Big Creek	South county line (S31, T72N, R05W) to mouth (S19, T70N, R05W)
	Brush Creek	West county line (S31, T72N, R07W) to mouth (S30, T72N, R07W)
	Cedar Creek	West county line (S6, T70N, R07W) to mouth (S6, T71N, R07W)
	Crooked Creek	West county line (S6, T73N, R07W) to north county line (S6, T73N, R07W)
	East Fork Crooked Creek	North county line (S1, T73N, R06W) to east county line (S36, T73N, R05W)
	Little Cedar Creek	South county line (S33, T70N, R07W) to mouth (S17, T70N, R07W)
	Mud Creek	South line (S15, T70N, R05W) to mouth (S34, T70N, R05W)
Howard	Skunk River	South county line (S35, T70N, R05W) to west county line (S19, T73N, R07W)
	Crane Creek	South county line (S16, T97N, R12W) to Hwy. 9 (S29, T99N, R13W)
	Little Wapsipinicon River	South county line (S13, T97N, R14W) to northwest line (S23, T98N, R14W)
	North Branch Turkey River	Mouth (S31, T99N, R11W) to Hwy. 9 (S25, T99N, R12W)
	Turkey River	East county line (S12, T98N, R11W) to west line (S1, T98N, R12W)

County	River/Stream	Location
	Upper Iowa River	East county line (S12, T100N, R11W) to north county line (NW 1/4, NE 1/4, S11, T100N, R14W)
	Wapsipinicon River	South county line (S17, T97N, R14W) to west county line (S18, T98N, R14W)
Humboldt	Des Moines River	South county line (S31, T91N, R28W) to west county line (S6, T92N, R30W)
	East Branch Des Moines River	Mouth (S19, T91N, R28W) to north county line (S1, T93N, R29W)
	Prairie Creek	West county line (S25, T93N, R27W) to north county line (S4, T93N, R27W)
Ida	Little Sioux River	West county line (S7, T89N, R41W) to north county line (S6, T89N, R41W)
	Maple River	West county line (S7, T86N, R41W) to north county line (S3, T89N, R39W)
	Odebolt Creek	Mouth (S15, T87N, R40W) to confluence with unnamed tributary (S24, T87N, R39W)
	Soldier River	South county line (S36, T86N, R41W) to confluence with unnamed tributary (NW 1/4, SE 1/4, S20, T86N, R40W)
Iowa	Big Bear Creek	West county line (S18, T80N, R12W) to mouth (S24, T81N, R11W)
	English River	South county line (S31, T78N, R09W) to west county line (S19, T79N, R12W)
	Honey Creek	Mouth (S12, T81N, R12W) to confluence with unnamed tributary (NE 1/4, SW 1/4, S28, T81N, R12W)
	Iowa River	East county line (S36, T81N, R09W) to north county line (S6, T81N, R12W)
	Old Mans Creek	West line (S35, T79N, R10W) to east county line (S36, T79N, R09W)
	Price Creek	Mouth (S36, T81N, R09W) to confluence with Mill Race (S26, T81N, R09W)
	Walnut Creek	North county line (S6, T81N, R12W) to west county line (S6, T81N, R12W)
Jackson	Bear Creek	Mouth (S13, T84N, R01E) to west county line (S30, T84N, R01E)
	Brush Creek	North line (S23, T85N, R03E) to Hwy. 62 bridge (S11, T85N, R03E)
	Deep Creek	Mouth (S18, T84N, R05E) to south county line (S31, T84N, R05E)
	Little Mill Creek	Mouth (S13, T86N, R04E) to west line (S23, T86N, R04E)
	Lytle Creek	Mouth (S8, T85N, R02E) to north county line (S6, T86N, R02E)
	Maquoketa River	Mouth (S7, T85N, R06E) to west county line (S18, T85N, R01E)
	Mill Creek	Mouth (S19, T86N, R05E) to west line (S9, T86N, R04E)
	Mississippi River	South county line (S32, T84N, R07E) to north county line (S3, T87N, R04E)

County	River/Stream	Location
	North Fork Maquoketa River	West county line (S31, T86N, R01E) to mouth (S13, T84N, R02E)
	Prairie Creek	Mouth (S17, T84N, R03E) to Hwy. 64, (S20, T84N, R03E)
	Tetes Des Morts Creek	North county line (S3, T87N, R04E) to confluence with unnamed tributary (S23, T87N, R03E)
Jasper	Clear Creek	Mouth (S2, T80N, R21W) to confluence with Mud Creek (S24, T81N, R21W)
	Indian Creek	Mouth (S32, T80N, R20W) to west county line (S18, T81N, R21W)
	North Skunk River	East county line (S13, T78N, R17W) to north county line (S6, T81N, R19W)
	South Skunk River	South county line (S32, T78N, R18W) to west county line (S30, T80N, R21W)
	Squaw Creek	Mouth (S2, T79N, R21W) to confluence with unnamed tributary (S10, T79N, R21W)
Jefferson	Brush Creek	South line (S18, T72N, R08W) to east county line (S36, T72N, R08W)
	Cedar Creek	South county line (S35, T71N, R08W) to west county line (S18, T72N, R11W)
	Competine Creek	West county line (S31, T73N, R11W) to mouth (S28, T72N, R11W)
	Crooked Creek	Mouth (S1, T73N, R08W) to east county line (S1, T73N, R08W)
	Lick Creek	South county line (S32, T71N, R10W) to confluence with East Branch Lick Creek (S30, T71N, R10W)
	Middle Walnut Creek	Mouth (S26, T73N, R09W) to east line (S22, T73N, R09W)
	Skunk River	East county line (S13, T72N, R08W) to north county line (S1, T73N, R08W)
	Walnut Creek	Confluence of South and Middle Walnut Creeks (S26, T73N, R09W) to mouth (S2, T72N, R08W)
Johnson	Buck Creek	Mouth (S2, T77N, R06W) to confluence with Pechman Creek (S2, T77N, R06W)
	Cedar River	East county line (S13, T81N, R05W) to north county line (S3, T81N, R05W)
	Clear Creek	West county line (S30, T80N, R08W) to mouth (S8, T79N, R06W)
	Iowa River	South county line (S32, T77N, R05W) to west county line (S31, T81N, R08W)
	Old Mans Creek	West county line (S31, T79N, R08W) to mouth (S27, T78N, R06W)
	Rapid Creek	Mouth (S34, T80N, R06W) to confluence with unnamed tributary (S21, T80N, R05W)
Jones	Bear Creek	East county line (S25, T84N, R01W) to confluence with Little Bear Creek (S30, T84N, R01W)

County	River/Stream	Location
	Buffalo Creek	West county line (S19, T85N, R04W) to mouth (S10, T84N, R04W)
	Maquoketa River	East county line (SE 1/4, S24, T85N, R01W) to north county line (S6, T86N, R03W)
	North Fork Maquoketa River	East county line (SE 1/4, S36, T86N, R01W) to north county line (S6, T86N, R01W)
	Silver Creek	Mouth (S8, T86N, R03W) to confluence with Grove Creek (S11, T86N, R04W)
	Walnut Creek	Mouth (S18, T83N, R02W) to confluence of North and South Fork Walnut Creeks (S13, T83N, R04W)
	Wapsipinicon River	South county line (S36, T83N, R01W) to west county line (S6, T84N, R04W)
	Whitewater Creek	Mouth (S10, T86N, R01W) to north county line (S2, T86N, R01W)
Keokuk	Bridge Creek	South line (S23, T76N, R12W) to mouth (S18, T75N, R11W)
	Cedar Creek	East line (S19, T76N, R13W) to mouth (S15, T75N, R12W)
	North Skunk River	West county line (S6, T75N, R13W) to mouth (S5, T74N, R10W)
	Rock Creek	South line (S21, T76N, R12W) to mouth (S9, T75N, R12W)
	Skunk River	East county line (S12, T74N, R10W) to confluence of North and South Skunk Rivers (S5, T74N, R10W)
	South English River	East county line (S12, T77N, R10W) to west county line (S6, T77N, R13W)
	South Skunk River	West county line (S30, T75N, R13W) to mouth (S5, T74N, R10W)
Kossuth	Buffalo Creek	West line (S4, T97N, R27W) to mouth (S21, T97N, R28W)
	East Branch Des Moines River	South county line (S36, T94N, R29W) to west county line (S31, T99N, R30W)
	Prairie Creek	South county line (S33, T94N, R27W) to confluence with Drainage Ditch 177 (S5, T94N, R27W)
Lee	Des Moines River	Mouth (S34, T65N, R05W) to west county line (S19, T67N, R07W)
	Lost Creek	South line (S32, T69N, R04W) to mouth (S36, T68N, R04W)
	Mississippi River	South county line (S34, T65N, R05W) to north county line (S8, T68N, R02W)
	Pitman Creek	South line (S10, T68N, R05W) to mouth (S29, T68N, R05W)
	Skunk River	Mouth (S8, T68N, R02W) to north county line (S2, T69N, R05W)
	Sugar Creek	South line (S24, T68N, R07W) to mouth (S25, T65N, R06W)

County	River/Stream	Location
Linn	Sugar Creek	South line (S26, T69N, R06W) to mouth (S26, T67N, R05W)
	Bear Creek	West county line (S18, T84N, R08W) to mouth (S21, T84N, R08W)
	Big Creek	Mouth (S9, T82N, R06W) to confluence with Abbe Creek (S34, T83N, R06W)
	Blue Creek	Mouth (S18, T85N, R08W) to west county line (S19, T86N, R08W)
	Buffalo Creek	East county line (S24, T85N, R05W) to north county line (S4, T86N, R06W)
	Cedar River	South county line (S34, T82N, R05W) to west county line (S18, T85N, R08W)
	Indian Creek	Mouth (S30, T83N, R06W) to confluence with Dry Creek (S1, T83N, R07W)
	Prairie Creek	West county line (S7, T82N, R08W) to mouth (S34, T83N, R07W)
	Wapsipinicon River	East county line (S1, T84N, R05W) to north county line (S6, T86N, R07W)
Louisa	Big Slough Creek	East line (S7, T74N, R05W) to mouth (S14, T74N, R05W)
	Buffington Creek	Mouth (S13, T74N, R05W) to west line (S18, T74N, R05W)
	Cedar River	Mouth (S20, T75N, R04W) to north county line (S5, T75N, R04W)
	East Fork Crooked Creek	West county line (S31, T73N, R04W) to south county line (S32, T73N, R04W)
	Goose Creek	West county line (S19, T76N, R05W) to mouth (S27, T76N, R05W)
	Honey Creek	Mouth (S1, T75N, R05W) to east county line (S25, T76N, R05W)
	Honey Creek	Mouth (S14, T73N, R03W) to south county line (S32, T73N, R03W)
	Indian Creek	Mouth (S7, T74N, R03W) to south line (S1, T75N, R04W)
	Iowa River	Mouth (S31, T74N, R01W) to north county line (NW 1/4, S6, T76N, R05W)
	Johnny Creek	Mouth (S12, T74N, R05W) to east line (S6, T74N, R04W)
	Long Creek	West line (S30, T75N, R05W) to mouth (S1, T74N, R04W)
	Mississippi River	South county line (S34, T73N, R01W) to north county line (S3, T75N, R02W)
	Muscatine Slough	North county line (S1, T75N, R03W) to county road bridge (S31, T75N, R02W)
	Muskrat Lake	Mouth at the Iowa River (S16, T74N, R03W) to SE 1/4, S16, T74N, R03W
	Otter Creek	Mouth (S19, T73N, R02W) to middle (S16, T73N, R04W)
Roff Creek	Mouth (S1, T73N, R04W) to south county line (S36, T73N, R04W)	

County	River/Stream	Location
	Short Creek	Mouth (S19, T75N, R04W) to west county line (S6, T75N, R05W)
	Smith Creek	Mouth (S28, T73N, R02W) to south county line (S35, T73N, R03W)
Lucas	Chariton River	Rathbun Lake (S36, T71N, R20W) to Hwy. 14 (S32, T72N, R21W)
	Otter Creek	North county line (S5, T73N, R23W) to confluence with South Otter Creek (S8, T73N, R23W)
	White Breast Creek	North county line (S2, T73N, R22W) to west county line (S6, T71N, R23W)
Lyon	Big Sioux River	South county line (S31, T98N, R48W) to north county line (S11, T100N, R49W)
	Kanaranzi Creek	Mouth (S28, T100N, R45W) to north county line (S11, T100N, R45W)
	Little Rock River	East county line (S25, T100N, R43W) to mouth (S35, T98N, R46W)
	Mud Creek	Mouth (S26, T98N, R46W) to confluence with first unnamed tributary (SW 1/4, S29, T99N, R46W)
	Otter Creek	Mouth (S21, T98N, R44W) to west county line (S36, T98N, R43W)
	Rock River	South county line (S35, T98N, R46W) to north county line (S8, T100N, R45W)
	Tom Creek	Mouth (S4, T99N, R45W) to confluence with unnamed tributary (S22, T100N, R44W)
Madison	Badger Creek	East county line (S24, T77N, R26W) to confluence with Cherry Creek (S13, T77N, R26W)
	Bush Branch	Mouth (S8, T75N, R29W) to west county line (S18, T75N, R29W)
	Clanton Creek	East county line (S12, T75N, R26W) to confluence of North Fork and South Fork Clanton Creek (S15, T74N, R27W)
	Middle River	West county line (NW 1/4, S31, T76N, R29W) to east county line (S25, T76N, R26W)
	North Branch North River	Mouth (S35, T77N, R27W) to west county line (S7, T77N, R29W)
	North River	East county line (S1, T76N, R26W) to east line (S17, T76N, R28W)
	South Fork Clanton Creek	Mouth (S15, T74N, R27W) to confluence with Bird Creek (S15, T74N, R27W)
	Thompson River	South county line (S34, T74N, R29W) to west county line (S7, T74N, R29W)
	West Branch Creek	Mouth (S34, T74N, R29W) to confluence with unnamed tributary (S19, T74N, R29W)
Mahaska	Cedar Creek	West county line (S31, T75N, R17W) to mouth (S33, T75N, R17W)
	Coal Creek	Mouth (S1, T74N, R17W) to confluence with North Coal Creek (S1, T74N, R17W)

County	River/Stream	Location
	Des Moines River	South county line (S36, T74N, R16W) to west county line (S18, T75N, R17W)
	English Creek	Mouth (S18, T75N, R17W) to west county line (S18, T75N, R17W)
	Middle Creek	Mouth (S35, T76N, R14W) to confluence with unnamed tributary (S16, T76N, R15W)
	Moon Creek	Mouth (S30, T77N, R14W) to north county line (S1, T77N, R15W)
	Muchakinock Creek	South county line (S36, T74N, R16W) to confluence with Little Muchakinock Creek (S34, T75N, R16W)
	North Skunk River	East county line (S1, T75N, R14W) to north county line (S1, T77N, R16W)

	Indian Creek	Mouth (S9, T93N, R48W) to north county line (S4, T93N, R47W)	
	Mink Creek	Mouth (S35, T92N, R46W) to confluence with unnamed tributary (S16, T92N, R46W)	
	Perry Creek	South county line (S33, T90N, R47W) to confluence with West Branch Perry Creek (S33, T90N, R47W)	
	West Branch Floyd River	Mouth (S2, T91N, R46W) to north county line (S5, T93N, R45W)	
	West Fork Little Sioux River	South county line (S34, T90N, R44W) to east county line (S36, T91N, R43W)	
	Whiskey Creek	Mouth (S36, T91N, R43W) to confluence with unnamed tributary (NE 1/4, NW 1/4, S2, T91N, R43W)	
	Willow Creek	Mouth (S9, T92N, R45W) to confluence with Deep Creek (S2, T92N, R45W)	
	Pocahontas	Des Moines River	East county line (S1, T92N, R31W) to north county line (S2, T93N, R31W)
		Lizard Creek	East county line (S13, T90N, R31W) to west line (S2, T90N, R31W)

County	River/Stream	Location
Polk	North Branch Lizard Creek	Mouth (S2, T90N, R31W) to north line (S6, T91N, R31W)
	Pilot Creek	Mouth (S1, T92N, R31W) to west line (S4, T92N, R31W)
	Beaver Creek	Mouth (S17, T79N, R24W) to west county line (S18, T80N, R25W)
	Des Moines River	East county line (S12, T77N, R22W) to west county line (S30, T81N, R25W)
	Fourmile Creek	Mouth (S16, T78N, R23W) to south line (S1, T80N, R24W)
	Indian Creek	East county line (S13, T81N, R22W) to north county line (S3, T81N, R22W)
	North River	Mouth (S36, T78N, R23W) to south county line (SW 1/4, SW 1/4, S34, T78N, R23W)
	Raccoon River	Mouth (S10, T78N, R24W) to west county line (S30, T78N, R25W)
	South River	Mouth (S12, T77N, R22W) to south county line (S12, T77N, R22W)
	South Skunk River	East county line (S25, T80N, R22W) to north county line (S3, T81N, R23W)
	Walnut Creek	Mouth (S13, T78N, R25W) to west county line (S30, T79N, R25W)
Pottawattamie	Boyer River	Mouth (S20, T77N, R44W) to north county line (S4, T77N, R44W)
	East Branch West Nishnabotna River	Mouth (S29, T77N, R39W) to north county line (S3, T77N, R39W)
	East Nishnabotna River	South county line (S36, T74N, R38W) to east county line (S36, T75N, R38W)
	Farm Creek	South county line (S36, T74N, R40W) to confluence with Jordan Creek (S31, T74N, R39W)
	Missouri River	South county line (S35, T74N, R44W) to north county line (S3, T77N, R45W)
	Mosquito Creek	Mouth (S30, T74N, R43W) to confluence with unnamed tributary (NW 1/4, S10, T76N, R42W)
	Pigeon Creek	Mouth (S3, T75N, R44W) to confluence with Potato Creek (S23, T77N, R43W)
	Pony Creek	Mouth (S30, T74N, R43W) to confluence with unnamed tributary (center of S28, T74N, R43W)
	Silver Creek	South county line (S31, T74N, R41W) to confluence with Middle Silver Creek (S31, T74N, R41W)
	West Nishnabotna River	South county line (S34, T74N, R40W) to north county line (S5, T77N, R39W)
Poweshiek	Big Bear Creek	East county line (S13, T80N, R13W) to confluence with unnamed tributary (NW 1/4, S8, T80N, R14W)
	English River	East county line (S24, T79N, R13W) to confluence with Dugout Creek (S15, T79N, R14W)

County	River/Stream	Location
	Moon Creek	South county line (S36, T78N, R15W) to confluence with unnamed tributary (NE 1/4, S26, T78N, R15W)
	North Skunk River	South county line (S36, T78N, R16W) to west county line (S18, T78N, R16W)
	Sugar Creek	Mouth (S20, T78N, R16W) to confluence with unnamed tributary (NW 1/4, S31, T79N, R16W)
	Walnut Creek	East county line (S1, T81N, R13W) to confluence with North Walnut Creek (S7, T81N, R13W)
Ringgold	East Fork Grand River	South county line (S25, T67N, R30W) to confluence with Hackberry Creek (S13, T70N, R29W)
	Grand River	South county line (S30, T67N, R31W) to confluence with Plum Creek (S29, T70N, R30W)
	Platte River	West county line (S31, T68N, R31W) to north county line (S6, T70N, R31W)
	Thompson River	East county line (S1, T70N, R28W) to north county line (S1, T70N, R28W)
Sac	Boyer River	South county line (S31, T86N, R37W) to west line (S5, T89N, R37W)
	Cedar Creek	Mouth (S25, T88N, R36W) to west line (S10, T88N, R35W)
	Drainage Ditch 57	Mouth (S23, T87N, R36W) to east line (S35, T87N, R36W)
	Indian Creek	Mouth (S24, T87N, R36W) to north line (S7, T87N, R36W)
	North Raccoon River	East county line (S1, T86N, R35W) to north county line (S1, T89N, R36W)
Scott	Hickory Creek	Mouth (S31, T80N, R02E) to confluence with unnamed tributary (S8, T79N, R02E)
	Lost Creek	Mouth (S15, T80N, R05E) to east line (S32, T80N, R05E)
	Mississippi River	West county line (S19, T77N, R02E) to north county line (S13, T80N, R05E)
	Mud Creek	Mouth (S12, T80N, R02E) to county road bridge (S11, T79N, R01E)
	Wapsipinicon River	Mouth (S13, T80N, R05E) to north county line (S1, T80N, R01E)
Shelby	East Branch West Nishnabotna River	South county line (S34, T78N, R39W) to east county line (S13, T80N, R37W)
	Indian Creek	South county line (S32, T78N, R37W) to confluence with unnamed tributary (S8, T78N, R37W)
	West Fork West Nishnabotna River	Mouth (S17, T79N, R38W) to north county line (S5, T81N, R38W)
	West Nishnabotna River	South county line (S32, T78N, R39W) to north county line (S2, T81N, R37W)
Sioux	Big Sioux River	South county line (S32, T94N, R48W) to west county line (S6, T97N, R48W)

County	River/Stream	Location
	Floyd River	South county line (S31, T94N, R44W) to east county line (S25, T97N, R43W)
	Indian Creek	South county line (S33, T94N, R47W) to confluence with unnamed tributary (S33, T94N, R47W)
	Otter Creek	North county line (S2, T97N, R44W) to north county line (S1, T97N, R43W)
	Rock River	Mouth (S1, T95N, R48W) to north county line (S2, T97N, R46W)
	Sixmile Creek	Mouth (S28, T94N, R48W) to confluence with unnamed tributary (S19, T95N, R46W)
	West Branch Floyd River	South county line (S32, T94N, R45W) to confluence with unnamed tributary (S8, T96N, R44W)
Story	East Indian Creek	Mouth (S16, T82N, R22W) to Hwy. 30 (S14, T83N, R22W)
	Indian Creek	Mouth (S34, T82N, R22W) to confluence of East and West Indian Creeks (S16, T82N, R22W)
	South Skunk River	South county line (S34, T82N, R23W) to north county line (S6, T85N, R23W)
	Squaw Creek	Mouth (S12, T83N, R24W) to west county line (S7, T84N, R24W)
	West Indian Creek	Mouth (S16, T82N, R22W) to Hwy. 30 (S18, T83N, R22W)
Tama	Deer Creek	Mouth (S34, T83N, R15W) to confluence with Crystal Creek (S10, T84N, R16W)
	East Branch Salt Creek	Mouth (S34, T84N, R13W) to confluence with Stein Creek (S26, T84N, R13W)
	Iowa River	East county line (S36, T82N, R13W) to west county line (S6, T83N, R16W)
	Salt Creek	East county line (S36, T82N, R13W) to confluence with Simpson Creek (S18, T84N, R13W)
	Stein Creek	Mouth (S26, T84N, R13W) to confluence with unnamed tributary (S24, T84N, R13W)
	Twelvemile Creek	Mouth (S19, T86N, R13W) to confluence with Rock Creek (S23, T86N, R14W)
	Wolf Creek	East county line (S24, T86N, R13W) to west county line (S31, T86N, R16W)
Taylor	East Fork One Hundred Two River	South county line (S31, T67N, R34W) to Hwy. 49 (S1, T69N, R33W)
	East Nodaway River	West county line (S6, T69N, R25W) to north county line (S6, T70N, R35W)
	Platte River	South county line (S28, T67N, R32W) to east county line (S36, T68N, R32W)
	West Branch One Hundred Two River	Mouth (S10, T68N, R35W) to confluence with Middle Branch One Hundred Two River (S6, T69N, R34W)

County	River/Stream	Location
	West Fork One Hundred Two River	South county line (S34, T67N, R35W) to confluence with West Branch One Hundred Two River (S10, T68, R35W)
Union	Platte River	South county line (S31, T71N, R31W) to S2, T73N, R31W
	Thompson River	South county line (S36, T71N, R28W) to north county line (S3, T73N, R29W)
	Threemile Creek	Mouth (S18, T72N, R28W) to confluence with Twomile Creek (S11, T72N, R29W)
	West Branch Creek	North county line (NE 1/4, S3, T73N, R29W) to north county line (NW 1/4, S3, T73N, R29W)
Van Buren	Cedar Creek	East county line (SE 1/4, S12, T70N, R08W) to north county line (S5, T70N, R08W)
	Chequest Creek	Mouth (S27, T69N, R10W) to west county line (S7, T69N, R11W)
	Des Moines River	East county line (S13, T67N, R08W) to west county line (S7, T70N, R11W)
	Fox River	South county line (S17, T67N, R09W) to west county line (S6, T68N, R11W)
	Lick Creek	Mouth (S1, T69N, R10W) to north county line (S5, T70N, R10W)
Wapello	Cedar Creek	East county line (S13, T72N, R12W) to confluence with Spring Creek (S17, T73N, R13W)
	Des Moines River	South county line (S35, T71N, R12W) to west county line (S6, T73N, R15W)
	Muchakinock Creek	Mouth (S6, T73N, R15W) to west county line (S6, T73N, R15W)
	Soap Creek	South county line (S35, T71N, R12W) to south county line (S34, T71N, R12W)
Warren	Badger Creek	Mouth (S33, T77N, R25W) to west county line (S19, T77N, R25W)
	Clanton Creek	Mouth (S28, T76N, R25W) to west county line (S7, T75N, R25W)
	Coal Creek	Mouth (S14, T77N, R22W) to east county line (S12, T76N, R22W)
	Des Moines River	East county line (S12, T77N, R22W) to north county line (S6, T77N, R22W)
	Middle River	Mouth (S9, T77N, R22W) to west county line (S30, T76N, R25W)
	North River	North county line (S2, T77N, R23W) to west county line (S6, T76N, R25W)
	Otter Creek	Mouth (S34, T76N, R23W) to south county line (S32, T74N, R23W)
	South River	Mouth (S12, T77N, R22W) to west county line (S19, T74N, R25W)
	Squaw Creek	Mouth (S2, T75N, R24W) to south county line (S36, T74N, R25W)
	White Breast Creek	East county line (S13, T74N, R22W) to south county line (S35, T74N, R22W)

County	River/Stream	Location
Washington	Camp Creek	Mouth (S17, T77N, R07W) to north line (S33, T77N, R07W)
	Clemons Creek	Mouth (S14, T75N, R08W) to west line (S9, T75N, R08W)
	Crooked Creek	South county line (S31, T74N, R07W) to confluence of East and West Forks (S24, T74N, R07W)
	Dutch Creek	Mouth (S8, T74N, R09W) to south line (S21, T75N, R09W)
	East Fork Crooked Creek	Mouth (S24, T74N, R07W) to south county line (S35, T74N, R06W)
	English River	East county line (S11, T77N, R06W) to north county line (S6, T77N, R09W)
	Goose Creek	East county line (S24, T76N, R06W) to east line (S22, T76N, R06W)
	Honey Creek	Mouth (S9, T74N, R09W) to Lake Darling (S21, T74N, R09W)
	Iowa River	East county line (S36, T77N, R06W) to north county line (S3, T77N, R06W)
	Lime Creek	Mouth (S9, T77N, R08W) to confluence with Smith Creek (S16, T77N, R08W)
	Long Creek	East county line (S25, T75N, R06W) to confluence of North and South Forks (S26, T75N, R06W)
	North Fork Long Creek	Mouth (S26, T75N, R06W) to east line (S3, T75N, R07W)
	Skunk River	South county line (S36, T74N, R08W) to west county line (S6, T74N, R09W)
	Smith Creek	Mouth (S16, T77N, R08W) to west county line (S19, T77N, R09W)
	South English River	Mouth (S6, T77N, R09W) to west county line (S7, T77N, R09W)
	South Fork Long Creek	Mouth (S26, T75N, R06W) to County Road W61 (S4, T75N, R07W)
	West Fork Crooked Creek	Mouth (S24, T74N, R07W) to east line (S28, T76N, R09W)
Williams Creek	Mouth (S31, T74N, R07W) to south county line (S32, T74N, R06W)	
Wayne	Chariton River	East county line (S1, T70N, R20W) to north county line (S1, T70N, R20W)
	South Fork Chariton River	East county line (S36, T70N, R20W) to confluence with Dick Creek (S16, T69N, R22W)
Webster	Boone River	Mouth (S36, T87N, R27W) to east county line (S25, T87N, R27W)
	Brushy Creek	Mouth (S15, T87N, R27W) to north line (S8, T88N, R27W)
	Deer Creek	Mouth (S24, T90N, R29W) to north line (S16, T90N, R29W)
	Des Moines River	South county line (S34, T86N, R27W) to north county line (S6, T90N, R28W)

County	River/Stream	Location
	Lizard Creek	Mouth (S19, T89N, R28W) to west county line (S18, T90N, R30W)
	Prairie Creek	Mouth (S35, T88N, R28W) to west line (S29, T88N, R28W)
	South Branch Lizard Creek	Mouth (S23, T89N, R29W) to west county line (S7, T89N, R30W)
Winnebago	Winnebago River	South county line (S36, T98N, R24W) to north county line (S9, T100N, R23W)
Winneshiek	Bear Creek	East county line (S25, T100N, R07W) to confluence of North and South Bear Creeks (S25, T100N, R07W)
	Canoe Creek	Mouth (S25, T99N, R07W) to west line (S8, T99N, R08W)
	Little Turkey River	South county line (S32, T96N, R10W) to west county line (S30, T96N, R10W)
	North Bear Creek	Mouth (S25, T100N, R07W) to confluence with Middle Bear Creek (S14, T100N, R07W)
	Paint Creek	East county line (S13, T99N, R07W) to west line (S11, T99N, R07W)
	South Bear Creek	Mouth (S25, T100N, R07W) to confluence with unnamed tributary (NW 1/4, S34, T100N, R07W)
	Turkey River	South county line (S34, T96N, R09W) to west county line (S7, T98N, R10W)
	Upper Iowa River	East county line (NE 1/4, NE 1/4, S25, T99N, R07W) to west county line (S7, T100N, R10W)
	Yellow River	East county line (S13, T96N, R07W) to confluence with North Fork Yellow River (S13, T96N, R07W)
Woodbury	Big Sioux River	Mouth (S31, T89N, R47W) to north county line (S3, T89N, R48W)
	Farmers Ditch	Mouth (S32, T86N, R45W) to confluence with Big Whiskey Creek (S31, T88N, R46W)
	Farmers Garretson Outlet Ditch	South county line (S32, T86N, R45W) to confluence with Farmers Ditch (S32, T86N, R45W)
	Floyd River	Mouth (S33, T89N, R47W) to north county line (S6, T89N, R46W)
	Garretson Ditch	Mouth (S32, T86N, R45W) to confluence with Camp Creek (S15, T87N, R46W)
	Haitz Ditch	South county line (S35, T86N, R45W) to confluence with Cottonwood Hollow (S35, T86N, R45W)
	Little Sioux River	South county line (S35, T86N, R44W) to east county line (S12, T89N, R42W)
	Maple River	South county line (S32, T86N, R42W) to east county line (S13, T86N, R42W)
	Missouri River	South county line (S31, T86N, R47W) to confluence with Big Sioux River (S31, T89N, R47W)

County	River/Stream	Location
	Perry Creek	Mouth (S32, T89N, R47W) to north county line (S4, T89N, R47W)
	West Fork Ditch	South county line (S33, T86N, R45W) to confluence with West Fork Little Sioux River (S9, T86N, R45W)
	West Fork Little Sioux River	Confluence with West Fork Ditch (S9, T86N, R45W) to north county line (S2, T89N, R44W)
	Wolf Creek	South county line (S35, T86N, R45W) to confluence with East Fork Wolf Creek (S30, T87N, R44W)
Worth	Beaver Creek	Mouth (S34, T98N, R22W) to Hwy. 9 (S28, T98N, R22W)
	Deer Creek	East county line (S1, T99N, R19W) to County Road S56 (S17, T100N, R19W)
	Elk Creek	Mouth (S27, T99N, R20W) to Hwy. 105 (S5, T99N, R22W)
	Shell Rock River	South county line (S32, T98N, R19W) to north county line (S12, T100N, R21W)
	Willow Creek	Mouth (S32, T98N, R21W) to Hwy. 9 (S20, T98N, R21W)
	Winans Creek	Mouth (S36, T98N, R22W) to Hwy. 9 (S24, T98N, R22W)
	Winnebago River	South county line (SE 1/4, SW 1/4, S32, T98N, R21W) to south county line (S34, T98N, R22W)
Wright	Boone River	South county line (S34, T90N, R26W) to north county line (S2, T93N, R26W)
	Eagle Creek	South county line (S31, T90N, R25W) to County Road R33 (S30, T91N, R25W)
	East Branch Iowa River	Mouth (S19, T93N, R23W) to north county line (S6, T93N, R23W)
	Iowa River	East county line (S13, T90N, R23W) to confluence of East Branch Iowa River and West Branch Iowa River (S19, T93N, R23W)
	Otter Creek	Mouth (S29, T92N, R26W) to west line (S11, T92N, R26W)
	Prairie Creek	Mouth (S30, T93N, R26W) to west county line (S30, T93N, R26W)
	West Branch Iowa River	Mouth (S19, T93N, R23W) to north county line (S2, T93N, R24W)
	White Fox Creek	South county line (S34, T90N, R25W) to County Road R38 (S36, T91N, R25W)

TABLE 2  
Major Water Sources—Lakes

County	Lake	Location
Adair	Greenfield Lake	1 mile Southwest of Greenfield
	Orient Lake	1 mile Southwest of Orient
	Meadow	6 miles Northeast of Greenfield
	Mormon Trail Lake	1½ miles Southeast of Bridgewater
	Nodaway Lake	2 miles Southwest of Greenfield
Adams	Binder Lake	1 mile Northeast of Corning
	Corning Reservoir	North edge of Corning
	Lake Icaria	4 miles North of Corning
Appanoose	Centerville Reservoir (Upper)	Southwest edge of Centerville
	Centerville Reservoir (Lower)	Southwest edge of Centerville
	Mystic Reservoir	½ mile North of Mystic
	Rathbun Reservoir	8 miles Northwest of Centerville
Audubon	Littlefield	4 miles East of Exira
Benton	Hannen Lake	4 miles Southwest of Blairstown
	Rodgers Park Lake	3½ miles Northwest of Vinton
Black Hawk	Alice Wyth Lake	North edge of Waterloo
	Big Woods Lake	Northwest edge of Cedar Falls
	Cedar Falls Reservoir	North edge of Cedar Falls
	East Lake (Quarry Lake)	North edge of Waterloo
	Fisher Lake	North edge of Waterloo
	George Wyth Lake	North edge of Waterloo
	Green Belt Lake	West edge of Waterloo
	Meyer Lake	Evansdale
	Mitchell Lake	Waterloo
North Prairie Lake	Southwest edge of Cedar Falls	
South Prairie Lake	Southwest edge of Cedar Falls	
Boone	Don Williams Lake	5 miles North of Ogden
	Sturtz	3 miles West of Boone
Bremer	Sweet Marsh (Martens Lake)	1 mile East of Tripoli
	Sweet Marsh (A)	2 miles East of Tripoli
	Waverly Impoundment	Waverly
Buchanan	Fontana Mill	½ mile South of Hazelton
	Independence Impoundment	Independence
	Kounty Pond	2½ miles Southeast of Brandon
Buena Vista	Gustafson Lake	1 mile South of Sioux Rapids
	Newell Pit	1½ miles Northwest of Newell
	Pickereel Lake	7 miles Northwest of Marathon
	Storm Lake	South edge of Storm Lake
Calhoun	Calhoun Wildlife Area	4 miles East of Manson
	Hwy. 4 Recreation Area	1 mile South of Rockwell City
	North Twin Lake	6 miles North of Rockwell City
	South Twin Lake	5 miles North of Rockwell City

County	Lake	Location
Carroll	Swan Lake	3 miles Southeast of Carroll
Cass	Cold Springs Lake Lake Anita	1 mile South of Lewis ½ mile South of Anita
Cerro Gordo	Blue Pit Clear Lake Fin and Feather Lake	Southwest edge of Mason City South edge of Clear Lake 3 miles South, 1 mile East of Mason City
Cherokee	Larson Lake Spring Lake	2½ miles East, 2 miles North of Aurelia South edge of Cherokee
Chickasaw	Airport Park Lake Nashua Impoundment Split Rock Park Lake	S35, T96N, R13W Nashua 5 miles Southwest of Fredericksburg

TABLE 4  
Crop Nitrogen Usage Rate Factors

Corn	Zone 1	0.9 lbs/bu	Orchard grass	38.0 lbs/ton
	Zone 2	1.1 lbs/bu	Tall fescue	38.0 lbs/ton
	Zone 3	1.2 lbs/bu	Switch grass	21.0 lbs/ton
Corn silage		7.5 lbs/ton	Vetch	56.0 lbs/ton
Soybeans		3.8 lbs/bu	Red clover	43.0 lbs/ton
Oats		0.75 lbs/bu	Perennial rye grass	24.0 lbs/ton
Alfalfa		50.0 lbs/ton	Timothy	25.0 lbs/ton
Wheat		1.3 lbs/bu	Wheat straw	13.0 lbs/ton
Smooth brome		40.0 lbs/ton	Oat straw	12.0 lbs/ton
Sorghum or Sudan grass		40.0 lbs/ton		

The following map outlines the three zones for the corn nitrogen usage rates indicated in the Table 4. Zone 1 corresponds to the Moody soil association. Zone 2 corresponds to the Marshall, Monona-Ida-Hamburg, and Galva-Primghar-Sac soil associations. Zone 3 corresponds to the remaining soil associations.

TABLE 4a

## Phosphorus Removal for Iowa Crops

Source: PM 1688, General Guide for Crop Nutrient Recommendations in Iowa

CROP	UNITS	P <sub>2</sub> O <sub>5</sub> (pounds/unit)
Corn	bu.	0.375
Corn silage	ton (65% H <sub>2</sub> O)	3.5
Soybeans	bu.	0.8
Alfalfa	ton	12.5
Oat and straw	bu.	0.4
Wheat	bu.	0.6
Smooth brome	ton	9
Orchard grass	ton	14
Tall fescue	ton	12
Switch grass	ton	12
Sorghum-Sudan	ton	12
Vetch	ton	12
Red clover	ton	12
Perennial rye grass	ton	12
Timothy	ton	9
Wheat straw	ton	4
Oat straw	ton	5

TABLE 5  
Manure Production Per Space of Capacity

<u>Swine</u>	<u>Space</u>	<u>Daily</u>		<u>Yearly</u>
		<u>Liquid, Pit* or Basin**</u>	<u>Liquid, Lagoon***</u>	<u>Solid Manure</u>
Nursery, 25 lb.	1 head	0.2 gal	0.7 gal	0.34 tons
Grow-finish, 150 lb.				
Formed storage*				
Dry feeders	1 head	1.2 gal		2.05 tons
Wet/dry feeders	1 head	0.90 gal		2.05 tons
Earthen storage**	1 head	1.2 gal		2.05 tons
Lagoon***	1 head		4.1 gal	2.05 tons
Gestation, 400 lb.	1 head	3.0 gal	3.7 gal	2.77 tons
Sow & Litter, 450 lb.	1 crate	3.5 gal	7.5 gal	6.16 tons
Farrow-nursery	Per sow in breeding herd	2.2 gal	5.4 gal	6.09 tons
Farrow-finish	Per sow in breeding herd	9.4 gal	30 gal	12.25 tons
<u>Dairy, Confined</u>	<u>Space</u>	<u>Liquid, Pit* or Basin**</u>	<u>Liquid, Lagoon***</u>	<u>Solid Manure</u>
Cows, 1200 & up lb.	1 head	18.0 gal	40.1 gal	14 tons
Heifers, 900 lb.	1 head	8.8 gal	29.9 gal	6.5 tons
Calves, 500 lb.	1 head	4.9 gal	16.5 gal	1.5 tons
Veal calves, 250 lb.	1 head	2.5 gal	8.2 gal	1.1 tons
Dairy herd	Per productive cow in herd	18.5 gal	59.8 gal	20 tons
<u>Beef, Confined</u>	<u>Space</u>	<u>Liquid, Pit* or Basin**</u>	<u>Liquid, Lagoon***</u>	<u>Solid Manure</u>
Mature cows, 1000 lb.	1 head	7.2 gal	15.7 gal	12.23 tons
Finishing, 900 lb.	1 head	6.5 gal	13.1 gal	11.00 tons
Feeder calves, 500 lb.	1 head	3.6 gal	7.3 gal	6.11 tons
<u>Poultry</u>	<u>Space</u>			<u>Dry Manure</u>
Layer, cages	1000 head			10.5 tons
Broiler, litter	1000 head			9.00 tons
Turkeys, litter	1000 head			35.00 tons

\* Formed manure storage structure

\*\* Earthen manure storage basin

\*\*\* Anaerobic lagoon

TABLE 6

Required Separation Distances—Swine, Sheep, Horses, Poultry, and Beef and Dairy Cattle

DISTANCES TO BUILDINGS AND PUBLIC USE AREAS				
Type of Structure	Animal Unit (AU) Capacity	Residences, Businesses, Churches, Schools		Public Use Areas
		Unincorporated Areas	Incorporated Areas	
Anaerobic lagoons and uncovered earthen manure storage basins	<1,000 AU	1,875 feet	1,875 feet	1,875 feet
	1,000 to <3,000 AU	2,500 feet	2,500 feet	2,500 feet
	3,000 AU or more	3,000 feet	3,000 feet	3,000 feet
Covered earthen manure storage basins	<1,000 AU	1,250 feet	1,875 feet	1,875 feet
	1,000 to <3,000 AU	1,875 feet	2,500 feet	2,500 feet
	3,000 AU or more	2,375 feet	3,000 feet	3,000 feet
Uncovered formed manure storage structures	<1,000 AU	1,500 feet	1,875 feet	1,875 feet
	1,000 to <3,000 AU	2,000 feet	2,500 feet	2,500 feet
	3,000 AU or more	2,500 feet	3,000 feet	3,000 feet
Confinement buildings and covered formed manure storage structures	<1,000 AU	1,250 feet	1,875 feet	1,875 feet
	1,000 to <3,000 AU	1,875 feet	2,500 feet	2,500 feet
	3,000 AU or more	2,375 feet	3,000 feet	3,000 feet
Egg washwater storage structures	<1,000 AU	1,000 feet	1,875 feet	1,875 feet
	1,000 to <3,000 AU	1,500 feet	2,500 feet	2,500 feet
	3,000 AU or more	2,000 feet	3,000 feet	3,000 feet

DISTANCES TO WELLS				
Type of Structure	Public Well		Private Well	
	Shallow	Deep	Shallow	Deep
Aerobic structure, anaerobic lagoon, earthen manure storage basin, egg washwater storage structure and open feedlot runoff control basin	1,000 feet	400 feet	400 feet	400 feet
Formed manure storage structure, confinement building, open feedlot solids settling facility and open feedlot	200 feet	100 feet	200 feet	100 feet

OTHER DISTANCES FOR ANIMAL FEEDING OPERATION STRUCTURES regardless of animal unit capacity	
Surface intake of an agricultural drainage well or water source other than major (Excluding farm ponds, privately owned lakes or when a secondary containment barrier is provided)	500 feet
Wellhead, cistern of agricultural drainage well, known sinkhole or major water source (Excluding farm ponds, privately owned lakes or when a secondary containment barrier is provided)	1,000 feet
Right-of-way of a thoroughfare maintained by a political subdivision (Excluding small feeding operations)	100 feet

See rule 567 IAC 65.12(455B) for exemptions available from the above distances

TABLE 7

Required Separation Distances—Beef and Dairy Cattle

Rescinded IAB 2/19/03, effective 3/1/03

TABLE 8  
Summary of Credit for Mechanical Aeration

% of Oxygen Supplied	Pounds Volatile Solids per 1000 cubic feet			
	Beef	Other than Beef		
		Daily max in all counties	Less than or equal to 6000 lb vs. daily max	Less than or equal to 6000 lb vs. daily max in counties listed in 65.15(13) "b"(2) above
0-50	10.0	5.0	4.5	4.0
50	12.5	6.3	5.6	5.0
60	13.3	6.6	6.1	5.5

[Editorial change: IAC Supplement 9/24/08]

<sup>1</sup> Effective date of Chapter 65 [DEQ, ch 20] delayed by the Administrative Rules Review Committee until October 25, 1976, pursuant to Iowa Code section 17A.4 amended by S.F. 1288, §8.

<sup>2</sup> Effective date of 65.17(13)“e” delayed 70 days by the Administrative Rules Review Committee at its meeting held August 11, 2004.

At its August 8, 2006, meeting, the Administrative Rules Review Committee voted to object to the provisions of **ARC 5243B\***, rules 567 IAC 65.5(3) and 65.103(5), on the grounds they are beyond the authority delegated to the Department of Natural Resources (Department). This filing was adopted by the Environmental Protection Commission (EPC) and published in IAB Vol. XXIX, No. 2 (7-19-2006). The Committee takes this action pursuant to the authority of Code section 17A.4, subsection 5.

This filing allows the Department to evaluate proposed animal feeding operation sites based on a number of factors that are specifically set out in the rules. After completing its evaluation, the adopted rules authorize the director of the Department to take a variety of actions to condition or deny a construction permit, to modify or disapprove a manure management plan, or to prohibit construction of a proposed confinement feeding operation that is otherwise in compliance with the provisions of Chapter 65 of the EPC rules.

It is the opinion of the Committee that Code chapters 459 and 459A establish the procedures and standards relating to the issuance of construction permits and the approval of manure management plans, and that the Department does not have authority to create additional procedures and standards by rule. The master matrix was created by Code section 459.305 in order "...to provide a *comprehensive* [emphasis added] assessment mechanism in order to produce a statistically verifiable basis for determining whether to approve or disapprove an application for the construction, including expansion, of a confinement feeding operation structure..." Section 459.305, subsection 1, paragraph "a", further states:

"The master matrix shall be used to establish conditions for the construction of a confinement feeding operation structure and for the implementation of manure management practices, which conditions shall be included in the approval of the construction permit or the original manure management plan as applicable."

The Committee believes this statutory language demonstrates a clear legislative intent that the matrix is the exclusive mechanism for the evaluation and approval of an application for the construction or expansion of a confinement feeding operation structure and for the implementation of manure management practices.

\*Objection to 567 IAC 65.5(3) and 65.103(5) filed October 10, 2006.

CHAPTER 66  
PESTICIDE APPLICATION TO WATERS

**567—66.1(455B) Aquatic pesticide.**

**66.1(1) *Prohibited discharges.*** Pesticides, including aquatic pesticides, shall not be applied to any water of the state designated in 567—subrule 61.3(5) as Class “A,” Class “C,” high quality, or high quality resource except as provided in 66.1(2).

**66.1(2) *Allowable applications.*** Aquatic pesticides may be applied to any water of the state designated in 567—subrule 61.3(5) as Class “A,” Class “C,” high quality, or high quality resource provided that the applicator has a valid Category 5—aquatic pest control certification from the department of agriculture and land stewardship pursuant to 21—paragraph 45.22(2)“c,” and has received a permit from the department in accordance with these rules.

**66.1(3) *Requirements to obtain a permit to apply an aquatic pesticide.*** The following information shall be submitted to the department to obtain the necessary permit for application of an aquatic pesticide. The information must be submitted on department Form 542-1409 entitled “Aquatic Pesticide Application to Prohibited Waters — Permit Application Form.” The form is available from the department. The completed application form shall be filed with the department at least 90 days prior to the anticipated period of aquatic pesticide application. The permit shall be issued for the period of time requested in the application, or such period of time as the department deems appropriate under the circumstances, but in no case shall the permit be valid for longer than the calendar year in which it was issued.

*a.* The applicator’s name, address, telephone number, and the Department of Agriculture and Land Stewardship (DALSS) certification number or a copy of the certificate; and

*b.* The purpose or objective of applying the aquatic pesticide; and

*c.* The name, exact location, and extent of the body of water where the aquatic pesticide or aquatic pesticides shall be applied, the beginning period and frequency of application, and the rate of aquatic pesticide application; and

*d.* The brand name of the aquatic pesticide, the aquatic pesticide manufacturer, the Environmental Protection Agency registration number, and a listing and percentage by weight of the active ingredient to be applied; and

*e.* The name and location of known public and private water supplies within 2000 feet, and public and private wells within 50 feet of the application area; and

*f.* A sketch of the application area and important physical features within 2000 feet of the application area; and

*g.* The applicant’s signature and date of filing the application form.

**66.1(4) *Basis for permit denial.*** A permit shall be denied if any of the following conditions are found to be applicable.

*a.* Water quality data show a water quality standards violation for the aquatic pesticide, or its ingredients, within the same lake, wetland or reservoir as the requested area for aquatic pesticide application, or downstream of the requested area for aquatic pesticide application; or

*b.* Water quality testing by a public or private water supply or by the department has found quantifiable levels of the aquatic pesticide in its raw or finished water within the last four years. The testing would be applicable if conducted within the same lake, wetland or reservoir as the requested area for aquatic pesticide application or if conducted downstream of the requested area for aquatic pesticide application; or

*c.* The applicator does not possess a current Category 5—aquatic pest control certificate from DALSS; or

*d.* The requested application of aquatic pesticide is not following label instructions for use of the aquatic pesticide; or

*e.* The active or inactive ingredients in the aquatic pesticide are regulated under the Safe Drinking Water Act (SDWA); or

*f.* A public or private water supply intake is within 2000 feet of the requested area of the aquatic pesticide application in a lake, reservoir, or wetland, or the public or private water supply intake is within 100 feet upstream or 2000 feet downstream of the requested area of the aquatic pesticide application in a river or stream; or

*g.* A shallow well, as defined in rule 567—40.2(455B), is located within 50 feet of the aquatic pesticide application area.

**66.1(5)** *Special considerations.* The conditions for a permit denial, 66.1(4) “*b*” (as it applies to quantifiable levels of copper only), “*e*,” “*f*,” and “*g*,” may be waived and a permit issued when the permit is being requested by the impacted water purveyor to correct or control water quality problems within the water supply or system.

The condition for a permit denial, 66.1(4) “*e*,” may be waived and a permit issued when the permit is being requested for application of an aquatic pesticide to a water body which is not designated Class “*C*,” but is designated Class “*A*,” high quality, or high quality resource.

This chapter is intended to implement Iowa Code section 455B.186.

[Filed 5/24/91, Notice 3/20/91—published 6/12/91, effective 7/17/91]

CHAPTER 67  
STANDARDS FOR THE LAND APPLICATION OF SEWAGE SLUDGE

**567—67.1(455B) Land application of sewage sludge.**

**67.1(1) General.** This chapter establishes standards for the land application of sewage sludge generated during the treatment of domestic sewage in a treatment works. This chapter applies to any person who prepares sewage sludge (generator), to any person who applies sewage sludge to the land (applicator), and to sewage sludge applied to the land. No person shall land apply sewage sludge through any practice for which requirements are established in this chapter except in accordance with such requirements.

In areas that are not specifically addressed in this chapter, but which are addressed in federal regulations at 40 CFR Part 503 as amended through August 4, 1999, the federal regulations shall apply under this rule and are hereby adopted by reference under this chapter.

On a case-by-case basis, this department may impose requirements for the land application of sewage sludge in addition to or more stringent than the requirements in this chapter when necessary to protect public health and the environment from any adverse effect of a pollutant in the sewage sludge.

**67.1(2)** Sewage sludge generators shall ensure that the applicable requirements in this chapter are met when the sewage sludge is applied to the land.

If the sewage sludge generator determines that a person being supplied sewage sludge for land application is not complying with applicable requirements of the land application program, the generator shall work with the applicator to obtain compliance with the requirements. If subsequent compliance cannot be achieved, the generator shall not supply additional sewage sludge to the applicator.

**567—67.2(455B) Exclusions.** This chapter does not establish requirements for the land application of the following solid wastes.

**67.2(1)** Sludge generated at an industrial facility.

**67.2(2)** Hazardous sewage sludge—sewage sludge determined to be hazardous in accordance with 40 CFR Part 261.

**67.2(3)** Sewage sludge with a PCB concentration of 50 mg/kg or higher.

**67.2(4)** Incinerator ash.

**67.2(5)** Grit and screenings.

**67.2(6)** Drinking water treatment sludge.

**567—67.3(455B) Sampling and analysis.** Any sewage sludge generator who intends to land apply sewage sludge shall:

**67.3(1)** Sample and analyze the waste to determine whether it meets the criteria for sewage sludge Class I, II, or III.

**67.3(2)** Analyze the waste to determine if any sources exist which may contribute significant quantities of potentially hazardous chemicals or other toxic substances. If any are found, the generator shall inform the department of their presence and shall analyze the waste for chemicals or substances in accordance with guidelines provided by the department.

**67.3(3)** Unless rules for specific programs under USEPA or department authority provide otherwise, or unless other methods are approved by the department for a specific situation, samples taken and analyses made to document contamination under this chapter shall be conducted in accordance with the methods described in 567—67.10(455B).

**567—67.4(455B) Land application program.** All sewage sludge generators wishing to land apply sewage sludge shall establish and maintain in writing a long-range program for land application of sewage sludge. This program shall be developed for a minimum period of five years and shall be updated annually. A copy of this program shall be available at the facility for inspection by the department. At a minimum this program shall contain the following information in detail for the next calendar year and in general terms for the following four years. The plan shall include but not be limited to the following:

**67.4(1)** An outline of the sewage sludge sampling schedule and procedures which will be followed to ensure that the sewage sludge being applied to land continues to meet the requirements.

**67.4(2)** A determination of the amount of land required to allow land application to be conducted in accordance with the requirements.

**67.4(3)** Identification of the land and application methods which will be used for land application of the sewage sludge. Those areas and application methods shall be selected as necessary to ensure that land application can be conducted in accordance with the requirements.

**67.4(4)** The names of the owners and operators of all land to be used for land application, and identification of any legal arrangements made relative to use of these areas. The programs should also outline any restrictions or special conditions which exist regarding use of these areas for land application of sewage sludge.

**67.4(5)** An overall schedule for the land application of sewage sludge. This schedule should indicate the areas being used, the time of year that land application on each area will be conducted, and the proposed application rates for each area.

**67.4(6)** A determination of the types and capacities of the equipment required for land application of sewage sludge in accordance with the developed application schedule. The program shall also outline how the required application equipment will be made available and who will be responsible for conducting land application operations.

**67.4(7)** A determination of the volumes and types of storage and handling facilities required to allow land application of sewage sludge to be conducted in accordance with the land application schedule. The program shall also outline how any required additional sludge storage or handling facilities will be provided.

**67.4(8)** A plan to construct or obtain any additional sludge storage, handling or application facilities or equipment which are required by the land application program.

**567—67.5(455B) Special definitions.**

*“Agronomic rate”* is the whole sludge application rate designed to provide the amount of nitrogen needed by the crop grown on the land and to minimize the amount of nitrogen that passes to the groundwater.

*“Annual whole sludge application rate”* is the maximum amount of sewage sludge (dry weight basis) that can be applied to a unit area of land during a 365-day period.

*“Bulk sewage sludge”* is sewage sludge that is not sold or given away in a bag or other container for application to the land.

*“Cumulative pollutant loading rate”* is the maximum amount of an inorganic pollutant that can be applied to an area of land.

*“Dry weight basis”* means calculated on the basis of having been dried at 105 degrees Celsius until reaching a constant mass (i.e., essentially 100 percent solids content).

*“Food crops”* are crops consumed by humans. These include, but are not limited to, fruits, vegetables, and tobacco.

*“Land with a high potential for public exposure”* is land that the public uses frequently. This includes, but is not limited to, a public contact site and a reclamation site located in a populated area (e.g., a construction site located in a city).

*“Land with a low potential for public exposure”* is land that the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area (e.g., a strip mine located in a rural area).

*“Person who prepares sewage sludge”* is either the person who generates sewage sludge during the treatment of domestic sewage in a treatment works or the person who derives a material from sewage sludge.

*“Sewage sludge”* is solid, semisolid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge does not include the grit and screenings generated during preliminary treatment.

**567—67.6(455B) Permit requirements.** Prior to any land application of sewage sludge, a permit must be obtained by the sewage sludge generator in accordance with the following requirements:

**67.6(1)** Any treatment facility proposing to land apply sewage sludge shall apply for a permit for land application of sewage sludge on a properly completed form supplied by the department. Application forms may be obtained from:

Environmental Services Division  
Iowa Department of Natural Resources  
Wallace State Office Building  
502 East 9th Street  
Des Moines, Iowa 50319  
<http://www.iowadnr.gov/>

Properly completed forms should be submitted in accordance with the instructions for the form.

*a.* Permit application for land application of sewage sludge from new facilities shall be filed at least 180 days prior to the date operation is scheduled to begin unless a shorter period of time is approved by the department.

*b.* Existing facilities generating sewage sludge shall file an application for land application of sewage sludge within 90 days of September 21, 1994, or at least 180 days prior to the expiration of any state operation or NPDES permit issued to the facility pursuant to 567—64.3(455B) or 567—64.4(455B), whichever date is later.

*c.* Sewage sludge disposal operations which are not regulated under 567—Chapter 64 shall apply for a permit for land application of sewage sludge no later than 90 days after September 21, 1994.

**67.6(2)** The permit for land application of sewage sludge for any sewage sludge generating facility will be issued concurrently and as part of a state operation permit or NPDES permit. The issuance process and permit terms will be the same as that specified for NPDES permits in 567—Chapter 64.

**567—67.7(455B) Land application requirements for Class I sewage sludge.**

**67.7(1) Class I sludge criteria.** Class I sludge is sewage sludge that has excellent quality and has been treated in a process equivalent to processes to further reduce pathogens (PFRP).

*a.* The concentration of each pollutant in the sewage sludge shall not exceed the concentration for the pollutant in Table 1.

TABLE 1—POLLUTANT CONCENTRATIONS

<u>Pollutant</u>	<u>Monthly Average Concentration</u> <u>milligrams per kilogram*</u>
Arsenic	41
Cadmium	39
Copper	1500
Lead	300
Mercury	17
Nickel	420
Selenium	100
Zinc	2800

\*Dry weight basis

*b.* One of the monitoring processes in (1) below and also one of the analytical and treatment processes in (2) below shall be met for a sewage sludge to be classified as Class I sludge.

(1) Monitoring processes.

1. The density of fecal coliform in the sewage sludge shall be less than 1000 Most Probable Number per gram of total solids (dry weight basis).

2. The density of *Salmonella* sp. bacteria in the sewage sludge shall be less than three Most Probable Number per four grams of total solids (dry weight basis).

(2) Analytical and treatment processes.

1. The density of enteric viruses in the sewage sludge shall be less than one Plaque-forming Unit per four grams of total solids (dry weight basis).

2. The density of viable helminth ova in the sewage sludge shall be less than one per four grams of total solids (dry weight basis).

3. Sewage sludge shall be treated in one of the Processes to Further Reduce Pathogens (PFRP) described in 567—67.11(455B).

4. Sewage sludge shall be treated in a process that is equivalent to a Process to Further Reduce Pathogens (PFRP), as determined by the department.

c. One of the vector attraction reduction requirements shall be met for a sewage sludge to be classified as Class I sludge.

(1) The mass of volatile solids in the sewage sludge shall be reduced by a minimum of 38 percent.

(2) The specific oxygen uptake rate (SOUR) for sewage sludge treated in an aerobic process shall be equal to or less than 1.5 milligrams of oxygen per hour per gram of total solids (dry weight basis) at a temperature of 20 degrees Celsius.

(3) Digest a portion of the previously anaerobically digested sewage sludge anaerobically in the laboratory in a bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees Celsius. At the end of the 40 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 17 percent.

(4) Digest a portion of the previously aerobically digested sewage sludge that has a percent solids of 2 percent or less aerobically in the laboratory in a bench-scale unit for 30 additional days at 20 degrees Celsius. At the end of the 30 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 15 percent.

(5) Sewage sludge shall be treated in an aerobic process for 14 days or longer. During that time, the temperature of the sewage sludge shall be higher than 40 degrees Celsius and the average temperature of the sewage sludge shall be higher than 45 degrees Celsius.

(6) The pH of sewage sludge shall be raised to 12 or higher by alkali addition and, without the addition of more alkali, shall remain at 12 or higher for 2 hours and then at 11.5 or higher for an additional 22 hours.

(7) Sewage sludge shall be injected below the surface of the land and no significant amount of the sewage sludge shall be present on the land surface within one hour after the sewage sludge is injected.

(8) Sewage sludge applied to the land surface or placed on a surface disposal site shall be incorporated into the soil within six hours after application to or placement on the land.

**67.7(2) Management practices for Class I sewage sludge.**

a. Only Class I sewage sludge can be applied to a lawn or a home garden.

b. Sewage sludge shall not be applied to land that is 35 feet or less from an open waterway.

c. Sewage sludge shall be applied to the land at an annual whole sludge application rate that is equal to or less than the agronomic nitrogen uptake rate, unless otherwise specified by the department.

d. An information sheet shall be provided to the person who receives sewage sludge sold or given away in a container for application to the land. The label or information sheet shall contain the following information:

(1) The name and address of the sewage sludge generator.

(2) A statement that application of the sewage sludge to the land is prohibited except in accordance with the instructions on the information sheet.

(3) The annual application rate for the sewage sludge.

**67.7(3) Frequency of monitoring for Class I sewage sludge.**

a. The frequency of monitoring for the pollutants listed in Table 1, the pathogen density requirements, and the vector attraction reduction requirements shall be the frequency stated in Table 2.

TABLE 2—FREQUENCY OF MONITORING

Amount of sewage sludge metric tons per 365-day period dry weight basis	Monitoring Frequency
Greater than zero but less than 290 (or 325 English ton)	once per year
Equal to or greater than 290 but less than 1,500 (English ton 325 to 1,680)	once per quarter (4 times per year)
Equal to or greater than 1,500 but less than 15,000 (English ton 1,680 to 16,800)	once per 60 days (6 times per year)
Equal to or greater than 15,000 (or 16,800 English ton)	once per month (12 times per year)

*b.* After the sewage sludge has been monitored for two years, the department may reduce the frequency of monitoring, but in no case shall the frequency of monitoring be less than once per year when sewage sludge is applied to the land.

**67.7(4) Record keeping for Class I sewage sludge.**

*a.* Both the generator and bulk sludge applicator of Class I sewage sludge shall develop the following information and shall retain the information for five years:

- (1) The concentration of each pollutant listed in Table 1 in the sewage sludge.
- (2) The following certification statement: "I certify, under penalty of law, that the Class I sewage sludge requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
- (3) A description of how the Processes to Further Reduce Pathogens requirements (PFRP) are met.
- (4) A description of how one of the vector attraction reduction requirements is met.
- (5) A description of how the management practices are met for each site.

*b.* Treatment works with a design flow rate of 1 million gallons per day or greater and treatment works that serve 10,000 people or more shall submit the above information to the department by February 19 of each year for the previous calendar year.

**567—67.8(455B) Land application requirements for Class II sewage sludge.**

**67.8(1) Class II sludge criteria.** Class II sludge is sewage sludge that has normal quality and has been treated in a process equivalent to Processes to Significantly Reduce Pathogens (PSRP).

*a.* The concentration of any pollutant in the sewage sludge shall not exceed the ceiling concentration for the pollutant in Table 3.

TABLE 3—CEILING CONCENTRATIONS

<u>Pollutant</u>	<u>Ceiling Concentration milligrams per kilogram*</u>
Arsenic	75
Cadmium	85
Copper	4300
Lead	840

<u>Pollutant</u>	<u>Ceiling Concentration milligrams per kilogram*</u>
Mercury	57
Molybdenum	75
Nickel	420
Selenium	100
Zinc	7500

\*Dry weight basis

*b.* One of the following Processes to Significantly Reduce Pathogens requirements (PSRP) shall be met for a sewage sludge to be classified as Class II sludge.

(1) Seven samples of the sewage sludge shall be collected at the time the sewage sludge is disposed, and the geometric mean of the density of fecal coliform shall be less than 2,000,000 Most Probable Number per gram of total solids (dry weight basis).

(2) Sewage sludge shall be treated in one of the Processes to Significantly Reduce Pathogens (PSRP) described in 567—67.11(455B).

(3) Sewage sludge shall be treated in a process that is equivalent to a Process to Significantly Reduce Pathogens (PSRP), as determined by the department.

*c.* One of the vector attraction reduction requirements shall be met for a sewage sludge to be classified as Class II sludge.

(1) The mass of volatile solids in the sewage sludge shall be reduced by a minimum of 38 percent.

(2) The specific oxygen uptake rate (SOUR) for sewage sludge treated in an aerobic process shall be equal to or less than 1.5 milligrams of oxygen per hour per gram of total solids (dry weight basis) at a temperature of 20 degrees Celsius.

(3) Digest a portion of the previously anaerobically digested sewage sludge anaerobically in the laboratory in a bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees Celsius. At the end of the 40 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 17 percent.

(4) Digest a portion of the previously aerobically digested sewage sludge that has a percent solids of 2 percent or less aerobically in the laboratory in a bench-scale unit for 30 additional days at 20 degrees Celsius. At the end of the 30 days, the volatile solids in the sewage sludge at the beginning of that period is reduced by less than 15 percent.

(5) Sewage sludge shall be treated in an aerobic process for 14 days or longer. During that time, the temperature of the sewage sludge shall be higher than 40 degrees Celsius and the average temperature of the sewage sludge shall be higher than 45 degrees Celsius.

(6) The pH of sewage sludge shall be raised to 12 or higher by alkali addition and, without the addition of more alkali, shall remain at 12 or higher for 2 hours and then at 11.5 or higher for an additional 22 hours.

(7) Sewage sludge shall be injected below the surface of the land and no significant amount of the sewage sludge shall be present on the land surface within one hour after the sewage sludge is injected.

(8) Sewage sludge applied to the land surface or placed on a surface disposal site shall be incorporated into the soil within six hours after application to or placement on the land.

**67.8(2) Management practices for Class II sewage sludge.**

*a.* Class II sewage sludge shall not be applied to a lawn or a home garden.

*b.* Land application sites accepting Class II sewage sludge not meeting pollutant concentrations listed in Table 1 of subrule 67.7(1) are subject to the cumulative pollutant loading rates listed in Table 4.

TABLE 4—CUMULATIVE POLLUTANT LOADING RATES

<u>Pollutant</u>	<u>Cumulative Pollutant kilograms per hectare</u>	<u>Loading Rate pounds per acre</u>
Arsenic	41	36
Cadmium	39	34
Copper	1500	1335
Lead	300	267
Mercury	17	15
Nickel	420	373
Selenium	100	89
Zinc	2800	2490

*c.* Sewage sludge shall not be applied to the land if it is likely to adversely affect a threatened or endangered species listed under section 4 of the Endangered Species Act or its designated critical habitat.

*d.* Sewage sludge shall be applied to the land at an annual whole sludge application rate that is equal to or less than the agronomic nitrogen uptake rate, unless otherwise specified by the department.

*e.* The sewage sludge shall be applied only to soils classified as acceptable throughout the top 5 feet of soil profile. The sewage sludge shall not be applied to soils classified as sand, loamy sand and silt. The acceptability of a soil shall be determined using the USDA soil classifications.

*f.* Land application sites shall have soil pH maintained above 6.0, unless (1) crops prefer soils with lower pH conditions, (2) the sludge meets the pollution concentrations contained in Table 1, or (3) the site does not exceed calcium carbonate equivalent levels according to sound farm management practices. If the soil pH is below 6.0, it is acceptable to use agricultural lime to increase the pH to an acceptable level.

*g.* If the sewage sludge is applied to land on which the soil loss exceeds the soil loss limits established by the county soil conservation district, the sewage sludge shall be injected on the contour or shall be applied to the surface and mechanically incorporated into soil within 48 hours of application. The sewage sludge shall not be applied to ground having greater than 9 percent slope unless approved by the department.

*h.* Sewage sludge application on frozen or snow-covered ground should be avoided, unless special precautions are taken such as proven farm management practices to avoid runoff. If application on frozen or snow-covered ground is necessary, it shall be limited to land areas of less than 5 percent slope unless approved by the department.

*i.* Sewage sludge shall not be applied to the land that is 35 feet or less from an open waterway. If sewage sludge is applied within 200 feet, but no closer than 35 feet, of a stream, lake, sinkhole or tile line surface intake located downgradient of the land application site, it shall be injected or applied to the surface and mechanically incorporated into the soil within 48 hours of application unless approved by the department.

*j.* If the sewage sludge is applied to land subject to flooding more frequently than once in ten years, the sludge shall be injected or shall be applied to the surface and mechanically incorporated into the soil within 48 hours. Information on which land is subject to flooding more frequently than once in ten years is available from the department.

*k.* Sewage sludge shall not be applied within 200 feet of an occupied residence or any well. Distances may be reduced to a minimum of 35 feet with the written agreement of both the owner and occupant and an approved farm management plan which addresses soil erodibility, harvest residuals, buffer strips, and other sound farm management practices. The farm management plan shall be approved by the local soil conservation district commission in accordance with rules implementing Iowa Code sections 161A.42 to 161A.51.

*l.* Food crops with harvested parts that touch the sewage sludge/soil mixture shall not be harvested for 38 months after application of sewage sludge.

*m.* Food crops, feed crops and fiber crops shall not be harvested for 30 days after application of sewage sludge.

*n.* Animals shall not be allowed to graze on the land for 30 days after application of sewage sludge.

*o.* Turf grown on land where sewage sludge is applied shall not be harvested for one year after application of the sewage sludge when the harvested turf is placed on either land with a high potential for public exposure or a lawn, unless otherwise specified by the department.

*p.* Public access to land with a high potential for public exposure shall be restricted for one year after application of sewage sludge.

*q.* Public access to land with a low potential for public exposure shall be restricted for 30 days after application of sewage sludge.

*r.* When required by the director, groundwater monitoring wells and surface monitoring points shall be installed and a monitoring program implemented. Samples must be analyzed by a laboratory which is equipped and competent to perform the tests required by the director. The results shall be forwarded to the department on a stipulated schedule.

*s.* The sewage sludge generator shall provide the notice and necessary information to comply with the requirements to the sewage sludge applicator and landowner.

*t.* The sewage sludge applicator shall provide written notice, prior to the initial application of sewage sludge, to the department. The notice shall include:

(1) The location, by legal description, of the land application site and the landowner.

(2) The name, address, telephone number, and National Pollutant Discharge Elimination System permit number (if appropriate) of the sewage sludge generator and the applicator.

**67.8(3)** *Frequency of monitoring for Class II sewage sludge.*

*a.* The frequency of monitoring for the pollutants listed in Table 3, the pathogen density requirements, and the vector attraction reduction requirements shall be at the frequency stated in Table 5.

TABLE 5—FREQUENCY OF MONITORING

Amount of sewage sludge metric tons per 365-day period dry weight basis	Monitoring Frequency
Greater than zero but less than 290 (or 325 English ton)	once per year
Equal to or greater than 290 but less than 1,500 (English ton 325 to 1,680)	once per quarter (4 times per year)
Equal to or greater than 1,500 but less than 15,000 (English ton 1,680 to 16,800)	once per 60 days (6 times per year)
Equal to or greater than 15,000 (or 16,800 English ton)	once per month (12 times per year)

*b.* After the sewage sludge has been monitored for two years, the department may reduce the frequency of monitoring, but in no case shall the frequency of monitoring be less than once per year when sewage sludge is applied to the land.

**67.8(4) Record keeping for Class II sewage sludge.**

a. Both the generator and applicator of Class II sewage sludge shall develop the following information and shall retain the information for five years:

- (1) The concentration of each pollutant listed in Table 3 in the sewage sludge.
- (2) The following certification statement: "I certify, under penalty of law, that the Class II sewage sludge requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
- (3) A description of how the Processes to Significantly Reduce Pathogens (PSRP) requirements are met.
- (4) A description of how the vector attraction reduction requirements are met.
- (5) A description of how the management practices for Class II sewage sludge are met for each site.
- (6) The location and area of each site.
- (7) The date and time and amount of sewage sludge applied to each site.
- (8) If subjected to cumulative loading limits, the amount and cumulative amount of each pollutant listed in Table 4 of paragraph 67.8(2) "b" in the sewage sludge applied to each site.
- (9) The amount of sewage sludge (i.e., metric tons) applied to each site.

b. Treatment works with a design flow rate of 1 million gallons per day or greater and treatment works that serve 10,000 people or more shall submit the above information to the department by February 19 of each year for the previous calendar year.

**567—67.9(455B) Class III sewage sludge.**

**67.9(1)** Class III sewage sludge is any sewage sludge that cannot meet either Class I sewage sludge criteria or Class II sewage sludge criteria.

**67.9(2)** Class III sewage sludge shall not be utilized for beneficial use for land application as specified in the chapter.

**67.9(3)** Class III sewage sludge shall be disposed according to the surface disposal subpart of the 40 CFR Part 503 regulation and 567—103.6(455B) or the incineration subpart of the 40 CFR Part 503 regulation.

**567—67.10(455B) Sampling and analytical methods.**

**67.10(1) General.** Representative samples of sewage sludge that are applied to the land shall be collected and analyzed. Methods listed below shall be used to analyze samples of sewage sludge and calculation procedures shall be used to calculate the percent of volatile solids reduction for sewage sludge.

**67.10(2) Enteric viruses.** ASTM Designation: D 4994-89, "Standard Practice for Recovery of Viruses From Wastewater Sludges," Annual Book of ASTM Standards: Section 11 - Water and Environmental Technology, ASTM, Philadelphia, PA, 1992.

**67.10(3) Fecal coliform.** Part 9221 E. or Part 9222 D., "Standard Methods for the Examination of Water and Wastewater," 18th Edition, American Public Health Association, Washington, D.C., 1992.

**67.10(4) Helminth ova.** Yanko, W.A., "Occurrence of Pathogens in Distribution and Marketing Municipal Sludges," EPA 600/1-87-014, 1987. PB 88-154273/AS, National Technical Information Service, Springfield, Virginia.

**67.10(5) Inorganic pollutants.** "Test Methods for Evaluating Solid Waste, Physical/ Chemical Methods," EPA Publication SW-846, Second Edition (1982) with Updates I and II and Third Edition (1986) with Revision I. Second Edition - PB87-120-291, National Technical Information Service, Springfield, Virginia. Third Edition-Document number 955-001-00000-1, Superintendent of Documents, Government Printing Office, Washington, D.C.

**67.10(6) Salmonella sp. bacteria.** Part 9260 D., "Standard Methods for the Examination of Water and Wastewater," 18th Edition, American Public Health Association, Washington, D.C., 1992; or Kenner, B.A. and H.P. Clark, "Detection and Enumeration of Salmonella and Pseudomonas aeruginosa," J. Water Pollution Control Federation, 46(9):2163-2171, 1974.

**67.10(7) Specific oxygen uptake rate.** Part 2710 B., “Standard Methods for the Examination of Water and Wastewater,” 18th Edition, American Public Health Association, Washington, D.C. 1992.

**67.10(8) Total, fixed, and volatile solids.** Part 2540 G., “Standard Methods for the Examination of Water and Wastewater,” 18th Edition, American Public Health Association, Washington, D.C., 1992.

**67.10(9) Percent volatile solids reduction calculation.** “Environmental Regulations and Technology - Control of Pathogens and Vectors in Sewage Sludge,” EPA-625/R-92/013, U.S. Environmental Protection Agency, Cincinnati, Ohio, 1992.

**567—67.11(455B) Pathogen treatment processes.**

**67.11(1) Processes to significantly reduce pathogens (PSRP).**

a. *Aerobic digestion.* Sewage sludge is agitated with air or oxygen to maintain aerobic conditions for a specific mean cell residence time at a specific temperature. Values for the mean cell residence time and temperature shall be between 40 days at 20 degrees Celsius and 60 days at 15 degrees Celsius.

b. *Air drying.* Sewage sludge is dried on sand beds or on paved or unpaved basins. The sewage sludge dries for a minimum of three months. During two of the three months, the ambient average daily temperature is above zero degrees Celsius.

c. *Anaerobic digestion.* Sewage sludge is treated in the absence of air for a specific mean cell residence time at a specific temperature. Values for the mean cell residence time and temperature shall be between 15 days at 35 to 55 degrees Celsius and 60 days at 20 degrees Celsius.

d. *Composting.* Using either the within-vessel, static aerated pile, or windrow composting methods, the temperature of the sewage sludge is raised to 40 degrees Celsius or higher and remains at 40 degrees Celsius or higher for five days. For four hours during the five days, the temperature in the compost pile exceeds 55 degrees Celsius.

e. *Lime stabilization.* Sufficient lime is added to the sewage sludge to raise the pH of the sewage sludge to 12 after two hours of contact.

**67.11(2) Processes to further reduce pathogens (PFRP).**

a. *Composting.* Using either the within-vessel composting method or the static aerated pile composting method, the temperature of the sewage sludge is maintained at 55 degrees Celsius or higher for three days.

Using the windrow composting method, the temperature of the sewage sludge is maintained at 55 degrees Celsius or higher for 15 days or longer. During the period when the compost is maintained at 55 degrees Celsius or higher, there shall be a minimum of five turnings of the windrow.

b. *Heat drying.* Sewage sludge is dried by direct or indirect contact with hot gases to reduce the moisture content of the sewage sludge to 10 percent or lower. Either the temperature of the sewage sludge particles exceeds 80 degrees Celsius or the wet bulb temperature of the gas in contact with the sewage sludge as the sewage sludge leaves the dryer exceeds 80 degrees Celsius.

c. *Heat treatment.* Liquid sewage sludge is heated to a temperature of 180 degrees Celsius or higher for 30 minutes.

d. *Thermophilic aerobic digestion.* Liquid sewage sludge is agitated with air or oxygen to maintain aerobic conditions and the mean cell residence time of the sewage sludge is ten days at 55 to 60 degrees Celsius.

e. *Beta ray irradiation.* Sewage sludge is irradiated with beta rays from an accelerator at dosages of at least 1.0 megarad at room temperature (ca. 20 degrees Celsius).

f. *Gamma ray irradiation.* Sewage sludge is irradiated with gamma rays from certain isotopes, such as Cobalt 60 and Cesium 137, at room temperature (ca. 20 degrees Celsius).

g. *Pasteurization.* The temperature of the sewage sludge is maintained at 70 degrees Celsius or higher for 30 minutes or longer.

*h. Lime treatment.*

(1) The pH of the sewage that is used or disposed shall be raised to above 12 and shall remain above 12 for 72 hours.

(2) The temperature of the sewage sludge shall be above 52 degrees Celsius for 12 hours or longer during the period that the pH of the sewage sludge is above 12.

(3) At the end of the 72-hour period during which the pH of the sewage sludge is above 12, the sewage sludge shall be air dried to achieve a percent solids in the sewage sludge greater than 50 percent.

These rules are intended to implement Iowa Code section 455B.174.

[Filed 7/29/94, Notice 3/16/94—published 8/17/94, effective 9/21/94]

[Filed 3/8/07, Notice 1/3/07—published 3/28/07, effective 5/2/07]

CHAPTER 68  
COMMERCIAL SEPTIC TANK CLEANERS

**567—68.1(455B) Purpose and applicability.** The purpose of this chapter is to implement Iowa Code subsection 455B.172(5) by providing standards for the commercial cleaning of and the disposal of waste from private sewage disposal systems and by providing licensing requirements and procedures. These rules govern the commercial cleaning of and the disposal of wastes from private sewage disposal systems.

**567—68.2(455B) Definitions.** For purposes of this chapter, the following terms shall have the meanings indicated:

“*Cleaning*” means removal of waste from private sewage disposal systems and other actions incidental to that removal.

“*Commercial septic tank cleaner*” means a person or firm engaged in the business of cleaning and disposing of waste from private sewage disposal systems, including a person or firm that owns and rents or leases portable toilets.

“*Department*” means the Iowa department of natural resources.

“*Holding tank for waste*” means any receptacle for the retention or storage of waste pending removal for further treatment or disposal.

“*Private sewage disposal systems*” means a system which provides for the treatment or disposal of domestic sewage from four or fewer dwelling units or the equivalent of fewer than 16 individuals on a continuing basis. “Private sewage disposal systems” includes, but is not limited to, septic tanks as defined in 567—subrule 69.1(2); holding tanks for waste; and impervious vault toilets, portable toilets, and chemical toilets as described in 567—69.15(455B).

“*Septage*” means the liquid and solid material pumped from a septic tank, cesspool, or similar domestic sewage treatment system, or from a holding tank, when the system is cleaned or maintained.

“*Tank*” means any container which is placed on a vehicle to transport waste removed from a private waste facility.

“*Toilet unit*” means a portable or fixed tank or vessel holding untreated human waste without secondary wastewater treatment which is emptied for disposal. “Toilet unit” does not include a portable or fixed tank or vessel holding untreated human waste that is part of a recreational vehicle or marine vessel.

“*Vehicle*” means a device used to transport a tank, including a trailer.

“*Waste*” means human or animal excreta, water, scum, sludge, septage, and grease solids from private sewage disposal.

**567—68.3(455B) Licensing requirements.** Commercial septic tank cleaners must annually apply for and obtain a license from the department before engaging in the commercial cleaning of and disposal of septage from any private sewage disposal system in the state of Iowa. The license period will run from July 1 to June 30 of the following year. The owner of a septic tank may clean the owner’s own tank without being licensed if all other requirements of this chapter are met.

**567—68.4(455B) Licensing procedures.**

**68.4(1) Application for license.** A commercial septic tank cleaner must apply for a license by completing a form provided by the department and submitting it with an annual waste management plan and the license fee to the Department of Natural Resources, License Bureau, Henry A. Wallace Building, 502 E. 9th Street, Des Moines, Iowa 50319. In the case of a commercial septic tank cleaner which is a corporation, partnership, association or any other business entity, the entity itself must apply as provided in this rule. The entity shall designate one person, such as a partner, officer, manager, supervisor, or other full-time employee, to act as its representative for the purpose of applying for a license. Individuals employed by a commercial septic tank cleaner business are not required to be licensed, but each cleaning unit (vehicle or tank) must have the license number (except for the year) displayed and a copy of the current license with the cleaning unit.

**68.4(2) *Waste management plan.*** The applicant must submit as a part of the application a septage disposal management plan. The plan must also be submitted to the county board of health in each county where septage is to be land-applied. The plan shall include:

- a. The volume of septage expected to be collected from private sewage disposal facilities.
- b. The volume of septage to be taken to permitted publicly owned treatment works.
- c. A letter of acceptance from any publicly operated treatment works where waste is proposed to be disposed.
- d. The location and area of all sites where septage is to be land-applied.
- e. The anticipated volume of septage applied to each site.
- f. The type of crop to be planted on each site and when the crop is to be planted.
- g. The type of application to be used at each site.
- h. A list of vehicles to be registered.
- i. The previous year's record of disposal as required in subrule 68.6(3) and subparagraph 68.10(2) "c"(4).

Allowance may be made in the plan for septage application on the property of the owner of the tank being pumped as long as disposal standards of this chapter are met. A license will be issued only after approval of the waste management plan. If the plan is not approved, it must be modified and resubmitted.

**68.4(3) *License fee.*** The initial license application and each renewal application must be accompanied by a nonrefundable fee in the form of a check or money order made payable to the Department of Natural Resources. The application fee is \$150 per year for the first registered vehicle and \$50 for each additional vehicle. If the applicant intends to land-apply any septage during the year, there will be an additional application fee of \$7 per 1,000 gallons of septage to be land-applied per year. Land application fees shall be based on the previous year's records. First-time applicants shall pay a \$300 annual land application fee if they propose to land-apply. New license applicants will be charged monthly prorated fees until the next June 30.

**68.4(4) *License renewal.*** In order to remain valid, a commercial septic tank cleaner license must be renewed by June 30 of each year. Renewal application must be made on a form provided by the department, and must be received by the department or postmarked at least 30 days prior to the expiration date. The renewal application form must be accompanied by the license fee specified in subrule 68.4(3), a copy of all waste disposal records as defined in 68.6(3) for the previous year, and a revised waste management plan.

**68.4(5) *Change in ownership.*** Within 30 days of the change in ownership of any commercial septic tank cleaner, the new owner shall furnish the department with the following information:

- a. Name of business and license number;
- b. Name, address, and telephone number of new owner; and
- c. Date the change in ownership took place and any change in the waste management plan. The license will transfer with the ownership with no additional fee due until the next renewal date.

**68.4(6) *Change in address.*** Within 30 days of any change in the address or location of the business, information regarding such change must be reported to the department.

**68.4(7) *Alteration of waste management plan.*** An amended waste management plan must be submitted before any new property for land application not listed on the existing plan is used or waste is taken to a publicly operated treatment works not listed on the plan.

### **567—68.5(455B) Suspension, revocation and denial of license.**

**68.5(1) *Basis for suspension, revocation, and denial.*** The department may suspend, revoke, or deny a commercial septic tank cleaner license for any of the following reasons:

- a. A material misstatement of facts in a license application.
- b. Failure to provide the adequate license fee.
- c. Failure to provide and adhere to an approved waste management plan.
- d. Failure to satisfy the obligations of a commercial septic tank cleaner and the standards as provided in rules 68.6(455B), 68.9(455B), and 68.10(455B).
- e. Failure to pay any fines assessed under 68.5(2).

**68.5(2) *Civil penalties.*** The department may assess civil penalties not to exceed \$250 for violations of this rule. Each day that the violation continues constitutes a separate offense.

**68.5(3) *Appeal.*** A commercial septic tank cleaner may appeal the suspension, revocation, or denial of a license under the provisions of 567—Chapter 7.

**68.5(4) *Reinstatement.*** In the case of a denial, revocation, or suspension pursuant to paragraph 68.5(1) “b” or “e,” the department may immediately reinstate or issue a license after receipt of the requisite fee or fine and confirmation that the commercial septic tank cleaner is fulfilling the requirements of rules 68.6(455B) and 68.9(455B). In case of a denial, revocation or suspension pursuant to paragraph 68.5(1) “a,” “c,” or “d,” the department may reinstate or issue a license no sooner than 60 days after the denial, revocation, or suspension if the department is satisfied that the commercial septic tank cleaner has corrected the deficiency and will comply with departmental rules in the future.

**567—68.6(455B) Licensee’s obligations.**

**68.6(1) *Supervision.*** The licensee shall provide supervision for the removal and disposal of septage from private sewage disposal systems.

**68.6(2) *Standards.*** The licensee shall meet the standards established in this chapter for the cleaning of and disposal of septage from private sewage disposal systems.

**68.6(3) *Records.*** The licensee shall maintain records of private sewage disposal systems cleaned and the location, method of septage disposal, and volume of septage disposed of for each trip. Such records shall be maintained for a period of five years, and shall be made readily available upon request to county board of health or department officials and submitted with the waste management plan.

**567—68.7(455B) County obligations.** The county boards of health shall enforce the standards and licensing requirements contained in this chapter and other referenced rules relating to the cleaning of private sewage disposal systems and disposal of septage from such facilities.

**567—68.8(455B) Application sites and equipment inspections.** All application sites specified on the waste management plan shall be inspected annually by an agent approved by the department to ensure that the sites meet the requirements for septage disposal and are properly managed. All tank trucks and related storage and handling facilities for septage shall be inspected annually to ensure compliance with these rules. The department may contract with other entities such as the local county health department to carry out the inspections. However, the department shall retain concurrent authority to determine inspection requirements.

**567—68.9(455B) Standards for commercial cleaning of private sewage disposal systems.**

**68.9(1) *Vehicles, tanks and equipment.*** For all vehicles, tanks and equipment used in the commercial cleaning of private sewage disposal systems, the licensee shall:

*a.* Prevent the dripping, falling, spilling, leaking, or discharging of waste onto roads, rights-of-way or other public properties.

*b.* Provide the equipment necessary for proper cleaning of private sewage disposal systems.

*c.* Ensure proper construction and repair of cleaning equipment to allow easy cleaning and maintenance in an essentially rust-free and sanitary condition and appearance.

*d.* If septage is to be land-applied, provide a mechanism for properly mixing lime with the septage or a means to incorporate or inject the septage.

**68.9(2) *Septic tank cleaning.*** Tanks shall be emptied of all waste. Sludge may be loosened by pumping liquid back into the tank or adding dilution water. The tank does not have to be washed out with fresh water; however, no more than four inches of waste shall be left in the bottom.

**68.9(3) *Miscellaneous.***

*a.* Any tanks or equipment used for hauling septage from private sewage disposal systems shall not be used for hauling hazardous or toxic wastes as defined in 567—Chapter 131 or other wastes detrimental to land application or wastewater treatment plants and shall not be used in a manner that would contaminate a potable water supply or endanger the food chain or public health.

- b. Pumps and associated piping shall be installed with watertight connections to prevent leakage.
- c. Agitation capability for use in cleaning private sewage disposal systems to disperse sludge and scum into the liquid for proper cleaning shall be provided.
- d. All vehicles shall display the license number (except for the year) assigned to the commercial septic tank cleaner with three-inch or larger letters and numbers on the side of the tank or vehicle.
- e. The name and address of the license holder shall be prominently displayed on the side of the tank or vehicle in letters at least three inches high.
- f. A direct connection shall not be made between a potable water source and the tank or equipment on the vehicle.

**567—68.10(455B) Standards for disposal.** Disposal of septage from private sewage disposal systems shall be carried out in accordance with the rules established by the department.

**68.10(1)** Waste from toilet units shall be disposed of by discharge to a publicly owned treatment works or other permitted wastewater treatment system with the treatment works owner's approval.

**68.10(2)** Septage from septic tanks or other types of private sewage disposal systems that normally discharge effluent for further treatment (such as mechanical/aerobic treatment tanks, siphon tanks or distribution boxes) shall be disposed of by utilizing one or more of the following methods:

- a. Septage shall be discharged to a publicly owned treatment works or other permitted wastewater treatment system with the treatment works owner's approval.
- b. Septage shall be discharged to permitted septage lagoons or septage drying beds with the septage system owner's approval.
- c. Septage shall be land-applied in accordance with the following requirements:
  - (1) The maximum application rate is 30,000 gallons of septage per acre of cropland per 365-day period. The nitrogen application rate shall be no more than is utilized by the crop. A crop capable of using the nitrogen applied must be grown and harvested from the site after application of the maximum annual allocation or, at a minimum, every third year.
  - (2) The following site restrictions shall be met when septage is applied to land:
    - 1. Septage shall not be applied to a lawn or a home garden.
    - 2. Septage shall not be applied to land where there is a bedrock layer or seasonal high water table within 3 feet of the soil surface. Determination of these confining layers may be ascertained by consulting the soil types noted in the county USDA soil surveys.
    - 3. Land application sites shall have soil pH maintained above 6.0, unless crops prefer soils with lower pH conditions. If the soil pH is below 6.0, it is acceptable to use agricultural lime to increase the pH to an acceptable level. Soil pH shall be measured and reported as part of the annual waste management plan.
    - 4. The septage shall not be applied to ground that has greater than 9 percent slope.
    - 5. If application on frozen or snow-covered ground is necessary, it shall be limited to land areas of less than 5 percent slope and application rates of less than 2,500 gallons per acre per day.
    - 6. Septage shall not be applied to land that is 35 feet or less from an open waterway. If septage is applied within 200 feet of a stream, lake, sinkhole or tile line surface intake located downgradient of the land application site, it shall be injected or applied to the surface and mechanically incorporated into the soil within 48 hours of application.
    - 7. If the septage is applied to land subject to flooding more frequently than once in ten years, the septage shall be injected or shall be applied to the surface and mechanically incorporated into the soil within 48 hours. Information on which land is subject to flooding more frequently than once in ten years is available from the department.
    - 8. Septage shall not be applied within 750 feet of an occupied residence, except the residence of the owner of the septic tank that was pumped, nor within 500 feet of a well.
    - 9. Crop harvesting restrictions:
      - Food crops with harvested parts that touch the septage/soil mixture and are totally above ground shall not be harvested for 14 months after application of domestic septage.

- Food crops with harvested parts below the surface of the land shall not be harvested for 38 months after application of domestic septage.

- Animal feed, fiber, and those food crops with harvested parts that do not touch the soil surface shall not be harvested for 30 days after application of the domestic septage. Animals shall not be allowed to graze on the land for 30 days after application of septage.

(3) One of the following vector attraction reduction requirements shall be met when septage is applied to land:

1. Septage shall be injected below the surface of the land. No significant amount of the septage shall be present on the land surface within one hour after the septage is injected.

2. Septage applied to the land surface shall be incorporated into the soil within six hours after application to or placement on the land.

3. Septage shall be stabilized by adding and thoroughly mixing sufficient alkaline material such as hydrated or quick lime to produce a mixture with a pH of 12. For example, adding and thoroughly mixing approximately 50 pounds of lime with each 1,000 gallons of septage is usually sufficient to bring the pH to 12 for 30 minutes. A minimum of 30 minutes of contact time shall be provided after mixing the lime with the septage prior to applying to land. Each container of septage shall be monitored for compliance by testing, using a pH meter or litmus paper, two representative samples of the batch of lime-treated domestic septage taken a minimum of 30 minutes apart to verify that the pH remains at 12 or greater for the minimum 30-minute time period.

(4) When septage is applied to land, the person who applies the septage shall develop the following information and shall retain the information for five years and include it in the annually submitted waste management plan:

1. The location, by either street address or latitude and longitude, of each site on which septage is applied.

2. The number of acres and precise application area in each site on which septage is applied.

3. The gallons of septage applied each time.

4. The total gallons applied at each site to date for the year.

5. The date and time septage is applied to each site.

6. The rate, in gallons per acre, at which septage is applied to each site.

7. A description of how the vector attraction reduction requirements are met.

8. The following certification statement shall be provided with the records when the records are submitted to or requested by the department:

“I certify, under penalty of law, that the pathogen requirements and the vector attraction reduction requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment.”

(5) Other methods of stabilization may be acceptable if shown to be equivalent to 68.10(2)“c”(3)“3” above.

*d.* Septage shall be discharged (with owner approval) to a permitted sanitary landfill in accordance with 567—Chapters 102 and 103 and the following requirements:

- (1) Septage shall be stabilized by adding and thoroughly mixing sufficient lime to produce a mixture with a pH of 12.

- (2) A minimum of 30 minutes of contact time shall be provided after mixing the lime with the septage prior to discharging to the landfill.

These rules are intended to implement Iowa Code section 455B.172.

CHAPTER 69  
ONSITE WASTEWATER TREATMENT AND DISPOSAL SYSTEMS

[Prior to 7/1/83, Health Dept. Ch 12]

[Prior to 11/19/86, Water, Air and Waste Management[900] Ch 69]

**567—69.1(455B) General.**

**69.1(1) Applications.** These rules are applicable only to onsite wastewater treatment and disposal systems.

**69.1(2) Definitions.**

*“Administrative authority”* is the local board of health as authorized by Iowa Code section 455B.172 and 567—Chapter 137.

*“Approved”* means accepted or acceptable under an applicable specification stated or cited in these rules, or accepted as suitable for the proposed use by the administrative authority.

*“Area drain”* means a drain installed to collect surface or storm water from an open area of a building or property.

*“Building drain”* is that part of the lowest horizontal piping of a house drainage system which receives the discharge from soil, waste, and other drainage pipes inside the walls of any building and conveys the same to the building sewer.

*“Building sewer”* is that part of the horizontal piping from the building wall to its connection with the main sewer or the primary treatment portion of an onsite wastewater treatment and disposal system conveying the drainage of one building site.

*“Carbonaceous biochemical oxygen demand (CBOD5)”* means a five-day measurement of the amount of oxygen used by microorganisms in the biochemical oxidation of organic matter.

*“Chamber system”* is a buried structure, typically with a domed or arched top, providing at least a six-inch height of sidewall soil exposure, creating a covered open space above a buried soil infiltrative surface.

*“Class ‘A1’ water,”* also referred to as a primary contact recreational use water, means waters in which recreational or other uses may result in prolonged and direct contact with the water, involving considerable risk of ingesting water in quantities sufficient to pose a health hazard. Such activities would include, but not be limited to, swimming, diving, water skiing, and water contact recreational canoeing.

*“Class ‘A2’ water,”* also referred to as a secondary contact recreational use water, means waters in which recreational or other uses may result in contact with the water that is either incidental or accidental. Class A2 uses include fishing, commercial and recreational boating, any limited contact incidental to shoreline activities and activities in which users do not swim or float in the water body while on a boating activity.

*“Class ‘A3’ water,”* also referred to as a children’s recreational use water, means waters in which recreational uses by children are common. Class A3 waters are water bodies having definite banks and bed with visible evidence of the flow or occurrence of water. This type of use would primarily occur in urban or residential areas.

*“Class ‘C’ water”* means a “drinking water supply” river or lake, designated by the department for protection as a raw water source for a drinking water supply system.

*“Conventional”* when used in reference to sewage treatment means a soil absorption system involving a series of two foot wide trenches filled with gravel one foot deep, containing a four-inch diameter rigid pipe to convey the sewage effluent.

*“Distribution box”* is a structure designed to accomplish the equal distribution of wastewater to two or more soil absorption trenches.

*“Drainage ditch”* is any watercourse meeting the classification of a “general use segment” under rule 567—61.3(455B) which includes intermittent watercourses and those watercourses which typically flow only for short periods of time following precipitation in the immediate locality and whose channels are normally above the water table.

*“Drip irrigation”* is a form of subsurface soil absorption using shallow pressure distribution with low-pressure drip emitters.

“*Drop box*” is a structure to divert wastewater flow into a soil absorption trench until the trench is filled to a set level, then allow any additional waste, which is not absorbed by that trench, to flow to the next drop box or soil absorption trench.

“*Dwelling*” means any house or place used or intended to be used by humans as a place of residence.

“*Fill soil*” means clean soil, free of debris or large organic material, which has been mechanically moved onto a site and has been in place for less than one year.

“*Foundation drain*” means that portion of a building drainage system provided to drain groundwater from the outside of the foundation or over or under the basement floor not including any wastewater and not connected to the building drain.

“*Free access filter (open filter)*” means an intermittent sand filter constructed within the natural soil or above the ground surface with access to the distributor pipes and top of the filter media for maintenance and media replacement.

“*Gravel*” means stone screened from river sand or quarried. Concrete aggregate designated as Class II by the department of transportation is acceptable.

“*Gravelless pipe system*” means an absorption system comprised of large diameter (8 and 10 inches) corrugated plastic pipe, perforated with holes on a 120-degree arc centered on the bottom, wrapped in a sheath of geotextile filter wrap and installed level in a trench without gravel bedding or cover.

“*Individual mechanical aerobic wastewater treatment system*” means an individual wastewater treatment and disposal system employing bacterial action which is maintained by the utilization of air or oxygen and includes the aeration plant and equipment and the method of final effluent disposal.

“*Intermittent sand filters*” are beds of granular materials 24 to 36 inches deep underlain by graded gravel and collecting tile. Wastewater is applied intermittently to the surface of the bed through distribution pipes or troughs and the bed is underdrained to collect and discharge the final effluent. Uniform distribution is normally obtained by dosing so as to flood the entire surface of the bed. Filters may be designed to provide free access (open filters), or may be buried in the ground (buried filters or subsurface sand filters).

“*Lake*” means a natural or man-made impoundment of water with more than one acre of water surface area at the high water level.

“*Limiting layer*” means bedrock, seasonally high groundwater level, or any layer of soil with a stabilized percolation rate exceeding 60 minutes for the water to fall one inch.

“*Mound system*” is an alternative aboveground system used to absorb effluents from septic tanks in cases where either seasonally high water table, high bedrock conditions, slowly permeable soils or limited land areas prevent conventional subsurface absorption systems.

“*Onsite wastewater treatment and disposal system*” means all equipment and devices necessary for proper conduction, collection, storage, treatment, and disposal of wastewater from four or fewer dwelling units or other facility serving the equivalent of 15 persons (1,500 gpd) or less. This includes domestic waste whether residential or nonresidential but does not include industrial waste of any flow rate. Included within the scope of this definition are building sewers, septic tanks, subsurface absorption systems, mound systems, sand filters, constructed wetlands and individual mechanical/aerobic wastewater treatment systems.

“*Percolation test*” is a falling water level procedure used to determine the ability of soils to absorb primary treated wastewater. (See Appendix B.)

“*Pond*” means a man-made impoundment of water with a water surface area of one acre or less at the high water level.

“*Primary treatment*” is a unit or system to separate the floating and settleable solids from the wastewater before the partially treated effluent is discharged for secondary treatment.

“*Professional soil analysis*” is an alternative to the percolation test which depends upon a knowledgeable person evaluating the soil factors, such as color, texture, and structure, in order to determine an equivalent percolation rate. Demonstrated training and experience in soil morphology (testing absorption qualities of soil by the physical examination of the soil’s color, mottling, texture, structure, topography and hillslope position) shall be required to perform a professional soil analysis.

“*Qualified sampler*,” for the purposes of collecting compliance effluent samples required under NPDES General Permit No. 4, means one of the following persons: a DNR staff person, a county environmental health staff person, an Iowa-certified wastewater treatment operator, or an individual who has received training approved by the department to conduct effluent sampling.

“*Roof drain*” is a drain installed to receive water collecting on the surface of a roof and discharging into an area or storm drain system.

“*Secondary treatment system*” is a system which provides biological treatment of the effluent from septic tanks or other primary treatment units to meet minimum effluent standards as required in these rules and NPDES General Permit No. 4. Examples include soil absorption systems, sand filters, mechanical/aerobic systems, or other systems providing equivalent treatment.

“*Septage*” means the liquid contents (including sludge and scum) of a septic tank normally pumped out periodically and transported to another site for disposal.

“*Septic tank*” is a watertight structure into which wastewater is discharged for solids separation and digestion, referred to as part of the closed portion of the treatment system.

“*Sewage wastewater*” is the water-carried waste derived from ordinary living processes.

“*Sludge*” means the digested or partially digested solid material accumulated in a wastewater treatment facility.

“*Stream*” means any watercourse listed as being a “designated use segment” in rule 567—61.3(455B) which includes any watercourse which maintains flow throughout the year or contains sufficient pooled areas during intermittent flow periods to maintain a viable aquatic community of significance.

“*Subsurface absorption system*” is a system of perforated conduits connected to a distribution system, forming a series of subsurface, water-carrying channels into which the primary treated effluent is discharged for direct absorption into the soil (referred to as part of the open portion of the treatment system).

“*Subsurface sand filter*” is a system in which the effluent from the primary treatment unit is discharged into perforated pipes, filtered through a layer of sand, and collected by lower perforated pipes for discharge to the surface or to a subsurface absorption system. A subsurface sand filter is an intermittent sand filter which is placed within the ground and provided with a natural topsoil cover over the crown of the distribution pipes.

“*Wastewater management district*” means an entity organized in accordance with permitting legislation to perform various specific functions such as planning, financing, construction, supervision, repair, maintenance, operation and management of onsite wastewater treatment and disposal systems within a designated area.

**69.1(3) General regulations.**

*a. Connections to approved sewer system.*

(1) No onsite wastewater treatment and disposal system shall be installed, repaired, or rehabilitated where a public sanitary sewer is available or where a local ordinance requires connection to a public system. The public sewer may be considered as not available when such public sewer, or any building or any exterior drainage facility connected thereto, is located more than 200 feet from any proposed building or exterior drainage facility on any lot or premises which abuts and is served by such public sewer. Final determination of availability shall be made by the administrative authority.

(2) When a public sanitary sewer becomes available within 200 feet, any building then served by an onsite wastewater treatment and disposal system shall connect to said public sanitary sewer within a time frame or under conditions set by the administrative authority.

(3) When a public sanitary sewer is not available, every building wherein persons reside, congregate or are employed shall be provided with an approved onsite wastewater treatment and disposal system.

(4) If a building is to be connected to an existing onsite wastewater treatment and disposal system, that existing system shall meet the standards of these rules and be appropriately sized.

*b. Discharge restrictions.* It is prohibited to discharge any wastewater from onsite wastewater treatment and disposal systems (except under an NPDES permit) to any ditch, stream, pond, lake, natural

or artificial waterway, county drain tile, surface water drain tile, land drain tile or to the surface of the ground. Under no conditions shall effluent from onsite wastewater treatment and disposal systems be discharged to any abandoned well, agricultural drainage well or sinkhole. Existing discharges to any of the above-listed locations or structures shall be eliminated by constructing a system which is in compliance with the requirements of these rules.

*c. Construction or alteration.* All onsite wastewater treatment and disposal systems constructed or altered after the effective date of these rules (May 13, 1998) shall comply with these requirements. Alteration includes any changes that effect the treatment or disposal of the waste. Repair of existing components that does not change the treatment or disposal would be exempt. However, the discharge restrictions in “b” above would always apply.

**69.1(4) Permit required.** No onsite wastewater treatment and disposal system shall be installed or altered as described in 69.1(3) “c,” until an application for a permit has been submitted and a permit has been issued by the administrative authority. The installation shall be in accordance with these rules.

**69.1(5) Site analysis.**

*a. Site evaluation.* A site evaluation shall be conducted prior to issuance of a construction permit. Consideration shall be given, but not be limited to, the impact of the following: topography; drainageways; terraces; floodplain; percent of land slope; location of property lines; location of easements; buried utilities; existing and proposed tile lines; existing, proposed and abandoned water wells; amount of available area for the installation of the system; evidence of unstable ground; alteration (cutting, filling, compacting) of existing soil profile; and soil factors determined from a soil analysis, percolation tests and soil survey maps if available.

*b. Soil survey reports.* During a site analysis and investigation, maximum use should be made of soil survey reports which are available from USDA Natural Resources Conservation Service. A general identification of the percolation potential can be made from soil map units in Iowa. Verification of the soil permeability on the specific site must be performed.

**69.1(6) Minimum distances.** All onsite wastewater treatment and disposal systems shall be located in accordance with the minimum distances shown in Table I.

TABLE I

Minimum Distance in Feet From	Closed Portion of Treatment System <sup>(1)</sup>	Open Portion of Treatment System <sup>(2)</sup>
Private water supply well	50	100
Public water supply well	200	200
Groundwater heat pump borehole	50	100
Lake or reservoir	50	100
Stream or pond	25	25
Edge of drainage ditch	10	10
Dwelling or other structure	10	10
Property lines (unless a mutual easement is signed and recorded)	10	10
Other type subsurface treatment system	5	10
Water lines continually under pressure	10	10
Suction water lines	50	100
Foundation drains or subsurface tiles	10	10

<sup>(1)</sup>Includes septic tanks, mechanical aeration tanks and impervious vault toilets.

<sup>(2)</sup>Includes subsurface absorption systems, mound systems, intermittent sand filters, constructed wetlands or waste stabilization ponds.

**567—69.2(455B) Requirements when effluent is discharged into surface water.** All discharges from onsite wastewater treatment and disposal systems which are discharged into any surface water, to the surface of the ground, or into a subsurface drainage tile that discharges to a surface water shall be treated in a manner that will conform with the requirements of NPDES General Permit No. 4 issued by the department of natural resources, as referenced in 567—Chapter 64. Prior to the installation of any system discharging to waters of the state, a notice of intent to be covered by NPDES General Permit No. 4 shall be submitted to the department. Systems covered by this permit must meet all applicable requirements listed in the NPDES permit, including effluent sampling and monitoring.

**567—69.3(455B) Requirements when discharged into the soil.** No septage or wastewater shall be discharged into the soil except in compliance with the requirements contained in these rules.

**567—69.4(455B) Building sewers.**

**69.4(1) Location and construction.** The types of construction and distances as shown in Table II shall be maintained for the protection of water supplies. The distances shall be considered minimum and increased where possible to provide better protection.

TABLE II

Sewer Construction	Distance from Well Water Supply	
	Private	Public
1. Schedule 40 plastic pipe (or SDR 26 or stronger) with approved type joints or cast-iron soil pipe (extra heavy or centrifugally cast) with joints of preformed gaskets.	10	25
2. Sewer pipe installed to remain watertight and root-proof.	50	75

Under no circumstances shall a well suction line pass under a building sewer line.

**69.4(2) Requirements for building sewers.**

*a. Type.* Building sewers used to conduct wastewater from a building to the primary treatment unit of an onsite wastewater treatment and disposal system shall be constructed of Schedule 40 plastic pipe (or SDR 26 or stronger) with solvent-weld or bell-and-gasket type joints, or cast iron with integral bell-and-gasket type joints.

*b. Size.* Such building sewers shall not be less than 4 inches in diameter.

*c. Grade.* Such building sewers shall be laid to the following minimum grades:

4-inch sewer . . . . .	12 inches per 100 feet
6-inch sewer . . . . .	8 inches per 100 feet

**69.4(3) Cleanouts.**

*a. Spacing.* A cleanout shall be provided where the building sewer leaves the house and at least every 100 feet allowing rodding downstream.

*b. Change of direction.* An accessible cleanout shall be provided at each change in direction or grade, if the change exceeds 45 degrees.

**567—69.5(455B) Primary treatment—septic tanks.**

**69.5(1) General requirements.**

*a. Septic tank required.* Every onsite wastewater treatment and disposal system, except mechanical-aerobic systems, shall have as a primary treatment unit a septic tank as described in this rule. All wastewater from the facility serviced shall discharge into the septic tank (except as noted in “d” below).

*b. Easements.* No septic tank shall be located upon property under ownership different from the ownership of that property or lot upon which the wastewater originates unless easements to that effect are legally recorded and approved by the proper administrative authority.

*c. Effluent discharge requirements.* All septic tank effluent shall discharge into a secondary treatment system in compliance with this rule or other system approved by the administrative authority according to rule 69.18(455B).

*d. Prohibited wastes.* Septic tanks shall not be used for the disposal of chemical wastes or grease in quantities which might be detrimental to the bacterial action in the tank or for the disposal of drainage from roof drains, foundation drains, or area drains.

**69.5(2) Capacity.**

*a. Minimum capacity.* The minimum liquid holding capacity shall be as specified in the following table (capacity may be obtained by using one or more tanks):

up to and including 3-bedroom homes	1,000 gal.
4-bedroom homes	1,250 gal.
5-bedroom homes	1,500 gal.
6-bedroom homes	1,750 gal.

Two hundred fifty gallons of capacity shall be added to each of these tank volumes if a kitchen garbage disposal unit, water softener, or a high volume water use fixture such as a whirlpool bath is to be used.

*b. Other domestic waste systems.* In the event that any installation serves more than a 6-bedroom home or its equivalent, or serves a facility other than a house and serves the equivalent of 15 persons or less (1,500 gal/day), approval of septic tank capacity and design must be obtained from the administrative authority. Minimum septic tank liquid holding volume shall be two times the estimated daily sewage flow.

*c.* For wastewater flow rates for nonresidential and commercial domestic waste applications under 1,500 gal/day, refer to Appendix A.

*d. Minimum depth.* Minimum liquid holding depth in any compartment shall be 40 inches.

*e. Maximum depth.* Maximum liquid holding depth for calculating capacity of the tank shall not exceed 6½ feet.

*f. Dimensions.* The interior length of a septic tank should not be less than 5 feet and shall be at least 1½ times the width (larger length-to-width ratios are preferred). No tank or compartment shall have an inside width of less than 2 feet. The minimum inside diameter of a vertical cylindrical septic tank shall be 5 feet.

**69.5(3) Construction details.**

*a. Fill soil.* Any septic tank placed in fill soil shall be placed upon a level, stable base that will not settle.

*b. Compartmentalization.* Every septic tank shall be divided into two compartments as follows (compartmentalization may be obtained by using more than one tank):

(1) The capacity of the influent compartment shall not be less than one-half nor more than two-thirds of the total tank capacity.

(2) The capacity of the effluent compartment shall not be less than one-third nor more than one-half of the total tank capacity.

*c. Inlet/outlet.* The invert of the inlet pipe shall be a minimum of 2 inches and a maximum of 4 inches higher than the invert of the outlet pipe.

*d. Baffles.* Four-inch diameter schedule 40 plastic pipe tees shall be used as inlet and outlet baffles. Inlet tees shall extend at least 6 inches above and 8 inches below the liquid level of the tank. The inlet tee shall extend below the liquid level no more than 20 percent of the liquid depth. The outlet tee shall extend above the liquid level a distance of at least 6 inches and below the liquid level a distance of at least 10 inches but no more than 25 percent of the liquid depth. A minimum clearance between the top of the inlet and outlet tees and the bottom of the tank lid of 2 inches shall be provided. A horizontal

separation of at least 36 inches shall be provided between the inlet baffle and the outlet baffle in each compartment.

A horizontal slot 4 inches by 6 inches, or two suitably spaced 4-inch diameter holes in the tank partition, may be used instead of a tee or baffle, the top of the slot or holes to be located below the water level a distance of one-third the liquid depth. A ventilation hole or slot shall be provided in the partition, at least 8 inches above the liquid level.

*e. Access.* Access must be provided to all parts of septic tanks necessary for adequate inspection, operation, and maintenance.

An access opening shall be provided at each end of the tank over the inlet and outlet. These openings shall be at least 18 inches in the smallest dimension if the tank has no other openings. Alternatively, a single opening at least 24 inches in diameter may be provided at the center of the tank allowing access to both compartments, with two smaller openings at least 6 inches in diameter over both inlet and outlet.

If the top of the tank is to be greater than 12 inches below the finished ground surface, a riser at least 24 inches in diameter must be installed over each manhole of 18 inches in diameter or more to bring the top of the manhole lid to within 6 inches of the finished ground surface.

**69.5(4) Construction.**

*a. Materials.* Tanks shall be constructed of poured concrete or plastic resistant to corrosion or decay and designed so that they will not collapse or rupture when subjected to anticipated earth and hydrostatic pressures when the tanks are either full or empty. Metal tanks are prohibited.

*b. Dividers.* Tank divider walls and divider wall supports shall be constructed of heavy, durable plastic, fiberglass, concrete or other similar corrosion-resistant materials approved by the administrative authority.

*c. Inlet and outlet ports.* Inlet and outlet ports of pipe shall be constructed of heavy, durable schedule 40 PVC plastic sanitary tees or other similar approved corrosion-resistant material.

**69.5(5) Wall thickness.** Minimum wall thickness for tanks shall conform to the following specifications:

Poured concrete	6 inches thick
Poured concrete, reinforced	4 inches thick
Special concrete mix, vibrated and reinforced	2.5 inches thick
Fiberglass or plastic	.25 inches thick

**69.5(6) Concrete specifications.** Concrete used in precast septic tank construction shall have a maximum water-to-cement ratio of 0.45. Cement content shall be at least 650 pounds per cubic yard. Minimum compressive strength ( $f'_c$ ) shall be 4,000 psi (28 Mpa) at 28 days of age. The use of ASTM C150 Type II cement or the addition of silica fume or Class F fly ash is recommended.

**69.5(7) Tank bottoms.** Septic tank bottoms shall conform to the specifications set forth for septic tank walls except special mix concrete shall be at least 3 inches thick.

**69.5(8) Tank tops.** Concrete or masonry septic tank tops shall be a minimum of 4 inches in thickness and reinforced with 3/8-inch reinforcing rods in a 6-inch grid or equivalent. Fiberglass or plastic tank tops shall be a minimum of 1/4 inch in thickness and shall have reinforcing and be of ribbed construction.

**69.5(9) Reinforcing steel placement.** The concrete cover for reinforcing bars, mats, or fabric shall not be less than 1 inch.

**69.5(10) Bedding.** Fiberglass or plastic tanks shall be bedded according to manufacturer's specifications. Provisions should be made to prevent flotation when the tanks are empty.

**69.5(11) Connecting pipes.**

*a. Minimum diameter.* The pipes connecting septic tanks installed in series and at least the first 5 feet on the effluent side of the last tank shall be a minimum of 4-inch diameter schedule 40 plastic.

*b. Tank connections.* All inlet and outlet connections at the septic tanks shall be made by self-sealing gaskets cast into the concrete or formed into the plastic or fiberglass.

*c. Joints.* All joints in connecting schedule 40 plastic pipe shall be approved plastic pipe connections such as solvent-welded or compression-type gaskets.

*d. Pipe in unstable ground.* Schedule 40 plastic pipe shall be used extending across excavations or unstable ground to at least 2 feet beyond the point where the original ground has not been disturbed in septic tank installations. If the excavation spanned is more than 2 feet, it must be filled with sand or compacted fill to provide a firm bed for the pipe. The first 12 inches of backfill over the pipe shall be applied in thin layers using material free from stones, boulders, large frozen chunks of earth or any similar material that would damage or break the pipe.

**567—69.6(455B) Secondary treatment—subsurface absorption systems.** Soil absorption systems are the best available treatment technology and shall always be used where possible.

**69.6(1) General requirements.**

*a. Locations.* All subsurface absorption systems shall be located on the property to maximize the vertical separation distance from the bottom of the absorption trench to the seasonal high groundwater level, bedrock, hardpan or other confining layer, but under no circumstances shall this vertical separation be less than 3 feet.

*b. Soil evaluation.* A percolation test or professional soil analysis is required before any soil absorption system is installed.

(1) Percolation test. The percolation test procedure is outlined in Appendix B.

(2) Alternative analysis. If a professional soil analysis is performed, soil factors such as soil content, color, texture, and structure shall be used to determine a percolation rate.

(3) *Acceptable percolation rate.* An area is deemed suitable for conventional soil absorption if the average percolation test rate is 60 minutes per inch or less and greater than 1 minute per inch. However, if an alternative type system is proposed (e.g., mound), then the percolation test should be extended to determine whether a percolation rate of 120 minutes per inch is achieved.

(4) *Confining layer determination.* An additional test hole 6 feet in depth or to rock, whichever occurs first, shall be provided in the center of the proposed absorption area to determine the location of groundwater, rock formations or other confining layers. This 6-foot test hole may be augered the same size as the percolation test holes or may be made with a soil probe.

*c. Groundwater.* If seasonal high groundwater level is present within 3 feet of the trench bottom final grade and cannot be successfully lowered by subsurface tile drainage, the area shall be classified as unsuitable for the installation of a standard subsurface absorption system. Consult the administrative authority for an acceptable alternative method of wastewater treatment.

*d. Site limitations.* In situations where specific location or site characteristics would appear to prohibit normal installation of a soil absorption system, design modifications may be approved by the administrative authority which could overcome such limitations. Examples of such modifications could be the installation of subsurface drainage, use of shallow or at-grade trenches, use of dual soil treatment areas, mound system or water conservation plans.

*e. Prohibited drainage.* Roof, foundation and storm drains shall not discharge into or upon subsurface absorption systems. Nothing shall enter the subsurface absorption system which does not first pass through the septic tank.

*f. Prohibited construction.* There shall be no construction of any kind, including driveways, covering the septic tank, distribution box or absorption field of an on-site wastewater treatment and disposal system. Vehicle access should be infrequent, primarily limited to vegetation maintenance.

*g. Driveway crossings.* Connecting lines under driveways shall be constructed of schedule 40 plastic pipe or equivalent, and shall be protected from freezing.

*h. Easements.* No wastewater shall be discharged upon any property under ownership different from the ownership of the property or lot upon which it originates unless easements to that effect are legally recorded and approved by the administrative authority.

**69.6(2) Trench length requirements.**

*a. Percolation charts.* Table IIIa specifies lineal feet of lateral trenches required in accordance with the results of the standard percolation tests. Tables IIIb and IIIc list optional methods for determining

length of lateral trenches or sizing of absorption beds. The alternative option for increased rock usage (Table IIIb) shall be used only when the size of lots limits the use of trench lengths prescribed in Table IIIa. Absorption beds (Table IIIc) shall not be used except when the lot size limitations preclude the installation of a lateral trench system. Further details concerning limitations of these two alternatives should be obtained from the administrative authority prior to requesting authorization for installation.

*b. Unsuitable absorption.* Conventional subsurface soil absorption trenches shall not be installed in soils that have a percolation rate less than 1 minute per inch or greater than 60 minutes per inch. Plans for an alternative method of wastewater treatment shall be submitted to the administrative authority for approval prior to construction.

Table IIIa  
Soil Absorption System Sizing Chart  
(Lineal feet of absorption trench)

Min. Per Inch	Two-Bedroom 300 gal/day <sup>(1)</sup>	Three- Bedroom 450 gal/day	Four- Bedroom 600 gal/day	Five- Bedroom 750 gal/day	Six- Bedroom 900 gal/day
1-5 <sup>(2)</sup>	160	200	260	340	400
6-15	200	300	400	500	600
16-30	300	400	500	600	700
31-45	400	500	600	800	900
46-60	500	600	700	900	1,100

<sup>(1)</sup>For domestic, nonhousehold wastewater flow rates, refer to Appendix A.

<sup>(2)</sup>For soils having more than 50 percent of very fine sand by weight, plus fine sand having a particle size range of 0.05 millimeters (sieve size 270) to 0.25 millimeters (sieve size 60), the 16-30 min. per inch values shall be used when gravelless pipe is installed.

Table IIIb  
Alternative Option for Increased Rock Usage  
(Only if necessary)

Depth of gravel <sup>(1)</sup> below distribution line	Reduction in trench lengths as taken from Table IIIa
12"	20%
18"	33%
24"	40%

<sup>(1)</sup>Total depth of trench must not exceed 36". Soil profile must be consistent with the percolation rate throughout the depth used. Separation from groundwater and confining layers must be maintained.

Table IIIc  
Alternative Option for Use of Absorption Bed<sup>(1)</sup>

Percolation Rate Min./Inch	Absorption Area/Bedroom Sq. Ft.	Loading Rate/Day Gal./Sq. Ft.
1-5	300	.5
6-15	400	.375
16-30	600	.25

(1)Absorption beds may only be used when site space restrictions require and shall not be used when the soil percolation rate exceeds 30 min./inch.

**69.6(3) Construction details.** (All soil absorption trenches.)

*a. Depth.* Lateral trenches shall not exceed 36 inches in depth unless authorized by the administrative authority, but a more shallow trench bottom depth of 18 to 24 inches is recommended. Not less than 6 inches of porous soil shall be provided over the laterals. Minimum separation between trench bottom and groundwater, rock formation or other confining layers shall be 36 inches even if extra rock is used under the pipe.

*b. Length.* No lateral absorption trench shall be greater than 100 feet long.

*c. Separation distance.* At least 6 feet of undisturbed soil shall be left between each trench edge on level sites. The steeper the slope of the ground, the greater the separation distance should be. Two feet of separation distance should be added for each 5 percent increase in slope from level.

*d. Grade.* Trench bottom should be constructed level from end to end. On sloping ground, the trench shall follow a uniform land contour to maintain a minimum soil cover of 6 inches while ensuring a level trench bottom.

*e. Compaction.* There shall be minimum use or traffic of heavy equipment on the area proposed for soil absorption. In addition, it is prohibited to use heavy equipment on the bottom of the trenches in the absorption area.

*f. Fill soil.* Soil absorption systems shall not be installed in fill soil. Disturbed soils which have stabilized for at least one year would require a recent percolation test.

*g. Bearing strength.* Soil absorption systems shall be designed to carry loadings to meet AASHTO H-10 standards.

*h. Soil smearing.* Soils with significant clay content should not be worked when wet. If soil moisture causes sidewall smearing, the trench bottom and sidewalls shall be scarified.

**69.6(4) Gravel systems.**

*a. Gravel.* A minimum of 6 inches of clean, washed river gravel, free of clay and clay coatings, shall be laid below the distribution pipe, and enough gravel shall be used to cover the pipe. This gravel shall be of such a size that 100 percent will pass a 2½-inch screen and 100 percent will be retained on a ¾-inch screen. Limestone or crushed rock is not recommended for soil absorption systems. If used it shall meet the following criteria:

(1) Abrasion loss. The percent wear, as determined in accordance with the AASHTO T 96, Grading C, shall not exceed 40 percent.

(2) Freeze and thaw loss. When subjected to the freezing and thawing test, Iowa DOT Materials Laboratory Test Method 211, Method A, the percentage loss shall not exceed 10 percent.

(3) Absorption. The percent absorption, determined in accordance with Iowa DOT Materials Laboratory Test Method 202, shall not exceed 3 percent.

(4) Gradation. The aggregate shall have not more than 1.5 percent by weight pass a No. 16 sieve.

*b. Trench width.* Lateral trenches for gravel systems shall be a minimum of 24 inches and a maximum of 36 inches in width at the bottom of the trench.

*c. Grade.* The distribution pipes shall be laid with a minimum grade of 2 inches per 100 feet of run and a maximum grade of 6 inches per 100 feet of run, with a preference given to the lesser slope.

*d. Pipe.* Distribution pipe shall be PVC rigid plastic meeting ASTM Standard 2729, or other suitable material approved by the administrative authority. The inside diameter shall be not less than 4 inches, with perforations at least ½ inch and no more than ¾ inch in diameter spaced no more than 40 inches apart. Two rows of perforations shall be provided located 120 degrees apart along the bottom half of the tubing (each 60 degrees up from the bottom centerline). The end of the pipe in each trench shall be sealed with a watertight cap unless, on a level site, a footer is installed connecting the trenches together. Coiled perforated plastic pipe shall not be used when installing absorption systems.

*e. Gravel cover.* Unbacked, rolled, 3½-inch-thick fiberglass insulation, untreated building paper, synthetic drainage fabric, or other approved material shall be laid so as to separate the gravel from the soil backfill.

**69.6(5) Gravelless pipe systems.**

*a. Application.* Gravelless subsurface absorption systems may be used as an alternative to conventional 4-inch pipe placed in gravel-filled trenches. However, they cannot be used in areas where conventional systems would not be allowed due to poor permeability, high groundwater, or insufficient depth to bedrock.

*b. Installation.* Manufacturer's specifications and installation procedures shall be adhered to.

*c. Material.* The 8- and 10-inch I.D. corrugated polyethylene tubing used in gravelless systems shall meet the requirements of ASTM F667, Standard Specification for Large Diameter Corrugated Polyethylene Tubing.

*d. Perforations.* Two rows of perforations shall be located 120 degrees apart along the bottom half of the tubing (each 60 degrees up from the bottom centerline). Perforations shall be cleanly cut into each inner corrugation along the length of the tubing and should be staggered so that there is only one hole in each corrugation.

*e. Top marking.* The tubing should be visibly marked to indicate the top of the pipe.

*f. Filter wrap.* All gravelless drainfield pipe shall be encased, at the point of manufacture, with a geotextile filter wrap specific to this purpose.

*g. Trench width.* If dug with a backhoe, the minimum trench width for the gravelless system shall be 18 inches in sandy loam soil to ensure proper backfill around the bottom half of the pipe. In clay soils, the minimum trench width shall be 24 inches. If the pipe is laid in with a wheel trencher leaving a curved trench bottom, the trench width may be just 2 inches wider than the outside diameter of the pipe.

*h. Length of trench.* The total length of absorption trench for a 10-inch gravelless tubing installation shall be the same as given in Table IIIa for a conventional absorption trench, except for fine sandy soils as noted in Table IIIa footnote. An increase of at least 20 percent in total trench length shall be required if 8-inch tubing is used rather than 10-inch.

**69.6(6) Chamber systems.**

*a. Application.* Chamber systems may be used as an alternative to conventional 4-inch pipe placed in gravel-filled trenches. However, they cannot be used in areas where conventional systems would not be allowed due to poor permeability, high groundwater, or insufficient depth to bedrock.

*b. Installation.* Manufacturer's specifications and installation procedures shall be closely adhered to.

*c. Length of trench.* The total length of absorption trench for chambers 24 inches or less in bottom width shall be the same as given in Table IIIa for a conventional absorption trench. For chambers greater than 33 inches in width a reduction of 25 percent from the lengths given in Table IIIa may be used.

*d. Sidewall.* The chambers shall have at least 6 inches of sidewall effluent soil exposure height.

**69.6(7) Gravity distribution.** Dosing is always recommended and preferred to improve distribution, improve treatment and extend the life of the system.

*a.* On a hillside, septic tank effluent may be serially loaded to the soil absorption trenches by drop boxes or overflow piping (rigid sewer pipe). Otherwise, effluent shall be distributed evenly to all trenches by use of a distribution box or commercial distribution regulator approved by the administrative authority.

*b. Design.* When a distribution box is used, it shall be of proper design and installed with separate watertight headers leading from the distribution box to each lateral. Header pipes shall be rigid PVC plastic pipe meeting ASTM Standard 2729 or equivalent.

*c. Outlets height.* The distribution box shall have outlets at the same level at least 4 inches above the bottom of the box to provide a minimum of 4 inches of water retention in the box.

*d. Baffles.* There shall be a pipe tee or baffle at the inlet to break the water flow.

*e. Unused outlets.* All unused outlet holes in the box shall be securely closed.

*f. Interior coating.* All distribution boxes shall be constructed of corrosion-resistant rigid plastic materials, or other corrosion-resistant material approved by the administrative authority.

*g. Outlets level.* All outlets of the distribution box shall be made level. A 4-inch cap with an offset hole approximately 2½ inches in diameter shall be installed on each outlet pipe. These caps shall

be rotated until all outlets discharge at the same elevation. Equivalent leveling devices may be approved by the local authority.

*h.* Equal length required. The soil absorption area serviced by each outlet of the distribution box shall be equal.

**69.6(8) Dosing systems.**

*a. Pump systems.*

(1) Pump and pit requirements. In the event the effluent from the septic tank outlet cannot be discharged by gravity and still maintain proper lateral depths, the effluent shall discharge into a watertight vented pump pit with an inside diameter of not less than 24 inches, equipped with a tight-fitting manhole cover at grade level. The sump vent shall extend a minimum of 6 inches above grade level and shall be a minimum size of 1¼ inches fitted with a return bend. The pump shall be of a submersible type of corrosion-resistant material.

(2) Pump setting. The pump shall be installed in the pump pit in a manner that ensures ease of service and protection from frost and settled sludge. The pump shall be set to provide a dosing frequency of approximately twice a day based on the maximum design flow. No on-site electrical connections shall be made in the pump pit. These connections shall be made in an exterior weatherproof box.

(3) Pressure line size. The pressure line from the pump to the point of discharge shall not be smaller than the outlet of the pump it serves.

(4) Drainage. Pressure lines shall be installed to provide total drainage between dosings to prevent freezing or be buried below frost level up to the distribution box.

(5) High water alarm. Pump pits shall be equipped with a sensor set to detect if the water level rises above the design high water level when the pump fails. This sensor shall activate an auditory or visual alarm to alert the homeowner that repairs are required.

(6) Discharge point. The effluent shall discharge under pressure into a distribution box or may be distributed by small diameter pipes throughout the entire absorption field.

*b. Dosing siphons.* Dosing siphons may also be used. Manufacturer's specifications shall be adhered to for installation. Similar dosing volumes and frequencies are recommended. Dosing siphons require periodic cleaning to ensure their continued proper operation.

**567—69.7(455B) Mound system.**

**69.7(1) General requirements.**

*a.* Mound systems shall be permitted only after a thorough site evaluation has been made and landscaping, dwelling placement, effect on surface drainage and general topography have been considered.

*b.* Mound systems shall not be utilized on sites which are subject to flooding with a ten-year or greater frequency.

*c.* Mound systems shall not be utilized on soils where the high groundwater level, impermeable bedrock or soil strata having a percolation rate exceeding 120 minutes per inch occur within 12 inches of natural grade, or where creviced bedrock occurs within 20 inches of natural grade.

*d.* Mound systems shall be constructed only upon undisturbed naturally occurring soils.

*e.* Mound systems shall be located in accordance with the distances specified in Table I as measured from the outer edge of the mound.

*f.* No buildings, driveways or other surface or subsurface obstructions shall be permitted within 50 feet on the down gradient side of the mound when the mound is constructed on a slope greater than 5 percent. No future construction shall be permitted in this effluent disposal area as long as the mound is in use.

*g.* Specifications given in these rules for mounds are minimal and may not be sufficient for all applications. Technical specifications are changing with experience and research. Other design information beyond the scope of these rules may be necessary to properly design a mound system.

**69.7(2) Material for mound fill.**

*a.* The mound shall be constructed using clean, medium-textured sand, sometimes referred to as concrete sand. The sand size shall be such that at least 25 percent by weight shall have a diameter

between 2.0 and 0.25 mm, less than 35 percent with a diameter between 0.25 and 0.05 mm and less than 5 percent with a diameter between 0.002 and 0.05 mm.

*b.* Rock fragments larger than 1/16 inch (2.0 mm) shall not exceed 15 percent by weight of the material used for sandy fill.

**69.7(3) Construction details.**

*a.* There shall be a minimum of 3 feet of fill material and undisturbed naturally occurring soils between the bottom of the washed gravel and the highest elevation of the limiting conditions defined in 69.7(1) "c."

*b.* Gravel shall be washed and shall range in size from ¾ inch to 2½ inches.

*c.* From 1 to 2 feet of medium-textured sand (depending upon the underlying soil depth, see 69.7(3) "a") must be placed between the bottom of the gravel and the top of the plowed surface of the naturally occurring soil.

*d.* Mound systems shall utilize absorption bed distribution piping design. The bed shall be installed with the long dimension parallel to the land contour. Systems on steep slopes with slowly permeable soils should be narrow to reduce the possibility of toe seepage.

*e.* Minimum spacing between distribution pipes shall be 4 feet, and a minimum of 3 feet shall be maintained between any trench and the sidewall of the mound.

*f.* No soil under or up to 50 feet down gradient of the mound may be removed or disturbed except as specified herein.

*g.* Construction equipment which would cause undesirable compaction of the soil shall be kept off the base area. Construction or plowing shall not be initiated when the soil moisture content is high. If a sample of soil from approximately 9 inches below the surface can be easily rolled into a 1/8- to 1/4-inch diameter wire, the soil moisture content is too high for construction purposes.

*h.* Aboveground vegetation shall be closely cut and removed from the ground surface throughout the area to be utilized for the placement of the fill material.

*i.* The area shall be plowed to a depth of 7 to 8 inches, parallel to the land contour with the plow throwing the soil up slope to provide a proper interface between the fill and the natural soil. Tree stumps should be cut flush with the surface of the ground, and roots should not be pulled.

*j.* The base area of the mound is to be calculated on the results of percolation rate as indicated in Table IV. The base area of the mound below and down slope from the trenches, excluding the area under the end slopes, must be large enough for the natural soil to absorb the estimated daily wastewater flow.

*k.*

Table IV

Percolation Rate Min/Inch	Application Rate Gal/Square Foot/Day
Less than 1	Not Suitable
1 - 5	1.25
6 - 15	1.00
16 - 30	.75
31 - 45	.50
46 - 60	.40
61 - 90	.20
91 - 120	.10
Over 120	Not Suitable

*l.* The area of the fill material shall be sufficient to extend 3 feet beyond the edge of the gravel area before the sides are shaped to at least a 4:1 slope (preferably 5:1).

*m.* Distribution system.

(1) The distribution pipe shall be rigid plastic pipe, schedule 40 or 80 with 1-inch nominal diameter.

(2) The distribution pipe shall be provided with a single row of ¼-inch perforations in a straight line 30 inches on center along the length of the pipe or an equivalent design that ensures uniform distribution. All joints and connections shall be solvent-cemented.

(3) The distribution pipe shall be placed in the clean, washed gravel (or crushed limestone as described in 69.6(4)“a”) with holes downward. The gravel shall be a minimum of 9 inches in depth below and 3 inches in depth above the pipe.

(4) No perforations shall be permitted within 3 inches of the outer ends of any distribution pipes.

(5) The outer ends of all pressure distribution lines shall be securely capped.

(6) The central pressure manifold should consist of 1½-inch or 2-inch solid plastic pipe using a tee or cross for connecting the distribution lines.

*n.* Construction should be initiated immediately after preparation of the soil interface by placing all of the sandy fill material needed for the mound (to the top of the trench) to a minimum depth of 21 inches above the plowed surface. This depth will permit excavation of the trenches to accommodate the 9 inches of washed gravel or crushed stone necessary for the distribution piping.

*o.* The absorption trench or trenches shall be hand excavated to a depth of 9 inches, the bottoms of the trenches made certain to be level.

*p.* Twelve inches of gravel shall be placed in the trench and hand leveled, and then 3 inches of the gravel removed with a shovel in the location where the distribution pipe will be placed. After the distribution pipe is placed the pipe shall be covered with 2 inches of gravel.

*q.* The top of the gravel shall be covered with synthetic drainage fabric. Unbacked, rolled 3½-inch-thick fiberglass insulation, untreated building paper, or other suitable material may be used with approval of the administrative authority. Plastic or treated building paper shall not be used.

*r.* After installation of the distribution system, gravel and material over the gravel, the entire mound is to be covered with topsoil native to the site or of similar characteristics to support vegetation found in the area. The entire mound shall be crowned by providing 12 inches of topsoil on the side slopes with a minimum of 18 inches over the center of the mound. The entire mound shall be seeded, sodded or otherwise provided with a grass cover to ensure stability of the installation.

*s.* The area surrounding the mound shall be graded to provide for diversion of surface runoff water.

**69.7(4) Dosing.**

*a.* Dosing shall be required for mound systems.

*b.* The dosing volume shall be five to ten times the distribution piping network volume.

*c.* The size of the dosing pump or siphon shall be capable of maintaining an approximate pressure of one psi at the outer ends of the distribution lines.

**567—69.8(455B) Drip irrigation.**

**69.8(1) General design.**

*a.* Pretreatment required. These systems must be preceded by a secondary treatment system discharging a treated, filtered effluent with BOD and TSS values less than 20 mg/L.

*b.* Separation from groundwater. Drip irrigation systems shall have a minimum vertical separation distance to high groundwater level or bedrock of 20 inches.

*c.* Maximum hillside slope. Drip irrigation systems shall not be installed on slopes of more than 25 percent.

*d.* Specifications given in these rules for drip irrigation are minimal and may not be sufficient for all applications. Technical specifications are changing with experience and research. Other design information beyond the scope of these rules may be necessary to properly design a drip irrigation system.

**69.8(2) Emitter layout.**

*a.* *Discharge rate.* Systems shall be designed so that emitters discharge approximately 1 gpm at 12 psi or other rates suggested by the manufacturer and approved by the administrative authority.

*b.* *Grid size.* Drip lines shall be run in parallel lines 2 feet apart. Emitters shall be placed in the drip lines on 2-foot intervals with emitters offset 1 foot between adjacent lines. Each emitter shall cover 4 square feet of absorption area.

*c.* *Field size.* The field shall be sized according to the application rate given in Table V.

*d. Depth of drip lines.* Drip lines shall be laid on the contour 6 to 12 inches deep with a maximum line length of 100 feet. Lines may be of unequal length.

*e. Interconnection.* Drip lines shall all be connected to supply and return headers such that the entire system will automatically drain back to the dosing tank or pump pit upon completion of the pumping cycle. Vacuum breakers shall be positioned at the high point of the supply and return headers. The dosing tank shall have a high water audio/visual alarm.

Table V. Length of Drip Line Required Per Bedroom

Perc. Rate min./in.	Design Hyd. Loading gpd/sq.ft.	Length of Drip Line feet/bedroom
1 - 5	2.0	40
6 - 15	1.3	60
16 - 30	0.9	90
31 - 45	0.6	150
46 - 60	0.4	200
61 - 90	0.2	400
91 - 120	0.1	800

**567—69.9(455B) Intermittent sand filters.**

**69.9(1) General requirements.**

*a. Use.* Intermittent sand filters may be used when the administrative authority determines the site is unacceptable for a full-sized soil absorption system.

*b. Location.* Intermittent sand filters shall be located in accordance with the distances specified in Table I.

*c. Sampling.* A sampling port shall be available at the discharge point of the filter or shall be installed in the discharge line. Monitoring and effluent sampling of intermittent sand filters must meet the requirements of the NPDES permit as specified in rule 69.2(455B). Such sampling shall be performed annually for a subsurface sand filter as described in 69.9(3) and twice a year, at six-month intervals, for free access sand filters as described in 69.9(4). (Beginning January 1, 2005, such sampling shall be done by a qualified sampler.) Tests shall be run on all samples for carbonaceous biochemical oxygen demand (CBOD5) and *Escherichia coli* (*E. coli*) (testing for *E. coli* is limited to locations noted in the following sentence), and once a year in the spring for total suspended solids (TSS). The maximum CBOD5, TSS, and *E. coli* count limits are as follows. *E. coli* tests shall only be required where effluent is discharged into (directly or within one mile upgradient of the shoreline of) a Class "A1," Class "A2," Class "A3" or Class "C" water.

Effluents Discharging To	<i>E. coli</i> cfu/100 mL	CBOD5 mg/L	TSS mg/L
Class "A1," "A2," "A3" and "C" waters*	235	25	25
All other water use classifications	no limit	25	25

\*A separation distance of 750 feet shall be maintained between any point of discharge and the shoreline of a Class "A1," "A2," or "A3" water.

*d. Prohibited construction.* There shall be no construction, such as buildings or concrete driveways, covering any part of an intermittent sand filter.

**69.9(2) Construction.**

*a. Number.* An intermittent sand filter shall consist of one filtering bed or two or more filtering beds connected in series and separated by a minimum of 6 feet of undisturbed earth.

*b. Pipelines.* Each bed shall contain a horizontal set of collector lines. The collector lines shall be equivalent to SDR 35 PVC pipe, 8-inch diameter gravelless drainpipe or other suitable materials.

(1) One collector line shall be provided for each 6 feet of width or fraction thereof. A minimum of two collector lines shall be provided.

(2) The collector lines shall be laid to a grade of 1 inch in 10 feet (or 0.5 to 1.0 percent).

(3) Each collector line shall be vented or connected to a common vent. Vents shall extend at least 12 inches above the ground surface with the outlet screened, or provided with a perforated cap.

(4) Gravelless drainfield pipe with fiber wrap may be used for the collector lines. If so, no gravel or pea gravel is required covering the collector lines. The pipe shall be bedded in filter sand.

(5) If 4-inch plastic pipe with perforations is used for the collector lines, they shall be covered as follows:

1. Gravel  $\frac{3}{4}$  inch to  $2\frac{1}{2}$  inches in size shall be placed around and over the lower collector lines until there is a minimum of 4 inches of gravel over the pipes.

2. The gravel shall be overlaid with a minimum of 3 inches of washed pea gravel  $\frac{1}{8}$ -inch to  $\frac{3}{8}$ -inch size interfacing with the filter media. A layer of fabric filter may be used in place of the pea gravel. Fabric filters must be 30 by 50 mesh with a percolation rate of at least 5 gal/sq.ft.

(6) A minimum of 24 inches of coarse washed sand shall be placed over the pea gravel or above the gravelless drainfield pipe. The sand shall meet the Iowa DOT standards for concrete sand: 100 percent shall pass a 9.5 mm screen, 90 to 100 percent shall pass a 4.75 mm screen, 70 to 100 percent shall pass a 2.36 mm screen, 10 to 60 percent shall pass a 600Tm screen, and 0 to 1.5 percent shall pass a 75Tm screen.

**69.9(3) Subsurface sand filters.**

*a. Distribution system and cover.*

(1) Gravel base. Six inches of gravel  $\frac{3}{4}$  inch to  $2\frac{1}{2}$  inches in size shall be placed upon the sand in the bed.

(2) Distribution lines. Distribution lines shall be level and shall be horizontally spaced a maximum of 3 feet apart, center to center. Distribution lines shall be rigid perforated PVC pipe.

(3) Venting. Venting shall be placed on the downstream end of the distribution lines with each distribution line being vented or connected to a common vent. Vents shall extend at least 12 inches above the ground surface with the outlet screened, or provided with a perforated cap.

(4) Gravel cover. Enough gravel shall be carefully placed to cover the distributors.

(5) Separation layer. A layer of material such as unbacked, rolled  $3\frac{1}{2}$ -inch-thick fiberglass insulation, untreated building paper of 40- to 60-pound weight, synthetic drainage fabric or 4 to 6 inches of marsh hay or straw shall be placed upon the top of the upper layer of gravel.

(6) Soil cover. A minimum of 12 inches of soil backfill shall be provided over the beds.

(7) Distribution boxes. A distribution box shall be provided for each filter bed where gravity distribution is used. The distribution boxes shall be placed upon undisturbed earth outside the filter bed. Separate watertight lines shall be provided leading from the distribution boxes to each of the distributor lines in the beds.

*b. Sizing of subsurface sand filters.*

(1) Gravity flow.

1. For residential systems, single bed subsurface sand filters shall be sized at a rate of 240 square feet of surface area per bedroom.

2. Dual subsurface sand filters, constructed in series, shall be sized at the rate of 160 square feet of surface per bedroom in the first filter and 80 square feet of surface area per bedroom in the second filter in the series.

(2) Pressure dosed.

1. For residential systems, single bed subsurface sand filters dosed by a pump or dosing siphon may be sized at a rate of 180 square feet of surface area per bedroom.

2. Dual subsurface sand filters, constructed in series, may be sized at the rate of 120 square feet of surface per bedroom in the first filter and 60 square feet of surface area per bedroom in the second filter in series.

(3) Nonhousehold. Effluent application rates for commercial systems treating domestic waste shall not exceed the following:

1. 1.5 gallon/square feet/day for double bed sand filters.
2. 1.0 gallon/square feet/day for single bed sand filters.
3. Total surface area for any subsurface sand filter system shall not be less than 200 square feet.

**69.9(4) Free access sand filters.**

*a. Description.* Media characteristics and underdrain systems for free access filters are similar to those for subsurface filters. Dosing of the filter should provide for flooding the bed to a depth of approximately 2 inches. Dosing frequency is usually greater than two times per day. For coarser media (greater than 0.5 mm) a dosing frequency greater than four times per day is desirable. Higher acceptable loadings on these filters as compared to subsurface filters relate primarily to the accessibility of the filter surface for maintenance. Gravel is not used on top of the sand media, and the distribution pipes are exposed above the surface.

*b. Distribution.* Distribution to the filter may be by means of troughs laid on the surface, pipelines discharging to splash plates located at the center or corners of the filter, or spray distributors. Care must be taken to ensure that lines discharging directly to the filter surface do not erode the sand surface. The use of curbs around the splash plates or large stones placed around the periphery of the plates will reduce the scour. A layer of washed pea gravel placed over the filter media may also be employed to avoid surface erosion. This practice will create maintenance difficulties, however, when it is time to rake or remove a portion of the media surface.

*c. Covers.* Free access filters may be covered to protect against severe weather conditions and to avoid encroachment of weeds or animals. The cover also serves to reduce odor conditions. Covers may be constructed of treated wooden planks, galvanized metal, or other suitable material. Screens or hardware cloth mounted on wooden frames may also serve to protect filter surfaces. Where weather conditions dictate, covers should be insulated. A space of 12 to 24 inches should be allowed between the insulated cover and sand surface. Free access filters may not be buried by soil or sod.

*d. Loading.* The hydraulic loading for free access sand filters should be from 2.0 to 5.0 gpd/sq.ft.

*e. Number of filters.* Dual filters each sized for the design flow are recommended for loading rates in excess of 3½ gpd/sq.ft. treating septic tank effluent.

**69.9(5) Dosing.** Dosing for sand filters is strongly advised. Without dosing, the entire area of the sand filter is never effectively used. Dosing not only improves treatment effectiveness but also decreases the chance of premature failure.

*a. Pumps.* A pump shall be installed when adequate elevation is not available for the system to operate by gravity.

- (1) The pump shall be of corrosion-resistant material.
- (2) The pump shall be installed in a watertight pit.
- (3) The dosing system shall be designed to flood the entire filter during the dosing cycle. A dosing frequency of greater than two times per day is recommended.
- (4) A high water alarm shall be installed.

*b. Dosing siphons.* When a dosing siphon is used where elevations permit, such siphon shall be installed as follows:

- (1) Dosing siphons shall be installed between the septic tank and the first filter bed.
- (2) Dosing siphons shall be installed with strict adherence to the manufacturer's instructions.

*c. Dosing tanks.* The dosing tank shall be of such size that the siphon will flood the entire filter during the dosing cycle. A dosing frequency of greater than two times per day is recommended.

**567—69.10(455B) Individual mechanical aerobic wastewater treatment systems.** General requirements for individual mechanical aerobic wastewater treatment systems are as follows:

**69.10(1) Use.** Mechanical/aerobic systems may be used only when the administrative authority determines that the site is unacceptable for a full-sized soil absorption system. Because of the higher maintenance requirements of mechanical/aerobic systems, preference should be given to sand filters, where conditions allow.

**69.10(2) Certification.** All individual mechanical aerobic wastewater treatment plants shall be certified by an ANSI-accredited third-party certifier to meet National Sanitation Foundation Standard 40, Class I, including appendices (May 1996).

**69.10(3) Installation and operation.** All individual mechanical aerobic wastewater treatment plants shall be installed, operated and maintained in accordance with the manufacturer's instructions and the requirements of the administrative authority. The aerobic plants shall have a minimum treatment capacity of 150 gallons per bedroom per day or 500 gallons, whichever is greater.

**69.10(4) Effluent treatment.** The effluent from individual mechanical aerobic wastewater treatment plants shall receive additional treatment through the use of intermittent sand filters, mound systems or subsurface absorption systems of a magnitude of half that prescribed in rule 69.6(455B), 69.7(455B) or 69.9(455B) or by discharge to a drip irrigation system as sized in 69.8(455B).

**69.10(5) Maintenance contract.** A maintenance contract with a manufacturer-certified technician shall be maintained at all times. Maintenance agreements and responsibility waivers shall be recorded with the county recorder and in the abstract of title for the premises on which mechanical aerobic treatment systems are installed. Mechanical aerobic units shall be inspected for proper operation at least twice a year on six month intervals.

**69.10(6) Effluent sampling.** Any open discharge from systems involving mechanical aeration shall have the effluent sampled twice a year at six-month intervals. (Beginning January 1, 2005, such sampling shall be done by a qualified sampler.) Tests shall be run twice a year on all samples for CBOD5 and *E. coli*, and once a year in the spring for TSS, as prescribed in 69.9(1).

#### **567—69.11(455B) Constructed wetlands.**

##### **69.11(1) General site design.**

*a.* Application. Constructed wetlands shall only be used where soil percolation rates at the site exceed 120 minutes per inch. Because of the higher maintenance requirements of constructed wetland systems, preference should be given to sand filters, where conditions allow.

*b.* Effluent treatment. The effluent from a constructed wetland shall receive additional treatment through the use of intermittent sand filters of a magnitude of half that prescribed in rule 69.9(455B).

*c.* Effluent sampling. Effluent sampling of constructed wetlands shall be performed twice a year at six-month intervals. (Beginning January 1, 2005, such sampling shall be done by a qualified sampler.) Tests shall be run on all parameters as required in 69.9(1).

*d.* Specifications given in these rules for constructed wetlands are minimal and may not be sufficient for all applications. Technical specifications are changing with experience and research. Other design information beyond the scope of these rules may be necessary to properly design a constructed wetland system.

##### **69.11(2) Wetland design.**

*a.* Depth. The wetland shall be of a subsurface flow construction with a rock depth of 18 inches and a liquid depth of 12 inches.

*b.* Materials. Substrate shall be washed river gravel with a diameter of ¾ inch to 2½ inches. If crushed quarried stone is used, it must meet the criteria listed in 69.6(4) "a."

*c.* Sizing and configuration. Detention time shall be a minimum of seven days.

(1) Dimensions. This may be accomplished with trenches 16 to 18 inches deep (12 inches of liquid), 3 feet wide with 100 feet of length per bedroom. This may also be done with beds 16 to 18 inches deep with at least 300 square feet of surface area per bedroom. The bottom of each trench or bed must be level within ±½ inch.

(2) Configuration. Multiple trenches or beds in series should be used. Beds or trenches in series may be stepped down in elevation to fit a hillside application. If the system is on one elevation, it should still be divided into units by earthen berms at about 50 and 75 percent of the total length.

(3) Unit connections. Each subunit shall be connected to the next with an overflow pipe (rigid sewer pipe) that maintains the water level in the first section. Protection from freezing may be necessary.

*d.* Liner. Wetlands shall be lined with a synthetic PVC or PE plastic liner 20 to 30 mils thick.

*e. Inlet pipe.* Effluent shall enter the wetland by a 4-inch pipe sealed into the liner. With beds, a header pipe shall be installed along the inlet side to distribute the waste.

*f. Protective berms.* Wetland system sites shall be bermed to prevent surface water from entering the trenches or beds.

**69.11(3) Vegetation.**

*a. Setting plants.* Vegetation shall be established on the wetlands at time of construction. Twelve inches of rock is placed in each unit, the plants are set, then the final 4 to 6 inches of rock is placed.

*b. Plant species.* Only indigenous plant species shall be used, preferably collected within a 100-mile radius of the site. Multiple species in each system are recommended. Preferred species include, but are not limited to:

- (1) *Typha latifolia* - Common cattail
- (2) *Typha angustifolia* - Narrow leaf cattail
- (3) *Scirpus* spp. - Bullrush
- (4) *Phragmites communis* - Reed

*c. Plant establishment.* Transplantation is the recommended method of vegetation establishment. For transplanting, the propagule should be transplanted, at a minimum, on a 2-foot grid. The transplants should be fertilized, preferably with a controlled-release fertilizer such as Osmocote 18-5-11 for fall and winter planting, 18-6-12 for spring planting, and 19-6-12 for summer planting. Trenches or beds should be filled with fresh water immediately.

*d. Plant management.* In the late fall the vegetation shall be mown and the detritus left on the wetland surface as a temperature mulch. In the early spring the mulch shall be removed and disposed of to allow for adequate bed aeration.

**567—69.12(455B) Waste stabilization ponds.**

**69.12(1) General requirements.** Waste stabilization ponds may be used if designed and constructed in accordance with the following criteria and provided the effluent is discharged in accordance with the requirements of the general NPDES permit listed in rule 69.2(455B). A septic tank sized according to rule 69.5(455B) shall precede a waste stabilization pond.

**69.12(2) Location.** Waste stabilization ponds must meet the following separation distances:

*a.* 1,000 feet from the nearest inhabitable residence, commercial building, or other inhabitable structure. If the inhabitable or commercial building is the property of the owner of the proposed treatment facility, or there is written agreement with the owner of the building, this separation criterion shall not apply. Any such written agreement shall be filed with the county recorder and recorded for abstract of title purposes, and a copy submitted to the department.

*b.* 1,000 feet from public shallow wells.

*c.* 400 feet from public deep wells.

*d.* 400 feet from private wells.

*e.* 400 feet from lakes and public impoundments.

*f.* 25 feet from property lines and rights-of-way.

**69.12(3) Size.**

*a. Dimensions.* Ponds shall have a length not exceeding three times the width.

*b. Capacity.* When domestic sewage from a septic tank is to be discharged to a waste stabilization pond, the capacity of the pond shall be equivalent to 180 times the average daily design flow.

*c. Depth.* The wastewater depth for a waste stabilization pond shall be uniform and 3 feet to 5 feet.

*d. Freeboard.* A minimum freeboard of 2 feet shall be maintained at all times.

**69.12(4) Embankments.**

*a. Seal.* Embankments shall be constructed of impermeable materials and shall be compacted. The bottom of the waste stabilization pond shall be cleared and leveled to the required elevation and shall be lined with an impermeable natural or man-made material. Seepage loss through the sides and bottom shall be less than 1/16 inch per day.

*b. Slopes.* Inside embankment slopes shall be 3 horizontal to 1 vertical. Outside embankments shall be at least 3:1.

*c. Berm top.* Berm tops shall be at least 4 feet wide.

*d. Cover.* Embankments shall be seeded from the outside toe to the inside high water line. From the high water line down the embankment diagonally about 5 feet shall be rip-rapped for erosion and vegetation control.

**69.12(5) Inlet and outlet structures.**

*a. Inlet.* The inlet shall be placed no higher than 12 inches above the bottom of the pond. It shall discharge near the middle of the pond at a point opposite the overflow structure and onto a concrete splash plate at least 2 feet square.

*b. Outlet.* The outlet pipe shall withdraw water from a submerged depth of at least 1 foot. The intake for the outlet pipe shall be 3 to 5 feet from the embankment.

*c. Separation.* The inlet and outlet should be separated to the maximum extent possible, ideally by a berm or baffle constructed in the lagoon to prevent short-circuiting.

**69.12(6) Drainage.** All surface water shall be diverted away from the waste stabilization pond.

**69.12(7) Discharge.**

*a. Controlled discharge.* If the pond is designed for open discharge, it must be discharged under controlled conditions. The effluent must be tested before discharge, and effluent quality must be less than 25 mg/L of CBOD5 and less than 25 mg/L of TSS. Another test must be taken during discharge with the same results. Pond discharge is permitted only in spring and fall when stream flows are highest.

*b. Continuous discharge.* If the pond is to have an unlimited continuous discharge, the effluent shall receive additional treatment through the use of intermittent sand filters, mound systems or subsurface absorption systems of a magnitude of half that prescribed in rules 69.6(455B), 69.7(455B) and 69.9(455B). Under continuous discharge, effluent sampling shall be as required for constructed wetlands as outlined in 69.11(1)“c.”

**69.12(8) Maintenance.**

*a. Fencing.* All waste stabilization ponds are to be fenced adequately to prevent entrance of livestock and to discourage entrance by people into the area. Signs shall be posted warning of possible health and safety hazards.

*b. Vegetation.* Vegetation on the top and sides of the berm shall be kept mown. No trees shall be allowed to become established.

**567—69.13(455B) Requirements for impervious vault toilets.** All impervious vault toilets hereafter constructed or required by the administrative authority to be reconstructed shall comply with the following requirements:

**69.13(1) Location.** Impervious vault toilets shall be located in accordance with the distances given in Table I, rule 69.3(455B) for the closed portion of the treatment system.

**69.13(2) Construction.** The vault shall be constructed of reinforced, impervious concrete at least 4 inches thick. The superstructure including floor slab, seat, seat cover, riser and building shall comply with good design and construction practices to provide permanent safe, sanitary facilities. The vault shall be provided with a cleanout opening fitted with a fly-tight cover.

**69.13(3) Disposal.** Wastewater from impervious vault toilets shall be disposed of at a public sewage treatment facility.

**567—69.14(455B) Requirements for portable toilets.** All portable toilets shall be designed to receive and retain the wastes deposited in them and shall be located and maintained in a manner that will prevent the creation of any nuisance condition. Disposal of waste from portable toilets shall be at a public sewage treatment facility.

**567—69.15(455B) Requirements for chemical toilets.** All chemical toilets shall comply with the following requirements:

**69.15(1) Tank.** Chemical toilets for use in isolated residences shall have a receptacle of smooth, impervious material that is resistant to chemicals and easily cleanable.

**69.15(2) Vent.** When vents are required for chemical toilets, they shall be of durable corrosion-resistant material installed in a professional manner.

**69.15(3) Mixing and chemical charge.** The fixture shall be equipped with a mixing device and shall be charged with the proper concentration of bactericidal chemical or chemicals. Chemical recharges shall be added and mixed with the contents when necessary to maintain sufficient solution strength and to suppress odors.

**69.15(4) Toilet rooms.** Chemical toilets shall be located in toilet rooms which are well lighted, ventilated and maintained in a nuisance-free condition.

**69.15(5) Final disposal of receptacle contents.** The receptacle contents shall be disposed of in accordance with the requirements of 567—Chapter 68. The recommended method of disposal is discharging to a municipal sewage treatment facility.

**567—69.16(455B) Other methods of wastewater disposal.** Other methods or types of private wastewater treatment and disposal systems shall be installed only after plans and specifications for each project have been approved by the administrative authority.

**567—69.17(455B) Disposal of septage from onsite wastewater treatment and disposal systems.**

**69.17(1)** The collection, storage, transportation and disposal of all septage shall be carried out in accordance with the requirements in 567—Chapter 68.

**69.17(2)** Commercial septic tank cleaners. Individual administrative authorities shall enforce the licensing program for commercial septic tank cleaners in accordance with the requirements of 567—Chapter 68.

**567—69.18(455B) Alternative or innovative onsite wastewater treatment and disposal systems.**

**69.18(1) Design requirements.** Alternative or innovative systems are to be designed and operated in accordance with approved standards and operating procedures established by individual administrative authorities.

*a.* Plans and specifications, meeting all applicable rule requirements, should be prepared and submitted to the administrative authorities by a licensed professional engineer. Included with the engineering submittal should be adequate supporting data relating to the effectiveness of the proposed system.

*b.* For systems designed to discharge treated effluent into waters of the state, it will be necessary to obtain a Notice of Intent to fall under the requirements of NPDES General Permit No.4. The administrative authority is responsible for determining that the requirements of the permit are met including the monitoring program.

*c.* Administrative authorities should prepare for signature an enforceable agreement to be placed on record which would require that present and future system owners meet all applicable rule requirements. In the event of noncompliance, the administrative authority shall require that adequate steps be taken by the system owner to bring the system into compliance.

*d.* Wastewater management districts may be formed for the purpose of providing specialized control of on-site wastewater treatment and disposal systems located in certain problem areas or in intensive development areas. Formation of such wastewater management districts shall be coordinated under the guidance of the administrative authority and shall meet all applicable rule requirements.

**69.18(2)** Reserved.

**567—69.19(455B) Variances.** Variances to these rules may be granted by the department of natural resources or the administrative authority provided sufficient information is submitted to substantiate the need and propriety for such action. Applications for variances and justification shall be in writing and copies filed with the department.

These rules are intended to implement Iowa Code chapter 455B, division III, part 1.

Appendix A  
Estimates of Nonhousehold Domestic Sewage Flow Rates

Source of use for sewage unit	(units)	Gallons per day per unit	
		Average (Secondary treat- ment unit sizing)	Maximum (Septic tank)
<u>Dwelling units</u>			
Hotels or luxury motels	(Each guest)	50	60
	(Add per employee)	11	13
or	(Per square foot)	0.26	0.3
Discount motels	(Each guest)	30	40
	(Add per employee)	11	13
or	(Per square foot)	0.22	0.46
Rooming house	(Each resident)	40	50
	(Add per nonresident meal)	2.5	4.0
<u>Commercial/Industrial</u>			
Retail stores	(Per square foot of sales area)	0.1	0.15
or	(Each customer)	2.5	5
	(Plus each employee)	11	15
or	(Each toilet room)	530	630
Offices	(Each employee)	15	18
or	(Per square foot)	0.1	0.25
Medical offices	(Per square foot)	0.6	1.6
Industrial buildings	(Each employee)	15	20
	(Does not include process ware or cafeteria)		
Construction camp	(Each employee)	15	20
Visitor center	(Each visitor)	5	20
Laundromat	(Each machine)	580	690
or	(Each load)	50	50
or	(Per square foot)	2.2	2.9
Barber shops	(Per chair)	55	80
Beauty shops	(Per station)	270	300
Car washes	(Per inside square foot)	5	10
	(Does not include car wash water)		
<u>Eating and Drinking Establishments</u>			
Restaurant	(Per meal)	2.5	4.0
	(Does not include bar or lounge)		
or	(Each seat)	24	40
	(Plus add for each employee)	11	13
Dining hall	(Per meal)	2.5	4.0
Coffee shop	(Each customer)	2.0	2.5
	(Add per employee)	11	13
Cafeteria	(Each customer)	2.0	2.5
	(Add per employee)	11	13
Drive-in	(Per car stall)	110	145

Source of use for sewage unit	(units)	Gallons per day per unit	
		Average (Secondary treat- ment unit sizing)	Maximum (Septic tank)
Bar or lounge	(Each customer)	2.0	5.5
	(Add per employee)	13	16
or	(Per seat)	32	40
Country clubs (no meals)	(Per member)	22	22
or	(Per member) (Meals and showers)	105	130
or	(Per member in residence)	75	100
<u>Resorts</u>			
Housekeeping cabin	(Per person)	42	50
Lodge	(Per person)	53	74
Parks/swimming pools	(Per guest)	10	13
Picnic parks with toilet only	(Per guest)	5	10
Movie theaters	(Per guest)	2.5	4.0
Drive-in theaters	(Per space)	3	5
Skating rink/dance hall	(Per customer)	7	10
Bowling lanes	(Per lane)	133	200
<u>Transportation</u>			
Airport, bus or rail depot	(Per passenger)	2.5	4
or	(Per square foot)	3.33	6.5
or	(Per public restroom)	500	630
Auto service station	(Each vehicle served)	11	13
	(Add per employee)	13	16
or	(Per inside square foot)	0.25	0.6
or	(Per public restroom)	500	630
<u>Institutional</u>			
Hospitals	(Each medical bed)	175	250
	(Add per employee)	10	16
Mental institution	(Each bed)	105	175
	(Add per employee)	10	16
Prison or jail	(Each inmate)	120	160
	(Add per employee)	10	16
Nursing home	(Each resident)	93	145
	(Add per employee)	10	16
<u>Schools and Churches</u>			
School	(Per student) (No gym, cafeteria or showers)	10	17
	(Per student) (Cafeteria only)	16	17
	(Per student) (Cafeteria, gym & showers)	20	30
Boarding school	(Per student)	75	115
Churches	(Per member)	0.14	0.86
	(Add for each kitchen meal)	1	1

Source of use for sewage unit	(units)	Gallons per day per unit	
		Average (Secondary treat- ment unit sizing)	Maximum (Septic tank)
	(Add per Sunday school student)	0.14	0.86
<u>Recreational</u>			
Campground/with hookups	(Per person)	32	40
or	(Per site with central bath)	100	100
	(Per site)	50	75
	(Add for dump station w/ hookup)	13	16
Day camp (no meals)	(Per person)	13	16
Weekly overnight camp	(Per member)	33	33

Appendix B  
Percolation Test Procedure

- (1) A minimum of three test holes distributed evenly over the proposed lateral field is required.
- (2) Percolation test holes shall be 4 to 12 inches in diameter and to the same depth as the proposed absorption trenches (not to exceed 36 inches in depth).
- (3) Sides and bottoms of the test holes shall be scratched or roughened to provide a natural surface. All loose material shall be removed from each hole.
- (4) The bottoms of the test holes shall be covered with approximately 2 inches of rock to protect the bottom from scouring action when the water is added.
- (5) The hole shall be filled with at least 12 inches of clean water and this depth shall be maintained for at least 4 hours and preferably overnight if clay soils are present. It is important that the soil be allowed to soak for a sufficiently long period of time to allow the soil to swell if accurate results are to be obtained.
- (6) In sandy soils with little or no clay, soaking is not necessary. If, after filling the hole twice with 12 inches of water, the water seeps completely away in less than 10 minutes, the test can proceed immediately.
- (7) Except for sandy soils, percolation rate measurements should be made at least 4 hours but no more than 24 hours after the soaking period began. Any soil that sloughed into the hole during the soaking period is removed and the water level is adjusted to 6 inches above the gravel (or 8 inches above the bottom of the hole). At no time during the test is the water level allowed to rise more than 6 inches above the gravel.
- (8) Immediately after adjustment, the water level is measured from a fixed reference point to the nearest 1/8 inch at 30-minute intervals. The test is continued until two successive water level drops do not vary by more than 1/8 inch. At least three measurements are made.
- (9) After each measurement, the water level is readjusted to the 6-inch level. The last water level drop is used to calculate the percolation rate.
- (10) In sandy soils or soils in which the first 6 inches of water added after the soaking period seeps away in less than 30 minutes, water level measurements are made at 10-minute intervals for a 1-hour period. The last water level drop is used to calculate percolation rate.
- (11) The percolation rate is calculated for each test hole by dividing the time interval used between measurements by the magnitude of the last water level drop. This calculation results in a percolation rate in terms of minutes per inch. To determine the percolation rate for the area, the rates obtained from each hole are averaged. (If tests in the area vary by more than 20 minutes per inch, variations in soil type are indicated. Under these circumstances, percolation rates should not be averaged.) EXAMPLE: If the last measured drop in water level after 30 minutes is 5/8 inch, the percolation rate = (30 minutes)/(5/8 inch) = 48 minutes/inch.

TITLE V  
FLOOD PLAIN DEVELOPMENT

## CHAPTER 70

## SCOPE OF TITLE—DEFINITIONS—FORMS—RULES OF PRACTICE

[Prior to 7/1/83, see INRC, Chs 2 and 5]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—70.1(455B,481A) Scope of title.** The department has jurisdiction over all flood plains and floodways in the state for the purpose of establishing and implementing a program to promote the protection of life and property from floods and to promote the orderly development and wise use of the flood plains of the state. As part of the program, the department regulates flood plain development by three alternative methods: establishment of regulations for specific stream reaches by issuance of flood plain management orders (see Chapter 75); approval of flood plain management regulations adopted by local governments (see Chapter 75); and approval of flood plain development on a case-by-case basis where areas or projects are not covered by the first two methods (see Chapter 71). Any person who desires to construct or maintain a structure, dam, obstruction, deposit or excavation, or allow the same in any flood plain or floodway has a responsibility to contact the department to determine whether approval is required from the department or a local government authorized to act for the department.

Minimum statewide criteria for most types of flood plain development are listed in Chapter 72. Special requirements for dams are listed in Chapter 73.

**567—70.2(455B,481A) Definitions.** Definitions used in this title are listed in alphabetical order as follows:

*“Agricultural levees or dikes”* means levees or dikes constructed to provide limited flood protection to land used primarily for agricultural purposes.

*“Animal feeding operation”* means the same as defined in 567—65.1(455B).

*“Animal feeding operation structure,”* as defined in 567—65.1(455B), means a confinement building, manure storage structure, or egg washwater storage structure.

*“Backwater”* means the increase in water surface level immediately upstream from any structure, dam, obstruction or deposit, erected, used, or maintained in the floodway or on the flood plains caused by the resulting reduction in conveyance area.

*“Building”* means all residential housing including mobile homes as defined herein, cabins, factories, warehouses, storage sheds, and other walled, roofed structures constructed for occupation by people or animals or for storage of materials.

*“Channel”* means a natural or artificial flow path of a stream with definite bed and banks to collect and conduct the normal flow of water.

*“Channel change”* means either (a) the alteration of the location of a channel of a stream or (b) a substantial modification of the size, slope, or flow characteristics of a channel of a stream for a purpose related to the use of the stream’s flood plain surface rather than for the purpose of actually using the water itself, or putting the water to a new use. (NOTE: Diversions of water subject to the permit requirements of Iowa Code sections 455B.268 and 455B.269 usually are not channel changes.) Increasing the cross-sectional area of a channel by less than 10 percent is not considered a substantial modification of the size, slope, or flow characteristics of a channel of a stream.

*“Confinement feeding operation,”* as defined in 567—65.1(455B), means an animal feeding operation in which animals are confined to areas which are totally roofed.

*“Confinement feeding operation building”* or *“confinement building,”* as defined in 567—65.1(455B), means a building used in conjunction with a confinement feeding operation to house animals.

*“Confinement feeding operation structure,”* as defined in 567—65.1(455B), means an animal feeding operation structure that is part of a confinement feeding operation.

*“Dam”* means a barrier which impounds or stores water.

*“Development”* means a structure, dam, obstruction, deposit, excavation or flood control work in a floodway or flood plain.

*“Drainage district ditch”* means a channel located within the boundaries of a drainage district and excavated to establish a design channel-bottom profile for efficient conveyance of water discharged from agricultural tile systems and open drains.

*“Elevating”* means raising buildings by fill or other means to or above a minimum level of flood protection.

*“Encroachment limits”* means the boundaries of the floodway established in the flood plains and designating the width of the channel and minimum width of the overbank areas needed for the conveyance of Q100.

*“Equal and opposite conveyance”* means the location of development offsets from stream banks so that flood plain lands on each side of a stream convey a share of the flood flows proportionate to the total conveyance available on each respective side of the stream.

*“Experienced Iowa flood chart”* means a plot on logarithmic graph paper of points representing floods which have been observed and measured in Iowa and subsequently published by the U.S. geological survey or other agency. Each point on the plot is located with the drainage area in square miles as the abscissa and discharge in cubic feet per second as the ordinate.

*“Flood control works”* means physical works such as dams, levees, floodwalls, and channel improvements or relocations undertaken to provide moderate to high degree of flood protection to existing or proposed structures or land uses.

*“Flood hazard area”* means the area including the flood plains and the river or stream channel.

*“Flood plain”* means the land adjacent to a stream which has been or may be inundated by a flood having the magnitude of the regional flood as defined in these rules.

*“Flood proofing”* means a combination of structural provisions, changes, or adjustments in construction to buildings, structures, or properties subject to flooding primarily for the reduction or elimination of flood damages.

*“Floodway fringe”* means those portions of the flood plains located landward of the encroachment limits.

*“Height of dam”* means the vertical distance from the top of the dam to the natural bed of the stream or water source measured at the downstream toe of the dam or to the lowest elevation of the outside limit of the dam if it is not across a water source.

*“High damage potential”* means the flood damage potential associated with habitable residential buildings or industrial, commercial, or public buildings or building complexes of which flooding would result in high public damages as determined by the department.

*“Low damage potential”* means all buildings, building complexes or flood plain use not defined as maximum, high, or moderate damage potential.

*“Low head dam”* means any dam essentially contained within the channel of a river or stream and which is overtopped by normal stream flows.

*“Major dam structure”* means a dam meeting any of the following criteria:

1. Any high hazard dam.
2. Any moderate hazard dam with a permanent storage exceeding 100 acre-feet or a total of permanent and temporary storage exceeding 250 acre-feet at the top of the dam elevation.
3. Any dam, including low hazard dams, where the height of the emergency spillway crest measured above the elevation of the channel bottom at the centerline of the dam (in feet) multiplied by the total storage volume (in acre-feet) to the emergency spillway crest elevation exceeds 30,000. For dams without emergency spillways, these measurements shall be taken to the top of dam elevation.

*“Major water source,”* as defined in 567—65.1(455B), means a water source that is a lake, reservoir, river or stream located within the territorial limits of the state, or any marginal river area adjacent to the state, if the water source is capable of supporting a floating vessel capable of carrying one or more persons during a total of a six-month period in one out of ten years, excluding periods of flooding. Major water sources in the state are listed in Appendix B, Table 1 and Table 2 of 567—Chapter 65.

*“Manure storage structure,”* as defined in 567—65.1(455B), means a formed manure storage structure or an unformed manure storage structure, as defined in 567—65.1(455B). A manure storage structure does not include an egg washwater storage structure.

*“Maximum damage potential”* means the flood damage potential associated with hospitals and like institutions; buildings or building complexes containing documents, data, or instruments of great public value; buildings or building complexes containing materials dangerous to the public or fuel storage facilities; power installations needed in emergency or buildings or building complexes similar in nature or use to those listed above.

*“Minimum level of flood protection”* means the elevation corresponding to the water surface profile of the regulatory flood associated with a damage potential classification listed in these rules plus any freeboard specified in these rules.

*“Mobile home”* means a structure, transportable in one or more sections, which is built on a permanent chassis and designed to be used with or without a permanent foundation when connected to the required utilities. It does not include recreational vehicles or travel trailers.

*“Moderate damage potential”* means flood damage potential associated with industrial and commercial buildings or building complexes containing readily movable goods, equipment, or vehicles and seasonal residential buildings or building complexes which flooding would not result in high public damages as determined by the department.

*“Nominated stream”* means the stream or water source named in the petition described in 567—Chapter 72 that seeks designation of a stream as a protected stream.

*“Permanent storage”* means the volume of water expressed in acre-feet which is stored upstream from a dam or in an impoundment up the level of the principal outlet works of the structure.

*“Probable maximum flood”* means the flood that may be expected from the most severe combination of critical meteorological and hydrologic conditions that are reasonably possible in the region, and is derived from probable maximum precipitation, the theoretical greatest depth of precipitation for a given duration that is physically possible over a particular drainage area at a certain time of year. The probable maximum precipitation within designated zones in Iowa has been determined by the National Weather Service. The probable maximum flood for any location within Iowa is determined by the department.

*“Protected stream”* means a stream designated by the department as a “protected stream” in 567—Chapter 72.

*“Public damages”* means costs resulting from damage to roads and streets, sewers, water mains, other public utilities and public buildings; expenditures for emergency flood protection, evacuation and relief, rehabilitation and cleanup; losses due to interruption of utilities and transportation routes, and interruption of commerce and employment.

*“Q100,” “Q50,” “Q25,” “Q15,” “Q10,”* et cetera, means a flood having a 1, 2, 4, 7, 10, et cetera, percent chance of being equaled or exceeded in any one year as determined by the department.

*“Regional flood”* means a flood representative of the largest floods which have been observed on streams in Iowa.

*“Repair and maintenance of a drainage district ditch”* means the restoration of the original grade line, cross-sectional area, or other design specifications of a drainage district ditch lawfully established as part of a drainage district formed and operating under the provisions of Iowa Code chapter 468.

*“Road projects”* means the construction and maintenance of any bridges, culverts, road embankments, and temporary stream crossings.

*“Rural areas”* means any area not defined or designated as an urban area.

*“Seasonal homes”* means residential buildings or building complexes which are not used for permanent or year-round human habitation.

*“Stream”* means a water source that either drains an area of at least two square miles or has been designated as a protected stream in 567—Chapter 72.

*“Temporary storage”* means the volume of water expressed in acre-feet which may be stored upstream from a dam or in an impoundment above the level of the principal outlet works.

*“Urban areas”* means incorporated municipalities.

*“Water source,”* as defined in 567—65.1(455B), means any lake, river, creek, ditch or other body of water or channel having definite banks and bed with visible evidence of the flow or occurrence of water, except such lakes or ponds without outlet to which only one landowner is riparian.

**567—70.3(17A,455B,481A) Forms.** The following forms are currently in use for flood plain projects.

Form 36: Application for Approval of Construction in or on any Floodway or Flood Plain. 4/87. 542-3234

Form 37: Notification of Completion of Construction. 1/87. 542-3017

**567—70.4(17A,455B,481A) Requesting approval of flood plain development.**

**70.4(1) *Development needing approval.*** Any development in a floodway or flood plain which exceeds the thresholds in 567—Chapter 71 and is not otherwise regulated by a department flood plain management order or a department-approved, locally adopted flood plain management ordinance requires a department flood plain development permit.

**70.4(2) *Applying for a flood plain development permit.*** Application for a flood plain development permit shall be made on DNR Form 36 or a reasonable facsimile thereof. The application shall be submitted by or on behalf of the person or persons who have or will have responsibility by reason of ownership, lease, or easement for the property on which the project site is located. The application must be signed by the applicant or a duly authorized agent. Completed applications along with supporting information shall be mailed or otherwise delivered to the Flood Plain Management Section, Environmental Protection Division, Iowa Department of Natural Resources, Wallace State Office Building, Des Moines, Iowa 50319.

**70.4(3) *Engineering plans.***

*a. General requirement of certified plans.* An application shall not be considered complete until sufficient engineering plans have been submitted to enable the department to determine whether the project as proposed satisfies applicable criteria. The engineering plans shall contain information, as specified by the department, which is needed for the department to conduct a technical review pursuant to paragraph 70.5(3) “b.” The engineering plans shall include specifications, operation procedures and other information relating to environmental impacts. The engineering plans and other engineering information shall be certified by a registered professional engineer or, if applicable, a registered land surveyor, as required by Iowa Code chapter 542B. Duplicate copies of certified plans are required so that one copy can be returned to the applicant upon approval or disapproval of the application. An additional copy of the certified plans shall be required if the plans are incorporated as part of an approval or disapproval order which is filed with a county recorder.

*b. Waiver of submission of certified plans.* The department may waive the requirement in paragraph “a” of this subrule that the application for approval of a flood plain project be supported by certified engineering plans by making one of the following determinations:

(1) Engineering data are not required to determine that the project conforms to all applicable administrative and statutory criteria; or

(2) Adequate engineering data used to evaluate the dimensions and effects of the project were already available to the engineering staff.

**70.4(4) *Application fee.*** Reserved. No fee is charged at this time.

**70.4(5) *Modification of application or plans.*** Applicants and prospective applicants are encouraged to communicate with the department’s staff before submitting plans to identify the data required for review of a project and to discuss project modifications reasonably required to make the project conform to applicable criteria. When staff review of submitted plans discloses need for plan modification to conform to one or more criteria, the applicant is encouraged to submit revised plans.

**567—70.5(17A,455B,481A) Procedures for review of applications.**

**70.5(1) *Initial screening of applications.*** Each application upon receipt shall be promptly evaluated by the department to determine whether adequate information is available to review the project. The department shall advise the applicant of any additional information required to review the project. If the requested information is not submitted within 60 days of the date the request is made, the department may consider the application withdrawn.

**70.5(2) *Order of processing.*** In general, complete applications including sufficient plans and specifications shall be reviewed in the order that complete information is received. However, when

there are a large number of pending applications, which preclude the department from promptly processing all applications, the department may expedite review of a particular application out of order if the completed application and supporting documents were submitted at the earliest practicable time and any of the following conditions exist:

- a. Relatively little staff review time (generally less than four hours) is required and delay will cause the applicant hardship;
- b. The applicant can demonstrate that a delay in the permit will result in a substantial cost increase of a large project;
- c. Prompt review of the permit would result in earlier completion of a project that conveys a significant public benefit;
- d. The need for a permit is the result of an unforeseen emergency or catastrophic event; or
- e. A permit is needed to complete a project that will abate or prevent an imminent threat to the public health and welfare.

**70.5(3) Project investigation.** The department shall make an investigation of a project for which an application is submitted. The following are standard procedures for an investigation of an application.

a. *Inspection.* Agency personnel may make one or more field inspections of the project site when necessary to obtain information about the project. Submission of the application is deemed to constitute consent by the applicant for the agency staff and its agents to enter upon the land on which the proposed activity or project will be located for the sole purpose of collecting the data necessary to process the application, unless the applicant indicates to the contrary on the application.

b. *Technical review.* The department staff shall conduct a technical review using appropriate analytical techniques such as application of hydrologic and hydraulic models to determine the effects and impacts of a proposed project.

c. *Solicitation of expert comments on environmental effects.* For channel changes or other development which may cause significant adverse effects on the wise use and protection of water resources, water quality, fish, wildlife and recreational facilities or uses, the department shall request comments from the fish and wildlife division of the department or other knowledgeable sources.

d. *Summary report of project review.* The department staff may, if indicated, prepare a project summary report which summarizes the results of the review with respect to relevant criteria, the analytical methods used in the review and other project information. Typical indications of when project summary reports will be prepared are for those projects for which negative comments have been received from potentially affected landowners, those projects which are not approvable, and those projects which are complex in nature. Project summary reports will not normally be prepared for routine, noncontroversial projects.

e. *Notice to landowners who might be affected.* Before an application for approval of a levee or channel change is approved the department shall require the applicant to provide the names of the owners and occupants of land located immediately upstream, downstream, and across from the project site, and owners of any other land which the agency staff determines may be adversely affected by the project. The department shall then notify the landowners that the project is under consideration and provide a reasonable opportunity for submission of comments. The requirements of this paragraph also apply to other types of flood plain development when the project review discloses that lands not controlled by the applicant may be adversely affected by the project.

f. *Notice to the applicant that project does not conform to criteria.* If the project review discloses that the project violates one or more criteria and that the project should be disapproved, or approved only subject to special conditions to which the applicant has not agreed, the department shall notify the applicant and, when practical, suggest appropriate project modifications. The department shall offer the applicant an opportunity to submit comments before an initial decision is made.

**70.5(4) Initial decision by the department.** The initial decision by the department on an application for a flood plain development permit shall be either approval or disapproval. The initial decision shall include a determination whether the project satisfied all relevant criteria and may incorporate by reference and attachment the summary report described in 70.5(3) "d."

*a. Approval.* Issuance of a flood plain development permit shall constitute approval of a project. The permit shall include applicable general conditions listed in 567—Chapter 72 and may include one or more special conditions when reasonably necessary to implement relevant criteria.

*b. Disapproval.* A letter to the applicant denying the application shall constitute disapproval of a project.

*c. Notice of initial decision.* Copies of the initial decision shall be mailed to the applicant, any person who commented pursuant to 70.5(3)“e,” and any other person who has requested a copy of the decision. The decision may be sent by ordinary mail, first class, and shall be accompanied by a certification of the date of mailing. An initial decision becomes the final decision of the department unless a timely notice of appeal is filed in accordance with 70.6(17A,455B,481A). The final decision may be filed with the appropriate county recorder to give constructive notice to future landowners of any conditions or requirements imposed by the final decision.

**567—70.6(17A,455B,481A) Appeal of initial decision.** Any person aggrieved by an initial decision issued under 70.5(17A,455B,481A) of these rules may file a notice of appeal with the director. The notice of appeal must be filed within 30 days following the certified date of mailing of the decision unless the appellant shows good cause for failure to receive actual notice and file within the allowed time. The form of the notice of appeal and appeal procedures are governed by 567—Chapter 7.

The department shall mail a copy of the notice of appeal to each person who was sent a copy of the initial decision. The department shall attach an explanation of the opportunity to seek intervention in the contested case.

These rules are intended to implement Iowa Code sections 17A.3, 455B.105, 459.102, 459.301 and 481A.15 and Iowa Code chapter 455B, division III, part 4.

CHAPTER 71  
FLOOD PLAIN OR FLOODWAY DEVELOPMENT—  
WHEN APPROVAL IS REQUIRED

[Prior to 7/1/83, INRC, Ch 5, Div. 1]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

PREAMBLE: This chapter of these rules contains administrative thresholds which implement the statutory requirement that approval from the department be obtained for any development including construction, maintenance and use of a structure, dam, obstruction, deposit, excavation or “flood control work” on a flood plain or floodway. These administrative thresholds are organized into categories such as “channel changes,” “levees or dikes,” “buildings,” etc. Any doubt concerning whether a project or activity requires approval under these thresholds should be resolved by requesting advice from the department.

The department may delegate regulatory authority to a local government by approving local flood plain regulations (see 567—Chapter 75). To determine whether the department has delegated regulatory authority over a specific category of project at a specific location, an inquiry should be made to:

State Coordinator  
National Flood Insurance Program  
Department of Natural Resources  
Wallace State Office Building  
Des Moines, Iowa 50319  
Telephone: (515)281-8690

**567—71.1(455B) Bridges, culverts, temporary stream crossings, and road embankments.** Approval by the department for the construction, operation, and maintenance of bridges, culverts, temporary stream crossings, and road embankments shall be required in the following instances.

**71.1(1) Rural area—floodway.** In rural areas, bridges, culverts, road embankments, and temporary stream crossings in or on the floodway of any river or stream draining more than 100 square miles. (NOTE: Channel modifications associated with bridge, culvert or roadway projects may need approval; see 567—71.2(455B).)

**71.1(2) Rural area—floodway and flood plain.** Road embankments located in the floodway or flood plains, but not crossing the channel of a river or stream draining more than 10 square miles, where such works occupy more than 3 percent of the cross-sectional area of the channel at bankfull stage or where such works obstruct more than 15 percent of the total cross-sectional area of the flood plain at any stage. In determining a 15 percent occupancy of the flood plain, the concept of equal and opposite conveyance as defined in 567—Chapter 70 shall apply.

**71.1(3) Urban areas.** In urban areas, bridges, culverts, road embankments and temporary stream crossings in or on the floodway or flood plains of any river or stream draining more than 2 square miles.

**567—71.2(455B) Channel changes.** Approval by the department for the construction, operation, and maintenance of channel changes shall be required in the following instances.

**71.2(1) Rural areas.** In rural areas:

*a.* Channel changes not otherwise associated with road projects in or on the floodway of any stream draining more than 10 square miles at the location of the channel change.

*b.* Channel changes associated with road projects in or on the floodway of any stream draining more than 10 square miles at the location of the channel change whereby either (i) more than a 500-foot length of the existing channel is being altered or (ii) the length of existing channel being altered is reduced by more than 25 percent.

**71.2(2) Urban areas.** In urban areas channel changes on any river or stream draining more than 2 square miles at the location of the channel change.

**71.2(3) Protected streams.** Channel changes at any location on any river or stream designated as a protected stream pursuant to division III of 567—Chapter 72.

**71.2(4) Channel change by drainage district.** Rule 72.2(455B) applies to channel changes sponsored by a drainage district. However, approval is not required for repair and maintenance of a drainage district

ditch as defined in 70.2(455B) if the drainage area of the ditch at the location of the proposed work is less than 100 square miles.

This rule is intended to implement Iowa Code section 455B.275.

**567—71.3(455B) Dams.** Approval by the department for construction, operation, or maintenance of a dam in the floodway or flood plain of any water source shall be required when the dimensions and effects of such dam exceed the thresholds established by this rule. EXCEPTION: Public road embankments with culverts which impound water only in temporary storage are exempt from the requirements of this rule and shall be reviewed under rules 567—71.1(455B) and 567—72.1(455B). Approval required by this rule shall be coordinated with approval for storage of water required by 567—Chapter 51. Approval by the department shall be required in the following instances:

**71.3(1) Rural areas.** In rural areas:

*a.* Any dam designed to provide a sum of permanent and temporary storage exceeding 50 acre-feet at the top of dam elevation, or 25 acre-feet if the dam does not have an emergency spillway, and which has a height of 5 feet or more.

*b.* Any dam designed to provide permanent storage in excess of 18 acre-feet and which has a height of 5 feet or more.

*c.* Any dam across a stream draining more than 10 square miles.

*d.* Any dam located within 1 mile of an incorporated municipality, if the dam has a height of 10 feet or more, stores 10 acre-feet or more at the top of dam elevation, and is situated such that the discharge from the dam will flow through the incorporated area.

**71.3(2) Urban areas.** Any dam which exceeds the thresholds in 71.3(1) “a,” “b” or “d.”

**71.3(3) Low head dams.** Any low head dam on a stream draining 2 or more square miles in an urban area, or 10 or more square miles in a rural area.

**71.3(4) Modifications to existing dams.** Modification or alteration of any dam or appurtenant structure beyond the scope of ordinary maintenance or repair, or any change in operating procedures, if the dimensions or effects of the dam exceed the applicable thresholds in this rule. Changes in the spillway height or dimensions of the dam or spillway are examples of modifications for which approval is required.

**71.3(5) Mill dams.** Rescinded IAB 2/20/91, effective 3/27/91.

**71.3(6) Maintenance of preexisting dams.** Approval shall be required to maintain a preexisting dam as described in 567—Chapter 73 only if the department determines that the dam poses a significant threat to the well-being of the public or environment and should therefore be removed or repaired and safely maintained. Preexisting dams are subject to the water, air and waste management dam safety inspection program as set forth in 567—Chapter 73.

This rule is intended to implement Iowa Code sections 455B.262, 455B.264, 455B.267, 455B.275 and 455B.277.

**567—71.4(455B) Levees or dikes.** Approval by the department for construction, operation, and maintenance of levees or dikes shall be required in the following instances.

**71.4(1) Rural areas.** In rural areas, any levees or dikes located on the flood plain or floodway of any stream or river draining more than 10 square miles.

**71.4(2) Urban areas.** In urban areas, any levee or dike along any river or stream draining more than 2 square miles.

**567—71.5(455B) Waste or water treatment facilities.** Approval by the department for construction, operation, and maintenance of waste or water treatment facilities shall be required in the following instances.

**71.5(1) Rural areas.** In rural areas, any such facilities on the flood plains or floodway of any river or stream draining more than 10 square miles.

**71.5(2) Urban areas.** In urban areas, any such facilities on the flood plain or floodway of any river or stream draining more than 2 square miles.

**567—71.6(455B) Sanitary landfills.** Approval by the department for construction, operation, and maintenance of any sanitary landfill shall be required in the following instances.

**71.6(1) Rural areas.** In rural areas, any such landfill located on the flood plain or floodway of any stream draining more than 10 square miles at the landfill site.

**71.6(2) Urban areas.** In urban areas, any such facilities located on the flood plain or floodway of any stream draining more than 2 square miles at the landfill site.

**567—71.7(455B) Buildings and associated fill.** Approval by the department for construction, use and maintenance of “buildings” as defined in 567—Chapter 70 and for placement of fill is required as described in the following thresholds.

**71.7(1) Building and placement of associated fill in urban areas.** In urban areas as defined in these rules approval is required for construction, use and maintenance of buildings in the floodway or flood plain of any stream draining more than 2 square miles at the location of the structure as follows:

*a. New construction including fill for development purposes.* Approval is required for construction of any new building. New construction includes replacement or relocation of an existing building. New construction also includes placement and grading of fill materials in a manner that would create an elevated building site.

*b. Additions to existing buildings.* Approval is required for any addition which increases the original floor area of a building by 25 percent or more. All additions constructed after July 4, 1965, shall be added to any proposed addition in determining whether the total increase in original floor space would exceed 25 percent.

*c. Lowering or elevating.* Approval is required for lowering a floor of a building. Approval is not required for elevating an existing building. However, when a building is elevated the lowest floor should be elevated to the appropriate minimum protection level stated in 567—subrule 72.5(1). The department, upon request, will cooperate in determining the minimum protection level for a person who proposes to elevate a building.

*d. Reconstruction.* Approval is required for reconstruction of any portion of a building if the cost of reconstruction exceeds 50 percent of the market value of the existing building or if reconstruction will increase the market value by more than 50 percent.

**71.7(2) Buildings and associated fill located within 2 miles of an urban area.** The thresholds for buildings and associated fill in subrule 71.7(1) shall apply to rural areas within 2 miles of municipal corporate limits.

**71.7(3) Buildings and associated fill in all other rural areas.** In rural areas not covered by 71.7(1) the thresholds for approval of buildings and associated fill are the same as in 71.7(1) except that approval is required only when the drainage area at the location of the structure is more than 10 square miles.

**71.7(4) Buildings and associated fill adjacent to or downstream from impoundments.** Approval is required for new construction, additions, lowering, or reconstruction and associated fill as described in 71.7(1) without regard to the drainage area if the proximity of the building to a dam regulated by the department is as follows:

*a. Adjacent to impoundment.* Approval is required for a building and associated fill adjacent to an impoundment if the lowest floor level including any basement is lower than the top of the dam.

*b. Downstream from dam.* Approval is required for a building and associated fill downstream from a dam at any location where flooding can be reasonably anticipated from principal or emergency spillway discharges. If the dam does not substantially comply with high hazard criteria in these rules, approval is required for a building and associated fill at any location where flooding can be reasonably anticipated from overtopping and failure of the dam.

**567—71.8(455B) Pipeline crossings.** Approval by the department for the construction, operation and maintenance of buried pipeline crossings is not required if the natural contours of the channel and flood plain are maintained. (NOTE: Approval of stream bank protection measures associated with pipeline crossings may need approval under 567—71.9(455B).) Approval by the department for the construction, operation, and maintenance of all other pipeline crossings shall be required in the following instances:

**71.8(1) Rural areas.** In rural areas, pipeline crossings on any river or stream draining more than 100 square miles.

**71.8(2) Urban areas.** In urban areas, pipeline crossings on any river or stream draining more than 2 square miles.

**567—71.9(455B) Stream bank protective devices.** Approval by the department for construction, operation, and maintenance of stream bank protective devices (including wing dikes, jetties, et cetera) shall be required in the following instances:

**71.9(1) Rural areas.** In rural areas:

*a.* All stream bank protective devices along any river or stream draining more than 100 square miles.

*b.* Stream bank protective devices along any river or stream draining between 10 and 100 square miles where the cross-sectional area of the river or stream channel is reduced more than 3 percent.

**71.9(2) Urban areas.** In urban areas:

*a.* Stream bank protective devices along any river or stream draining more than 100 square miles.

*b.* Stream bank protective devices along any river or stream draining between 2 and 100 square miles where the cross-sectional area of the river or stream channel is reduced more than 3 percent.

**567—71.10(455B) Boat docks.**

**71.10(1) In general.** Except as provided in subrule 71.10(2), department approval is required for all boat docks that are located in any stream other than a lake and do not float on the surface of the water.

**71.10(2) Exempted nonfloating boat docks.** Recreational nonfloating type boat docks located on the Mississippi and Missouri rivers, and the conservation pools of the Coralville, Rathbun, Red Rock, and Saylorville reservoirs shall not require department approval, other than a permit obtained from the parks, recreation and preserves division of the department.

**567—71.11(455B) Excavations.** Approval by the department for excavations shall be required in the following instances:

**71.11(1) Rural areas.** In rural areas:

*a.* Excavation in the channel on any river or stream draining more than 10 square miles where said excavation increases the cross-sectional area of said channel below bankfull stage by more than 10 percent. The cross-sectional area of the channel shall be determined based on current engineering plans, or original engineering plans, if being performed by a drainage district. If an original plan is not available, the current engineering plan will be used to determine the original cross-sectional area of the channel. The drainage district shall submit a copy of the engineering plan for increasing the cross-sectional area of a channel to the department prior to approval by the board of supervisors or trustees regardless of size of the increase. The department shall submit its decision to the drainage district within 60 days.

*b.* Excavation on any flood plain of any river or stream draining more than 10 square miles where said excavation is within 100 feet of the normal stream or riverbank.

*c.* Excavations in relation to highway projects are exempt except as otherwise provided for in 71.1(1), 71.1(2) and 71.1(3).

*d.* Excavation for the repair and maintenance of a drainage district ditch as defined in 567—70.2(455B) is not considered an excavation within the intent of this rule if the drainage area of the ditch at the location of the proposed work is less than 100 square miles.

**71.11(2) Urban areas.** In urban areas excavations on the floodway of any stream draining more than 2 square miles.

This rule is intended to implement Iowa Code section 455B.275.

**567—71.12(455B) Miscellaneous structures, obstructions, or deposits not otherwise provided for in other rules.** Approval by the department for construction, operation, and maintenance of miscellaneous structures, obstructions, or deposits, shall be required in the following instances.

**71.12(1) Rural areas.** In rural areas, any miscellaneous structures, obstructions, or deposits on the floodway or flood plain of any river or stream draining more than 10 square miles where such works obstruct more than 3 percent of the cross-sectional area of the stream channel at bankfull stage or where such works obstruct more than 15 percent of the total cross-sectional area of the flood plain at any stage. In determining a 15 percent obstruction of the flood plain, the concept of equal and opposite conveyance as defined in 567—Chapter 70 shall apply.

**71.12(2) Urban areas.** In urban areas, miscellaneous structures, obstructions, or deposits on the floodway or flood plains of any river or stream draining more than 2 square miles.

**567—71.13(455B) Animal feeding operation structures.** Approval by the department for construction, operation, and maintenance of animal feeding operation structures shall be required in the following instances.

**71.13(1) Rural areas.** In rural areas, any such facilities on the flood plain or floodway of any stream draining more than ten square miles.

**71.13(2) Urban areas.** In urban areas, any such facilities on the flood plain or floodway of any stream draining more than two square miles.

**71.13(3) Adjacent to an impoundment.** Any such facilities if any part of the facility is located on land that is naturally lower than the top of the dam.

These rules are intended to implement Iowa Code chapter 455B, division III, part 4; and Iowa Code sections 459.102, 459.301 and 481A.15.

CHAPTER 72  
CRITERIA FOR APPROVAL  
[Prior to 7/1/83, INRC[580] Ch 5, Div. III to V]  
[Prior to 12/3/86, Water, Air and Waste Management[900]]

DIVISION I  
SPECIAL CRITERIA FOR VARIOUS TYPES OF FLOOD PLAIN DEVELOPMENT

This division of these rules establishes administrative criteria which implement certain statutory criteria, policies, and principles in Iowa Code sections 455B.262, 455B.264, 455B.275 and 455B.277. The specific requirements in these rules must be met for approval of a project or activity in a flood plain or floodway. Additionally, the project or activity must satisfy all of the statutory criteria which sections 455B.262, 455B.264, 455B.275 and 455B.277 require the department to consider. Where a project or activity will result in effects which the department must by statute consider but which are not governed specifically by these rules, the department shall review such effects on a case-by-case basis to determine whether the project or activity meets the statutory criteria.

**567—72.1(455B) Bridges and road embankments.** The following criteria shall apply to the construction, operation, and maintenance of bridges and road embankments.

**72.1(1) Bridges and road embankments affecting low damage potential areas.** For bridges and road embankments affecting floodway or flood plain areas having a low flood damage potential, the following criteria will apply:

*a. Backwater Q50.* The maximum allowable backwater for Q50 and lesser floods is limited to 0.75 foot.

*b. Backwater Q100.* The maximum allowable backwater for Q100 is limited to 1.5 feet.

*c. Freeboard.* The minimum freeboard for low superstructure horizontal bridge members above Q50 is 3 feet.

**72.1(2) Bridges and road embankments affecting moderate damage potential areas.** For bridges and road embankments affecting floodway or flood plain areas occupied by buildings or building complexes having a moderate flood damage potential, the following criteria will apply:

*a.* The maximum allowable backwater for Q100 is limited to 1.0 foot.

*b.* The criteria specified in 72.1(1)“a” and “c.”

**72.1(3) Bridges and road embankments affecting high or maximum damage potential development.** For bridges and road embankments affecting floodway or flood plain areas occupied by buildings or building complexes having a high or maximum flood damage potential, the following criteria will apply:

*a.* Backwater effects are to be minimized for all stages which affect maximum or high flood damage potential buildings or building complexes or for all stages which would tend to reduce the level of protection of certain flood control works, unless acceptable remedial measures are provided or such buildings are removed or the uses relating to human occupancy are prohibited.

*b.* In no case shall the criteria specified in 72.1(1)“a” and “c” and 72.1(2)“a” be exceeded.

**72.1(4) Bridge and channel change.** For bridges and culverts involving channel changes on the floodway of any stream draining at the location of the channel change between 10 and 100 square miles whereby either (i) more than a 500-foot length of the existing channel is being altered or (ii) the length of existing channel being altered is reduced by more than 25 percent, the maximum allowable backwater shall correspond to the limits permitted in 72.1(1), 72.1(2), 72.1(3) or 72.1(5) depending upon the associated damage potential.

**72.1(5) Culverts.** The maximum allowable backwater at culvert inlets shall correspond to the limits permitted in 72.1(1), 72.1(2), or 72.1(3) depending upon the damage potential associated with the affected area. In the case of replacement culverts the backwater shall not exceed that created by the culvert or waterway crossing being replaced or that specified in 72.1(1), 72.1(2), or 72.1(3) depending upon the associated damage potential, whichever is greater.

**72.1(6) Road embankments.** The criteria listed in 72.11(455B) for miscellaneous flood plain construction projects shall apply to road embankments located on the flood plain but not crossing any stream or river channel.

**72.1(7) Temporary channel obstructions.** Temporary stream crossings and other temporary obstructions usually constructed, operated, and maintained during the construction phase of another flood plain construction project shall meet the following criteria:

*a. Low flow.* Said structures will provide for the passage of the prevailing flow in the stream or river.

*b. Flood flow.* Said structure shall be designed to fail or otherwise operate in the event of flooding so as to prevent premature overbank flow, or meet the backwater criteria indicated in 72.1(1), 72.1(2), or 72.1(3).

**72.1(8) Emergency.** Repairs or temporary construction required to maintain the operation of a bridge, roadgrade or culverts in time of emergency need not be submitted for prior department approval. Plans of such emergency or temporary construction shall be submitted to the department for review after the event causing the emergency has passed.

**567—72.2(455B) Channel changes.** The following criteria shall apply to channel changes.

**72.2(1) Percent reduction in length.**

*a. Streams draining over 100 square miles.* For streams (other than protected streams) draining more than 100 square miles, no more than a 10 percent reduction in the original length of the existing channel through any contiguous parcel(s) of the applicant's(s') property will be allowed.

*b. Rural streams draining 10 to 100 square miles.* For streams (other than protected streams) draining between 10 and 100 square miles in rural areas, no more than a 25 percent reduction in the original length of the existing channel through any contiguous parcel(s) of the applicant's(s') property will be allowed.

*c. Urban streams draining 2 to 100 square miles.* For streams (other than protected streams) draining between 2 and 100 square miles in urban areas, no more than a 25 percent reduction in the original length of the existing channel through any contiguous parcel(s) of the applicant's(s') property will be allowed.

*d. Protected streams.* For protected streams no channel changes will be allowed, because of actual or potential significant adverse effects on fisheries, water quality, flood control, flood plain management, wildlife habitat, soil erosion, public recreation, the public health, welfare and safety, compatibility with the state water plan, rights of other landowners, and other factors relevant to the control, development, protection, allocation, and utilization of the stream. Protected stream status does not prohibit bank stabilization measures; tree maintenance or removal; maintenance or installation of tile outlets; machinery crossings, including concrete drive-throughs and bridges; boat or canoe ramps; or other structures permitted by the department; nor restrict riparian access to the protected stream for such uses as livestock watering or grazing. Protected stream status does not affect current cropping practices or require the establishment or maintenance of buffer strips, filter strips or fences along protected streams.

**72.2(2) Capacity.** In the project reach, excavated channels shall have a discharge capacity equal to or greater than the existing channel. Excessive channel excavation will not be permitted.

**72.2(3) Alignments.** The alignments and dimensions of the excavated channel shall be such as to provide a smooth transition between the existing and the excavated channel.

**72.2(4) Velocities.** Velocities in the excavated channel shall not cause excessive erosion of the channel or banks, with the acceptable velocities being determined by the department. Energy dissipation structures, channel and bank protection, or other engineering measures may be required to eliminate excessive erosion of the channel or banks.

**72.2(5) Spoil disposition.** Disposition of spoil material from channel excavation of the flood plain shall be reviewed under miscellaneous flood plain construction.

**72.2(6) *Increase in flood peak.*** No significant increase in peak flood discharge will be permitted by the department. Floodwater retardance structures may be required to minimize any increase in peak flood discharges.

**72.2(7) *Fish and wildlife habitat and public rights.*** The channel change shall not have a significant adverse effect on fish and wildlife habitat or public rights to use of the stream. Conservation easements and other conditions may be required to mitigate potential damages to the quality of water, fish and wildlife habitat, recreational facilities, and other public rights.

**72.2(8) *Soil erosion.*** The tillage of land along the reach of a straightened stream shall be prohibited or modified when necessary to hold soil erosion to reasonable limits. Zones of land in which tillage shall be prohibited along the straightened reach shall be set on a case-by-case basis with consideration given to topography, soil characteristics, current use, and other factors affecting propensity for soil erosion. The tillage prohibition shall be recorded by the department in the office of the appropriate county recorder and shall run with the land against the applicant and all successors in interest to the land subject to the prohibition.

**72.2(9) *Encroachment on a confinement feeding operation structure.*** A major water source, as identified in Appendix B, Tables 1 and 2 of 567—Chapter 65, or a water source other than a major water source shall not be constructed, expanded or diverted if the water source or major water source as constructed, expanded or diverted is closer than the following distances from a confinement feeding operation. Measurement shall be from the closest point of the confinement feeding operation structure to the top of the bank of a stream channel or the ordinary high water mark of a lake, pond, impoundment or reservoir. Farm ponds, privately owned lakes, and confinement feeding operations constructed with a secondary containment barrier pursuant to 567—subrule 65.15(17) are exempt from the separation distance requirements. The provisions of this subrule shall not be construed to allow construction of a confinement feeding operation structure on land that would be inundated by Q100 and is adjacent to a major water source.

*a.* Minimum separation between a water source other than a major water source and a confinement feeding operation structure is 500 feet.

*b.* Minimum separation between a major water source and a confinement feeding operation structure is 1,000 feet.

**567—72.3(455B) Dams.** The following criteria shall apply to dams which exceed the thresholds in 567—71.3(455B).

**72.3(1) *General criteria for all regulated dams.***

*a. Required findings.* The department will approve the construction, operation or maintenance of a dam or modification of a dam or appurtenant structure only after finding that the project is designed in accordance with accepted engineering practice and methods and in a manner consistent with the applicable criteria and guidelines in department Bulletin No. 16, “Design Criteria and Guidelines for Iowa Dams,” December 1990.

*b. Anticipation of changed circumstances.* In applying the approval criteria in subrule 72.3(1), paragraph “a,” consideration shall be given to both existing conditions and potential future conditions which can reasonably be anticipated at the time the application is reviewed.

*c. Landowner notification.* The department staff engineering review of the plans and specifications for a dam project shall determine whether there are lands upstream, downstream, or adjacent to the impoundment whose use apparently would be potentially adversely affected by maintenance of the dam and appurtenant structures, spillway discharges, temporary ponding of floodwater behind the dam, or failure of the dam. It is the applicant’s responsibility to submit sufficient information with the application and on request to enable the staff to accurately identify the owners and occupants of affected lands. The staff shall notify all known affected owners and occupants that the project may affect use of land in which they have an interest and advise them of their opportunity to be heard on the application. The project shall not be approved unless it appears that notice reasonably calculated to advise all owners and occupants has been given and that they have had an opportunity to be heard.

**72.3(2) Dams other than low head dams.** The following criteria shall apply to all dams other than low head dams:

*a. Assignment of hazard class.* Dams shall be assigned a hazard class based on the potential consequences of failure. Anticipated future land and impoundment use shall be considered in the determination of hazard class. The criteria in this subrule shall be used to determine hazard class regardless of the methodology used in engineering design of a dam. The hazard class shall determine the design requirements of the structure as outlined in department Bulletin No. 16. The hazard class shall be evaluated using the following criteria:

(1) *Low hazard.* A structure shall be classified as low hazard if located in an area where damages from a failure would be limited to loss of the dam, loss of livestock, damages to farm outbuildings, agricultural lands, and lesser used roads, and where loss of human life is considered unlikely.

(2) *Moderate hazard.* A structure shall be classified as moderate hazard if located in an area where failure may damage isolated homes or cabins, industrial or commercial buildings, moderately traveled roads or railroads, interrupt major utility services, but without substantial risk of loss of human life. In addition, structures where the dam and its impoundment are of themselves of public importance, such as dams associated with public water supply systems, industrial water supply or public recreation, or which are an integral feature of a private development complex, shall be considered moderate hazard for design and regulatory purposes unless a higher hazard class is warranted by downstream conditions.

(3) *High hazard.* A structure shall be classified as high hazard if located in an area where failure may create a serious threat of loss of human life or result in serious damage to residential, industrial or commercial areas, important public utilities, public buildings, or major transportation facilities.

(4) *Multiple dams.* Where failure of a dam could contribute to failure of a downstream dam or dams, the minimum hazard class of the dam shall not be less than that of any such downstream structure.

*b. Lands, easements, and rights-of-way.* An application for approval of a dam project shall include information showing the nature and extent of lands, easements, and rights-of-way which the applicant has acquired or proposes to acquire to satisfy the following criteria:

(1) Ownership or perpetual easements shall be obtained for the area to be occupied by the dam embankment, spillways, and appurtenant structures, and the permanent or maximum normal pool;

(2) Ownership or easements shall be obtained for temporary flooding of areas which would be inundated by the flood pool up to the top of dam elevation and for spillway discharge areas;

(3) Easements covering areas affected by temporary flooding or spillway discharges shall include provisions prohibiting the erection and usage of structures for human habitation or commercial purposes without prior approval by the agency;

(4) In locating the site of a dam and in obtaining easements and rights-of-way, the applicant shall consider the impacts which anticipated changes in land use downstream of a dam or adjacent to the impoundment could have on the hazard class of the dam, the operation of the dam, and the potential liability of the dam owner;

(5) The applicant may be required to acquire control over lands downstream from the dam as necessary to prevent downstream development which would affect the hazard class of the dam.

*c. Other approvals required.* The applicant shall comply with all applicable provisions of 567—Chapters 51, 52 and 73 concerning water storage permits, operating permits, and inspections.

*d. Additional requirements for major dam structures.* Dams which are major dam structures as defined in 567—Chapter 70 must satisfy additional criteria set forth in Chapter VI of department Bulletin No. 16.

**72.3(3) Low head dams.** The following criteria shall apply to low head dams:

*a.* The location and design of a low head dam shall not adversely affect the fisheries or recreational use of the stream.

*b.* The pool created by a low head dam shall not adversely affect drainage on lands not owned or under easements by the applicant.

*c.* The structure shall be hydraulically designed to submerge before bankfull stage is reached in the stream channel in order that increased or premature overbank flooding does not occur. Where this

cannot be reasonably accomplished in order for the structure to fulfill its intended purpose, the applicant shall demonstrate that any increased flooding will affect only lands owned or controlled by the applicant.

*d.* For projects which include significant appurtenant structures or works outside the stream channel, the combined effect of the total project shall not create more than 1 foot of backwater during floods which exceed the flow capacity of the channel, unless the proper lands, easements, or rights-of-way are obtained.

*e.* The structure shall be capable of withstanding the effects of normal and flood flows across its crest and against the abutments, and adjacent channel or bank areas shall be protected against erosion as needed.

**72.3(4) Operating plan.** For any dam with movable structures which must operate or be operated during times of flood or to provide minimum downstream flow, or where the impoundment level is raised or lowered on a regular basis, an operating plan must be submitted for approval. The plan shall be in accordance with department Bulletin No. 16 and rules in 567—Chapter 73.

**72.3(5) Encroachment on a confinement feeding operation structure.** A dam shall not be constructed or modified so that the ordinary high water of the lake, pond or reservoir created by the dam is closer than the following distances from a confinement feeding operation structure unless a secondary containment barrier according to 567—subrule 65.15(17) is in place. Measurement shall be from the closest point of the confinement feeding operation structure to the water edge of the lake, pond or reservoir for a pool level at the elevation of the crest of the emergency spillway or at the top of dam elevation should the dam not have an emergency spillway.

*a.* Minimum separation between a water source other than a major water source and a confinement feeding operation structure is 500 feet.

*b.* Minimum separation between a major water source and a confinement feeding operation structure is 1,000 feet or such distance that the structure is not located on land that would be inundated by Q100, whichever is greater.

This rule is intended to implement Iowa Code sections 455B.262, 455B.264, 455B.270, 455B.275 and 455B.277.

**567—72.4(455B) Levees or dikes.** The following criteria shall apply to levees or dikes.

**72.4(1) Agricultural levees or dikes.**

*a. Level of protection.* The permanent height of agricultural levees or dikes normally shall be limited so that overtopping will occur due to discharges from Q10 to Q25 with the more comprehensive levee system being permitted the greater degree of protection.

*b. Additional protection.* Where it can clearly be shown that loss of valley storage caused by construction of the levee will not increase peak flood stages and discharges, the level of protection provided by the agricultural levee or dike may be increased beyond the Q10 to Q25 range.

*c. Alignment.* The location and alignment of agricultural levees or dikes shall be compatible with existing encroachment limits so that minimum flood protection levels will not be increased and said levee or dike alignment otherwise shall be consistent with the rules governing the location of encroachment limits set out in 567—75.4(455B).

*d. Maximum effect.* The maximum increase in the flood profile resulting from the construction, operation, and maintenance of an agricultural levee or dike shall be 1 foot. Equal and opposite conveyance as defined in 567—Chapter 70 shall be used in determining the maximum increase in flood profile resulting from such levees or dikes.

*e. Interior drainage.* All agricultural levees or dikes shall be provided with adequate interior drainage facilities.

*f. Offset.* A minimum offset equal to 100 feet or twice the width of a river or stream measured from top of bank to top of bank, whichever distance is less, shall be required for all agricultural levees unless a greater offset is dictated by 72.4(1), paragraph “c” or “d.”

**72.4(2) Flood control levees or dikes.**

*a. Design level.* The minimum design flood protection level for flood control levees or dikes shall correspond to the flood profile for Q100.

*b. Freeboard.* The levee or dike height shall provide for at least 3 feet of freeboard above the design flood profile.

*c. Alignment.* The alignment of a flood control levee or dike shall be consistent with the rules governing the location of encroachment limits set out in 567—75.4(455B).

*d. Interior drainage.* Flood control levees or dikes shall provide for adequate interior drainage and ponding.

*e. Design and specifications.* The structural design and construction of flood control levees or dikes must be undertaken in accordance with accepted engineering and construction procedures and practices.

**567—72.5(455B) Buildings.** The following criteria apply to buildings.

**72.5(1) Minimum protection levels.** The minimum level of flood protection for a building depends on the damage potential of the building and contents. “Maximum,” “high” and “moderate” damage potential classifications are defined in 567—Chapter 70. Criteria for determining minimum levels of protection are as follows:

*a.* Buildings with maximum damage potential shall be protected to the level of a flood equivalent to Q500 plus 1 foot. Determination of the elevation of the department regional flood is recommended as an alternative to establish an appropriate level of protection for a building which has maximum damage potential (see discussion of flood frequencies and magnitudes in 567—subrule 75.2(1)).

*b.* Buildings with high damage potential shall be protected to the level of a flood equivalent to Q100 plus 1 foot.

*c.* Buildings with moderate damage potential shall be protected to the level of a flood equivalent to Q50.

*d.* Buildings adjacent to an impoundment shall be protected to the elevation of the top of the dam unless the dam has adequate spillway capacity to discharge the flood corresponding to the damage potential of the building at an elevation below the top of the dam.

*e.* Buildings downstream from a dam shall be protected to a level established by the department after due consideration of the hazards posed by the dam for buildings downstream.

**72.5(2) Flood protection methods.** The following flood protection methods are required for buildings to which a minimum flood protection level applies.

*a. Structural design and flood proofing.* Basement walls and floors below the applicable minimum flood protection level shall be structurally designed and constructed to be flood proof and able to withstand hydrostatic pressure and buoyant forces associated with a water table elevation equivalent to the minimum flood protection level. However, attached garages and storage space may be constructed below the applicable minimum protection level without flood proofing if all electrical circuit boxes, furnaces, and hot-water heaters are located above the applicable minimum protection level.

*b. Sanitary sewer drains.* Sanitary sewer drains below the applicable minimum flood protection level shall be provided with automatic closure valves to prevent backflow.

**72.5(3) Location.** The criteria for location of a building include consideration of the potential for obstructing flood flows and the potential hazards which may arise when the building is surrounded by floodwater. Criteria for location of buildings in floodways and flood plains are as follows:

*a. Obstruction.* Buildings shall not be located in the floodway of a stream so as to result, individually or collectively, in any increase in the elevation of Q100 as confined to the floodway. The floodway boundary applicable to an individual application shall be determined as necessary by the department in accordance with the criteria in rule 567—75.4(455B). Analysis of the effect that a building in the floodway would have on flood levels shall be based on the assumption that all similarly situated landowners would be allowed an equal degree of development in the floodway.

*b. Public damages.* Buildings shall be located to minimize public damages associated with isolation due to flooding of surrounding ground. In identifying the potential for public damages, the department shall determine whether there is a need for access passable by wheeled vehicles during Q100. The need for such access shall be determined on the basis of the criteria for evaluating flood warning and response time in 567—subrule 75.2(3).

*c. Existing buildings—replacement and improvements.* In applying the criteria in paragraphs “a” and “b” of this subrule to projects which improve or replace existing lawful buildings the department shall give consideration to the policies for protection of existing development in rule 567—75.6(455B).

**567—72.6(455B) Wastewater treatment facilities.** The following criteria shall apply to wastewater treatment facilities.

**72.6(1) Location.** Wastewater treatment facilities shall not be located so as to individually or collectively conflict with 567—75.4(455B) governing the establishment of encroachment limits.

**72.6(2) Flood protection.** Flood protection for wastewater treatment facilities shall be provided to the level necessary for high damage potential buildings or building complexes unless evidence is submitted indicating the facility is of a lesser damage potential.

**567—72.7(455B) Sanitary landfills.** The following criteria shall apply to sanitary landfills.

**72.7(1) Location.** Sanitary landfills shall not be located so as to individually or collectively conflict with 567—75.4(455B) governing the establishment of encroachment limits.

**72.7(2) Flood protection.** Flood protection for the active working portion of the sanitary landfill shall be provided to the level necessary for high damage potential buildings or building complexes.

**567—72.8(455B) Water supply treatment facilities.** The following criteria shall apply to water supply treatment facilities.

**72.8(1) Location.** Water supply treatment facilities shall not be located so as to individually or collectively conflict with 567—75.4(455B) governing the establishment of encroachment limits.

**72.8(2) Flood protection.** Flood protection for water supply treatment facilities shall be provided to at least the level necessary for high damage potential buildings or building complexes.

**567—72.9(455B) Stream protective devices.** The following criteria shall apply to stream protective devices.

**72.9(1) Overflow.** Stream protective devices shall be constructed in a manner which will not cause premature overbank flow.

**72.9(2) Velocity.** Increased velocities resulting from the construction, operation, and maintenance of stream protective devices shall be limited so as not to cause excessive scour in the channel as determined by the department.

**72.9(3) Stability.** Stream protective devices shall be anchored securely to the bank or constructed in a stable manner so as not to become dislodged and result in the scattering of debris in adjacent and downstream reaches.

**72.9(4) Water quality and aesthetics.** Stream protective devices shall not adversely affect the water quality, fish and wildlife habitat or aesthetics of the stream.

**567—72.10(455B) Pipeline river or stream crossings.** The following criteria shall apply to pipeline river and stream crossings.

**72.10(1) Protection.** Pipeline river or stream crossings shall be sufficiently buried in the stream bed and banks or otherwise sufficiently protected to prevent rupture.

**72.10(2) Overflow and velocities.** Pipeline river or stream crossings shall be constructed, operated, and maintained so as not to create premature overbank flow or excessive scour to the channel or banks.

**72.10(3) Spoil.** Spoil material resulting from the construction of a pipeline crossing shall be disposed of in a manner which will not obstruct low flow or flood flows.

**567—72.11(455B) Miscellaneous construction.** The following criteria shall apply to miscellaneous construction.

**72.11(1) Structures, obstructions, or deposits.**

*a. Location.* Miscellaneous structures, obstructions, or deposits shall not be located so as to individually or collectively conflict with 567—75.4(455B) governing the establishment of encroachment limits.

*b. Protection.* Miscellaneous structures, obstructions, or deposits shall be provided with the minimum level of flood protection associated with the designated damage potential as indicated in 72.5(1) governing buildings and building complexes.

**72.11(2) Excavation.**

*a. Spoil.* Spoil material resulting from an excavation shall be disposed of in a manner consistent with 72.11(1)“a” pertaining to miscellaneous structures, obstructions, or deposits.

*b. Levees.* Levees protecting excavations shall meet the requirements of 72.11(1)“a” pertaining to miscellaneous structures, obstructions, or deposits.

*c. Control of surface runoff into rock quarries.* When the department investigates an application for approval of excavation of a quarry in carbonate rock on a flood plain or floodway, the department shall consider the potential for pollution of an underground watercourse or basin from drainage of surface water into the quarry. If available information including topographic and geological information support a finding that drainage of surface water into the quarry would constitute a violation of the permit requirement in Iowa Code section 455B.268(3) and might cause pollution of an underground watercourse or basin if not controlled, then the department shall require that the applicant either request a permit under Iowa Code sections 455B.268(3) and 51.5(455B) to authorize drainage of surface water into the quarry, or construct and maintain a means of controlling drainage of surface water which would otherwise drain into the quarry.

**567—72.12** Reserved.

**567—72.13(455B) Animal feeding operation structures.** The following criteria shall apply to animal feeding operation structures.

**72.13(1) Confinement feeding operation structures located on the flood plain of a major water source.** As required by 567—Chapter 65, confinement feeding operation structures shall not be constructed on land that would be inundated by Q100 and is adjacent to a major water source. Placing fill material on flood plain land to elevate the land above the Q100 level will not be considered as removing the land from the one hundred year flood plain for the purpose of this subrule.

**72.13(2) Other animal feeding operation structures.** The following criteria shall apply to animal feeding operation structures located on the flood plain of any water source and confinement feeding operation structures located on the flood plain of a water source other than a major water source.

*a. Location.* Such structures shall not be located so as to individually or collectively conflict with rule 567—75.4(455B) governing the establishment of encroachment limits.

*b. Flood protection.* Flood protection for such structures shall be provided to the level necessary for high damage potential buildings or building complexes, pursuant to rule 567—72.5(455B).

These rules are intended to implement Iowa Code sections 455B.262, 455B.264, 455B.270, 455B.275, 455B.277, 459.102 and 459.301.

**567—72.14 to 72.29** Reserved.

DIVISION II  
GENERAL CRITERIA

**567—72.30(455B) General conditions.** Department orders approving an activity or project shall be subject to the following conditions.

**72.30(1) Maintenance.** The applicant and any successor in interest to the real estate on which the project or activity is located shall be responsible for proper maintenance.

**72.30(2) Responsibility.** No legal or financial responsibility arising from the construction or maintenance of the approved works shall attach to the state of Iowa or the agency due to the issuance of an order or administrative waiver.

**72.30(3) Lands.** The applicant shall be responsible for obtaining such government licenses, permits, and approvals, and lands, easements, and rights-of-way which are required for the construction, operation, and maintenance of the authorized works.

**72.30(4) *Change in plans.*** No material change from the plans and specifications approved by the department shall be made unless authorized by the department.

**72.30(5) *Revocation of order.*** A department order may be revoked if construction is not completed within the period of time specified in the department order.

**72.30(6) *Performance bond.*** A performance bond may be required when necessary to secure the construction, operation, and maintenance of approved projects and activities in a manner that does not create a hazard to the public's health, welfare, and safety. The amount and conditions of such bond shall be specified as special conditions in the department order.

**567—72.31(455B) Variance.**

**72.31(1) *In general.*** Where evidence is presented that additional private or significant public damage will not result from flood plain or floodway construction (other than channel changes) subject to regulation under 567—Chapters 70 to 72, the department may permit variance to the criteria stated in Chapter 72.

**72.31(2) *Channel change variances.*** The department may grant variances to the criteria stated in this chapter for channel changes (other than channel changes on protected streams) only in the following instances: (a) For comprehensive flood control projects in urban areas where channelization is the best alternative available; (b) for public projects such as roads or road grade protection where a channel change is the only reasonable and practicable alternative; (c) in cases whereby natural channel erosion has significant probability of eroding the structural stability of a building or other structure and bank erosion control measures are not feasible or practical under the circumstances; (d) in other cases where the applicant can clearly show that there are no adverse effects on the public interest.

**72.31(3) *Protected stream channel change variance.*** The department may grant variances to the prohibition of channel changes on protected streams for those cases listed in 72.31(2) "b," "c," and "d," but such variances will be with provisions for mitigation of environmental damage.

**567—72.32(455B) Protected stream information.** The following describes the variance procedure and the relation of hydrologically connected streams to protected streams:

**72.32(1) *Protected streams variance procedure.*** The variance shall be requested as part of the permit application and review process provided for in rules 567—70.3(17A,455B,481A) to 70.5(17A,455B,481A) and decisions on the variance request may be appealed in accordance with rule 567—70.6(17A,455B,481A). If the applicant is denied a permit to channelize a protected stream, the applicant may appeal to the environmental protection commission. The appeal will normally be heard by an administrative law judge but the applicant may request that the commission hear the appeal directly. If a proposed decision of an administrative law judge would affirm the denial of the permit, the applicant may appeal the administrative law judge's decision to the commission. If, on appeal, the commission affirms the denial of the permit, the applicant may appeal to the district court.

**72.32(2) *Hydrologically connected streams.*** Streams or waters that are hydrologically connected to protected streams are not protected streams unless specifically listed as protected streams in 72.50(2). The environmental protection commission considers the streams and waters that are hydrologically connected to streams proposed to become protected streams as one of the factors in the decision-making process to add streams to the list of protected streams in a rule-making procedure. Subrule 72.51(7) lists the other factors that affect the decision.

**72.32(3) *Protected stream activities.*** Protected stream status does not prohibit bank stabilization measures; tree maintenance or removal; maintenance or installation of tile outlets; machinery crossings, including concrete drive-throughs and bridges; boat or canoe ramps; or other structures permitted by the department; nor restrict riparian access to the protected stream for such uses as livestock watering or grazing. Protected stream status does not affect current cropping practices or require the establishment or maintenance of buffer strips, filter strips, or fences along protected streams except as may be required to mitigate environmental damage associated with a channel change on a protected stream.

**567—72.33 to 72.49** Reserved.

DIVISION III  
PROTECTED STREAM DESIGNATION PROCEDURE

**567—72.50(455B) Protected streams.**

**72.50(1) *Protected streams defined.*** Protected streams shall include streams designated as protected streams pursuant to the procedures of 72.51(455B), which upon designation will be listed in 72.50(2). Streams hydrologically connected to protected streams are not protected streams unless specifically listed as protected streams in 72.50(2).

**72.50(2) *List of protected streams.*** Streams designated as protected streams are the following:

ADAIR COUNTY

Middle River, east county line to confluence with unnamed creek (NE 1/4, S36, T76N, R30W, Adair Co.);

ALLAMAKEE COUNTY

Bear Creek, mouth (S1, T99N, R6W, Allamakee Co.) to west county line;

Clear Creek, mouth (S35, T100N, R5W, Allamakee Co.) to north line of S15, T100N, R5W;

Clear Creek, mouth (S29, T99N, R3W, Allamakee Co.) to west line of S25, T99N, R4W;

Cota Creek, mouth to west line of S10, T97N, R3W;

Dousman Creek, mouth (S33, T96N, R3W, Allamakee Co.) to south county line;

French Creek, mouth to east line of S23, T99N, R5W;

Hickory Creek, mouth to south line of S28, T96N, R5W;

Irish Hollow Creek, mouth to north line of S17, T100N, R4W;

Little Paint Creek, mouth to north line of S30, T97N, R3W;

Norfolk Creek, mouth to confluence with Teeple Creek (S24, T97N, R6W);

Paint Creek (a.k.a. Pine Creek), mouth (S9, T99N, R6W, Allamakee Co.) to west county line;

Paint Creek, mouth (S15, T96N, R3W, Allamakee Co.) to road crossing S18, T97N, R4W;

Patterson Creek, mouth to east line of S3, T98N, R6W;

Silver Creek, mouth (S4, T99N, R5W, Allamakee Co.) to south line of S31, T99N, R5W;

Suttle Creek, mouth (S17, T96N, R4W, Allamakee Co.) to south county line;

Teeple Creek, mouth (S24, T97N, R6W, Allamakee Co.) to spring source in S11, T97N, R6W;

Trout Run, mouth in S16, T98N, R4W through one mile reach;

Unnamed tributary to Village Creek (a.k.a. Erickson Spring Branch), mouth to west line of S23, T98N, R4W;

Unnamed tributary to the Yellow River (a.k.a. Bear Creek), mouth to north line of S12, T96N, R5W;

Upper Iowa River, from Lane's Bridge at river mile 6 to west county line;

Village Creek, mouth to west line of S19, T98N, R4W;

Waterloo Creek, mouth (S35, T100N, R6W) to north county line;

Wexford Creek, mouth to west line of S25, T98N, R3W;

Yellow River, mouth to west county line;

APPANOOSE COUNTY

Chariton River, Highway 2 (S27, T69N, R17W, Appanoose Co.) to Rathbun Lake Dam (S35, T70N, R18W, Appanoose Co.);

BENTON COUNTY

Bear Creek, east county line to confluence with Opossum Creek (S 5/8, T84N, R9W, Benton Co.);

Bear Creek, mouth (S21, T86N, R10W, Benton Co.) to confluence with unnamed creek (NE1/4, NE 1/4, S2, T86N, R10W, Benton Co.);

Cedar River, east county line to north county line;

Iowa River, south county line to west county line;

Lime Creek, mouth (S4, T86N, R10W, Benton Co.) to north county line;

Prairie Creek, mouth (S10, T85N, R10W, Benton Co.) to confluence with unnamed creek (S36, T86N, R10W, Benton Co.);

Salt Creek, mouth (S31, T82N, R12W, Benton Co.) to west county line;

Wild Cat Creek, mouth (S8, T84N, R9W, Benton Co.) to confluence with unnamed creek (W1/2, S33, T84N, R10W, Benton Co.);

Wolf Creek, north county line to west county line;

#### BLACK HAWK COUNTY

Black Hawk Creek, mouth (S22, T89N, R13W, Black Hawk Co.) to west county line;

Cedar River, east county line to north county line;

Crane Creek, mouth (S26, T90N, R11W, Black Hawk Co.) to confluence with unnamed creek (S3, T90N, R12W, Black Hawk Co.);

Shell Rock River, mouth (S4, T90N, R14W, Black Hawk Co.) to north county line;

Wapsipinicon River, east county line to north county line;

West Fork Cedar River, mouth (S10, T90N, R14W, Black Hawk Co.) to west county line;

Wolf Creek, mouth (S19, T87N, R11W, Black Hawk Co.) to south county line;

#### BOONE COUNTY

Big Creek, south county line to confluence with unnamed creek (NW 1/4, S34, T82N, R25W, Boone Co.);

Bluff Creek, mouth (S22, T84N, R27W, Boone Co.) to Don Williams Lake Outlet (S5, T84N, R27W, Boone Co.);

Des Moines River, south county line to north county line;

#### BREMER COUNTY

Cedar River, south county line to north county line;

Shell Rock River, south county line to west county line;

Wapsipinicon River, south county line to north county line;

#### BUCHANAN COUNTY

Cedar River, south county line to west county line;

Lime Creek, south county line to confluence with unnamed creek (S1, T87N, R10W, Buchanan Co.);

South Fork Maquoketa River, east county line to confluence with major unnamed creek (S4, T90N, R7W, Buchanan Co.);

Wapsipinicon River, south county line to west county line;

#### BUENA VISTA COUNTY

Little Sioux River, north county line to north county line (entire length in county);

North Raccoon River, south county line to the north line of the NW 1/4, SE 1/4, S12, T90N, R36W, Buena Vista Co.;

#### BUTLER COUNTY

Shell Rock River, east county line to north county line;

West Fork Cedar River, east county line to west county line;

#### CALHOUN COUNTY

Camp Creek, mouth (S7, T86N, R34W, Calhoun Co.) to confluence with unnamed creek (NE1/4, NE 1/4, S33, T87N, R34W, Calhoun Co.);

Cedar Creek, south county line to confluence with unnamed creek (S 1/2, S34, T86N, R32W, Calhoun Co.);

Lake Creek, mouth (S23, T86N, R34W, Calhoun Co.) to confluence with D.D. 13 (S33, T88N, R32W, Calhoun Co.);

North Raccoon River, south county line to west county line;

#### CARROLL COUNTY

Middle Raccoon River, south county line to confluence with unnamed creek (SE 1/4, S15, T84N, R35W, Carroll Co.);

North Raccoon River, east county line to north county line;

#### CEDAR COUNTY

Cedar River, south county line to west county line;

Rock Creek, mouth (S2, T79N, R3W, Cedar Co.) to confluence with West Rock Creek (S11, T81N, R3W, Cedar Co.);

Sugar Creek, south county line to confluence with unnamed creek (S35, T80N, R2W, Cedar Co.);

Wapsipinicon River, east county line to north county line;

#### CERRO GORDO COUNTY

Beaverdam Creek, south county line to confluence with unnamed creek (S12, T95N, R22W, Cerro Gordo Co.);

Shell Rock River, east county line to north county line;

Spring Creek, mouth (S28, T97N, R20W, Cerro Gordo Co.) to confluence with Blair Creek (S9, T97N, R20W, Cerro Gordo Co.);

Willow Creek, mouth (S3, T96N, R20W, Cerro Gordo Co.) to confluence with Clear Creek (S16, T96N, R21W, Cerro Gordo Co.);

Winnebago River, east county line to west county line (entire length in county);

#### CHEROKEE COUNTY

Little Sioux River, south county line to north county line;

Maple River, south county line to confluence with unnamed creek (N 1/2, S29, T91N, R39W, Cherokee Co.);

Mill Creek, confluence with Willow Creek (S1, T93N, R41W, Cherokee Co.) to north county line;

#### CHICKASAW COUNTY

Cedar River, south county line to west county line;

Crane Creek, east county line to confluence with unnamed creek (NE 1/4, S25, T95N, R11W, Chickasaw Co.);

Little Cedar River, mouth (S20, T94N, R14W, Chickasaw Co.) to west county line;

Wapsipinicon River, south county line to north county line;

#### CLAY COUNTY

Little Sioux River, west county line to north county line (entire length in county);

Lost Island Outlet, mouth (S35, T96N, R36W, Clay Co.) to County Road M 54 (S24, T96N, R36W, Clay Co.);

Muddy Creek, mouth (S15, T96N, R36W, Clay Co.) to County Road B 17 (north line, S23, T97N, R36W, Clay Co.);

Ocheyedan River, mouth (S13, T96N, R37W, Clay Co.) to confluence with Stoney Creek (S7, T96N, R37W, Clay Co.);

Prairie Creek, mouth (S26, T96N, R36W, Clay Co.) to confluence with unnamed creek (SE1/4, S35, T96N, R37W, Clay Co.);

Stoney Creek, mouth (S7, T96N, R37W, Clay Co.) to Highway 18 (S31, T96N, R37W, Clay Co.);

#### CLAYTON COUNTY

Bear Creek, mouth (S34, T92N, R4W, Clayton Co.) to west line of S23 T91N, R5W, Clayton Co.;

Bloody Run, mouth (S15, T95N, R3W) to source at Spook Cave;

Bloody Run Creek (a.k.a. Grimes Hollow), mouth (S36, T91N, R3W) to south county line;

Brownfield Creek, mouth to spring source (S31, T91N, R3W);

Buck Creek, mouth (S29, T93N, R2W, Clayton Co.) to west line of S9, T93N, R3W;

Cox Creek, mouth (S21, T92N, R5W, Clayton Co.) to south line S12, T91N, R6W, Clayton Co.;

Dry Mill Creek, mouth to west line of S9, T93N, R4W;

Elk Creek, mouth (S36, T92N, R4W, Clayton Co.) to south county line;

Ensign Creek, mouth (S28, T92N, R6W, Clayton Co.) to spring source (S29, T92N, R6W, Clayton Co.);

Hewett Creek, mouth to south line of S29, T92N, R6W;

Kleinlein Creek (a.k.a. Spring Creek), mouth to spring source (S10, T91N, R6W);

Maquoketa River, south county line to west county line;

Miners Creek, mouth to west line of S1, T92N, R3W;

Mink Creek, mouth (S30, T93N, R6W) to west county line;

Mossey Glen Creek, mouth (S3, T91N, R5W) to south line of S10, T91N, R5W, Clayton Co.;

North Cedar Creek, mouth (S8, T94N, R3W) to source;

Pecks Creek, mouth to south line of S15, T91N, R3W;

Pine Creek, mouth (S26, T91N, R4W) to confluence with Brownfield Creek (S25, T91N, R4W);

Point Hollow Creek (a.k.a. White Pine Creek), mouth (S31, T91N, R2W) to south county line;  
Roberts Creek, mouth (SE 1/4, S25, T93N, R5W, Clayton Co.) to confluence with an unnamed creek (SE 1/4, S15, T95N, R6W, Clayton Co.);

Sny Magill Creek (a.k.a. Magill Creek), mouth to source;

South Cedar Creek (a.k.a. Cedar Creek), mouth (S33, T92N, R3W, Clayton Co.) to north line of S30, T93N, R3W, Clayton Co.;

Steeles Branch, mouth (S26, T91N, R4W) to south line S32, T91N, R4W, Clayton Co. (entire length in county);

Turkey River, confluence with Volga River to west county line;

Unnamed tributary to Sny Magill Creek (a.k.a. West Fork Sny Magill Creek), mouth (S7, T94N, R3W) to west line of S7, T94N, R3W;

Volga River, mouth (S26, T92N, R4W, Clayton Co.) to west county line;

#### CLINTON COUNTY

Elk River, mouth (S20, T83N, R7E, Clinton Co.) to confluence with North Branch Elk River (S10, T83N, R6E, Clinton Co.);

Wapsipinicon River, mouth (S13, T80N, R5E, Clinton Co.) to west county line (entire length in county);

#### CRAWFORD COUNTY

Boyer River, south county line to north county line;

#### DALLAS COUNTY

Des Moines River, east county line to north county line (entire length in county);

Middle Raccoon River, mouth (S9, T78N, R29W, Dallas Co.) to west county line (entire length in county);

North Raccoon River, mouth (S21, T78N, R27W, Dallas Co.) to north county line (S5, T81N, R29W, Dallas Co.) (entire length in county);

Raccoon River, east county line to confluence with North Raccoon River (S21, T78N, R27W, Dallas Co.);

#### DAVIS COUNTY

Des Moines River, east county line to north county line (entire length in county);

#### DECATUR COUNTY

Thompson River, Highway 69 (S35, T68N, R26W, Decatur Co.) to west county line;

#### DELAWARE COUNTY

Bloody Run Creek (a.k.a. Grimes Hollow), north county line to spring source (S3, T90N, R3W);

Coffins Creek, mouth (S19, T89N, R5W, Delaware Co.) to confluence with Prairie Creek (S29, T89N, R6W, Delaware Co.);

Elk Creek, north county line to confluence with unnamed creek (center, S13, T90N, R4W, Delaware Co.);

Fenchel Creek, mouth (S5, T90N, R6W) to Richmond Springs (center of S4, T90N, R6W);

Fountain Spring Creek (a.k.a. Odell Branch), mouth (SE 1/4, S10, T90N, R4W) to confluence with South Branch Fountain Spring Creek (SE 1/4, S16, T90N, R4W);

Little Turkey River, north county line to south line of S11, T90N, R3W;

Maquoketa River, south county line to north county line;

Sand Creek, mouth (S9, T88N, R5W, Delaware Co.) to confluence with major unnamed creek (SW 1/4, S11, T88N, R6W, Delaware Co.);

Schechtman Branch, mouth to south line of S14, T90N, R4W;

South Branch Fountain Spring Creek, mouth (S16, T90N, R4W) to spring source (S16, T90N, R4W);

South Fork Maquoketa River, mouth (S16, T90N, R6W, Delaware Co.) to west county line;

Spring Branch, mouth (S10, T88N, R5W) to major spring source, north of Highway 20 (S35, T89N, R5W, Delaware Co.)

Steeles Branch, north county line to west line of S5, T90N, R4W, Delaware Co. (entire length in county between S4, T90N, R4W and west line of S5, T90N, R4W);

Twin Springs Creek, mouth (S2, T90N, R4W) to spring source (S12, T90N, R4W);

## DES MOINES COUNTY

Cedar Creek, mouth (S1, T69N, R5W, Des Moines Co.) to Geode Lake Dam;

Cedar Creek, west county line to confluence with unnamed creek (S18, T70N, R4W, Des Moines Co.);

Flint Creek, mouth (S28, T70N, R2W, Des Moines Co.) to confluence with unnamed creek (NW 1/4, S21, T71N, R4W, Des Moines Co.);

Skunk River, mouth (S8, T68N, R2W, Des Moines Co.) to east county line (entire length in county);

## DICKINSON COUNTY

Little Sioux River, south county line to confluence with West Fork Little Sioux River (S7, T99N, R37W, Dickinson Co.);

## DUBUQUE COUNTY

Bloody Run, mouth (S34, T90N, R2E) to west line of S21, T90N, R2E;

Catfish Creek, mouth (S5, T88N, R3E, Dubuque Co.) to source;

Cloie Branch, mouth (S5, T89N, R2E) to west line of S5, T89N, R2E;

Hogans Branch, mouth (S35, T89N, R1W) to west line of S9, T88N, R1W;

Little Maquoketa River, mouth (S26, T90N, R2E, Dubuque Co.) to north line of NE 1/4, S5, T88N, R1W, Dubuque Co.;

Middle Fork Little Maquoketa River, west line of S31, T90N, R1E to north line of S33, T90N, R1W;

Point Hollow Creek (a.k.a. White Pine Creek), north county line to spring source (S8, T90N, R2W);

Tete des Morts Creek (a.k.a. Tete des Morts River), mouth (S34, T88N, R4E, Dubuque Co.) to south county line (S34, T88N, R4E, Dubuque Co.);

## EMMET COUNTY

Brown Creek, mouth (S24, T99N, R34W, Emmet Co.) to Highway 9 (S13, T99N, R34W, Emmet Co.);

Des Moines River, south county line to north county line;

East Fork Des Moines River, east county line to Tuttle Lake Outlet (S13, T100N, R32W, Emmet Co.);

## FAYETTE COUNTY

Bass Creek, mouth (S3, T95N, R9W) to west line of S3, T95N, R9W;

Bear Creek, mouth (S8, T92N, R7W, Fayette Co.) to west line of S6, T92N, R7W;

Bell Creek, mouth (S10, T94N, R7W) to west line of S8, T94N, R7W;

Brush Creek, mouth (S26, T93N, R7W, Fayette Co.) to east line of S17, T92N, R7W, Fayette Co.;

Crane Creek, mouth (S31, T95N, R9W, Fayette Co.) to west county line;

Grannis Creek, mouth (S30, T93N, R7W), to west line of S36, T93N, R8W, Fayette Co.;

Little Turkey River, mouth (S18, T95N, R8W, Fayette Co.) to north county line;

Maquoketa River, east county line to north line of S24, T91N, R7W;

Mink Creek, east county line to west line of S15, T93N, R7W;

North Branch Volga River, mouth (S33, T93N, R9W, Fayette Co.) to confluence with unnamed creek (S8, T93N, R9W, Fayette Co.);

Otter Creek, mouth to confluence with unnamed tributary (a.k.a. Glovers Creek) in S22, T94N, R8W;

Turkey River, east county line to north county line;

Unnamed tributary to Otter Creek (a.k.a. Glovers Creek), mouth (S22, T94N, R8W) to west line of S15, T94N, R8W;

Volga River, east county line to confluence with an unnamed creek (NW 1/4, NE 1/4, SE 1/4, S24, T93N, R10W, Fayette Co.);

## FLOYD COUNTY

Cedar River, east county line to north county line;

Little Cedar River, east county line to north county line;

Rock Creek, mouth (S24, T97N, R17W, Floyd Co.) to north county line (entire length in county);

Shell Rock River, south county line to west county line;

Winnebago River, mouth (S14, T95N, R18W, Floyd Co.) to west county line;

## FRANKLIN COUNTY

Beaver Creek, east county line to road crossing (S28, T90N, R19W, Franklin Co.);

Beaverdam Creek, mouth (S19, T93N, R19W, Franklin Co.) to north county line;

Iowa River, south county line to west county line (entire length in county);

Maynes Creek, confluence with unnamed creek (S12, T91N, R19W, Franklin Co.) to confluence with unnamed creek (S30, T91N, R20W, Franklin Co.);

Otter Creek, mouth (S28, T92N, R19W, Franklin Co.) to County Road C 23 (north line of S31, T93N, R20W, Franklin Co.);

West Fork Cedar River, east county line to confluence with Beaverdam & Bailey Creeks (S19, T93N, R19W, Franklin Co.);

## GREENE COUNTY

Cedar Creek, mouth (S33, T85N, R32W, Greene Co.) to north county line;

North Raccoon River, south county line to west county line (entire length in county);

## GRUNDY COUNTY

Black Hawk Creek, east county line to confluence with Minnehaha Creek (S7, T87N, R16W, Grundy Co.);

Wolf Creek, east county line to confluence with unnamed creek (S32, T86N, R17W, Grundy Co.);

## GUTHRIE COUNTY

Middle Raccoon River, Lake Panorama (S15, T80N, R31W, Guthrie Co.) to north county line;

Middle Raccoon River, east county line to Lake Panorama Outlet (S31, T80N, R30W, Guthrie Co.);

## HAMILTON COUNTY

Boone River, west county line to north county line;

Des Moines River, west county line to west county line (entire length in county);

Eagle Creek, mouth (S6, T89N, R25W, Hamilton Co.) to north county line;

White Fox Creek, mouth (S33, T89N, R25W, Hamilton Co.) to north county line;

## HANCOCK COUNTY

East Fork Iowa River, south county line to confluence with Galls Creek (S12, T95N, R24W, Hancock Co.);

West Fork Iowa River, south county line to County Road B 55 (north line of S31, T95N, R24W, Hancock Co.);

Winnebago River, east county line to north county line (entire length in county);

## HARDIN COUNTY

Iowa River, south county line to north county line;

School Creek, mouth (S28, T89N, R20W, Hardin Co.) to confluence with unnamed creek (S16, T89N, R20W, Hardin Co.);

South Fork Iowa River, mouth (S4, T86N, R19W, Hardin Co.) to Highway 359 (S11, T88N, R22W, Hardin Co.);

## HENRY COUNTY

Cedar Creek, mouth (S9, T71N, R7W, Henry Co.) to west county line (entire length in county);

Cedar Creek, upper extent of Geode Lake (S25, T70N, R5W, Henry Co.) to east county line;

Crooked Creek, west county line to north county line;

Skunk River, south county line to west county line (NW 1/4, S30, T73N, R7W, Henry Co.)(entire length in Henry Co.);

## HOWARD COUNTY

Beaver Creek, mouth (S19, T100N, R12W, Howard Co.) to south line of S29, T100N, R13W;

Bohemian Creek, east county line to west line of S2, T97N, R11W;

Chialk Creek, mouth (S1, T98N, R11W, Howard Co.) to north line S36, T99N, R11W, Howard Co.;

Nichols Creek (a.k.a. Bigalks Creek), east county line to west line of S23, T100N, R11W;

Staff Creek, mouth to west line of S27, T100N, R14W;

Turkey River, east county line to confluence with South Branch Turkey River (S2, T98N, R12W, Howard Co.);

Upper Iowa River, all of the river located in Howard County;

Wapsipinicon River, south county line to west county line;

#### HUMBOLDT COUNTY

Des Moines River, south county line to north line S7, T92N, R30W, Humboldt Co.;

East Fork Des Moines River, mouth (S19, T91N, R28W, Humboldt Co.) to north county line;

#### IDA COUNTY

Little Sioux River, west county line to north county line;

Maple River, west county line to north county line;

#### IOWA COUNTY

Iowa River, east county line to north county line;

#### JACKSON COUNTY

Brush Creek, north line of S23, T85N, R3E to north line of S1, T85N, R3E;

Cedar Creek, mouth (S30, T85N, R3E) to east line of S29, T85N, R3E;

Little Mill Creek, mouth to west line of S29, T86N, R4E;

Maquoketa River, mouth (S7, T85N, R6E, Jackson Co.) to west county line (entire length in county);

Mill Creek, mouth (S18, T86N, R5E, Jackson Co.) to confluence with unnamed creek (S1, T86N, R3E, Jackson Co.);

Mineral Creek, mouth (S32, T85N, R1E, Jackson Co.) to west county line;

Ozark Spring Run, mouth (S32, T86N, R1E) to spring source in center of S32, T86N, R1E;

Pleasant Creek (a.k.a. Springbrook), confluence with unnamed creek (E 1/2, S11, T85N, R4E, Jackson Co.) to west line S15, T85N, R4E, Jackson Co.;

South Fork Big Mill Creek, mouth (S8, T86N, R4E, Jackson Co.) to west line S17, T86N, R4E, Jackson Co.;

Storybook Hollow, mouth (S7, T86N, R4E, Jackson Co.) to south line of S12, T86N, R3E, Jackson Co.;

Tete des Morts Creek (a.k.a. Tete des Morts River), north county line (S3, T87N, R4E, Jackson Co.) to confluence with unnamed creek (NW 1/4, S4, T87N, R3E, Jackson Co.);

Unnamed Creek, mouth (S1, T86N, R3E, Jackson Co.) to west line S1, T86N, R3E, Jackson Co.;

Unnamed tributary to Lytle Creek, mouth (S7, T86N, R2E) to west line of S11, T86N, R1E;

#### JEFFERSON COUNTY

Crooked Creek, mouth (S1, T73N, R8W, Jefferson Co.) to east county line;

Skunk River, east county line (east line, S13, T72N, R8W, Jefferson Co.) to north county line (north line, S1, T73N, R8W, Jefferson Co.) (entire length in Jefferson Co.);

#### JOHNSON COUNTY

Cedar River, east county line to north county line;

Clear Creek, Interstate 380 (S34, T80N, R7W, Johnson Co.) to confluence with unnamed creek (S29, T80N, R8W, Johnson Co.);

Iowa River, south county line (south line, S32, T77N, R5W, Johnson Co.) to Coralville Dam (S22, T80N, R6W, Johnson Co.);

North Branch Old Mans Creek, mouth (S31, T79N, R7W, Johnson Co.) to north line S23, T79N, R8W, Johnson Co.;

#### JONES COUNTY

Buffalo Creek, mouth (S10, T84N, R4W, Jones Co.) to west county line;

Maquoketa River, east county line to north county line (entire length in county);

Mineral Creek, east county line to west line S29, T85N, R1W, Jones Co.;

Wapsipinicon River, south county line to west county line;

#### KEOKUK COUNTY

North Skunk River, mouth (S5, T74N, R10W, Keokuk Co.) to west county line;

Skunk River, east county line to confluence with North & South Skunk Rivers (S5, T74N, R10W, Keokuk Co.);

South English River, east county line to confluence with unnamed creek (S6, T77N, R13W, Keokuk Co.);

South Skunk River, mouth (S5, T74N, R10W, Keokuk Co.) to confluence with Olive Branch Creek (S30, T75N, R13W, Keokuk Co.);

**KOSSUTH COUNTY**

Buffalo Creek, mouth (S20, T97N, R28W, Kossuth Co.) to confluence with North Buffalo Creek (S4, T97N, R27W, Kossuth Co.);

East Fork Des Moines River, south county line to west county line;

**LEE COUNTY**

Des Moines River, mouth (S34, T65N, R5W, Lee Co.) to west county line (entire length in county);

Skunk River, mouth (S8, T68N, R2W, Lee Co.) to north county line (entire length in county);

**LINN COUNTY**

Bear Creek, mouth (S21, T84N, R8W, Linn Co.) to west county line;

Buffalo Creek, east county line to Highway 13 (S10, T86N, R6W, Linn Co.);

Cedar River, south county line to west county line;

East Otter Creek, confluence with Otter Creek (S7, T84N, R7W, Linn Co.) to confluence with unnamed creek (S 1/2, S28, T85N, R7W, Linn Co.);

Wapsipinicon River, east county line to north county line;

**LOUISA COUNTY**

Cedar River, mouth (S20, T75N, R4W, Louisa Co.) to north county line;

Iowa River, mouth to north county line (NW 1/4, S6, T76N, R5W, Louisa Co.) (entire length in county);

Long Creek, mouth (S1, T74N, R4W, Louisa Co.) to west county line;

**LUCAS COUNTY**

Chariton River, Rathbun Lake (S34, T71N, R20W, Lucas Co.) to Highway 14 (S31, T72N, R21W, Lucas Co.);

White Breast Creek, north county line to confluence with unnamed creek (W 1/2, NW 1/4, S6, T71N, R23W, Lucas Co.);

Wolf Creek, mouth (S15, T71N, R21W, Lucas Co.) to confluence with unnamed creek (NE 1/4, S36, T71N, R22W, Lucas Co.);

**LYON COUNTY**

Big Sioux River, south county line to north county line;

Little Rock River, mouth (S35, T98N, R46W, Lyon Co.) to confluence with unnamed creek (S10, T98N, R44W, Lyon Co.);

Otter Creek, mouth (S21, T98N, R44W, Lyon Co.) to south county line;

Rock River, south county line to north county line;

**MADISON COUNTY**

Middle River, east county line to west county line;

Thompson River, south county line to confluence with unnamed creek (NW 1/4, S7, T74N, R29W, Madison Co.);

**MAHASKA COUNTY**

Des Moines River, south county line to west county line (entire length in county);

North Skunk River, east county line to north county line;

**MARION COUNTY**

Des Moines River, east county line to west county line (entire length in county);

White Breast Creek, mouth to west county line;

**MARSHALL COUNTY**

Iowa River, east county line to Marshalltown Center St. Dam (S26, T84N, R18W, Marshall Co.);

Iowa River, confluence with Dowd Creek (S2, T85N, R19W, Marshall Co.) to north county line;

Minerva Creek, mouth (S2, T84N, R19W, Marshall Co.) to confluence with major unnamed creek (NW 1/4, S9, T85N, R20W, Marshall Co.);

Wolf Creek, north county line to north county line (S2, T85N, R17W, Marshall Co.) (entire length in county);

**MITCHELL COUNTY**

Beaver Creek, mouth to north line of S19, T99N, R15W;  
Burr Oak Creek, mouth (S12, T98N, R16W, Mitchell Co.) to north line of S5, T98N, R16W, Mitchell Co.;

Cedar River, south county line to north county line;  
Deer Creek, mouth (S23, T99N, R18W, Mitchell Co.) to west county line;  
Little Cedar River, south county line to north county line;  
Rock Creek, south county line (S14, T97N, R17W, Mitchell Co.) to north line of S26, T98N, R18W, Mitchell Co. (entire length in county between south line of S14, T97N, R17W and north line of S26, T98N, R18W);  
Spring Creek, mouth to north line of S8, T97N, R16W;  
Turtle Creek, mouth to east line of S7, T99N, R17W;  
Wapsipinicon River, east county line to north line of S20, T100N, R15W;

#### MONONA COUNTY

Maple River, south line (S34, T85N, R43W, Monona Co.) to north county line;

#### MONROE COUNTY

Des Moines River, east county line to north county line (entire length in county);

#### MUSCATINE COUNTY

Cedar River, south county line to north county line;  
Pine Creek, mouth (S21, T77N, R1E, Muscatine Co.) to confluence with unnamed creek (S26, T78N, R1W, Muscatine Co.);  
Sugar Creek, mouth (S17, T78N, R2W, Muscatine Co.) to north county line;

#### O'BRIEN COUNTY

Little Sioux River, south county line to east county line;  
Mill Creek, south county line to confluence with unnamed creek (NE 1/4, S9, T95N, R41W, O'Brien Co.);

#### PLYMOUTH COUNTY

Big Sioux River, south county line to north county line;

#### POLK COUNTY

Big Creek, upper extent of Big Creek Lake (S9, T81N, R25W, Polk Co.) to north county line;  
Des Moines River, east county line to west county line (entire length in county);  
Raccoon River, mouth (S10, T78N, R24W, Polk Co.) to west county line;

#### RINGGOLD COUNTY

Thompson River, east county line to north county line;

#### SAC COUNTY

Boyer River, south county line to confluence with unnamed creek (S6, T89N, R37W, Sac Co.);  
Indian Creek, mouth (S24, T87N, R36W, Sac Co.) to north line (S20, T87N, R36W, Sac Co.);  
North Raccoon River, east county line to north county line;

#### SCOTT COUNTY

Lost Creek, mouth (S15, T80N, R5E, Scott Co.) to confluence with unnamed creek (NW 1/4, S7, T79N, R5E, Scott Co.);  
Wapsipinicon River, mouth (S13, T80N, R5E, Scott Co.) to north county line (NE 1/4, S1, T80N, R1E, Scott Co.) (entire length in county);

#### SIOUX COUNTY

Big Sioux River, south county line to north county line;  
Rock River, mouth (S1, T95N, R48W, Sioux Co.) to north county line;

#### STORY COUNTY

South Skunk River, confluence with Squaw Creek (S12, T83N, R24W, Story Co.) to north county line;

#### TAMA COUNTY

Iowa River, east county line to west county line;  
Raven Creek, mouth (S25, T83N, R16W, Tama Co.) to confluence with unnamed creek (S6, T82N, R16W, Tama Co.);

Salt Creek, east county line to confluence with South Branch Salt Creek (S29, T84N, R13W, Tama Co.);

**UNION COUNTY**

Thompson River, south county line to north county line;

Twelve Mile Creek, mouth (S36, T71N, R28W, Union Co.) to Twelve Mile Lake Dam (S12, T72N, R30W, Union Co.);

**VAN BUREN COUNTY**

Cedar Creek, east county line (SE 1/4, S12, T70N, R8W) to east county line (NE 1/4, S12, T70N, R8W);

Des Moines River, south county line to west county line (entire length in county);

**WAPELLO COUNTY**

Des Moines River, south county line to west county line (entire length in county);

South Avery Creek, mouth (S31, T73N, R14W, Wapello Co.) to west county line;

**WARREN COUNTY**

Des Moines River, east county line to north county line (entire length in county);

Middle River, confluence with Clanton Creek (S28, T76N, R25W, Warren Co.) to west county line;

White Breast Creek, east county line to south county line;

**WASHINGTON COUNTY**

Crooked Creek, south county line to confluence with East and West Fork Crooked Creeks (S24, T74N, R7W, Washington Co.);

English River, mouth (S11, T77N, R6W, Washington Co.) to confluence with South English River (S6, T77N, R9W, Washington Co.);

Iowa River, east county line (east line, S36, T77N, R6W, Washington Co.) to north county line (north line, S2, T77N, R6W, Washington Co.) (entire length in Washington Co.);

Long Creek, east county line to confluence with South Fork Long Creek (S26, T75N, R6W, Washington Co.);

Skunk River, south county line (SE 1/4, S36, T74N, R8W, Washington Co.) to west county line (SW 1/4, S6, T74N, R9W, Washington Co.) (entire length in county);

South English River, mouth (S6, T77N, R9W, Washington Co.) to west county line;

**WEBSTER COUNTY**

Boone River, mouth (S36, T87N, R27W, Webster Co.) to east county line;

Brushy Creek, west line (S16, T88N, R27W, Webster Co.) to confluence with unnamed creek (S8, T88N, R27W, Webster Co.);

Brushy Creek, mouth (S15, T87N, R27W, Webster Co.) to south line S34, T88N, R27W, Webster Co.;

Deer Creek, mouth (S24, T90N, R29W, Webster Co.) to north line S16, T90N, R29W, Webster Co.;

Des Moines River, south county line to north county line (entire length in county);

Lizard Creek, mouth (S19, T89N, R28W, Webster Co.) to confluence with D.D. #3 (S35, T90N, R30W, Webster Co.);

South Branch Lizard Creek, mouth (S23, T89N, R29W, Webster Co.) to west line S32, T89N, R29W, Webster Co.;

**WINNEBAGO COUNTY**

Winnebago River, south county line to north county line;

**WINNESHIEK COUNTY**

Bear Creek (a.k.a. South Bear Creek), east county line to source (a.k.a. Mestad Springs, S29, T100N, R7W);

Bohemian Creek, mouth to west county line;

Canoe Creek, mouth (S25, T99N, R7W, Winneshiek Co.) to west line of S8, T99N, R8W, Winneshiek Co.;

Coon Creek, mouth to road crossing in NW 1/4, S13, T98N, R7W;

Dry Run, mouth to west line of S36, T98N, R9W;

East Pine Creek, mouth (S28, T100N, R9W) to north county line (S10, T100N, R9W);

Martha Creek, mouth to west line of S13, T99N, R10W;  
Middle Bear Creek, mouth to north line of S16, T100N, R7W;  
Nichols Creek (a.k.a. Bigalk Creek), mouth to west county line;  
North Bear Creek, mouth to north county line;  
North Canoe Creek, mouth to north line of S2, T99N, R8W;  
Paint Creek (a.k.a. Pine Creek), east county line to confluence with unnamed creek (SE 1/4, S11, T99N, R7W, Winneshiek Co.);  
Pine Creek, mouth (S10, T99N, R9W) to north county line;  
Pine Creek, mouth (S26, T99N, R7W) to north line of S21, T99N, R7W;  
Silver Creek, mouth to north line of S26, T100N, R9W;  
Smith Creek (a.k.a. Trout River), mouth (S21, T98N, R7W) to south line of S33, T98N, R7W;  
Ten Mile Creek, mouth to confluence with Walnut Creek (S18, T98N, R9W);  
Trout Creek, mouth (S9, T98N, R7W) to confluence with Smith Creek (S21, T98N, R7W);  
Trout Creek, mouth (S23, T98N, R8W) to confluence with unnamed tributary (a.k.a. Trout Run) in S27, T98N, R8W;  
Turkey River, south county line to west county line;  
Twin Springs Creek, mouth (S17, T98N, R8W) through one half mile reach;  
Unnamed Creek, mouth (SE 1/4, S11, T99N, R7W, Winneshiek Co.) to north line S12, T99N, R7W, Winneshiek Co.;  
Unnamed tributary to Trout Creek (a.k.a. Trout Run), mouth (S27, T98N, R8W, Winneshiek Co.) to south line of S27, T98N, R8W;  
Unnamed tributary to Upper Iowa River (a.k.a. Casey Springs Creek), mouth (S25, T99N, R9W) to west line of S26, T99N, R9W;  
Unnamed tributary to Upper Iowa River (a.k.a. Coldwater Creek), mouth (S32, T100N, R9W) to north county line;  
Upper Iowa River, east county line to west county line;  
Yellow River, east county line to confluence with North Fork Yellow River (S13, T96N, R7W);

**WOODBURY COUNTY**  
Little Sioux River, confluence with Parnell Creek (S25, T86N, R44W, Woodbury Co.) to east county line;  
Maple River, south county line to east county line;

**WORTH COUNTY**  
Deer Creek, east county line to confluence with unnamed creek (east line, S28, T100N, R19W, Worth Co.);  
Elk Creek, mouth (S27, T99N, R20W, Worth Co.) to Highway 105 (S5, T99N, R22W, Worth Co.);  
Shell Rock River, south county line to north county line;  
Winans Creek, mouth (S36, T98N, R22W, Worth Co.) to N/S road crossing (S 1/2, S25, T98N, R22W, Worth Co.);  
Winnebago River, south county line (S32, T98N, R21W, Worth Co.) to south county line (S34, T98N, R22W, Worth Co.) (entire length in county);

**WRIGHT COUNTY**  
Boone River, south county line to confluence with Middle Branch Boone River (S2, T93N, R26W, Wright Co.);  
Eagle Creek, south county line to confluence with Drainage Ditch No. 9 (S30, T91N, R25W, Wright Co.);  
East Fork Iowa River, mouth (S19, T93N, R23W, Wright Co.) to north county line;  
Iowa River, east county line (S13, T90N, R23W, Wright Co.) to confluence with East and West Fork Iowa Rivers (S19, T93N, R23W, Wright Co.) (entire length in county);  
West Fork Iowa River, mouth (S19, T93N, R23W, Wright Co.) to north county line;  
White Fox Creek, south county line to confluence with unnamed creek (E 1/2, SE 1/4, S36, T91N, R25W, Wright Co.).

**567—72.51(455B) Protected stream designation procedure.**

**72.51(1) Eligible petitioners.** Any state agency, governmental subdivision, association or interested person may petition the commission, according to the rules of this division, to designate a stream as a protected stream. However, if the stream had been the subject of a similar petition filed within the past 2 years, the commission shall not accept a petition except upon a majority vote.

**72.51(2) Content of petition.** The petition for protected stream designation shall contain the following: (a) names, addresses, and the telephone numbers of the petitioners; (b) location of the stream nominated for designation; (c) reasons why the stream is nominated, each reason being stated in a separate numbered paragraph; and (d) adequate evidence supporting the reasons for nomination. Eleven copies of the petition shall be filed with the department.

**72.51(3) Department review of petition.** Upon receipt of a petition for designation of a stream as a protected stream, the department shall make an initial determination as to whether the petition complies with 72.51(2) and whether the stream has a sufficient number of environmental amenities listed in 72.51(7) that further investigation is warranted. If the department finds the petition not in compliance with 72.51(7) or that further investigation is not warranted, agency proceedings to designate the nominated stream as protected shall cease and the petitioner shall be notified of the reasons for refusing to accept and act upon the petition. A petitioner aggrieved by the department's decision may appeal the decision within 30 days to an executive committee of at least three commission members.

**72.51(4) Notice of initiation of protected stream designation proceedings.** Upon department acceptance of a petition nominating a stream for protected stream designation, the department shall do the following:

*a. Notice of intended action.* Publish a notice of intended action in the Iowa Administrative Bulletin, the content of which identifies the nominated stream and requests public input into the protected stream designation procedure.

*b. Commission notification.* Notify the commission at the next meeting of the filing of a petition for protected stream designation.

*c. Interested agency notification.* Notify regional planning commissions, county boards of supervisors, city councils, soil conservation districts through which the nominated stream runs, the fish and wildlife division of the department, the soil conservation division of the department of agriculture and land stewardship, the department of agriculture and land stewardship and the geological survey bureau of the department.

*d. Countywide notification.* Publish notice of the filing of the petition in a newspaper of general circulation for two consecutive weeks in each county in which the nominated stream is located.

**72.51(5) Department investigation report.** Upon department acceptance of a petition nominating a stream for protected stream designation, the department shall do the following:

*a. Investigation.* Supervise a field staff investigation of the stream nominated for protected stream status for the purpose of assessing the effect that extending department flood plain regulation would have on the factors listed in 72.51(7);

*b. Report.* File a report with the commission at a monthly commission meeting held within one year after the notice of intended action was published; the report shall specifically state findings of fact or each reason alleged in the petition in support of a protected stream designation and convey a staff recommendation, including any minority recommendations and recommendations of other governmental bodies and interested persons on whether or not the stream should be regulated;

*c. Interagency coordination.* Invite the fish and wildlife division of the department, the geological survey bureau, and any other agency or governmental subdivision expressing an interest in the proceeding to participate in the field investigation and preparation of the report, and request their assessment of whether extension of department jurisdiction over the nominated stream would have either an adverse or beneficial impact on their agency's water resource programs.

**72.51(6) Commission determination.** After receipt of the director's report and the public has had an opportunity to submit written comments and make an oral presentation, the commission shall make a determination in writing whether or not to designate the stream identified in the petition as a protected stream, except that the commission may continue the proceeding as needed to collect or analyze

additional data. The commission's determination shall be based on the factors listed in 72.51(7), as applied to the nominated stream and its flood plain, and to other relevant streams and flood plains located in the same watershed as the nominated stream, as well as any underground water system hydrologically connected to the nominated stream.

**72.51(7) Basis for protected stream designation.** Commission determination of whether or not to classify a stream as a protected stream shall be based on the balancing of the costs and benefits of possible flood plain development as it would affect the following factors: (a) maintenance of stream fishery capacity; (b) water quality preservation; (c) wildlife habitat preservation; (d) flood control; (e) flood plain management; (f) existing flood plain developments; (g) soil erosion control; (h) the needs of agriculture and industry; (i) the maintenance and enhancement of public recreational opportunities; (j) the public's health, welfare and safety; (k) compatibility with the state water plan; (l) property and water rights of landowners; (m) other factors relevant to the control, development, protection, allocation, and utilization of the nominated stream and water hydrologically connected to it.

**567—72.52(455B) Protected stream declassification procedure.** The procedure for removing a stream from the list of protected streams in 72.50(2) of these rules shall be the same as the rules for designation of a stream as a protected stream, except that all notices, investigations and reports shall be addressed to the issue of declassification.

These rules are intended to implement Iowa Code sections 455B.261, 455B.262, 455B.263, 455B.264, 455B.275, 455B.277, 459.102 and 459.301.

<sup>1</sup> Effective date of 2/23/94 for segments incorporated by **ARC 4559A** in 72.50(2) and 72.52 delayed 70 days by the Administrative Rules Review Committee at their meeting held February 14, 1994.

CHAPTER 73  
USE, MAINTENANCE, REMOVAL, INSPECTIONS, AND SAFETY OF DAMS

[Prior to 7/1/83, INRC Ch 7]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

DIVISION I  
USE AND MAINTENANCE OF DAMS

**567—73.1(109,455B) Operating plan for dams with movable structures.**

**73.1(1)** *When approval of operating plan required.* An operating plan approved by the department shall be required for any dam exceeding the thresholds established in rule 567—71.3(455B) if the dam has movable structures which must operate during floods or to release a minimum downstream flow, or the impoundment water level is raised or lowered regularly or periodically.

**73.1(2)** *Procedures for approval of operating plan.*

*a. Form of review.* Requests for approval of an operating plan shall be submitted and reviewed in the following manner:

(1) *Where operating plan is related to proposed construction.* If an operating plan is required for a proposed new dam or because of proposed structural modification of an existing dam, the operating plan will be reviewed as part of the department review of construction plans which are required by 567—Chapters 70 to 72. Approval of the proposed operating plan will be made a part of the department permit, which approves the construction plans.

(2) *Where operating plan is not related to proposed construction.* If an operating plan is required because of a change in use of a dam and is not related to proposed structural modification of the dam, the proposed operating plan should be submitted to the department in writing together with department application Form 36, described in rule 567—70.3(455B). The applicant should indicate on Form 36 that structural modification of the dam is not proposed.

(3) *General review procedures.* Applications shall be reviewed in accordance with the procedures in 567—Chapter 70.

*b. Information required for review.* An application for approval of an operating plan shall be supported by written information identifying personnel responsible for operation of the dam, the circumstance under which gates or other movable structures must operate, the method of operation, and the method of discharge measurement. These requirements are more fully described in department Bulletin No. 16.

**73.1(3)** *Criteria for approval.*

*a. Required findings.* The department will approve a proposed operating plan only after the following findings are made:

(1) The proposed operating plan complies with the statutory criteria set forth in Iowa Code section 455B.275, considering the purposes of regulation set forth in Iowa Code section 455B.262 and the effects to be considered under Iowa Code section 455B.264.

(2) The proposed operating plan complies with the criteria in chapter IX of department Bulletin No. 16.

*b. Anticipation of changed circumstances.* In applying the approval criteria in paragraph “a” of this subrule, consideration shall be given to both existing conditions and potential future conditions which can reasonably be anticipated at the time the application is reviewed.

**567—73.2(109,455B) Raising or lowering of impoundment levels.**

**73.2(1)** *When approval required.* A separate approval is required to temporarily or permanently raise or lower the level of water impounded by a dam which exceeds the thresholds of rule 567—71.3(455B) unless the raising and lowering has been authorized as part of an approved operating plan. Such approval shall be in the form of a letter authorizing the lowering or raising and may be conditioned upon various requirements.

**73.2(2)** *Procedure for approval of raising or lowering impoundment water levels.* Review procedure shall be as provided for operating plans in subrule 73.1(2) except that the applicant shall submit the following additional information:

*a.* The date raising or lowering will be initiated, the level to which the impoundment will be raised or lowered, and, if temporary, the anticipated date when the normal water level will be restored.

*b.* Evidence that during raising of the water level the required minimum downstream release rate will be maintained.

*c.* Evidence that the discharge rate during lowering will not exceed the capacity of the stream channel below the dam.

**73.2(3)** *Criteria for approval of raising or lowering impoundment water levels.* The criteria for approval are the statutory criteria for approval of operating plans identified in subrule 73.1(3). In addition, as a condition of approving temporary or permanent raising or lowering of water levels, the applicant may be required to give prior notice to the director of the local county conservation board or local enforcement officer for the department and publicize the lowering locally in order to notify downstream users, persons who have boats or docks on the impoundment and other persons whose use of the impoundment might be affected.

**567—73.3 to 73.9** Reserved.

DIVISION II  
ABANDONMENT AND REMOVAL OF DAMS

**567—73.10(109,455B) Abandonment prohibited.** The abandonment of a dam, or the intent to permanently cease or cause to cease all acts of construction, operation, and maintenance of a dam, is prohibited. If any person wishes to be relieved of the responsibilities inherent in the ownership or control of a dam structure, those responsibilities shall be undertaken by another person through sale, transfer or other means or the dam shall be removed.

**567—73.11(109,455B) Removal of dams.**

**73.11(1)** *When approval required.* Agency approval is required to remove any dam which exceeds the thresholds in rule 567—71.3(455B).

**73.11(2)** *Procedures for approving removal of dams.*

*a.* *Information required.* To request approval to remove a dam the applicant shall submit a written statement including the following:

(1) Identification of the structure by name and location.

(2) Identification of the owner and, if the applicant is not the owner, evidence of authority to act for the owner.

(3) The purpose for removal of the dam.

(4) Methods to be used in drainage of the impoundment and removal of the structure and appurtenances.

(5) Proposed final disposition of the impoundment site.

(6) Names, mailing addresses and location of the immediate upstream, downstream and adjacent landowners and occupants and, in addition, names and mailing addresses of other landowners and occupants who the director or council, after reviewing the proposal, believes will have a substantial interest in or will be substantially affected by removal of the dam.

*b.* *Form of review.* Agency review process shall be as provided for review of operating plans in 73.1(2) “a”(2) and (3).

*c.* *Criteria for approval.* Criteria for approval of removal of a dam are the statutory criteria for approval of operating plans identified in 73.1(3).

*d.* *Waiver of procedures for requesting approval to remove certain small dams.* If a dam to be removed is classified as “low hazard” and is not a “major structure” as defined in 567—Chapter 70, the department may waive the requirements of paragraphs “a” and “b” of this subrule and approve removal by letter in response to oral or written notice of intent to remove the dam.

567—73.12 to 73.19 Reserved.

DIVISION III  
INSPECTION OF DAMS

**567—73.20(109,455B) Scope and purposes of dam safety inspection program.**

**73.20(1) *Scope of dam safety inspection program.*** Dams subject to inspection under these rules are all dams which exceed the thresholds in rule 567—71.3(455B) and certain preexisting dams as described in 73.21(3). The scope of department staff field inspections normally is limited to visually observable features of dams and their appurtenant structures.

**73.20(2) *Purposes of dam safety inspection program.*** The general purposes of inspections are as follows: to evaluate the construction, operation, and maintenance of dams; to identify observable deficiencies in dams or appurtenant structures; and to identify other flood plain structures or uses which may affect the hazard class of a dam or use of an associated impoundment. Inspection reports will be used by the department in determining whether a proposed dam project complies with applicable criteria, and to determine whether the following conditions exist:

- a. A permit violation;
- b. A violation of law which requires that a permit be obtained;
- c. A condition which constitutes a public nuisance by causing unacceptable risk of injury to the public health, safety or welfare.

**567—73.21(109,455B) Types of inspections; when inspections are made.**

**73.21(1) *Inspections of major dam structures.***

a. *Inspection prior to construction.* A field inspection shall be made by agency staff to determine the hazard class and verify the location and plan information upon receipt of an application for approval of construction or modification of a major dam structure under 567—Chapters 70 to 72.

b. *Inspection during construction.* Construction or modification of a major dam structure shall be supervised and inspected as provided in Chapter VI of department Bulletin No. 16.

c. *Acceptance inspections.* When construction of a major dam structure or modifications thereto is essentially completed, and as-built plans and a construction report have been submitted, the agency staff shall make a field inspection to determine whether visually observable features of the dam and appurtenant structures are consistent with the approved plans and the conditions of the agency approval order. The department shall thereafter issue a letter stating that the dam is accepted or that additional work is required for acceptance of construction. Filling of the impoundment shall not begin until the department has issued the letter of acceptance.

d. *Periodic inspections after acceptance.*

(1) *Inspections by department personnel.* All major structures shall be inspected by agency staff on a regular basis. The department staff shall notify the dam owner or agent before each inspection. High hazard structures shall be inspected at least once every two years. Major structures not classified as high hazard shall be inspected at least once every five years. Structures in poor condition shall be inspected more frequently until required repairs are completed. Each inspection shall assess the condition of the dam and appurtenant structures and the adequacy of operation and maintenance practices. If warranted, the inspection may include reevaluation of the ability of the dam and appurtenant structures to adequately withstand the hydraulic loadings and pass the appropriate design floods.

(2) *Maintenance inspections by owner.* The owner of a major structure shall be responsible for annual inspections and submission of written inspection reports as provided in Chapter VI of department Bulletin No. 16.

**73.21(2) *Inspections of dams other than major structures.***

a. *Preliminary site evaluation.* Department personnel may evaluate the site of a proposed dam other than a major structure from maps and aerial photographs in lieu of a field inspection.

b. *Inspection during construction.* The applicant shall be responsible for providing supervision of construction by a person experienced in the type of construction involved. The applicant shall

submit written notification of the name and business address of the person responsible for supervising construction.

*c. Inspections after construction.*

(1) Dams with approved operating plans shall be inspected by department personnel at least once every five years. Any problems noted shall be reported to the owner in writing.

(2) All other dams which exceed the thresholds in rule 567—71.3(455B) may be periodically inspected by department personnel to determine their condition. Any serious problems noted shall be reported to the owner in writing.

(3) Rescinded IAB 2/20/91, effective 3/27/91.

**73.21(3) Preexisting dams.** Preexisting dams are dams whose dimensions exceed the thresholds in rule 567—71.3(455B) but which were constructed and most recently modified before enactment of law requiring that approval be obtained for construction or modification.

*a. Inventory and classification of certain preexisting dams.* The U.S. Army Corps of Engineers, in cooperation with the department engineering staff, under the authority of the National Dam Safety Act, P.L. 92-367, have compiled an inventory of all known dams in Iowa having a permanent storage capacity in excess of 50 acre-feet. The inventory process included assignment of hazard classifications consistent with the hazard classifications in 567—subrule 72.3(2).

*b. Inspection of preexisting dams.*

(1) *Major structures.* Preexisting dams which are on the National Dam Safety Inventory and have dimensions which exceed the thresholds for major structures as defined in 567—Chapter 70 will be inspected by department personnel as provided in 73.21(1) “d.”

(2) *Other preexisting dams.* Preexisting dams not classified as major structures are subject to inspection in the circumstances described in 73.23(1) to 73.23(3).

**567—73.22(109,455B) Duty of dam owner to maintain, investigate, inspect and report.** The owner of a dam has a responsibility to maintain the dam and appurtenant structures in a safe condition. The owner should perform regular inspections to identify potential maintenance problems. The owner of a dam which exceeds the thresholds in rule 567—71.3(455B) will be required by the department to arrange for performance of engineering investigations when needed to evaluate potential safety problems. In any case where the department determines the need for follow-up inspections, the dam owner may be required to have a qualified person make inspections and prepare written inspection reports at specified intervals.

**567—73.23(109,455B) Special inspections and investigations.** Special inspections and investigations shall be made by department personnel in the following instances:

**73.23(1)** Upon notice or evidence of unauthorized construction;

**73.23(2)** Upon notice or evidence that a dam has failed or is in a condition where failure appears likely, and public damages would result from such failure;

**73.23(3)** Upon notice or evidence that the hazard classification of a dam may no longer be valid due to changed downstream conditions;

**73.23(4)** At the time renewal of a storage permit is being considered if the dam has not been inspected within the previous year.

**567—73.24(109,455B) Inspection by others.** At the discretion of the department, an inspection report submitted by a qualified individual may be accepted in lieu of an inspection and report by the agency staff.

**567—73.25(109,455B) Access for inspections a condition of construction approval.** An agency order which authorizes construction or modification, operation and maintenance of a dam for which postconstruction inspections are required by these rules shall include a condition stating that agency personnel shall have access to the dam site for such inspections.

**567—73.26(109,455B) Inspection reports.** Agency personnel shall prepare a report of each inspection and provide a copy to the owner of the dam. An annual summary report of all dams inspected during the year shall be presented to the department.

**567—73.27 to 73.29** Reserved.

DIVISION IV  
DESIGNATION OF UNSAFE DAMS

**567—73.30(109,455B) Procedures for designation of a dam as unsafe.**

**73.30(1) Agency staff report.** If after inspection and other investigation the agency staff determines that a dam is unsafe, the staff shall prepare a report and provide copies to the owner of the dam and any other person whom the report identifies as responsible for the unsafe condition of the dam. The staff report shall identify the problems which cause the dam to be unsafe and recommend action to remedy the unsafe condition.

**73.30(2) Opportunity for comment.** The department shall provide the owner or other responsible person with a reasonable opportunity to comment on the staff report considering the degree and imminence of hazard identified in the staff report.

**567—73.31(109,455B) Criteria for designating a dam as unsafe.** Designation of dam as unsafe may be based on one or more of the following findings:

**73.31(1)** The dam has serious deficiencies in its design, construction, use, maintenance, or physical condition which would contribute to failure or otherwise increase flood damages.

**73.31(2)** The design, construction, operation, or maintenance of the dam is such that its anticipated performance during flooding conditions is incompatible with an applicable, approved local flood plain regulation or zoning ordinance adopted prior to the time the dam or its deficiencies were in existence.

**73.31(3)** The dam has inadequate spillway capacity for the size and hazard class of the dam.

**567—73.32(109,455B) Agency action concerning an unsafe dam.** After completion of the procedures in 73.30(109,455B), the department shall issue an initial decision which may order remedial work depending on the degree and imminence of hazard caused by the unsafe condition. Remedial work may include draining of the impoundment or removal of any structure determined to constitute a public nuisance. Procedures for appealing an initial decision are the procedures in 567—70.6(455B). If the initial decision requires emergency remedial work to abate an imminent danger of failure which would cause significant public damages as defined in 567—Chapter 70, the director may request the assistance of the attorney general to seek an appropriate judicial order compelling performance of emergency remedial work.

The rules in this chapter are intended to implement Iowa Code sections 109.15, 455B.275, 455B.277, 455B.264 and 17A.12.

CHAPTER 74  
MILLDAMS AND RACES

[Prior to 7/1/83, INRC Ch 6]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

Rescinded IAB 2/20/91, effective 3/27/91.

CHAPTER 75  
MANAGEMENT OF SPECIFIC FLOOD PLAIN AREAS

[Prior to 7/1/83, INRC Ch 4]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—75.1(455B) Applicability and purposes of chapter.** The department has jurisdiction over all flood plains and floodways in the state for the purpose of establishing and implementing a program to promote the protection of life and property from floods and to promote the orderly development and wise use of the flood plains of the state. As part of the program, the department regulates flood plain development as defined in these rules by three alternative methods: establishment of regulations for specific stream reaches by issuance of flood plain management orders; approval of flood plain management regulations adopted by local governments; and approval of flood plain development on a case-by-case basis where areas or projects are not covered by the first two methods. Any person who desires to construct or maintain a structure, dam, obstruction, deposit or excavation, or allow the same in any flood plain or floodway has a responsibility to contact the department to determine whether approval is required from the department or a local government authorized to act for the department.

**75.1(1) Regulation of development by issuance of department flood plain management orders.** The department may issue flood plain management orders to better ensure the orderly development and wise use of the flood plains of specific stream reaches. Each flood plain management order issued shall comply with the criteria in this chapter. However, a flood plain management order issued before the effective date of an amendment of the rules in this chapter shall not be invalidated by reason of nonconformity with the amendment.

**75.1(2) Regulation of development by approval of locally adopted flood plain management ordinances.** The department may delegate regulatory authority to a local government by approving flood plain management regulations adopted by the local government to better ensure the orderly development and wise use of the flood plains of specific stream reaches. Local flood plain management regulations shall comply with the applicable criteria in this chapter. However, a local regulation approved by the department before the effective date of an amendment of the rules in this chapter shall not be invalidated by reason of nonconformity with such amendment.

**75.1(3) Regulation of development on a case-by-case basis.** Flood plain development not regulated by department flood plain management orders or department-approved, locally adopted ordinances is regulated by the department on a case-by-case basis. 567—Chapter 71 of these rules contains thresholds identifying the types of development for which such approval is required. 567—Chapter 70 contains procedures for requesting approval of development. 567—Chapter 72 contains criteria for approving development.

**567—75.2(455B) Flooding characteristics.** Flood plain regulations for a specific stream reach established pursuant to this chapter shall be based upon an analysis of the relevant flooding characteristics of the stream for which regulations are being established. The flooding characteristics of a stream include: flood magnitudes and frequencies; flood elevations, velocities and inundation limits; rate of rise of the flood waters and the related flood warning time; and characteristics related to changes in stream equilibrium over time. The following subrules identify standard methods for determining specific flooding characteristics.

**75.2(1) Flood frequencies and magnitudes.**

*a. Discharge frequency relationship.* In determining the discharge frequency relationship for the relevant flood the following frequency analysis methods shall be considered:

1. Log-Pearson Type III distribution where available records are adequate to warrant statistical analysis of the data.
2. Regional flood frequency methods such as department Bulletin No.11 which are applicable to the stream and watershed.
3. Rainfall-runoff watershed modeling techniques.
4. Other hydrologic techniques which are consistent with accepted scientific practices.

*b. Regional flood magnitude.* In determining the magnitude of the regional flood as defined in these rules the following methods should be considered:

1. An enveloping curve of experienced Iowa flood discharges as plotted in relation to the drainage area of the stream where they occurred.
2. The Standard Project Flood as computed by the U.S. Army Corps of Engineers.
3. Flood frequency methods outlined in paragraph “a” of this subrule.

**75.2(2) Flood stages and inundation limits.** Standard engineering methods and experienced flood information shall be used to determine flood heights and inundation limits. Consideration shall be given to the following:

- a.* The Manning formula or equivalent uniform-flow formula where stream geometry and slope are reasonably uniform.
- b.* Steady, gradually varied flow analysis using such surface water hydraulic models as one-dimensional, fixed-bed models.
- c.* For areas upstream and adjacent to a dam or impounding structure, a reservoir routing shall be made to determine maximum flood pool levels.
- d.* Experienced flood information including high water marks, flood profiles, and aerial or other photographs.
- e.* Other hydraulic methods which are consistent with standard engineering practices.

**75.2(3) Flood warning and response time.** Where the effectiveness of flood protection methods depends on timely human intervention to activate flood protection works or to evacuate people or property from flood-prone areas, the available flood warning time shall be determined. In estimating flood warning time and determining the reliability of a flood warning system, consideration shall be given to the following:

- a.* The general flooding history of the area including information on the flood warning provided during past floods.
- b.* Various hydrologic methods which permit calculation of basin rainfall/runoff response, travel time of a flood wave, rate of rise of flood waters and other pertinent data.
- c.* Meteorologic information such as weather forecasting methods.
- d.* Reliability of methods proposed for providing flood warning within the available time.
- e.* Response time for implementing flood protection measures once the flood warning has been given.
- f.* Seriousness of the hazard to life and property if the warning system fails, considering flood depths, velocities, and duration.

**567—75.3(455B) Area of regulation.** Regulations established by department flood plain management orders or by approved local ordinances shall fix the flood plain area to be regulated. The extent of the area to be regulated shall be based on the flooding characteristics of the stream and shall be delineated on suitable topographic or planimetric maps.

**567—75.4(455B) Establishment of a floodway.** Regulations established by department flood plain management order or by approved local ordinances shall provide for a floodway: An area of the flood plain which must be reserved for the conveyance of flood flows so that flood heights and velocities will not be substantially increased by future encroachment on the flood plain. Delineation of the encroachment limits defining the outer limits of the floodway must conform to the following criteria insofar as possible.

**75.4(1) Increase in water surface elevation.** The increase in the water surface elevation of Q100 which would result from confining flood flows to the floodway shall not exceed one foot.

**75.4(2) Equal and opposite conveyance.** The concept of equal and opposite conveyance as defined in 567—Chapter 70 shall be used to locate encroachment limits.

**75.4(3) Protection of existing development.** To the extent feasible, encroachment limits shall be located as follows:

- a.* To avoid the need to seek removal of a lawful existing structure in order to safely convey Q100;

b. To minimize any increase in the level of Q100 in an area where such increase would adversely affect an existing lawful structure;

c. To avoid the need to place an existing lawful structure in a delineated floodway if the placement would result in additional restrictions on improvements or reconstruction or replacement of the structure.

**75.4(4) *When acquisition of property interest required.*** Where protection of an existing structure necessitates prohibition of development in an area which could otherwise be developed under the criteria in 75.4(1) and 75.4(2), the department or local governmental designee may require that the owners of land benefited by the application of criteria in this subrule acquire property interests as needed to provide an adequate alternative floodway.

**567—75.5(455B) Minimum standards for flood plain and floodway uses.** Regulations established must require that structures vulnerable to flood damage be protected at the time of initial construction. The level of flood protection shall be commensurate with the flood damage potential of the use, must prevent obstruction of the floodway unless mitigating measures are taken, and must regulate or prohibit uses which result in significant public damages and costs. The following minimum standards shall be met:

**75.5(1) *All flood plain structures.***

a. Construction materials and methods shall be used which minimize flood damage potential.

b. Minimum levels of flood protection shall be consistent with or exceed the minimum levels of flood protection in 567—Chapter 72.

c. All structures used as dwellings shall be provided with an access which will remain passable by wheeled vehicles during Q100. But this criterion shall not apply where the department or its local designee determines that this access is not required for effective protection of life and property on the basis of the criteria for determining flood warning and response time as set forth in subrule 75.2(3).

**75.5(2) *Floodway development and uses.***

a. No building or other structure, deposit of fill, or other potential obstruction shall be allowed in the floodway if the development individually or collectively would increase the level of Q100. An analysis of the effect a development would have on flood levels shall be based on the assumption that all similarly situated landowners would be allowed an equal degree of development.

b. Notwithstanding paragraph “a” of this subrule, a structure, associated fill, or another potential obstruction whose location in the floodway provides a substantial public benefit may be allowed if the resulting increase in flood levels is mitigated by purchase of flooding easements or execution of other appropriate agreements with the owners of property on which flooding would be increased. Examples are bridge embankments, water supply intake structures, and water wells with appurtenant fill.

c. Any fill, structure or other potential obstruction allowed in the floodway shall be the minimum amount or size to achieve the intended purpose.

**567—75.6(455B) Preexisting nonconforming development and associated uses.** Regulations established by a department flood plain management order or an approved local ordinance shall identify the conditions under which nonconforming development and associated uses which lawfully existed prior to the effective date of the regulations may continue. The conditions shall include criteria for additions, reconstruction, replacement and changes in use. The criteria should generally encourage improvements or replacement construction which would provide an adequate degree of flood protection commensurate with the damage potential. The criteria should prohibit the improvements or replacement only where extension of the useful life of the structure by improvement or replacement would contribute to: perpetuation of an individual or collective obstruction which causes a significant increase in the level of Q100; perpetuation of a significant hazard to health or safety during floods; or perpetuation of the potential for significant flood damages to property and associated public costs.

**567—75.7(335,414,455B) Delegation of authority to local governments by approval of local regulations.** The department may cooperate with and assist cities and counties in the establishment of

local flood plain management regulations. By approval of locally proposed regulations, the department may delegate portions of its flood plain regulatory authority to local governments.

**75.7(1)** *Written comment from the department required before locally adopted or amended regulation is effective.* Written approval from the department must be obtained before effective adoption or amendment of a local regulation which would control development in a flood plain or floodway for purposes related to flood protection. Local officials are encouraged to consult with the department in drafting local flood plain regulations to ensure that proposed local regulations conform to the minimum statewide standards in these rules. Each written approval shall be issued by the department. A local government may appeal the refusal of the department to approve a proposed regulation by notifying the department and requesting that the proposed local regulation be considered at the next meeting of the commission.

**75.7(2)** *Department approval not required for projects covered by local regulations.* Structures, fill, excavations and other projects which would otherwise require approval by the department in accordance with 567—Chapter 71 do not need such approval if they are approved by a local government in conformity with department-approved, locally adopted flood plain management regulations.

**75.7(3)** *Flood plain works not covered by local regulations.* Works on the flood plain which because of their nature or scope are not adequately covered by department-approved, locally adopted flood plain management regulations shall be subject to department approval under the provisions of 567—Chapters 70 to 72. Where it is unclear whether the works are adequately covered by such local regulations, the department shall make the determination. Examples are bridges, channel changes, dams and flood control levees.

**75.7(4)** *Failure of local government to enforce regulations.* The department may, from time to time, take action to ascertain the effectiveness of department-approved, locally adopted flood plain management regulations. Upon a finding that the local government has been negligent in administering the approved regulations, the department may revoke approval of same. Flood plain works found to be in violation of department-approved, locally adopted flood plain management regulations may be handled under the provisions of the department's rules for investigation of unauthorized projects.

**567—75.8(335,414,455B) Review and approval of variances from local regulations.** A variance from an approved local flood plain regulation shall not be effective until it has been reviewed and approved by the department in accordance with the following procedures.

**75.8(1)** *Duty of local government to notify department of each variance request.* After receipt of each request for variance from a local flood plain regulation approved by the department, the local government shall notify the department of the variance request on a form obtained from the department. The notice must be received by the department at least 15 days before any hearing which the local government schedules on the variance request.

**75.8(2)** *Written comment from the department.* After receipt of notice of a variance request, the department shall mail or deliver a written comment on the variance request. The comment shall be issued within 15 days after receipt of the notice or in time for consideration at any hearing held after expiration of the 15-day period. The comment shall be either a statement of objection or “no objection” as follows:

*a. Objection to variance request.* The department may issue an objection to the variance request. The objection may be based upon an explanation of the minimum statewide criteria which the variance request does not satisfy and the reasons why applicable criteria should not be waived. The objection may be based on a statement that the applicant for the variance has provided insufficient information for the department to determine whether the requested variance would violate applicable minimum statewide criteria. An objection based on a statement of insufficiency of information shall identify the information needed to determine whether the request would violate applicable criteria.

*b. No objection to variance requests.* The comment issued by the department may state that the department has no objection to the variance request. The comment shall briefly explain why granting of the requested variance would not violate the purposes of minimum statewide criteria. A statement of “no objection” shall constitute approval to grant the requested variance.

**75.8(3) Basis for variance.** A variance from an applicable requirement should only be granted if the applicant can show that denial of the variance would cause unnecessary hardship and that granting of the variance would not be contrary to the public interest or the underlying purposes of the requirement in question.

**75.8(4) Review or appeal of local ruling on variance request.** The appropriate forum and procedures for review or appeal of the decision of a local government on a request for variance from a regulation approved by the department depend on the relationship between the local decision and the comment submitted by the department as follows.

*a. When local government grants variance after objection by department.* If the local government grants a variance request after issuance of an objection by the department, the local government shall give written notice of the local action and the supporting reasons to the department. The variance shall not be effective until approved by the commission. The applicant for the variance shall have the right to a contested case proceeding before the commission or its designee if required to resolve a material issue of fact or law.

*b. When local government denies variance after objection by department.* If the local government denies a variance request on the basis of an objection by the department, the applicant may file a notice of appeal with the department within 20 days following the local action. The applicant for the variance shall have the right to a contested case proceeding before the commission or its designee if required to resolve a material issue of fact or law.

*c. When local government grants or denies a variance request after a “no objection” comment by the department.* When a local government grants or denies a variance request after receiving a “no objection” comment from the department any appeal normally should be taken in the manner provided for appeal of other local actions. An appeal should be filed with the department only if the purpose of the appeal is to challenge the basis of the “no objection” comment.

*d. Duty of local government to notify department of appeal.* The local government shall promptly notify the department of the filing of any petition for judicial review of local action on a variance request so the department may determine whether participation in the judicial review would be in the interest of the state.

**567—75.9(335,414,455B) Notice of proposed department flood plain management order or proposed local flood plain regulation.** The department shall not issue a flood plain management order establishing encroachment limits or flood plain management regulations until public notice of the proposed establishment thereof has been given and a public hearing held to provide opportunity for the presentation of all protests. Public notice and a hearing shall not be required for department approval of flood plain management regulations proposed by local governments provided that such local governments give public notice and conduct public hearings as required by their enabling legislation which authorizes local adoption of the flood plain management regulations.

These rules are intended to implement Iowa Code sections 455B.262, 455B.263, 455B.264, 455B.275 to 455B.279(2).

CHAPTER 76  
FEDERAL WATER RESOURCE PROJECTS

[Prior to 7/1/83, INRC Ch 8]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—76.1(455B) Referral of federal project.** Upon referral by any federal agency of a water resource project to the department for comment in accordance with federal law, notification of such project shall be made as soon as possible to the governor, interested and affected state and federal agencies, regional planning organizations, local units of government, and other parties known to have an interest in the particular project.

**567—76.2(455B) Solicitation of comments.** Comments and views will be requested from all interested and affected state and federal agencies, planning organizations, multicounty planning organizations, and local units of government.

**567—76.3(455B) Hearing.** A public hearing will be held for the purpose of obtaining information regarding the particular project submitted to the state for comment in accordance with federal law. Unless known controversy exists a hearing will not be required in the following instances of referral:

**76.3(1) *Noncomprehensive —nonflood control.*** Projects related to water resources but not comprehensive in scope, not concerned with flood control, located in areas where no special problems exist or where local communities have given assurance of meeting federal requirements.

**76.3(2) *Nonfeasible projects.*** Projects which cannot be justified in accordance with federal criteria or which have not been provided with local assurances of meeting federal requirements or otherwise not given local support.

**76.3(3) *Other states.*** Projects proposed in other states where no material effect will result in Iowa.

**567—76.4(455B) Formulation of comments.** Department comments on federal projects will be based upon the views expressed by the interested and affected state agencies, information received at a public hearing, review by the department, and information of other sources which may come to the attention of the department. Determination of the desirability of a project will be based on but not necessarily limited to the following tests:

**76.4(1) *Functions.*** Whether the functions proposed to be provided throughout the project are justifiable.

**76.4(2) *Need.*** Whether the project is responsive to water and related resource problems of the area.

**76.4(3) *Purpose.*** Whether the project as planned will adequately serve the intended purpose.

**76.4(4) *Relationship to comprehensive water resource plans.*** Whether the proposed project is compatible with regional, state, river basin or local plans.

**76.4(5) *Benefits.*** Whether the benefits to be derived from the project will exceed the costs and damages of the project.

**76.4(6) *Environmental effect.*** That the significant environmental effects have been considered.

**567—76.5(455B) Transmittal of comments.** Prior to the transmittal to the sponsoring federal agency, the department comments formulated shall be coordinated with the governor and interested and affected state agencies.

**567—76.6(455B) Other coordination.** Prior to receipt of or after comment has been made on an official referral, the department may hold hearings, undertake coordination with the governor, interested and affected state and federal agencies, regional planning organizations, local units of government and other parties known to have an interest in a particular project; or otherwise consider a federal sponsored water

resource project for the purpose of resolving conflicts and to clarify certain aspects of the project which may pose special problems.

AND WASTEWATER TREATMENT SYSTEMS

[Prior to 7/1/83, DEQ Ch 21]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—81.1(455B) Definitions.** In addition to the definitions in Iowa Code section 455B.211, the following definitions shall apply to this chapter.

*“Activated sludge”* means a biological wastewater treatment process in which a mixture of wastewater and sludge floc, produced in a raw or settled wastewater by the growth of microorganisms, is agitated and aerated in the presence of a sufficient concentration of dissolved oxygen, followed by sedimentation.

*“Aerated lagoon system”* means a lagoon system which utilizes aeration to enhance oxygen transfer and mixing in the cell.

*“Aeration”* means the process of initiating contact between air and water. This definition includes but is not limited to: spraying the water in the air, bubbling air through the water, or forcing the air into the water by pressure.

*“Average daily pumpage”* means the total quantity of water pumped during the most recent one-year period of record divided by 365 days.

*“Chlorination”* means the addition of a chlorine compound or chlorine gas to water to inactivate pathogenic organisms.

*“Classification”* means the type of plant or distribution system: wastewater treatment plants, water treatment plants, or water distribution systems.

*“Coagulation”* means a process using coagulation chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs.

*“Community water system (CWS)”* means a public water supply system which has at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.

*“Continuing education unit (CEU)”* means ten contact hours of participation in an organized education experience approved by an accredited college, university, technical institute, or issuing agency, or by the department, and must be directly related to the subject matter of the particular certificate to which the credit is being applied.

*“Directly related post-high school education”* means post-high school education in chemistry, microbiology, biology, math, engineering, water, wastewater, or other curriculum pertaining to plant and distribution system operation.

*“Director”* means the director of the department of natural resources or a designee.

*“Direct responsible charge (DRC)”* means, where shift operation is not required, accountability for and performance of active, daily on-site operation of the plant or distribution system, or of a major segment of the plant or distribution system. Where shift operation is required, “direct responsible charge” means accountability for and performance of active, daily on-site operation of an operating shift, or a major segment of the plant or distribution system. A city manager, superintendent of public works, city clerk, council member, business manager, or other administrative official shall not be deemed to have direct responsible charge of a plant or distribution system unless this person’s duties include the active, daily on-site operation of the plant or distribution system. On-site operation may not necessarily mean full-time attendance at the plant or distribution system.

*“Direct surface water filtration”* means a water treatment system that applies surface water and groundwater under the influence (influenced groundwater as defined in rule 567—40.2(455B)) directly to the filters after chemical treatment consisting of coagulation and flocculation or chemical treatment consisting of coagulation. This type of system eliminates the sedimentation unit process.

*“Disinfection”* means a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.

*“Electrodialysis”* means the demineralization of water by the removal of ions through special membranes under the influence of a direct-current electric field.

*“Fixed film biological treatment”* means a treatment process in which wastewater is passed over a media onto which are attached biological organisms capable of oxidizing the organic matter, normally followed by sedimentation. This definition includes but is not limited to: trickling filters, rotating biological contactors, packed towers and activated filters.

*“Fluoridation”* means the addition of fluoride to produce the optimum fluoride concentration in water.

*“Grade”* means one of seven certification levels, designated as A, I, IL, II, IIL, III, or IV.

*“Ion exchange”* means the process of using ion exchange materials such as resin or zeolites to remove undesirable ions from water and substituting acceptable ions, for example, ion exchange for nitrate removal or ion exchange for softening.

*“Issuing agency”* means a professional, technical/educational organization authorized by the department to provide continuing education for certification renewal or upgrade in accordance with the commitments and guidelines detailed in the written issuing agency agreement and procedures.

*“Nontransient noncommunity water system (NTNC)”* means a public water system other than a community water system which regularly serves at least 25 of the same persons four hours or more per day for four or more days per week for 26 or more weeks per year.

*“Operator-in-charge”* means a person or persons on site in direct responsible charge for a plant or distribution system. A city manager, superintendent of public works, city clerk, council member, business manager, or other administrative official shall not be deemed to be the operator-in-charge of a plant or distribution system unless this person’s duties include the active, daily on-site operation of the plant or distribution system. On-site operation may not necessarily mean full-time attendance at the plant or distribution system.

*“Plant”* means those facilities which are identified as either a water treatment plant, defined as that portion of the water supply system which in some way alters the physical, chemical, or bacteriological quality of the water, or a wastewater treatment plant, defined as the facility or group of units used for the treatment of wastewater from public sewer systems and for the reduction and handling of solids removed from such wastes.

*“Population equivalent”* for a wastewater treatment plant means the calculated number of people who would contribute the same biochemical oxygen demand (BOD) per day as the system in question, assuming that each person contributes 0.167 pounds of five-day, 20°C, BOD per day.

*“Post-high school education”* means credit received for completion of courses given or cosponsored by an accredited college, university, technical institute, or issuing agency. Courses offered by regulatory agencies may also be recognized as post-high school education. One year of post-high school education is 30 semester hours or 45 quarter hours or 45 CEUs of credit.

*“Primary treatment”* means a treatment process designed to remove organic and inorganic settleable solids from wastewater by the physical process of sedimentation.

*“Public water system certificate”* means a certificate issued by the department certifying that an operator has successfully completed the certification requirements of this chapter. The certificate specifies the grades and classifications for which the certificate is valid.

*“Reverse osmosis”* means the process in which external pressure is applied to mineralized water against a semipermeable membrane to effectively reduce total dissolved solids (TDS) and radionuclides content as the water is forced through the membrane.

*“Rural water district”* means a water supply incorporated and organized as such pursuant to Iowa Code chapter 357A or 504A.

*“Stabilization”* means the addition of chemical compounds to water to maintain an ionic equilibrium whereby the water is not in a depository or corrosive state.

*“Waste stabilization lagoon”* means an excavation designed and constructed to receive raw or pretreated wastewater in which stabilization is accomplished by several natural self-purification processes. This definition includes both anaerobic and aerobic lagoons.

*“Wastewater treatment plant”* means the facility or group of units used for the treatment of wastewater from public sewer systems and for the reduction and handling of solids removed from such wastes.

“*Water distribution system*” means that portion of the water supply system in which water is conveyed from the water treatment plant or other supply point to the premises of the consumer, including storage facilities and pumping stations. For the purposes of this chapter, a water distribution system does not include individual service lines to the premises of the consumer, which are not under the control of the system.

“*Water supply system*” means the system of pipes, structures, and facilities through which water for a public water supply is obtained, treated, sold or distributed for human consumption or household use.

“*Water treatment plant*” means that portion of the water supply system which in some way alters the physical, chemical, or microbiological quality of the water.

**567—81.2(455B) General.**

**81.2(1) *Plant grade for system with multiple treatment processes.*** A plant having a combination of treatment processes that are in different grades shall be assigned the highest numerical plant grade of that combination.

**81.2(2) *Increase in facility grade for complex systems.*** The director may increase a plant or water distribution system grade above that indicated in rules 81.3(455B) to 81.6(455B) for those systems which in the judgment of the director include unusually complex treatment processes, complex distribution systems, or which present unusual operation or maintenance conditions.

**81.2(3) *Operator-in-charge certification requirement.*** The operator-in-charge shall hold a certificate of the same classification of the plant or water distribution system and of equal or higher grade than the grade designated for that plant or distribution system.

**81.2(4) *Shift operator certification.*** Any person who is responsible for the operation of an operating shift of a plant or distribution system or major segment of the plant or distribution system and is under the supervision of the operator-in-charge identified in 81.2(3) shall be certified in a grade no less than a Grade II level for Grade III and IV plants and distribution systems and Grade I for Grade I and II plants and distribution systems.

**81.2(5) *Public water system certificate requirement.*** The operator who is designated by the owner to be the operator-in-charge of both the water treatment plant and the water distribution system shall hold a public water system (PWS) certificate valid for water treatment and water distribution in accordance with 81.2(3) and 81.2(6).

**81.2(6) *PWS certificate.*** A PWS certificate shall be issued to an operator successfully completing water treatment or water distribution certification. The PWS certificate shall specify the grade and classification for which the certificate is valid. An operator successfully completing both water treatment and water distribution certification shall be issued a PWS certificate valid for both classifications. For purposes of renewal, all renewal fees and CEU requirements shall be applied as one certification. The number of CEUs required shall be determined by the highest certification grade on the operator’s public water system certificate.

**81.2(7) *PWS certificate issuance.*** Rescinded IAB 1/7/04, effective 2/11/04.

**81.2(8) *Notification requirements for a personnel change in the operator-in-charge.*** The owner of a plant or distribution system must notify the department of a change in operator(s)-in-charge within 30 days after the change.

**81.2(9) *Change of address or employment.*** Certified operators must report to the department a change in address or employment within 30 days after the change.

**81.2(10) *Owner reporting requirements.*** All owners of plants and distribution systems must report, when requested by the department, the method of treatment provided, the average daily pumpage, and the operator(s)-in-charge.

**81.2(11) *Compliance plan.*** When the director allows the owner of a plant or distribution system required to have a certified operator time to obtain an operator, the owner must submit a compliance plan indicating what action will be taken to obtain a certified operator. The plan must be on Form 52, Compliance Plan 542-3120, provided by the department and must be submitted within 30 days of the facility owner’s receipt of a notice of violation.

**567—81.3(455B) Wastewater treatment plant grades.**

**81.3(1) Classifications.** The wastewater treatment plant classifications are listed in the following table:

Wastewater Treatment Plant Classifications

Treatment Type	Grade				
	Based on Design Pounds of BOD <sub>5</sub> /day				
	less than 334	334-835	836-2,505	2,506-8,350	more than 8,350
	Based on Design Population Equivalent				
	less than 2,000	2,000-5,000	5,001-15,000	15,001-50,000	more than 50,000
1. Primary Treatment	I	I	II	III	IV
2. Waste Stabilization Lagoon	IL	IL	IL	IL	IL
3. Aerated Lagoon System	IL	IL	III	III	III
4. Fixed Film Biological Treatment	II	II	III	III	IV
5. Activated Sludge	II	III	III	IV	IV

**81.3(2) Unknown design BOD<sub>5</sub> loading.** When the design BOD<sub>5</sub> loading is unknown, the plant BOD<sub>5</sub> loading shall be determined by using the average pounds of BOD<sub>5</sub> of the 24-hour composite samples taken in the last 12 months. If no 24-hour composite samples were taken, then grab samples shall be used.

**81.3(3) IL and IIL wastewater operator requirements.** A Grade I, II, III, or IV wastewater treatment certificate will satisfy the certification requirements for a Grade IL plant. A Grade II, III, or IV wastewater treatment certificate will satisfy the certification requirements for a Grade IIL plant.

**567—81.4(455B) Water treatment plant grades.**

**81.4(1) Classifications.** The water treatment plant classifications are listed in the following table:

Water Treatment Plant Classifications

Treatment Type	Grade*			
	Average Daily Pumpage in MGD			
	0-0.1	>0.1-0.5	>0.5-1.5	>1.5
1. Iron or manganese removal; aeration; chlorination; fluoridation; stabilization; any other chemical addition; or any combination of these processes	I	II	II	III
2. Ion exchange	II	II	III	III
3. Direct surface water filtration	II	II	III	III
4. Utilization of lime, soda ash or other chemical addition for pH adjustment in the precipitation and coagulation of iron or manganese	II	II	III	III
5. Complete surface water clarification or lime softening of surface water or groundwater	III	III	III	IV
6. Reverse osmosis and electrodialysis	II	II	III	IV
7. Activated carbon for THM or synthetic organics removal	III	III	III	IV

\*For Grade A water supply classification, see subrule 81.6(1).

**81.4(2) Average daily pumpage.** When the average daily pumpage is unknown, the plant grade will be determined from the population of the most recent census and an evaluation of commercial, industrial, and other users.

**567—81.5(455B) Water distribution system grades.**

**81.5(1) Classifications.** The water distribution plant classifications are listed in the following table:

Water Distribution System Classifications\*

System Type	Grade**			
	Average Daily Pumpage in MGD			
	0-0.1	>0.1-1.5	>1.5-5	>5
All municipal water systems	I	II	III	IV
Community water systems not classified as a Grade A water system	I	II	III	IV
Nontransient noncommunity water systems not classified as a Grade A water system	I	II	III	IV
Rural water districts	Miles of Pipe			
	0-100	>100-1,000	>1,000-2,500	>2,500
	II	II	III	IV

\*Note: A public water system with a well, storage, and a distribution system shall be classified as a water distribution system if no treatment is provided.

\*\*For Grade A water system classification, see subrule 81.6(1).

**81.5(2) Average daily pumpage.** When the average daily pumpage is unknown, the system grade will be determined from the population of the most recent census and an evaluation of commercial, industrial, and other users.

**81.5(3) IR certificate holders.** Rescinded IAB 1/7/04, effective 2/11/04.

**567—81.6(455B) Grade A classification.**

**81.6(1) Grade A water system classification.**

*a. Community water system.* A community water system, other than a municipal or rural water system, which serves a population of 250 persons or less and provides no treatment other than hypochlorination or treatment which does not require any chemical addition, process adjustment, backwashing or media regeneration by an operator shall be classified as a Grade A water system.

*b. Nontransient noncommunity water system.* A nontransient noncommunity water system which serves a population of 500 persons or less and provides no treatment other than hypochlorination or treatment which does not require any chemical addition, process adjustment, backwashing or media regeneration by an operator shall be classified as a Grade A water system.

**81.6(2) Certification requirements for Grade A water systems.** Any grade of water treatment certification will satisfy the certification requirements for a Grade A water system with hypochlorination. Any grade of water distribution certification will satisfy the certification requirements for a Grade A water system without hypochlorination.

**567—81.7(455B) Operator education and experience qualifications.**

**81.7(1) Education and experience requirements.** All applicants shall meet the education and experience requirements for the grade of certificate shown in the table below prior to being allowed to take the examination. Experience shall be in the same classification for which the applicant is applying except that partial credit may be given in accordance with 81.7(2) and 81.7(3). Directly related post-high school education shall be in the same subject matter as the classification in which the applicant is applying. Directly related post-high school education will be granted education credit 2.0 times the number of semester, quarter or CEU credits until January 1, 2006. The director will determine which courses qualify as “directly related” in cases which are not clearly defined.

## Operator Education and Experience Qualifications

Grade	Education	Substitution for Education	Experience	Substitution for Experience
A	High school diploma or GED	None	Completion of an IDNR-approved training course	None
I	High school diploma or GED	None	1 year	See 81.7(3) "b"(1), (3) to (5)
II	High school diploma or GED	None	1 year	See 81.7(3) "b"(1), (3) to (5)
II	High school diploma or GED	None	3 years	See 81.7(3) "b"(2) to (5)
III	High school diploma or GED	None	3 years	See 81.7(3) "b"(2) to (5)
III	High school diploma or GED and 2 years of post-high school education (1 year must be directly related)	See 81.7(3) "a" (1), (3)	4 years of experience in a Grade I or higher	See 81.7(3) "b"(2), (3)
IV	High school diploma or GED and 4 years of post-high school education (2 years must be directly related)	See 81.7(3) "a" (2), (3)	4 years of experience including 2 years of DRC in a Grade III or higher	See 81.7(3) "b"(2), (3) and 81.7(3) "c"

**81.7(2) Related work experience.** The following substitutions of related work experience for operating experience requirements may be accepted by the director.

*a. Laboratory personnel.* Laboratory personnel employed in water or wastewater treatment plants may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II certification only. Laboratory experience must be in the same classification for which the applicant is applying.

*b. Oversight personnel.* Personnel with experience in on-site operation review and evaluation of plants and distribution systems may be allowed 50 percent credit for on-site work experience toward meeting the operating experience requirements for Grades I and II certification only. On-site experience must be in the same classification for which the applicant is applying.

*c. Maintenance personnel.* Maintenance personnel employed in water or wastewater treatment plants may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II certification only. Maintenance experience may be applied either to the water or to the wastewater experience requirements.

*d. Certified operators.*

(1) Certified water treatment operators may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II wastewater treatment certification only.

(2) Certified wastewater treatment operators may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II water treatment certification only.

(3) Certified water treatment operators may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II water distribution certification only.

(4) Certified water distribution operators may be allowed 50 percent credit for work experience toward meeting the operating experience requirements for Grades I and II water treatment certification only.

*e. Limitation.* The portion of related work experience that is substituted for operating experience cannot also be used to substitute for education.

**81.7(3) Experience and education substitutions.** The following substitutions for experience or education may be accepted by the director.

*a. Substitution of experience for education.*

(1) One year of operating experience in a Grade II or higher position may be substituted for one year of post-high school education for Grade III certification up to one-half of the post-high school education requirement.

(2) One year of operating experience in a Grade III or higher position may be substituted for one year of post-high school education for Grade IV certification up to one-half of the post-high school education requirement.

(3) Two years of direct responsible charge experience in a Grade III or higher position may be substituted for one year of directly related post-high school education for Grade IV certification up to three-fourths of the post-high school education requirement.

(4) That portion of experience which is applied toward substitution for education cannot also be used for experience.

*b. Substitutions of education for experience.*

(1) Two semester hours or three quarter hours or three CEUs of directly related post-high school education may be substituted for one-half the experience requirement for Grades I and II.

(2) Thirty semester hours or 45 quarter hours or 45 CEUs of post-high school education may be substituted for one year of experience up to a maximum of one-half the experience requirement for Grades II, IIL, III and IV.

(3) That portion of education which is applied toward substitution for experience cannot also be used for education.

(4) Class hours involving closely supervised on-the-job type training in a pilot or full-scale facility where there are clearly defined educational objectives may be applied to the on-the-job experience requirement. The substitution value of such training shall be applicable only toward obtaining a Grade I and Grade II certification and shall not exceed one-half year of on-the-job experience. One hour of on-the-job training is equivalent to three hours of on-the-job experience. One month of on-the-job training consists of 20 eight-hour days. Credit for on-the-job training may be applied only to the examination for the type of system in which the experience was obtained.

(5) That portion of on-the-job training courses which is applied toward substitution for the on-the-job experience requirement cannot also be used for education.

*c. Substitution of education for direct responsible charge experience.* Thirty semester hours or 45 quarter hours or 45 CEUs of directly related post-high school education may be substituted for one year of direct responsible charge experience up to one-half the requirement for Grade IV certification.

#### **567—81.8(455B) Certification and examination fees.**

**81.8(1) Examination fee.** The examination fee for each examination shall be \$30.

**81.8(2) Oral examination fee.** The oral examination fee for each oral examination shall be \$90.

**81.8(3) Reciprocity application fee.** The reciprocity application fee for each type of classification shall be \$30.

**81.8(4) Certification fee.** The certification fee shall be \$20 for each one-half year of a two-year period from the date of issuance to June 30 of odd-numbered years.

**81.8(5) Renewal fee.** The certification renewal fee shall be \$60.

**81.8(6) Penalty fee.** The certification and renewal penalty fee shall be \$18.

**81.8(7) Duplicate certificate fee.** The duplicate certificate fee shall be \$20.

**81.8(8) Temporary certificate fee.** The temporary certificate fee shall be \$60.

**81.8(9) *Fee adjustments.*** The department may adjust the fees annually by up to plus or minus 20 percent to cover costs of administering and enforcing these rules and reimbursement for other expenses relating to operator certification. The environmental protection commission must approve any fee increases above those listed in 81.8(1) through 81.8(8). All fees collected shall be retained by the department for administration of the operator certification program.

**567—81.9(455B) Examinations.**

**81.9(1) *Examination application.*** All persons wishing to take the examination required to become a certified operator of a wastewater or water treatment plant or a water distribution system shall complete the Operator Certification Examination Application, Form CFN-542-3118/CPG-63997. A listing of dates and locations of examinations is available from the department upon request. The application form requires the applicant to indicate educational background, training and past experience in water or wastewater operation. The completed application and examination fee shall be sent to Iowa Department of Natural Resources, Water Supply Section, 502 East Ninth Street, Des Moines, Iowa 50319-0034. The completed application and examination fee must be received by the department at least 30 days prior to the date of examination.

**81.9(2) *Application evaluation.*** The director shall designate department personnel to evaluate all applications for examination, certification, and renewal of certification and upgrading of certification. The director will review applications when it is indicated the applicant has falsified information or when questions arise concerning an applicant's qualifications of eligibility for examination or certification.

**81.9(3) *Application expiration.*** A properly completed application for examination shall be valid for one year from the date the application is approved by the department. An applicant may request only one class and grade of examination with each application. A new application shall be required with each different class or grade of examination desired by the applicant.

**81.9(4) *Refund of examination fee.*** An applicant who does not qualify for examination at the time of application will have the examination fee refunded if the applicant cannot qualify for examination within one year. If the applicant will qualify for a scheduled examination within one year, the applicant will be notified when the examination may be taken and the fee will not be refunded.

**81.9(5) *Reexamination.*** Upon failure of the first examination, the applicant may be reexamined at the next scheduled examination. Upon failure of the second examination, the applicant shall be required to wait a period of 180 days between each subsequent examination.

**81.9(6) *Reexamination fee.*** Upon each reexamination when a valid application is on file, the applicant shall submit the examination fee to the department at least ten days prior to the date of examination.

**81.9(7) *Application invalidation.*** Failure to successfully complete the examination within one year from the date of approval of the application shall invalidate the application.

**81.9(8) *Retention of completed examinations.*** Rescinded IAB 1/7/04, effective 2/11/04.

**81.9(9) *Oral examination.*** Upon written request by an applicant for Grade A, I, IL, II or IIL certification, the director will consider the presentation of an oral examination on an individual basis when the plant or distribution system which employs the applicant is not in compliance with Iowa Code section 455B.223; the applicant has failed the written examination at least twice; the applicant has shown difficulty in reading or understanding written questions but may be able to respond to oral questioning; the applicant is capable of communicating in writing with regard to departmental requirements and inquiries; and the director has received a written recommendation for an oral examination from a department staff member attesting to the operational and performance capabilities of the applicant. The director shall designate department personnel to administer the examination. The examination shall contain practical questions pertaining to the operation of the plant or distribution system in which the applicant is employed. In addition, the examination shall include specific on-site review by department personnel of the operator's capabilities in the operation of the specific plant or distribution system. Certificates issued to operators through oral examinations shall be restricted to the plant or distribution system where the operator is employed at the time of certification.

Applicants who obtain certification under this subrule and subsequently let their certification lapse will be required to reapply for certification, meet the experience and education requirements pursuant to 81.7(455B), and be reexamined. The requirement that an applicant shall have failed two written examinations before being allowed to take an oral examination will be waived for an operator that has previously been certified under this subrule.

**81.9(10) Reasonable accommodation.** Upon request for certification by an applicant, the director will consider on an individual basis reasonable accommodation to allow administration of the examination without discrimination on the basis of disability. The applicant shall request the accommodation 30 days prior to the date of the examination. The applicant must provide documentation of eligibility for the accommodation. Documentation shall be submitted with the completed examination application. Accommodations based on documentation may include site accessibility, oral examination, extended time, separate testing area, or other concerns.

**567—81.10(455B) Certification by examination.**

**81.10(1) Examination requirement.** All applicants not addressed for certification in 81.11(1) shall successfully complete and pass an examination prior to receiving certification.

**81.10(2) Certification application time line.** Application for certification must be received by the department within 30 days of the date the applicant receives notification of successful completion of the examination. All applications for certification shall be made on a form provided by the department and shall be accompanied by the certification fee.

**81.10(3) Late certification application.** Applications for certification by examination which are received more than 30 days but less than 60 days after notification of successful completion of the examination shall be accompanied by the certification fee and the penalty fee. Applicants who do not apply for certification within 60 days' notice of successful completion of the examination will not be certified on the basis of that examination.

**567—81.11(455B) Certification by reciprocity.**

**81.11(1) Other states' mandatory certification programs.** For applicants who have been certified under other states' mandatory certification programs, the equivalency of which has been previously reviewed and accepted by the department, certification in an appropriate classification and grade, without examination, will be recommended. The applicant must have successfully completed an examination generally equivalent to the Iowa examination and must meet the education and experience qualifications established by the director.

**81.11(2) Other states' voluntary certification programs.** For applicants who have been certified under voluntary certification programs in other states, certification in an appropriate class will be considered. The applicant must have successfully completed an examination generally equivalent to the Iowa examination and must meet the education and experience qualifications established by the director. The director may require the applicant to successfully complete the Iowa examination.

**81.11(3) Reciprocity application.** Applicants who seek Iowa certification pursuant to subrule 81.11(1) or 81.11(2) shall submit an application for examination accompanied by a letter requesting certification pursuant to these subrules. Application for certification pursuant to 81.11(1) and 81.11(2) shall be received by the director in accordance with these subrules.

**81.11(4) Certification obtained through reciprocity.** An applicant who obtains certification in Iowa through reciprocity and subsequently allows the certification to lapse will be required to reapply for certification in accordance with 81.10(455B).

**567—81.12(455B) Restricted and temporary certification.**

**81.12(1) Restricted certification.** Upon written request by an operator, the director may determine that further education requirements be waived when a plant or distribution system grade has been increased and the operator has been in direct responsible charge of the existing plant or distribution system. An operator successfully completing the examination will be restricted to that plant or distribution system until the education requirements are met.

**81.12(2) *Temporary certification.*** Upon written request by the owner of a plant or system not previously required to have a certified operator, the director may issue a temporary certificate of the appropriate grade and classification to the operator(s)-in-charge. The temporary certificate holder will be restricted to that plant or distribution system until all certification requirements, in accordance with rules 81.6(455B), 81.8(455B) and 81.9(455B), are met. The temporary certificate is not renewable and will expire 24 months after issuance. No temporary certificates will be issued to operators of new water plants or distribution systems, as defined in 567—subrule 43.8(1).

**567—81.13(455B) Certification renewal.**

**81.13(1) *Renewal period.*** All certificates shall expire on June 30 of odd-numbered years and must be renewed every two years in order to maintain certification.

**81.13(2) *Application for renewal.*** An application for renewal will be mailed to currently certified operators prior to the expiration date of their certificates. Application for renewal must be made in accordance with this rule and the instructions on the form in order to renew the certificate for the next two years. Application for renewal of a certificate without penalty must be received by the director or postmarked prior to the expiration of the certificate, and shall be accompanied by the certification renewal fee.

**81.13(3) *Late application.*** A late application for renewal of a certificate may be made provided that the application is received by the director or postmarked within 60 days of the expiration of the certificate on forms provided by the department. Such late application shall be accompanied by the penalty fee and the certification renewal fee.

**81.13(4) *Failure to renew.*** If a certificate holder fails to renew within 60 days following expiration of the certificate, the right to renew the certificate is automatically terminated. Certification may be allowed at any time following such termination, provided that the applicant meets all education and experience eligibility requirements pursuant to 81.7(455B), and successfully completes an examination. The applicant must then apply for certification in accordance with 81.10(455B).

**81.13(5) *Expired certificate.*** An operator may not continue as the operator-in-charge of a plant, distribution system, operating shift, or major segment of the plant or distribution system after expiration of a certificate unless the certificate is renewed.

**567—81.14(455B,272C) Continuing education.**

**81.14(1) *CEU requirements.*** Continuing education must be earned during two-year periods between April 1 and March 31 of odd-numbered years. A Grade III or IV certified operator must earn two units or 20 contact hours per certificate during each two-year period. All other certified operators must earn one unit or 10 contact hours per certificate during each two-year period. Newly certified operators (previously uncertified) who become certified after April 1 of a two-year period will not be required to earn CEUs until the next two-year period. If an operator upgrades a certificate after April 1 of a two-year period and that upgrade increases the CEU requirement, the operator will not be required to meet the higher CEU requirement until the next two-year period but must fulfill the lower CEU requirement for that period. For those certified operators holding both a water treatment and a water distribution certification, no less than 25 percent of the required CEUs may be earned in any one area.

**81.14(2) *Certificate renewal.*** Only those operators fulfilling the continuing education requirements before the end of each two-year period (March 31) will be allowed to renew their certificate(s). The certificate(s) of operators not fulfilling the continuing education requirements shall expire on June 30 of each odd-numbered year.

**81.14(3) *CEU approval.*** All activities for which continuing education credit will be granted must be approved by an accredited college, university, technical institute, or issuing agency, or by the department, and must be directly related to the subject matter of the particular certificate to which the credit is being applied. Any entity holding courses in Iowa for which continuing education credit is offered for water treatment, water distribution, or wastewater operator certification must provide at no cost to the department the opportunity for one staff member to audit the training and receive all training materials.

**81.14(4) CEU extensions.** The director may, in individual cases involving hardship or extenuating circumstances, grant an extension of up to three months within which the certified operator may fulfill the minimum continuing education requirements. Hardship or extenuating circumstances include documented health-related confinement or other circumstances beyond the control of the certified operator which prevent attendance at the required activities. All requests for extensions must be made prior to March 31 of each biennium.

**81.14(5) CEU reporting.** It is the certified operator's personal responsibility to maintain a written record and to notify the department of the continuing education credit earned during the period. The continuing education credits earned during the period shall be listed on the application for renewal.

**567—81.15(455B) Upgrading of certificates.** A person holding an unexpired certificate may upgrade the certificate by examination to a higher grade in the same classification in accordance with 81.7(455B), 81.9(455B) and 81.10(455B). The expiration date of the upgraded certificate shall be the same as the unexpired certificate. A person who upgrades a certificate during the biennium must also renew the upgraded certificate in accordance with 81.13(455B) and 81.14(455B, 272C) to maintain the person's certification.

**567—81.16(455B) Operator by affidavit.**

**81.16(1) Affidavit allowance.** The owner of a plant or distribution system that is required to have a Grade A, I, IL, II, IIL certified operator may sign an affidavit with a certified operator of the required classification and grade.

**81.16(2) Affidavit requirements.** This affidavit will verify that the certified operator is the operator-in-charge and has direct responsibility for a plant or distribution system that does not have first rights on the services of that operator. The affidavit form shall be provided by the director and shall require the name and signature of the certified operator, the operator's certification number, class and grade, and the date of last renewal of the operator's certificate. The affidavit form shall be proof that the certified operator has agreed to be directly responsible for the operation and maintenance of the plant or distribution system. The director may specify additional operational and maintenance requirements based on the complexity and size of the plant or distribution system. Four duly notarized copies of the affidavit must be returned to and approved by the director, based upon the ability of the certified operator to properly operate and maintain additional facilities. In event of disapproval, the owner of the plant or distribution system must terminate the agreement with the certified operator and seek the services of another certified operator. Both the owner of the plant or distribution system and the certified operator shall notify the director at least 30 days before the termination of the agreement.

**567—81.17(455B,272C) Disciplinary actions.**

**81.17(1) Reasons for disciplinary action.** Disciplinary action may be taken against a certified operator on any of the grounds specified in Iowa Code section 455B.219 and chapter 272C and the following more specific grounds.

*a.* Failure to use reasonable care or judgment or to apply knowledge or ability in performing the duties of a certified operator.

(1) Wastewater operator duties. Examples of a wastewater operator's duties are specified in the Water Environment Federation Manual of Practice #11, 1996; California State University—Sacramento (CSUS) Operation of Wastewater Treatment Plants, Volume I, 4th edition, 1998; CSUS Operation of Wastewater Treatment Plants, Volume II, 4th edition, 1998; CSUS Advanced Waste Treatment, 3rd edition, 1998; and 567—Chapters 60 through 64, 67, and 83, Iowa Administrative Code.

(2) Water treatment or distribution operator duties. Examples of a water treatment or distribution operator's duties are specified in the American Water Works Association (AWWA) Manuals of Water Supply Practice (Volumes 1, 3-7, 9, 11-12, 14, 17, 19-38, 41-42, 44-48); AWWA Water Supply Operations Series, 2nd edition: Vol. 1, 1995; Vol. 2, 1995; Vol. 3, 1996; Vol. 4, 1995; and Vol. 5, 1995; AWWA Water Distribution Operator Handbook, 2nd edition, 1976; and California State University—Sacramento (CSUS) Water Treatment Plant Operation, Volume I, 4th edition, 1999; CSUS

Water Treatment Plant Operation, Volume II, 3rd edition, 1998; CSUS Small Water System Operation and Maintenance, 4th edition, 1999; CSUS Water Distribution System Operation and Maintenance, 4th edition, 2000; and 567—Chapters 40 through 43 and 83, Iowa Administrative Code.

b. Failure to submit required records of operation or other reports required under applicable permits or rules of the department, including failure to submit complete records or reports.

c. Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

d. Fraud in procuring a license.

e. Professional incompetence.

f. Knowingly making misleading, deceptive, untrue or fraudulent representations in the practice of the licensee's profession or engaging in unethical conduct or practice harmful or detrimental to the public. Proof of actual injury need not be established.

g. Habitual intoxication or addiction to the use of drugs.

h. Conviction of a felony related to the profession or occupation of the licensee. A copy of the record of conviction or plea of guilty shall be conclusive evidence.

i. Fraud in representations as to skill or ability.

j. Use of untruthful or improbable statements in advertisements.

k. Willful or repeated violations of the provisions of Iowa Code chapter 272C or 455B, division III.

**81.17(2) Disciplinary sanctions.** Disciplinary sanctions may include those specified in Iowa Code section 272C.3(2) and the following:

a. *Revocation of a certificate.* Revocation may be permanent without chance of recertification or for a specified period of time.

b. *Partial revocation or suspension.* Revocation or suspension of the practice of a particular aspect of the operation of a plant or distribution system, including the restriction of operation to a particular plant or distribution system, or a particular type of plant or distribution system.

c. *Probation.* Probation under specified conditions relevant to the specific grounds for disciplinary action.

d. *Additional education, training, and examination requirements.* Additional education, training, and reexamination may be required as a condition of reinstatement.

e. *Penalties.* Civil penalties not to exceed \$1,000 may be assessed for causes identified in 81.17(1).

**81.17(3) Procedure.**

a. *Initiation of disciplinary action.* The department staff shall initiate a disciplinary action by conducting such lawful investigation as is necessary to establish a legal and factual basis for action. The administrator of the environmental protection commission or designee shall make a decision as to any disciplinary action based on the department staff recommendations. Except as specified by this subrule, the disciplinary action shall be initiated by a notice of intended action in accordance with rule 561—7.16(17A,455A). At any time, the licensee and the department may enter into a settlement agreement, subject to approval by the director, which provides for a disciplinary sanction.

b. *Request for hearing.* Notwithstanding references in 561—subrule 7.16(4), a licensee shall be deemed to have waived any right to a contested case hearing unless the licensee appeals the action and requests a hearing within 30 days of receipt of the notice of intended action. If a timely appeal is filed, further contested case procedures shall apply in accordance with 561—Chapter 7.

c. *Appeal and review of proposed decision.* After a contested case hearing conducted in accordance with rule 561—7.14(17A,455A), the director shall review the presiding officer's proposed decision issued in accordance with 561—subrule 7.15(3). The proposed decision shall constitute a final decision of the director and the department unless the licensee or the director and department appeal the proposed decision to the environmental protection commission within 30 days of receipt as provided in 561—subrule 7.15(5).

*d. Effective date of suspension or revocation.* Notwithstanding any contrary interpretation in 561—subrule 7.16(7), suspension, revocation or other disciplinary action shall be effective 30 days after receipt of the notice of intended action if the licensee fails to file a timely appeal and request for hearing. If a contested case hearing is timely requested, the disciplinary action is effective as specified in the presiding officer's proposed decision unless the licensee obtains a stay of the action in accordance with 561—subrule 7.15(7) pending a timely appeal to the environmental protection commission.

*e. Emergency disciplinary action.* The director may initiate an emergency suspension or other disciplinary action upon such grounds and following those procedures as provided in 561—subrule 7.16(6). The terms of the emergency order shall be effective upon service as provided in 561—subrule 7.16(7). The department shall promptly give notice of an opportunity to appeal and request a contested case hearing following the procedures as specified above.

*f. Reinstatement of revoked certificates.* Upon revocation of a certificate in accordance with the authority provided in Iowa Code section 455B.219 and chapter 272C, application for certification may be allowed after two years from the date of revocation unless otherwise specified in accordance with 81.17(2). Any such applicant must meet all education and experience eligibility requirements pursuant to 81.7(455B), and successfully complete an examination and be certified in the same manner as a new applicant.

**81.17(4) Noncompliance with child support order procedures.** Upon receipt of a certification of noncompliance with a child support obligation as provided in Iowa Code section 252J.7, the department will initiate procedures to deny an application for certification or renewal, or to suspend a certification in accordance with Iowa Code section 252J.8(4). The department shall issue to the person by restricted certified mail a notice of its intent to deny or suspend operator certification based on receipt of a certificate of noncompliance. The suspension or denial shall be effective 30 days after receipt of the notice unless the person provides the department with a withdrawal of the certificate of noncompliance from the child support recovery unit as provided in Iowa Code section 252J.8(4) "c." Pursuant to Iowa Code section 252J.8(4), the person does not have a right to a hearing before the department to contest the denial or suspension action under this subrule but may seek a hearing in district court in accordance with Iowa Code section 252J.9.

These rules are intended to implement Iowa Code sections 455B.211 to 455B.224 and chapter 272C.

CHAPTER 82  
WELL CONTRACTOR CERTIFICATION  
[Prior to 5/12/93, see also 567—Ch 37]

**567—82.1(455B) Definitions.** In addition to the definitions in Iowa Code sections 455B.171, 455B.190 and 455B.190A, which are hereby adopted by reference, the following definitions shall apply to this chapter:

“*Certified well contractor*” means a well contractor who has successfully passed an examination prescribed by the department to determine the applicant’s qualifications to perform well drilling or pump services or both.

“*Class 1 well*” means a well 100 feet or less in depth and 18 inches or more in diameter.

“*Class 2 well*” means a well more than 100 feet in depth or less than 18 inches in diameter or a bedrock well. Bedrock wells include:

1. Wells completed in a single confined aquifer;
2. Wells completed in a single unconfined aquifer; and
3. Wells completed in multiple aquifers.

“*Class 3 well*” means a sandpoint well 50 feet or less in depth and having a casing inside diameter of 2 inches or less constructed by joining a screened drive point with lengths of pipe and driving the assembly into a shallow sand and gravel aquifer.

“*Classification*” means one of three levels of well contractor certification, designated as certified well contractor, provisionally certified well contractor or well plugging contractor. All three are referred to as “certified well contractor” in the following rules unless specifically identified otherwise.

“*Continuing education unit (CEU)*” means ten contact hours of participation in an organized education experience under responsible sponsorship, capable direction, and qualified instruction.

“*Direct charge*” means the certified well contractor at the well site responsible for ensuring that the well services are performed as required in 567—Chapters 38, 39, 43, 49 and 110.

“*Director*” means the director of the department of natural resources or a designee.

“*Issuing agency*” means a professional, technical/educational organization authorized by the department to provide continuing education for certification renewal in accordance with the commitments and guidelines detailed in the written issuing agency agreement and procedures.

“*Pump installer*” means a person certified by the department to perform pump services.

“*Pump services*” means the installation, repair, and maintenance of water systems; modification of the upper terminus of a well; well plugging; well rehabilitation; or the construction of Class 3 wells.

“*Upper terminus*” means the upper ten feet of the well casing as measured from the finished surface grade.

“*Water systems*” means any part of the mechanical portion of a water well that delivers water from the well to a valve that separates the well from the plumbing system. “Water systems” includes the pump, drop pipe to the well, electrical wire from the pump to the first electrical panel or connection outside the casing, piping from the well to the pressure tank or first valve outside the casing, pitless unit or adapter, and all related miscellaneous fittings necessary to operate the pump. “Water systems” does not include any outside piping to other buildings and does not include the piping that carries the water in the remainder of the distribution system.

“*Water well*” means any excavation that is drilled, cored, bored, augered, washed, driven, dug, jetted, or otherwise constructed for the purpose of exploring for groundwater, monitoring groundwater, utilizing the geothermal properties of the ground, or extracting water from or injecting water into the aquifer. “Water well” does not include an open ditch or drain tiles or an excavation made for obtaining or prospecting for oil, natural gas, minerals, or products mined or quarried.

“*Well construction*” means constructing a water well and installing necessary casing, screen, liners, grout, seals, and other appurtenances.

“*Well driller*” means a person certified by the department to perform well drilling services.

“*Well drilling services*” means new well construction, well reconstruction, well rehabilitation, well repair, installation of pitless equipment, or well plugging.

“*Well plugging*” means the closure of an abandoned well with plugging materials by procedures which will permanently seal the well from contamination by surface drainage and permanently seal off the well from contamination into an aquifer. “Well plugging” involves the proper application of filling and sealing materials.

“*Well plugging contractor*” means a contractor certified to plug only Class 1 or Class 3 wells but not certified to abandon Class 2 wells or perform any other well services.

“*Well reconstruction*” means modifying the original construction of a well. “Well reconstruction” includes, but is not limited to, deepening the well, installing a liner, installing or replacing a screen with one of a different diameter or length, installing a pitless adapter, extending the casing, or hydrofracturing a well. Replacing a screen with one of identical diameter and length or replacing a pitless adapter is considered repair, not reconstruction.

“*Well rehabilitation*” means the physical or chemical cleaning of a well.

“*Well services*” means both well drilling services and pump services.

#### **567—82.2(455B) General.**

**82.2(1) *Certified well contractor requirement.*** All well services shall be performed by a certified well contractor pursuant to this chapter, except that a person may perform well services on the person’s own property without being certified. A certified well contractor shall notify the department or the county prior to performing well drilling services for a well that does not have the required construction permits. A certified well contractor shall notify the department prior to drilling a well if the use of the water requires a water use allocation and the owner has not applied for or been issued a water use allocation.

**82.2(2) *Certified well contractor present.*** A certified well contractor shall be present at the well site and in direct charge of the well services being performed or provided.

**82.2(3) *Applicability exception.*** These rules shall not apply to a water operator certified pursuant to Iowa Code section 455B.213, when the water operator is performing pump services on any well owned by a public water supply system as defined in Iowa Code section 455B.171. These rules shall not apply to a wastewater operator certified pursuant to Iowa Code section 455B.213, when the wastewater operator is performing pump services on a groundwater monitoring well, groundwater dewatering well, or other well not used to provide drinking water, owned by a sewer system as defined in Iowa Code section 455B.171. Pump installer certification requirements shall not apply to monitoring wells.

**82.2(4) *Change of address.*** Any certified well contractor who possesses a certificate must report to the department a change in address within 30 days after the change.

#### **567—82.3(455B) Classification of well contractors.**

**82.3(1) *Classifications.*** There shall be three classifications of certified well contractors:

- a. Certified well contractor.
  - (1) Well driller.
  - (2) Pump installer.
- b. Provisionally certified well contractor.
  - (1) Well driller.
  - (2) Pump installer.
- c. Well plugging contractor.

**82.3(2) *Certified well contractor.*** In order to be certified as a certified well contractor, an applicant shall have met the experience requirements, successfully completed the well contractor examination for well drilling services or pump services or both, been issued a certificate by the department, and renewed the certification in accordance with rules 82.10(455B) and 82.11(455B).

**82.3(3) *Provisionally certified well contractor.*** A provisionally certified well contractor does not meet all the experience requirements for a certified well contractor. In order to be a provisionally certified well contractor, an applicant shall:

- a. Sign a statement on the application form that there is a shortage of certified well contractors;

b. Complete and submit an application documenting at least one half of the work experience required for full certification in well services performed under the direct supervision of a certified well contractor;

c. Include on the application a signature of a certified well contractor who employs the applicant for provisional certification. By signing the application, the certified well contractor certifies to be jointly liable for any violation of the rules regarding well services provided by the provisionally certified well contractor and that the violation is grounds for suspension or revocation of the certification of the certified well contractor and the provisionally certified well contractor; and

d. Successfully complete, with a passing score, the well contractor certification examination for well drilling services or pump services or both.

**82.3(4)** *Change from provisionally certified well contractor to certified well contractor.* The provisionally certified well contractor shall become a certified well contractor after the submission of an application showing all requirements for certification have been met and submission of appropriate fees to the department. The certificate for a provisionally certified well contractor will be issued for one year. The department will issue a certified well contractor certificate after the one-year period and the receipt of appropriate fees.

**82.3(5)** *Well plugging contractor.* In order to be certified as a well plugging contractor, an applicant shall take a four-hour training course designated by the department, successfully complete a well plugging test, be issued a certificate by the department, and renew the certification in accordance with rules 82.10(455B) and 82.11(455B).

**567—82.4 and 82.5** Reserved.

**567—82.6(455B) Experience requirements.**

**82.6(1)** All applicants shall meet the experience requirements as shown below. Educational programming approved by the department may be substituted for up to one half of any experience requirement at the rate of one CEU for each 100 hours of required experience.

CLASSIFICATION	EXPERIENCE
Certified Well Contractor (well driller)	Two years' employment and 2000 hours work experience in Class 1 and Class 2 well construction
Certified Well Contractor (pump installer)	Two years' employment and 1000 hours work experience in the installation, repair, and maintenance of water systems
Provisionally Certified Well Contractor	One half of the employment and experience required for full certification
Well Plugging Contractor	None

**82.6(2)** Applicable experience review committee. The department may appoint a peer review committee to help evaluate relevant well services work experience submitted by applicants for certification. The committee should consist of three members recommended by the Iowa Water Well Association, two members recommended by the Iowa Environmental Health Association, one member recommended by the Iowa Groundwater Association and one member recommended by the Iowa Environmental Council. Committee recommendations shall be considered by the department, which shall make the final determination of eligibility.

**567—82.7(455B) Certification and examination fees.** The following fees are nonrefundable except as noted in 82.8(4).

**82.7(1)** *Examination fee.* The examination fee for each examination shall be \$50.

**82.7(2)** *Oral examination fee.* The oral examination fee for each oral examination shall be \$100.

**82.7(3)** *Certification fees.* The certification fee for well drilling contractors shall be \$75 for each one-half year of a two-year period from the date of issuance to June 30 of the next even-numbered year.

The certification fee for pump installation contractors and well plugging contractors shall be \$75 for each one-half year of the first year of certification and \$50 for each additional one-half year period to June 30 of the next even-numbered year.

**82.7(4) Provisionally certified well contractor fee.** The provisionally certified well contractor fee shall be \$150.

**82.7(5) Penalty fee.** The penalty fee shall be \$100 for each 30 days in delinquency. The penalty fee is for late payment of the initial certification fee or renewal fee.

**82.7(6) Certification renewal fees.** The certification renewal fee for certified well drilling contractors shall be \$300 for the two-year period. The certification renewal fee for pump installers and well plugging contractors shall be \$200 for the two-year period.

**82.7(7) Duplicate certificate fee.** A currently certified well contractor may obtain a duplicate certificate upon payment of a \$20 fee.

**82.7(8) Recertification fee.** Contractors who have not earned sufficient CEUs for certification renewal and who wish to recertify within two years after expiration of their certification must retake and pass the written examination and pay a certification fee of \$1000.

#### **567—82.8(455B) Examinations.**

**82.8(1) Type of examination.** There will be four examinations available:

- a. A general fundamentals examination for well drilling and pump installation contractors.
- b. An examination for well drillers.
- c. An examination for pump installers.
- d. An examination for well plugging contractors.

**82.8(2) Required examinations.** Well drilling contractors and pump installers must take and pass the general fundamentals examination and at least one of the specialty examinations. Examinations may be taken at the same time and place or at different times. Work shall be limited to the specialty in which proficiency has been demonstrated by written examination. Well plugging contractors must take and pass the well plugging examination only.

**82.8(3) Examination application.** A person wishing to take the examination required to become a certified well contractor shall complete the Well Contractor Certification Examination Application, Form 43970. A listing of dates and locations of examinations is available from the department upon request. The application form requires the applicant to indicate educational background, training and past experience in providing well services. The completed application and the application fee shall be sent to the director and addressed to the Iowa Department of Natural Resources, Well Contractor Certification, 401 SW 7th Street, Suite M, Des Moines, Iowa 50309. Application for examination must be received by the department at least 60 days prior to the date of the examination.

The department may allow local county environmental health officials to take the written examination, even though they do not meet the work experience or training requirements, provided they pay the examination fee. If the officials receive a passing score on the examination, they will receive a letter of acknowledgement; however, they will not be certified and will not be allowed to perform any well services.

**82.8(4) Application evaluation.** The director may designate department personnel and the experience review committee to evaluate all applications for examination.

**82.8(5) Application expiration.** A properly completed application for the examinations will be valid for one year from the date the application is approved by the department. All required examinations must be completed within one year of application.

**82.8(6) Refund of examination application fee.** The department may refund a portion of the examination application or reexamination application fee for an applicant who does not qualify for examination within one year of making the application. If the applicant will qualify for a scheduled examination within one year, the applicant will be notified when the examination may be taken and the fee will not be refunded.

**82.8(7) Reexamination.** Upon failure of the first examination, the applicant may be reexamined at the next scheduled examination. Upon failure of the second examination, the applicant shall be required to wait a period of 180 days between each subsequent reexamination.

**82.8(8) Reexamination fee.** Upon each reexamination while a valid application is on file, the applicant shall submit to the department the examination fee at least ten days prior to the date of examination.

**82.8(9) Application invalidation.** Failure to successfully complete the necessary examinations within one year from the date of approval of the application shall invalidate the application.

**82.8(10) Retention of completed examinations.** Completed examinations shall be retained by the director for a period of one year, after which they may be destroyed.

**82.8(11) Oral examination.** Upon written request by an applicant for well contractor certification, the director will consider the administration of an oral examination on an individual basis when: the applicant has failed the written examination at least twice; the applicant has shown difficulty in reading or understanding written questions but may be able to respond to oral questioning; the applicant is capable of communicating in writing with regard to departmental requirements and inquiries; and the director has received a written recommendation for an oral examination from a department staff member attesting to the operational and performance capabilities of the applicant. The director shall designate department personnel to administer the appropriate examinations as defined in 82.8(1).

**82.8(12) Reasonable accommodation.** Upon request for certification by an applicant, the director will consider on an individual basis reasonable accommodation to allow administration of the examinations without discrimination on the basis of disability. The applicant shall request the accommodation 30 days prior to the date of the examination. The applicant must provide documentation of eligibility for the accommodation. Documentation shall be submitted with the completed examination application. Accommodations based on documentation may include site accessibility, oral examination, extended time, separate testing area, or other concerns. If a reasonable accommodation is considered to be an oral examination, the oral examination fee shall apply.

#### **567—82.9(455B) Certification by examination.**

**82.9(1) Examination requirement.** All applicants for certification shall successfully complete and pass the relevant examinations prior to receiving certification.

**82.9(2) Certification by registration without testing.** A well contractor who is engaged in performing pump services on or prior to June 30, 2004, and who registers as a pump installer with the department by June 30, 2004, shall be deemed to have met the certification requirements of this chapter without examination. The experience requirement will apply. Beginning July 1, 2004, a pump installer seeking an initial well contractor certification shall meet the testing requirements for certification established in this chapter.

**82.9(3) Certification application time line.** Application for certification must be received by the department within 30 days after the date the applicant receives notification of having passed the examinations. All applications for certification shall be made on a form provided by the department and shall be accompanied by the certification fee.

**82.9(4) Late certification application.** Applications for certification by examination which are received more than 30 days but less than 60 days after the applicant has received notification of having passed the examination shall be accompanied by the certification fee and the penalty fee. Applicants who do not apply for certification within 60 days' notice of having passed the examination will not be certified on the basis of that examination.

**82.9(5) Denial appeal.** Applicants may appeal a denial of certification within 30 days of receiving written notification, pursuant to 567—Chapter 7.

#### **567—82.10(455B) Certification renewal.**

**82.10(1) Renewal period.** All certificates shall expire on June 30 of even-numbered years and must be renewed every two years in order to maintain certification.

**82.10(2) *Application for renewal.*** Application for renewal will be mailed to all certified well contractors 60 days prior to the expiration date of their certificates. Application for renewal must be made in accordance with this rule and the instructions on the form in order for the applicant to renew the certificate for the next two-year period. Application for renewal of a certificate without penalty must be received by the director or postmarked prior to the expiration of the certificate, and shall be accompanied by the certification renewal fee.

**82.10(3) *Late application.*** Late application for renewal of a certificate may be made provided that such late application shall be received by the director or postmarked within 60 days of the expiration of the certificate on forms provided by the department. Such late application shall be accompanied by the penalty fee and the certification renewal fee.

**82.10(4) *Failure to renew.*** If a certificate holder fails to renew within 60 days following expiration of the certificate, the right to renew the certificate automatically terminates. Certification may be allowed at any time following such termination provided that the applicant passes the appropriate examinations. The applicant must then apply for certification in accordance with subrule 82.7(8) and rule 82.9(455B).

**82.10(5) *Expired certificate.*** A certified well contractor may not continue to provide well services after expiration of a certificate without renewal thereof.

**567—82.11(455B) Continuing education.**

**82.11(1) *CEU requirements.*** Continuing education must be earned during two-year periods between April 1 and March 31 of even-numbered years. A certified well contractor holding well driller certification or both well driller and pump installer certifications must earn 1.6 units or 16 contact hours during each two-year period. A certified well contractor holding only pump installer certification must earn 1.0 units or 10 contact hours during each two-year period. A well plugging contractor may be required to earn 0.2 units or 2 contact hours during each two-year period as determined by the department, provided the well plugging contractor is notified of the requirement at the beginning of the renewal period. Newly certified (previously uncertified) well contractors who are certified after April 1 of even-numbered years will not be required to earn CEUs until the next two-year period.

**82.11(2) *Certificate renewal.*** Only those certified well contractors fulfilling the continuing education requirements before the end of each two-year period (March 31) will be allowed to renew their certificates. The certificates of certified well contractors not fulfilling the continuing education requirements shall expire on June 30 of every even-numbered year.

**82.11(3) *CEU approval.*** All activities for which continuing education credit will be granted must be approved by an accredited college or university, an issuing agency, or by the department, and shall be related to well services, relevant aspects of Iowa groundwater law, well construction, well maintenance, well abandonment practices, well contractor safety (no more than 0.2 CEU per renewal), water system maintenance, and Iowa hydrogeologic conditions which protect groundwater and water supplies.

**82.11(4) *CEU extensions.*** The director may, in individual cases involving hardship or extenuating circumstances, grant an extension of time of up to six months within which to fulfill the minimum continuing education requirements. Hardship or extenuating circumstances include documented health-related confinement or other circumstances beyond the control of the certified well contractor which prevent attendance at the required activities. All requests for extensions must be made prior to March 31 of each even-numbered year.

**82.11(5) *CEU reporting.*** It is the certified well contractor's personal responsibility to maintain a written record and to notify the department of the continuing education credit earned during the period. The continuing education credits earned during the period shall be shown on the application for renewal.

**82.11(6) *Alternative CEU requirements.*** A certified well contractor shall be deemed to have complied with the continuing education requirements of this rule during periods that the certified well contractor serves honorably on active duty in the military services, or for periods that the person is a government employee working as a well contractor and assigned to duty outside of the United States, or for other periods of active practice and absence from the state approved by the director.

**567—82.12(455B) Certified well contractor obligations.**

**82.12(1) *Submission of records and samples.*** Each certified well contractor shall submit drilling records and drill cutting samples, when required, to the Iowa Geological Survey, Department of Natural Resources, Oakdale Campus, University of Iowa, Iowa City, Iowa 52242, telephone (319)338-1575, or as otherwise directed by the department, as follows:

*a.* Within 30 days of completion of any water well used as part of a public water supply, a well used for withdrawal of water for which a permit is required by rule 567—50.1(455B), or wells used to monitor groundwater quantity or quality required by the department if so directed by the Iowa geological survey (IGS), department of natural resources. The certified well contractor must submit the drilling records and samples required by subrules 82.12(2) and 82.12(3).

*b.* Within 30 days of the completion of any water well used as part of a nonpublic water supply or other water wells used to access groundwater. The certified well contractor must submit the drilling records and samples required by subrules 82.12(2) and 82.12(3).

*c.* Prior to constructing a water well to be used as part of a nonpublic water supply or other water well used to access groundwater, the certified well contractor must contact the local health department in the county in which the water well is to be located to determine if submittal of drill cutting samples is required.

**82.12(2) *Drilling records.*** Drilling records must be submitted on the water well driller's log form provided by the Iowa geological survey, department of natural resources.

**82.12(3) *Water well log.*** The water well driller's log shall include the following:

- a.* Location and legal description (quarter section, section number, township, range and county).
- b.* Reference point for all depth measurements.
- c.* Depth at which each significant change of formation occurs.
- d.* Depth at which pump is set, the nonpumping and pumping water levels in the well measured from the land surface, and the rate and duration the well was pumped.
- e.* Identification of the material of which each significant stratum is composed.
- f.* Depth at which hole diameters (bit sizes) change.
- g.* Normal hole diameter of the well bore.
- h.* Total depth of the completed hole.
- i.* Depth or location of any lost drilling fluids, drilling materials, or tools.
- j.* Casing depth, grouting schedule, including materials used and method of placement, and description of the well casing and liner pipe.
- k.* Description of well screens including diameter, length, material slot sizes, amount of open area, and location in well.
- l.* Description of physical and chemical well development activities.

**82.12(4) *Cutting samples.*** Drill cutting samples shall be collected at intervals of 5 feet and at each pronounced change in geological formation. The Iowa geological survey, department of natural resources, will provide drill cutting bags.

**82.12(5) *Test pumping.*** Certified well contractors shall provide the requested test pumping data for water wells used as part of a public water supply pursuant to 567—subrule 41.12(2) and for water wells utilized as part of a regulated water use pursuant to 567—subrule 50.6(1).

**567—82.13(455B) Disciplinary actions.**

**82.13(1) Reasons for disciplinary action.** Disciplinary action may be taken against a certified well contractor or well plugging contractor on any of the grounds specified in Iowa Code section 455B.190A and the following more specific grounds: (Iowa Code section 455B.109 authorizes the assessment of administrative penalties for violations of Iowa Code chapter 455B or rules, permits, and orders promulgated or issued pursuant to Iowa Code chapter 455B. The department will follow the provisions of 567—Chapter 10 for assessing such penalties.)

*a.* Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

- b. Failure to renew certification.
- c. Failure to obtain required continuing education units.
- d. Failure to submit, within the time required, drill cutting samples, records or other reports required under applicable permits or rules of the department, including failure to submit complete records or reports.
- e. Failure to use reasonable care or judgment or to apply knowledge or ability in performing the duties of a certified well contractor or well plugging contractor.
- f. Violation of well construction, plugging or pump installation standards or other requirements contained in 567—Chapters 38, 39, 43, 49 and 110.
- g. Failure to advise a person for whom well services are being provided that a hazardous or potentially hazardous condition, as defined in Iowa Code section 455B.381(2), has been encountered.
- h. Knowingly causing or allowing a hazardous or potentially hazardous condition due to well construction to exist.
- i. Drilling or reconstructing a well without a construction permit.

**82.13(2)** Disciplinary sanctions allowable are:

- a. *Revocation of a certificate.* Revocation of a certificate may be permanent without chance of recertification or it may be for a specified period of time.
- b. *Partial revocation or suspension.* Revocation or suspension of the practice of a particular aspect of the contractor's responsibility.
- c. *Probation.* Probation under specified conditions relevant to the specific grounds for disciplinary action. Additional education or training or reexamination may be required as a condition of probation. Reexamination may include written and oral examinations.
- d. *Fees.* The department shall determine which fees in rule 82.7(455B) apply.

**82.13(3)** Procedure.

- a. The director shall initiate disciplinary action. The director may investigate any alleged factual situation that may be grounds for disciplinary action under subrule 82.13(1) and report the results of the investigation to the commission.
- b. The director may issue an administrative order that may assess a penalty or refer a case to the attorney general for prosecution for any disciplinary action.
- c. Written notice by certified mail shall be provided to a certified well or well plugging contractor against whom disciplinary action is being considered. The certified well or well plugging contractor will be given 20 days' advance notice that an informal hearing has been scheduled before the commission. The notice will provide the specific date, time, and place, at which time the commission will hold the informal hearing to determine whether a formal hearing is warranted or whether informal resolution can be reached. The certified well or well plugging contractor may present any relevant facts and indicate the certified well or well plugging contractor's position in the matter.
- d. A certified well or well plugging contractor who receives notice of an informal hearing shall communicate orally or in writing with the director, and efforts shall be made to clarify the respective positions of the certified well or well plugging contractor and the director. The staff may present a recommendation concerning disciplinary sanctions to the commission at the informal hearing.
- e. Failure to attend the informal hearing or otherwise to communicate facts and position relevant to the matter by the scheduled date will be considered by the commission when determining whether a formal hearing is warranted.
- f. If agreement as to appropriate disciplinary sanction, if any, can be reached with the certified well or well plugging contractor and the commission concurs, a written stipulation and settlement between the department and the certified well or well plugging contractor shall be entered. The stipulation and settlement shall recite the basic facts and violations alleged, any facts presented by the certified well or well plugging contractor and the reasons for the particular sanctions imposed.
- g. If the commission determines that no disciplinary action is warranted on the facts asserted, the certified well or well plugging contractor shall be notified of the decision in writing.

*h.* If the commission determines that an opportunity for formal hearing is required to impose any disciplinary sanction specified in subrule 82.13(2), the director shall proceed in accordance with 567—Chapter 7.

**567—82.14(455B,272C) Revocation of certificates.** Upon revocation of a certificate in accordance with the authority provided in Iowa Code section 455B.190A, application for certification may be allowed after two years from the date of revocation. Any such applicant must pass an examination and be certified in the same manner as other applicants. The department may require the applicant to take and pass a written and oral examination in order to become recertified. The department will decide which fees in rule 82.7(455B) will apply.

These rules are intended to implement Iowa Code sections 455B.187 and 455B.190A.

CHAPTER 83  
LABORATORY CERTIFICATION  
[Prior to 4/10/96, see 567—Chapter 42]

PART A  
GENERAL

**567—83.1(455B) Authority, purpose, and applicability.**

**83.1(1) Authority.** Pursuant to Iowa Code section 455B.113, a laboratory certification program is required for laboratories performing analyses of samples which are required to be submitted to the department as a result of Iowa Code provisions, rules, operation permits, or administrative orders. Pursuant to Iowa Code section 455B.114, the department may suspend or revoke the certification of a laboratory upon determination of the department that the laboratory no longer fulfills one or more of the requirements for certification.

**83.1(2) Purpose.** The purpose of these rules is to provide the procedures for laboratories to use to apply for certification, to establish laboratory certification fees, to maintain certification, and to provide the appropriate methods and references for evaluating laboratory competence including the requirements for laboratories to become certified.

**83.1(3) Applicability to environmental program areas.**

*a. Water supply (drinking water).* The requirements of this chapter apply to all laboratories conducting drinking water analyses pursuant to 567—Chapters 40, 41, 42, 43, and 47. Routine, on-site monitoring for alkalinity, calcium, conductivity, residual disinfectant, orthophosphate, pH, silica, temperature, turbidity and on-site operation and maintenance-related analytical monitoring are excluded from this requirement, and may be performed by a Grade I, II, III, or IV certified operator meeting the requirements of 567—Chapter 81, any person under the supervision of a Grade I, II, III, or IV certified operator meeting the requirements of 567—Chapter 81, or a laboratory certified by the department to perform water supply analyses under this chapter.

*b. Underground storage tanks.* The requirements of this chapter also apply to all laboratories conducting underground storage tank analyses for petroleum constituents pursuant to 567—Chapter 135. Routine on-site monitoring conducted by or for underground storage tank owners for leak detection or a nonregulatory purpose is excluded from this requirement.

*c. Wastewater.* The requirements of this chapter also apply to all laboratories conducting analyses of wastewater, groundwater or sewage sludge pursuant to 567—Chapters 63, 67, and 69. Routine on-site monitoring for pH, temperature, dissolved oxygen, total residual chlorine and other pollutants that must be analyzed immediately upon sample collection, settleable solids, physical measurements such as flow and cell depth, and operational monitoring tests specified in 567—subrule 63.3(4) are excluded from this requirement.

*d. Solid waste and contaminated sites.* The requirements of this chapter also apply to all laboratories conducting analyses of solid waste parameters pursuant to 567—Chapters 100 through 130, contaminated site parameters pursuant to 567—Chapters 133 and 137, and regulated substances other than petroleum parameters regulated under 567—Chapter 135. Any parameter that must be analyzed immediately upon sample collection is excluded from the requirements of this chapter. Any samples collected or testing conducted that is not part of the specific monitoring required by the department for regulatory purposes are also excluded from the requirements of this chapter.

**567—83.2(455B) Definitions.**

“*Certified*” means a laboratory demonstrates to the satisfaction of the department its ability to consistently produce valid data within the acceptance limits as specified within the department’s requirements for certification and meets the minimum requirements of this chapter and all applicable regulatory requirements. A laboratory may be certified for an analyte, an analytical series, or an environmental program area, except in the UST program area, where certification for individual analytes is not allowed.

“*Environmental program area*” means the water supply (drinking water) program, underground storage tank program, wastewater program, or solid waste and contaminated site program pursuant to 83.1(3).

“*Manual for the Certification of Laboratories Analyzing Environmental Samples for the Iowa Department of Natural Resources*” (2003) (Iowa Manual) is incorporated by reference in this chapter.

Chapter 1 of the Iowa Manual pertains to certification of laboratories analyzing samples of drinking water and incorporates by reference the Manual for the Certification of Laboratories Analyzing Drinking Water, 4th edition, March 1997, EPA document 815-B-97-001.

Chapter 2 of the Iowa Manual, 2003, pertains to laboratories analyzing samples for the underground storage tank program.

Chapter 3 of the Iowa Manual, 2003, pertains to laboratories analyzing samples for wastewater and sewage sludge disposal programs.

Chapter 4 of the Iowa Manual, 2003, pertains to laboratories analyzing samples for the solid waste and contaminated site programs.

“*Performance evaluation (PE) sample*” means a reference sample provided to a laboratory for the purpose of demonstrating that a laboratory can successfully analyze the sample within limits of performance specified by the department. The true value of the concentration of the reference material is unknown to the laboratory at the time of analysis. A PE sample may also be referred to as a proficiency testing sample or PT sample.

“*Provisional certification*” means a laboratory has deficiencies, which must be corrected within the specified time frames listed in 83.7(2) “d,” but demonstrates to the satisfaction of the department its ability to consistently produce valid data within the acceptance limits as specified within the department’s certification requirements.

“*Revoked certification*” means a laboratory no longer fulfills the requirements of this chapter, and certification is revoked by the director upon determination of the director that the laboratory no longer fulfills the requirements for certification (455B.114).

“*Suspended certification*” means a temporary suspension of certification for a laboratory, conditional upon meeting the time frames in 83.7(4) “d” for the correction of the deficiency.

“*Temporary certification*” means short-term transitional certification granted in certain circumstances when the department implements certification in a new environmental program area.

#### PART B CERTIFICATION PROCESS

### **567—83.3(455B) Application for laboratory certification.**

**83.3(1) *Application forms.*** Application for laboratory certification, other than for temporary certification, shall be made on forms provided by the department and shall be accompanied by the nonrefundable fee specified in 83.3(2). The application for renewal of certification shall be made at least 60 days prior to the certification expiration date. The department may require submission of additional information necessary to evaluate the application. All required documentation must be supplied to the department prior to the on-site visit. Failure to submit a complete application may result in denial of the renewal.

#### **83.3(2) *Fees and expenses.***

*a.* A nonrefundable fee for the administration, completion of on-site laboratory surveys and assessments, and enforcement of laboratory certification requirements shall be paid with the certification application.

(1) The on-site visit will not be conducted and certification will not be issued until the fees and expenses are paid and all other certification requirements are met. The fee for certification will not be refunded if an on-site visit is not performed.

(2) Out-of-state laboratories will be responsible for paying the expenses of an on-site visit, in addition to the standard certification fee if required, and the department or its agent will bill the out-of-state laboratory directly for the expenses.

(3) When a laboratory's certification is changed to "provisional" or "suspended" and the period for correcting deficiencies extends beyond the certification period, the laboratory must continue to pay the required fees in order to maintain its certification status.

(4) Additional fees. Additional fees will be assessed for the following, and the department or its agent will bill the laboratory directly.

1. The laboratory is responsible for paying for any additional on-site visits, at a fee of \$300 per visit. An example of this is when an additional on-site visit is required when a laboratory seeks certification for an entirely new set of parameters for which it had previously not been certified.

2. When an on-site visit is required to inspect for deficiencies that the laboratory has been required to correct, the fee is \$500 per visit.

b. Certification in multiple environmental program areas. Where a laboratory is certified for the same analyte in more than one environmental program area, the laboratory must meet all the applicable certification requirements in addition to the payment of the fees.

c. The applicable fees shall be based on the type of analytical service provided as follows:

ANALYTICAL GROUP	REGULATORY PROGRAM & PARAMETERS <sup>1</sup>	FEE
Asbestos	SDWA	\$400
Basic Drinking Water	SDWA (includes total and fecal coliform bacteria, <i>E. coli</i> , heterotrophic plate count, nitrate, nitrite, and fluoride)	\$800
Basic Wastewater	CWA (includes BOD5, cBOD5, total suspended solids, and ammonia)	\$400
Bacteria	CWA (includes total coliform, fecal coliform, and enterococci bacteria)	\$800
	SDWA (includes total coliform, fecal coliform, <i>E. coli</i> , and heterotrophic plate count)	\$800
	SDWA & CWA combined	\$1,300
Dioxin	SDWA	\$800
Effluent Toxicity Testing	CWA	\$800
Inorganics, including metals	CWA metals, inorganic compounds, and physical characteristics (\$400 per analyte up to a maximum of \$1,600)	\$400 to 1,600
	SDWA (includes metals, nitrate, nitrite, ammonia, cyanide, fluoride, bromate, bromide, chlorite, and total organic carbon)	\$1,600
	SW/CS	\$1,600
	CWA & SDWA combined	\$2,400
	CWA & SW/CS combined	\$2,400
	CWA, SDWA, and SW/CS combined	\$2,800
Radionuclides	CWA	\$400
	SDWA (includes gross alpha, gross beta, photon emitters, radium, strontium, tritium, and uranium)	\$400
	SDWA & CWA combined	\$650

ANALYTICAL GROUP	REGULATORY PROGRAM & PARAMETERS <sup>1</sup>	FEE
Synthetic Organic Chemicals (SOC)	CWA	\$1,600
	SDWA	\$1,600
	SW/CS	\$1,600
	CWA & SDWA combined	\$2,400
	CWA & SW/CS combined	\$2,400
	CWA, SDWA, and SW/CS combined	\$2,800
Volatile Organic Chemicals (VOC)	CWA	\$1,600
	SDWA	\$1,600
	SW/CS	\$1,600
	CWA & SDWA combined	\$2,400
	CWA & SW/CS combined	\$2,400
	CWA, SDWA, and SW/CS combined	\$2,800
Underground Storage Tank Program Methods (UST)	OA1 and OA2 for UST, CWA, & SW/CS programs	\$1,600
	OA1, OA2, PAH, and Air Gas for UST, CWA, & SW/CS programs	\$2,000
Other analyte <sup>2</sup>	SDWA, CWA, UST, or SW/CS	\$400 per analyte

<sup>1</sup> CWA: Analysis of wastewater samples for the federal Clean Water Act.

SDWA: Analysis of drinking water samples for the federal Safe Drinking Water Act.

SW/CS: Analysis of water, soil, or solid samples for the solid waste or contaminated sites programs.

UST: Analysis of water and soil samples for the underground storage tank program.

<sup>2</sup> The fee for an additional analyte may be charged at the discretion of the appraisal authority.

*d.* Payment of fees. Fees shall be paid by bank draft, check, money order, or other means acceptable to the department, made payable to the Iowa Department of Natural Resources. Purchase orders are not an acceptable form of payment.

**83.3(3) Reciprocity.** Reciprocal certification of out-of-state laboratories by Iowa, and of Iowa laboratories by other states or accreditation providers, is encouraged. A laboratory must meet all Iowa certification criteria and pay all applicable fees as listed in this chapter. Any laboratory which is granted reciprocal certification in Iowa using primary certification from another state or provider is required to report any change in certification status from the accrediting state or provider to the department within 14 days of notification. A laboratory that loses primary certification, either in its resident state program or third-party accreditation program, will also immediately lose certification for the same program area and parameters in Iowa, pursuant to 83.7(5)“a”(9).

*a. Out-of-state laboratories.* Where an out-of-state laboratory has received an on-site visit within its own state, the fee for certification shall not be reduced if an on-site visit is not performed by Iowa.

*b. Third-party accreditation.* The department may accept third-party accreditation from national accreditation providers on an individual basis.

**567—83.4(455B) Procedure for initial certification for laboratories analyzing solid waste and contaminated site program parameters.**

**83.4(1) Implementation process.** All laboratories seeking certification to perform solid waste or contaminated site analyses shall provide a letter of intent requesting certification from the department. The letter shall include a statement that the laboratory is capable of performing the analyses for which certification is requested and that the laboratory intends to participate in blind PE testing using the approved methods.

*a. Letter of intent.* Laboratories submitting a letter of intent by April 1, 2004, will be issued a letter granting temporary certification. The temporary certification will be effective until the laboratory

is certified through the on-site visit. Laboratories submitting applications after April 1, 2004, will not be issued temporary certification and must apply for certification as provided for in 83.5(455B). Temporary certification will be denied if a laboratory fails to submit a completed application with the appropriate fee for full certification within the time frame established by the department.

*b. Application.* The department or its designee will schedule an on-site visit for each laboratory with temporary certification unless the on-site visit is waived by the department as provided by the reciprocity agreements pursuant to 83.4(1)“d.” The department will request a completed application from the laboratory at least 60 days prior to the on-site visit. The completed application and the correct fee must be received by the department no later than 30 days before the on-site visit. Temporary certification will be denied and the on-site visit will not take place if the application is not complete and the fee is not timely received.

*c. Performance evaluation (PE) testing.* Participation in PE testing using the approved method(s) for which certification is requested must be initiated within 30 days after the laboratory submits the letter of intent. PEs consist of analyzing product-spiked samples in a particular matrix provided by the testing organization to determine if a laboratory’s analytical results are within the acceptance range. Acceptable results on the PE are required in order for the laboratory to receive final certification. Temporary certification will be denied if the laboratory fails to initiate the PE. An independent performance testing organization meeting the requirements of Chapter 4 in the “Manual for the Certification of Laboratories Analyzing Environmental Samples for the Iowa Department of Natural Resources” (2003) must be used.

*d. On-site visits.* Upon application to the department by a laboratory with temporary certification, the director or designee will contact the laboratory and a date will be established for an on-site visit. The criteria given in the “Manual for the Certification of Laboratories Analyzing Environmental Samples for the Iowa Department of Natural Resources” (2003), specifically Chapter 4 regarding solid waste, will be used during the on-site visit to evaluate qualifications of laboratory equipment, procedures, records, and personnel. The on-site visit requirement may be waived for out-of-state laboratories desiring certification where EPA or the resident state has a certification program equivalent to Iowa’s, an on-site visit has been conducted within the past two years, and a copy of the on-site visit report is provided to the department.

**83.4(2) Letter of certification.** If the physical facilities and equipment of the laboratory meet the criteria set forth in the “Manual for the Certification of Laboratories Analyzing Environmental Samples for the Iowa Department of Natural Resources” (2003), and the laboratory personnel have properly demonstrated proficiency with the procedures specified in the manual, the laboratory will be issued a letter granting certification. The letter of certification will state the essential personnel, the specific parameters and analytical methods for which the laboratory is certified and may contain conditions deemed necessary by the department to ensure that the laboratory meets all requirements of this chapter.

**567—83.5(455B) Procedures for certification of new laboratories or changes in certification.** Laboratories that wish to become certified to conduct testing for an analyte or a method after the deadline for initial certification has passed, and any laboratory seeking initial certification, shall follow the procedures specified in 567—83.6(455B) for laboratory recertification. For changes in certification, the relevant fee must accompany the application where appropriate.

**567—83.6(455B) Laboratory recertification.** Laboratories shall be recertified every two years after initial certification. Applications for recertification must be on forms provided by the department and must be postmarked at least 60 days prior to the renewal date. Applications shall be accompanied by the fee specified in 83.3(2). To be recertified, laboratories must meet the following requirements.

**83.6(1)** Laboratories must use the approved methodology for all analyses the results of which are to be submitted to the department. A laboratory may not analyze and report data from samples collected for an environmental program area until certified in that area.

**83.6(2)** Certified laboratories must satisfactorily analyze PEs at least once every 12 months for each analyte by each method for which the laboratory wishes to retain certification unless a PE sample is not available for the particular analyte or method. Results must be submitted to Iowa department of natural

resources or as otherwise directed, along with a statement of the method used within 30 days of receipt from the provider. The laboratory must maintain records of all PE samples for a minimum of 5 years.

**83.6(3)** Laboratories must notify the department, in writing, within 15 days of major changes in essential personnel, equipment, laboratory location, or other major change which might alter or impair analytical capability. An example of a major change in essential personnel includes the loss or replacement of the laboratory supervisor, or a trained and experienced analyst is no longer available to analyze a particular parameter for which certification has been granted.

**83.6(4)** Site visits.

*a. Certification of the University of Iowa Hygienic Laboratory.* The department has designated the University of Iowa Hygienic Laboratory (UHL) as its appraisal authority for laboratory certification. The U.S. Environmental Protection Agency is responsible for the certification of UHL for the SDWA program, and the UHL quality assurance officer is responsible for the certification of UHL for those programs with no available EPA certification program, including wastewater, underground storage tank, solid waste, and contaminated site programs. The UHL quality assurance officer reports directly to the office of the UHL director and operates independently of all areas of the laboratory generating data to ensure complete objectivity in the evaluation of laboratory operations. The quality assurance officer will schedule a biennial on-site inspection of the UHL and review results for acceptable performance. Inadequacies or unacceptable performance shall be reported by the quality assurance officer to the UHL and the department for correction. The department shall be notified if corrective action is not taken.

*b. On-site visits.* Laboratories must consent to a periodic site visit by the department or its designee, at least every two years. However, an on-site visit may be conducted more frequently if the laboratory undergoes a major change which may alter or impair analytical capability, fails a PE sample analysis, or if the department questions an aspect of data submitted which is not satisfactorily resolved.

**83.6(5)** Period of validity. Certification shall be valid for a period not to exceed two years from the date of issuance, except in the case of reciprocal certification of an out-of-state laboratory. Reciprocal certification shall be valid for a period equal to that of the resident state in which the laboratory is certified, but shall not exceed two years. Certification shall remain in effect provided a laboratory has submitted a timely and complete application, until certification is either renewed or revoked.

**83.6(6)** Reporting requirements. Laboratories may not analyze or report sample results for any analyte, analytical series, or environmental program area until the initial certification status of “certified” or “temporary” has been granted by the department. Any data generated before certification status is granted will be considered invalid for compliance purposes. A laboratory with “provisional” status may analyze and report analyses for compliance purposes.

A certified laboratory may contract analyses to another certified laboratory. The responsibility lies with the primary certified laboratory contracting for services to verify that the secondary contracting laboratory is certified by the department and to ensure that reporting requirements and deadlines are met.

*a. Water supply program.*

(1) Certified laboratories must report to the department, or its designee such as UHL, all analytical test results for all public water supplies, using forms provided or approved by the department or by electronic means acceptable to the department. If a public water supply is required by the department to collect and analyze a sample for an analyte not normally required by 567—Chapters 41 and 43, the laboratory testing for that analyte must also be certified and report the results of that analyte to the department. It is the responsibility of the laboratory to correctly assign and track the sample identification number as well as facility ID and source/entry point data for all reported samples.

1. The following are examples of sample types for which data results must be reported:

- Routine: a regular sample which includes samples collected for compliance purposes from such locations as the source/entry point and in the distribution system, at various sampling frequencies;
- Repeat: a sample which must be collected after a positive result from a routine or previous repeat total coliform sample, per 567—41.2(455B). Repeat samples must be analyzed at the same laboratory from which the associated original routine sample was analyzed;

- Confirmation: a sample which verifies a routine sample, normally used in determination of compliance with a health-based standard, such as nitrate;
  - Special: a nonroutine sample, such as raw, plant, and troubleshooting samples, which cannot be used to comply with monitoring requirements assigned by the department;
  - Maximum residence time: a sample which is collected at the maximum residence time location in the distribution system, usually for disinfection byproduct measurement; and
  - Replacement: a sample which replaces a missed sample from a prior monitoring period resulting in a monitoring violation.
2. The following additional types of data must be reported to the department:
    - Monthly Operation Report (MOR) data which has been specifically required by the department to demonstrate compliance with public health standards;
    - Chemical results not required to be analyzed but which are detected during analysis, such as detection of a synthetic organic chemical during a routine analysis of that related analytical series for compliance reporting; and
    - Raw water sampling results specifically covered by 567—Chapters 40 to 43 for new surface water or groundwater sources, or reconstruction of groundwater sources.
  3. The following are examples of data results that are not required to be reported by the laboratory to the department:
    - Routine MOR data;
    - Distribution samples for the Total Coliform Rule for water main repair or installation; or
    - Results for contaminants that are not required by the department to be analyzed, which are below detection level.
  4. The sample type cannot be changed after submittal to the laboratory, without written approval by the department. The prescreening, splitting, or selective reporting of compliance samples is not allowed.
    - (2) Certified laboratories must report all analytical results to the public water supply for which the analyses were performed.
    - (3) Analytical results must be reported to and received by the department's designee by the seventh day of the month following the month in which the samples were analyzed.
    - (4) In addition to the monthly reporting of the analytical results, the following results must be reported within 24 hours of the completion of the analysis to the department by facsimile transmission (fax) or other method acceptable to the department, and to the public water supply for which the analyses were conducted:
      1. Results of positive routine coliform bacteria samples, and all repeat and follow-up samples, reported within 24 hours of the completion of each sample's analysis.
      2. Results of any contaminant which exceeds public drinking water standards (maximum contaminant level, treatment technique, or health advisory), and any subsequent confirmation samples, excluding lead and copper.
    - (5) If requested by the department, certified laboratories shall report their method detection levels, levels of quantitation, and any other pertinent information when reporting results for public water supplies.
      - b. Underground storage tank program.* Certified laboratories must report to the client requesting the analysis and include the information required in 567—subrule 135.10(2) in their laboratory report.
      - c. Wastewater program.* Certified laboratories must report to the client requesting the analysis and include the information required in 567—paragraphs 63.2(2) “b” to “e” in their laboratory report.
      - d. Solid waste and contaminated site programs.* Certified laboratories must report to the client requesting the analysis and include the information required in 567—paragraph 83.6(7) “d” and 567—subrule 103.2(8).
- 83.6(7)** Performance evaluation (PE) and acceptance limits. All PE samples must be obtained from EPA; a provider accredited by EPA, the National Environmental Laboratory Accreditation Program (NELAP) or National Institute of Standards and Technology (NIST); or other provider acceptable to

the department. All PE samples must have statistical acceptance limits. Certain environmental program areas may have specific PE requirements, as follows:

*a. Water supply program.* Laboratories must be able to achieve at least the method detection limit for each specific analyte as listed in 567—Chapter 41, in addition to any method detection limit requirement listed in this paragraph.

(1) Volatile organic chemical (VOC). Analysis for VOCs shall only be conducted by laboratories certified by EPA or the department or its authorized designee according to the following conditions. To receive approval to conduct analyses for the VOC contaminants in 567—subparagraph 41.5(1)“b”(1), except for vinyl chloride, the laboratory must:

1. Analyze PE samples provided by EPA, the department, or a third-party provider acceptable to the department, at least once a year by each method for which the laboratory desires certification.

2. Achieve the quantitative acceptance limits for at least 80 percent of the regulated organic chemicals included in the PE sample, except for vinyl chloride.

3. Achieve quantitative results on the PE samples within plus or minus 20 percent of the actual amount of the substances when the actual amount is greater than or equal to 0.010 mg/L.

4. Achieve quantitative results on the PE samples within plus or minus 40 percent of the actual amount of the substances when the actual amount is less than 0.010 mg/L.

5. Achieve a VOC method detection limit of 0.0005 mg/L.

(2) Vinyl chloride. To receive approval for vinyl chloride, the laboratory must:

1. Analyze PE samples which include vinyl chloride provided by EPA, the department, or a third-party provider acceptable to the department, at least once a year by each method for which the laboratory desires certification.

2. Achieve quantitative results on the PE samples within plus or minus 40 percent of the actual amount of vinyl chloride.

3. Achieve a method detection limit of 0.0005 mg/L.

(3) Synthetic organic chemical (SOC). Analysis for SOCs shall be conducted only by laboratories certified by EPA or the department or its authorized designee. To receive approval to conduct analyses for the SOC contaminants in 567—subparagraph 41.5(1)“b”(2), the laboratory must:

1. Analyze PE samples which include those substances provided by EPA, the department, or a third-party provider acceptable to the department, at least once a year by each method for which the laboratory desires certification.

2. For each contaminant that has been included in the PE sample, achieve quantitative results on the analyses that are within the following acceptance limits:

#### ACCEPTANCE LIMITS

<u>Contaminant</u>	<u>Acceptance Limit, in percent</u>
Aalachlor	(+ or -) 45
Aldicarb	2 standard deviations
Aldicarb sulfoxide	2 standard deviations
Aldicarb sulfone	2 standard deviations
Atrazine	(+ or -) 45
Benzo(a)pyrene	2 standard deviations
Carbofuran	(+ or -) 45
Chlordane	(+ or -) 45
2,4-D	(+ or -) 50
Dalapon	2 standard deviations
Dibromochloropropane (DBCP)	(+ or -) 40
Di(2-ethylhexyl)adipate	2 standard deviations
Di(2-ethylhexyl)phthalate	2 standard deviations

<u>Contaminant</u>	<u>Acceptance Limit, in percent</u>
Dinoseb	2 standard deviations
Diquat	2 standard deviations
Endothall	2 standard deviations
Endrin	(+ or -) 30
Ethylene dibromide (EDB)	(+ or -) 40
Glyphosate	2 standard deviations
Heptachlor	(+ or -) 45
Heptachlor epoxide	(+ or -) 45
Hexachlorobenzene	2 standard deviations
Hexachlorocyclopentadiene	2 standard deviations
Lindane	(+ or -) 45
Methoxychlor	(+ or -) 45
Oxamyl	2 standard deviations
Pentachlorophenol	(+ or -) 50
Picloram	2 standard deviations
Polychlorinated biphenyls (PCBs as decachlorobiphenyl)	0 - 200
Simazine	2 standard deviations
2,3,7,8-TCDD (Dioxin)	2 standard deviations
2,4,5-TP (Silvex)	2 standard deviations
Toxaphene	(+ or -) 45

(4) Inorganic chemical (IOC). Analysis for IOCs shall be conducted only by laboratories certified by EPA or the department or its authorized designee. To receive approval to conduct analyses for ammonia, antimony, arsenic, asbestos, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nitrate, nitrite, selenium and thallium, the laboratory must:

1. Analyze PE samples provided by EPA, the department, or a third-party provider acceptable to the department, at least once a year.

2. For each contaminant that has been included in the PE sample and for each method for which the laboratory desires certification, achieve quantitative results on the analyses that are within the following acceptance limits:

#### ACCEPTANCE LIMITS

<u>Contaminant</u>	<u>Acceptance Limit</u>
Ammonia	(+ or -) 20% at greater than or equal to 0.3 mg/L
Antimony	(+ or -) 30% at greater than or equal to 0.006 mg/L
Arsenic	(+ or -) 30% at greater than or equal to 0.003 mg/L
Asbestos	2 standard deviations based on study statistics
Barium	(+ or -) 15% at greater than or equal to 0.15 mg/L
Beryllium	(+ or -) 15% at greater than or equal to 0.001 mg/L
Cadmium	(+ or -) 20% at greater than or equal to 0.002 mg/L
Chromium	(+ or -) 15% at greater than or equal to 0.01 mg/L
Cyanide	(+ or -) 25% at greater than or equal to 0.1 mg/L
Fluoride	(+ or -) 10% at greater than or equal to 1 to 10 mg/L
Mercury	(+ or -) 30% at greater than or equal to 0.0005 mg/L
Nitrate	(+ or -) 10% at greater than or equal to 0.4 mg/L

<u>Contaminant</u>	<u>Acceptance Limit</u>
Nitrite	(+ or -) 15% at greater than or equal to 0.4 mg/L
Selenium	(+ or -) 20% at greater than or equal to 0.01 mg/L
Thallium	(+ or -) 30% at greater than or equal to 0.002 mg/L

(5) Lead and copper. To obtain certification to conduct analyses for lead and copper, laboratories must:

1. Analyze PE samples that include lead and copper provided by EPA, the department, or a third-party provider acceptable to the department, at least once a year by each method for which the laboratory desires certification; and

2. Achieve quantitative results on the analyses that are within the following acceptance limits:

- Lead: plus or minus 30 percent of the actual amount in the PE sample when the actual amount is greater than or equal to 0.005 mg/L. The practical quantitation level or PQL for lead is 0.005 mg/L; and

- Copper: plus or minus 10 percent of the actual amount in the PE sample when the actual amount is greater than or equal to 0.050 mg/L. The practical quantitation level or PQL for copper is 0.050 mg/L; and

3. Be currently certified by EPA or the department to perform analyses to the specifications described in 567—paragraph 41.4(1)“g.”

(6) Disinfection byproducts. To obtain certification to conduct analyses for disinfection byproducts listed in 567—paragraph 41.6(1)“b,” laboratories must:

1. Analyze PE samples approved by EPA, the department, or a third-party provider acceptable to the department at least once a year by each method for which the laboratory desires certification;

2. Achieve quantitative results within the acceptance limit on a minimum of 80 percent of the analytes included in each PE sample. The acceptance limit is defined as the 95 percent confidence interval calculated around the mean of the PE study data. However, the acceptance limit range shall not exceed plus or minus 50 percent or be less than plus or minus 15 percent of the study mean; and

3. Be currently certified by EPA or the department to perform analyses to the specifications described in 567—paragraph 41.6(1)“d.”

*b. Underground storage tank program.* A laboratory must achieve acceptable results on PE samples every 12 months within plus or minus 20 percent of the true value for individual compounds (i.e., benzene, ethylbenzene, toluene, xylene by OA-1) and plus or minus 40 percent of the true value for multicomponent materials (i.e., gasoline, diesel fuel, motor oil by either OA-1 or OA-2). The PE samples must be provided by EPA, the department, or a third-party provider acceptable to the department.

*c. Wastewater program.* Achieve acceptable quantitative results every 12 months on PE samples equivalent to those used in the Water Pollution (WP) proficiency program, or the Discharge Monitoring Report Quality Assurance (DMRQA) program, both of which are administered by EPA or its designee.

*d. Solid waste and contaminated site programs.* Achieve acceptable quantitative results every 12 months on PE samples provided by EPA, the department, or a third-party provider acceptable to the department.

**567—83.7(455B) Criteria and procedure for provisional, suspended, and revoked laboratory certification.**

**83.7(1) Provisional certification criteria.**

*a.* The department may downgrade certification to “provisional” status based on cause. The reasons for which a laboratory may be downgraded to “provisionally certified” status include, but are not limited to, the following list.

(1) Failure to analyze a performance evaluation (PE) sample annually within Iowa acceptance limits;

(2) Failure to notify the department within 15 days of changes in essential personnel, equipment, laboratory facilities or other major change which might impair analytical capability;

(3) Failure to satisfy the department that the laboratory is maintaining the required standard of quality based on an on-site visit;

(4) Failure to report compliance data in a timely manner to the department or the client, thereby preventing timely compliance with environmental program regulations.

*b.* The department may assess an administrative penalty for a laboratory's failure to comply with the laboratory certification or reporting requirements.

*c.* A laboratory will not be granted provisional certification by the department for contaminants which pose an acute risk to human health, including nitrate, nitrite, fecal coliform bacteria, and *Escherichia coli* bacteria.

**83.7(2) Provisional certification procedure.**

*a. Notification to the laboratory.* If a laboratory is subject to downgrading to "provisional" status on the basis of 83.7(1), the department will notify the laboratory or owner in writing of the downgraded status. Certification may be downgraded to provisional for an analyte, a related analytical series, an environmental program area, or the entire laboratory.

*b. Reporting.* A provisionally certified laboratory may continue to analyze samples for compliance purposes, but must notify the laboratory's IDNR-regulated clientele and other state certifying agencies of the change in laboratory certification status. If there is cause to question the quality of the data generated by the laboratory, the department may suspend the laboratory's ability to submit data to the department for any or all analytes, pursuant to 83.7(3), which includes suspension of the ability of the laboratory's client to report the data of questionable quality to the department.

*c. Right to appeal.* There is no appeal for this process, as it does not affect a laboratory's ability to analyze and report to the department.

*d. Correction of deficiencies.*

(1) If a laboratory failed to analyze a PE sample within acceptance limits, the laboratory has 60 days from receipt of the notification of the failure to identify and correct the problem to the department's satisfaction, and analyze a second PE sample. If the laboratory fails to analyze this second sample within acceptance limits and has had acceptable PE sample results within the last year, the department will downgrade the laboratory to "provisionally certified" status and notify the laboratory in writing.

(2) Once the department notifies a laboratory in writing that it has been downgraded to "provisionally certified" status, the laboratory must correct the problem within the following time frames, unless a written extension is obtained from the department. If the problem is not corrected, the laboratory is subject to suspension or revocation for that analyte, related analytical series, environmental program area, or the entire laboratory.

1. Unacceptable PE sample result within two months of notification.

2. Procedural deficiency within three months of notification.

3. Administrative deficiency within three months of notification.

4. Minor equipment deficiency within three months of notification. Examples of a minor equipment deficiency are inadequate analytical balances or incubators.

(3) The laboratory shall review the problems cited and, within the time period designated by the department, specify in writing to the department the corrective actions being taken, including an appropriate implementation schedule. The department shall consider the adequacy of the response and notify the laboratory of its certification status in a timely basis by mail, and may follow up to ensure corrective actions have been taken.

*e. Reinstatement.* Certification will be reinstated when the laboratory can demonstrate that all conditions for laboratory certification have been met to the satisfaction of the department and that the deficiencies which resulted in provisional certification status have been corrected. This may include an on-site visit, successful analysis of PE samples, or any other measure that the department deems appropriate.

**83.7(3) Suspended certification criteria.**

a. The department may downgrade certification to “suspended” status based on cause. The reasons for which a laboratory may be downgraded to “suspended” status include, but are not limited to, the following list.

(1) Failure to analyze a PE sample annually for contaminants which pose an acute risk to human health, including nitrate, nitrite, fecal coliform bacteria, and *Escherichia coli* bacteria, or which pose an imminent risk to the environment;

(2) Failure to analyze a PE sample annually within Iowa acceptance limits for contaminants which pose an acute risk to human health, including nitrate, nitrite, fecal coliform bacteria, and *Escherichia coli* bacteria, or which pose an imminent risk to the environment;

(3) Failure to correct previously identified deficiencies, which resulted in “provisional” certification status, within the prescribed time frames of 83.7(2)“d”;

(4) Failure to analyze a PE sample within Iowa acceptance limits when there is not a reliable history of successful PE sample analysis within the past 12 months;

(5) Failure to satisfy the department that the laboratory is producing accurate data.

b. Administrative penalty. The department may assess an administrative penalty for a laboratory’s failure to comply with the laboratory certification or reporting requirements.

c. Emergency certification suspension. The department may suspend certification without providing notice and opportunity to the laboratory to be heard if the department finds that the public health, safety, or welfare imperatively requires emergency action, and incorporates a finding to that effect in its administrative order, pursuant to 561—subrule 7.16(6).

**83.7(4) Suspended certification procedure.**

a. *Notification to the laboratory.* If a laboratory is subject to downgrading to “suspended” status on the basis of 83.7(3), the department will notify the laboratory or owner in writing of its intent to suspend certification in accordance with 561—7.16(17A,455A). Certification may be suspended for an analyte, a related analytical series, an environmental program area, or the entire laboratory.

b. *Reporting.* Once the suspension is effective, a laboratory must immediately discontinue analysis and reporting of compliance samples, may not analyze or report samples for compliance with departmental standards, and must notify the laboratory’s Iowa regulated clientele and other state certifying agencies of the change of the laboratory certification status. Any results generated during the period of suspension may not be used for compliance purposes by the department.

c. *Right to appeal.*

(1) The laboratory may appeal this decision by filing a written notice of appeal and request an administrative hearing with the department director within 30 days of receipt of the notice of suspension of certification. Contested case procedures under 561—Chapter 7 shall govern administration of the appeal.

The appeal must identify the specific portion(s) of the department action being appealed and be supported with a statement of the reason(s) for the challenge and must be signed by a responsible official from the laboratory such as the president or owner for a commercial laboratory, or the laboratory supervisor in the case of a municipal laboratory, or the laboratory director for a state laboratory.

(2) If no timely notice of appeal is filed, suspension is effective 30 days after receipt of the notice of suspension unless an emergency suspension order is in effect.

d. *Correction of deficiencies.*

(1) If a laboratory failed to analyze a PE sample within acceptance limits, the laboratory has 30 days from receipt of the notification of the failure to identify and correct the problem to the department’s satisfaction. If the laboratory fails to analyze this second sample within acceptance limits, the department will downgrade the laboratory to “suspended” status and notify the laboratory in writing.

(2) Once the department notifies a laboratory in writing that it has been downgraded to suspended status, the laboratory must correct the problem within the following timetable, unless a written extension is obtained from the department. If the problem is not corrected, the laboratory is subject to revocation for that analyte, related analytical series, environmental program area, or the entire laboratory.

1. Unacceptable PE sample result within two months of notification.

2. Procedural deficiency within three months of notification.
3. Administrative deficiency within three months of notification.
4. Minor equipment deficiency within three months of notification. Examples of a minor equipment deficiency are inadequate analytical balances or incubators.
5. Major equipment deficiency within six months of notification. An example of a major equipment deficiency would be the inability of existing complex analytical equipment to produce acceptable results, such as a chromatograph or spectrophotometer.

(3) The laboratory shall review the problems cited and, within the time period designated by the department, specify in writing to the department the corrective actions being taken including an appropriate implementation schedule. The department shall consider the adequacy of the response and notify the laboratory of its certification status in a timely basis by mail, and may follow up to ensure that corrective actions have been taken.

*e. Reinstatement.*

(1) Fee.

1. The laboratory will not be required to pay an additional fee if recertification affects an analyte or related analytical series, provided that:

- The laboratory is currently certified for other analytes, or
- A fee was paid within the two-year certification period for that related analytical series and the laboratory is certified for other parameters within that related analytical series.

2. A fee will be required if suspension affects a related analytical series effectively deleting that fee group from certification (such as all microbiological parameters in SDWA-MICRO), an environmental program area, or the entire laboratory. A fee will also be required if an additional on-site visit is required.

(2) Certification will be reinstated when the laboratory can demonstrate that all conditions for laboratory certification have been met to the department's satisfaction and, in particular, that the deficiencies which produced the suspension have been corrected. This may include an on-site visit, successful analysis of unknown samples, or any other measure that the department deems appropriate.

**83.7(5) *Revoked certification criteria.***

*a.* The department may revoke certification for cause. The reasons for which a laboratory's certification may be revoked include, but are not limited to, the following:

- (1) For laboratories of any status, failure to analyze a PE sample within Iowa acceptance limits;
- (2) Failure to satisfy the department that the laboratory has corrected deficiencies identified during the on-site visit within three months for a procedural or administrative deficiency or within six months for an equipment deficiency;
- (3) Submission of a PE sample to another laboratory for analysis and reporting the data as its own;
- (4) Falsification of data or other deceptive practices;
- (5) Failure to use required analytical methodology for analyses submitted to the department;
- (6) Failure to satisfy the department that the laboratory is maintaining the required standard of quality based on the on-site visit;
- (7) Persistent failure to report compliance data to the regulated client or the department in a timely manner, thereby preventing compliance with state regulations and endangering public health;
- (8) Subverting compliance with state regulations by actions such as changing the sample type for a noncompliance sample to a compliance sample after its submission to the laboratory, allowing compliance samples to be changed to other noncompliance sample types, or selective reporting of split sample results; or
- (9) For laboratories certified through a reciprocal agreement with another state or third-party accreditation program, loss of certification in either the resident state or third-party accreditation program is cause for immediate revocation of certification in Iowa for the same parameters or program areas for which certification was lost.

*b.* The department may either downgrade or revoke certification based on cause.

*c.* Emergency revocation. The department may revoke certification without providing notice and opportunity to the laboratory to be heard if the department finds that the public health, safety, or welfare

imperatively requires emergency action, and incorporates a finding to that effect in its administrative order, pursuant to 561—subrule 7.16(6).

*d. Laboratory-requested revocation.* The department may revoke certification upon receipt of a written request by the certified laboratory for removal from the certification program.

**83.7(6) Revoked certification procedure.**

*a. Notification to the laboratory.* Except for the instance when the laboratory voluntarily requests revocation in 83.7(5)“d,” if a laboratory is subject to revocation on the basis of 83.7(5), the department will notify the party in writing of its intent to revoke certification in accordance with 561—7.16(17A,455A). Certification may be revoked for an analyte, a related analytical series, an environmental program area, or the entire laboratory.

*b. Reporting.* Once revocation is effective, a laboratory must immediately discontinue analysis and reporting of compliance samples, shall not analyze or report samples for compliance with departmental standards, and must notify the laboratory’s Iowa-regulated clientele and other state certifying agencies of the change of the laboratory certification status within three business days of receipt of the final notice. Any results generated after revocation may not be used for compliance purposes by the department.

*c. Right to appeal.* There is no appeal process for revocation of an analyte or a related analytical series unless the analyte(s) represents an entire environmental program area, such as underground storage tank parameters, or the entire laboratory. When the laboratory requests revocation pursuant to 83.7(5)“d,” the revocation will be issued promptly and will be effective immediately with no appeal process.

(1) For an environmental program area or for the entire laboratory, the laboratory may appeal this decision by filing a written notice of appeal and request for an administrative hearing with the department director within 30 days of receipt of the notice of revocation of certification. Contested case procedures under 561—Chapter 7 shall govern further administration of the appeal.

The appeal must identify the specific portion(s) of the department action being appealed and be supported with a statement of the reason(s) for the challenge and must be signed by a responsible official from the laboratory such as the president or owner for a commercial laboratory, or the laboratory supervisor in the case of a municipal laboratory, or the laboratory director for a state laboratory.

(2) If no timely notice of appeal is filed within the 30-day time period, revocation is effective 30 days after receipt of the notice of intent.

*d. Reinstatement.* A laboratory which has had its certification revoked may apply for certification in accordance with 83.3(455B) once the deficiencies have been corrected.

These rules are intended to implement Iowa Code sections 455B.113 through 455B.115.

TITLE VII  
WATER POLLUTION CONTROL STATE REVOLVING FUND  
CHAPTER 90  
SCOPE OF TITLE — DEFINITIONS — FORMS  
[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—90.1(455B,17A) Scope of title.** The department has jurisdiction over the surface water and groundwater of the state to prevent, abate and control pollution. As a part of that general responsibility, the department and the Iowa finance authority are jointly designated to administer the clean water state revolving fund (CWSRF) pursuant to Iowa Code sections 455B.291 to 455B.299 and the federal Clean Water Act. This chapter provides the definitions and forms in the department's administration of the CWSRF. 567—Chapter 91 contains the criteria for rating and ranking water pollution control projects. 567—Chapter 92 contains the general project and program administration rules. 567—Chapter 93 contains rules for the nonpoint source pollution control programs.

**567—90.2(455B,17A) Definitions.** The following words and terms shall have the following meanings unless the context clearly indicates otherwise. The following definitions are applicable for this chapter and 567—Chapters 90, 91, 92 and 93.

*“Authority”* means the Iowa finance authority (IFA) as established by Iowa Code chapter 16.

*“Clean Water Act”* means the federal Water Pollution Control Act of 1972, P.L. 92-500, as amended by the Water Quality Act of 1987, P.L. 100-4, as published in 33 U.S.C. 1251-1376.

*“Cluster systems”* means onsite wastewater treatment systems providing treatment for two or more dwellings with a combined flow not to exceed 1,500 gallons per day.

*“Commission”* means the Iowa department of natural resources environmental protection commission.

*“Comprehensive Nutrient Management Plan”* or *“CNMP”* means a conservation system that is unique to an animal feeding operation (AFO). A CNMP is a grouping of conservation practices and management activities which, when implemented as part of a conservation system, will help to ensure that both production and natural resource protection goals are achieved. A CNMP incorporates practices to use animal manure and organic by-products as beneficial resources. A CNMP addresses natural resource concerns dealing with soil erosion, manure, and organic by-products and their potential impacts on all natural resources including water and air quality, which may derive from an AFO. A CNMP is developed to assist an AFO owner/operator in meeting all applicable local, tribal, state, and federal water quality goals or regulations. For nutrient-impaired stream segments or water bodies, additional management activities or conservation practices may be required by local, tribal, state, or federal water quality goals or regulations. [From proposed Natural Resources Conservation Service Environmental Quality Incentives Program (NRCS EQIP) rules.]

*“CWSRF”* means the clean water state revolving fund, also known as the water pollution control works revolving loan fund as defined in Iowa Code section 455B.291.

*“Department”* or *“DNR”* means the Iowa department of natural resources.

*“Director”* means the director of the Iowa department of natural resources.

*“Eligible cost”* means the cost of all labor, material, machinery, equipment, loan initiation and service fees, facility planning, design and construction engineering services, legal fees and expenses related to the project; capitalized interest during construction of the project; and construction and rehabilitation of all or part of a project included in the funding request placed on the draft IUP as a fundable project, subject to approval by the commission.

*“Eligible entity”* means a person eligible under the provisions of the Clean Water Act, the Safe Drinking Water Act, and the commission rules to receive loans for projects from either of the revolving loan funds.

*“Eligible project”* means, in the context of the water pollution control facilities, the acquisition, construction, reconstruction, extension, equipping, improvement, or rehabilitation of any works and facilities useful for the collection, treatment and disposal of sewage and industrial waste in a

sanitary manner including treatment works as defined in Section 212 of the Clean Water Act, or the implementation and development of management programs established under Sections 319 and 320 of the Clean Water Act, including construction and undertaking of nonpoint source water pollution control projects and related development activities authorized under those Sections. Only projects classified under one of the following needs categories are eligible for loan assistance: I, II, IIIa, IIIb, IVa, IVb, V, VI, and all subcategories of VII. Projects for the primary purpose of speculative growth are considered ineligible.

*“Equity fund”* means the fund to receive grant proceeds pursuant to a capitalization grant agreement, amounts transferred from the deficiency fund, investment earnings from certain accounts in the master trust, and all loan principal and interest payments received for loans made from the clean water account, including prepayments but excluding repayments on loans transferred to a series of bonds. The equity fund is to be used to originate a loan agreement with an applicant for project costs and subsequently disburse funds to the applicant, to transfer for deposit in a reserve account established under a series of bonds, or to transfer or disburse funds and enter into loan agreements for any other purposes, programs or undertakings that may be authorized by the Water Quality Act and rules enacted by the department.

*“Facility plan”* means a report certified by a professional engineer licensed to practice in Iowa and prepared in conformance with Chapter 11 of the Iowa Wastewater Facilities Design Standards (567—paragraph 64.2(9)“b”). This report shall be prepared to include an evaluation of the facility, identify problems, provide alternatives and a recommended solution, outline financing options and project time line, and address other applicable issues ensuring the viability of the project and the facility to meet project goals and discharge requirements.

*“Federal cross-cutters”* means the federal laws and authorities that apply to projects funded through CWSRF.

*“Financial agent”* means the entity or entities that have entered into a contract with the department to carry out the financial administration of the nonpoint source set-aside programs.

*“Fiscal year”* means the state fiscal year starting July 1 and ending June 30.

*“Fundable applicant”* means an eligible entity that meets the following criteria:

1. Appears on the state project priority list;
2. Has submitted a complete application for a water pollution control project with eligible costs;
3. Will be in a state of readiness to proceed with construction and use loan payments in a timely manner; and
4. Has been included on the state’s intended use plan as a proposed loan recipient or is otherwise eligible as described in 567—paragraph 93.5(1)“c,” 93.6(1)“c,” or 93.7(1)“c.”

*“Intended use plan”* or *“IUP”* means a plan identifying the intended uses of funds available for loans in the WPCSRF for each fiscal year as described in Section 606(c) of the Clean Water Act.

*“Lending institution”* means any bank, bank holding company, national banking association, savings and loan association, or life insurance company; any state or federal government agency or instrumentality; or any other financial institution or entity authorized to make loans in the state of Iowa.

*“Loan agreement”* means an executed contract between an individual and the participating lending institution which confirms the purpose of the loan, the amount and terms of the loan, the schedule of the loan payments and requirements, and any other agreed-upon conditions set forth by the director.

*“Municipality”* means the city, county, sanitary district, state agency, or other governmental corporation or body empowered to provide sewage collection and treatment services, or any combination of two or more such governmental bodies, or corporations acting jointly, in connection with a project.

*“Needs category”* means identified categories of needs which comprise mutually exclusive classes of facilities:

1. Category I – Secondary treatment. This category includes wastewater treatment needs necessary to meet the minimum level of treatment required by the federal Clean Water Act.
2. Category II – More stringent treatment. This category includes the wastewater treatment needs necessary when more stringent wastewater treatment than secondary (Category I) is required to protect the receiving waters.

3. Category IIIa – Infiltration/inflow correction. This category includes rehabilitation of existing sanitary sewers to preclude the entrance of storm water inflow or groundwater infiltration into the sewer. Rehabilitation can include sewer or manhole repairs by sealing, lining or replacement and physical removal of inflow sources. Infiltration/inflow correction removes flow from the sewer system by elimination and thereby reduces volumes of wastewater to be treated.

4. Category IIIb – Major sewer system rehabilitation. This category includes sewer replacement and major rehabilitation of collection or transmission sewers where necessary to the total integrity and performance of the wastewater conveyance and treatment facilities. Category IIIb does not have infiltration and inflow removal as its basic justification. “Replacement” is defined as the construction of parallel sewer or sewers which perform the function of existing sewers where existing sewers are to be abandoned. “Major rehabilitation” is defined as extensive repair of existing sewers beyond the scope of normal maintenance programs and necessary to maintain structural integrity. Sewer work associated with infiltration/inflow elimination is considered a Category IIIa need. Relief sewers do not fall within this category since they are newly constructed sewers with a function beyond that of existing sewers.

5. Category IVa – New collectors and appurtenances. This category includes sewers which will serve to collect wastewater in existing communities. The collection system is considered as those public sewers which have a principal purpose of providing service for individual users in existing residential and commercially developed areas to enable collection of wastewater in a centralized system. Pumping stations and force mains and other related appurtenant structures are considered part of the collection system if their primary mechanical function relates to the collection system.

6. Category IVb – New interceptors and appurtenances. This category includes sewers which have a principal purpose of transporting wastewater from a collection system to a wastewater treatment site. Relief sewers are included in this category where additional sewer capacity is required to accommodate all wastewater in a separate sewer system to ensure that it is transported to a wastewater treatment plant for adequate treatment, and to prevent public health hazards within the service area. Relief sewers may include parallel sewers. Pumping stations and force mains and other related appurtenant structures are considered in this category if their primary mechanical function relates to the interceptor’s principal purpose. Equalization basins are included in this category.

7. Category V – Correction of combined sewer overflows. This category includes any construction to control the discharge of pollutants from combined storm and sanitary overflows and bypasses, including sewer separation or rehabilitation, detention basins, lagoons or other facilities to control or treat such discharges.

8. Category VI – Storm water. This category includes municipal storm water management programs required pursuant to NPDES permits for discharges from municipal separate storm sewers systems. These management programs include programs or source control measures, or both, structural and nonstructural.

9. Category VIIa – Agricultural cropland sources. This category includes nonpoint source needs caused by agricultural activities such as plowing, pesticide spraying, irrigation, fertilizing, planting, and harvesting.

10. Category VIIb – Animal sources. This category includes nonpoint source needs caused by agricultural activities related to animal production such as confined animal facilities and grazing.

11. Category VIIc – Silviculture. This category includes nonpoint source needs caused by forestry activities such as removal of streamside vegetation, road construction and use, timber harvesting, and mechanical preparation for the planting of trees.

12. Category VIId – Urban sources. This category includes nonpoint source needs associated with new or existing development in urban or rural settings, such as erosion, sedimentation, and discharge of pollutants (e.g., inadequately treated wastewater, oil, grease, road salts, and toxic chemicals) into water resources from construction sites, roads, bridges, parking lots, and buildings.

13. Category VIIe – Groundwater protection (unknown sources). This category includes the needs that address groundwater protection nonpoint source needs such as wellhead and recharge protection activities.

14. Category VIII f – Marinas. This category includes needs associated with boating and marinas such as poorly flushed waterways, boat maintenance activities, discharge of sewage from boats, and the physical alteration of shoreline, wetlands, and aquatic habitat during the construction and operation of marinas.

15. Category VIII g – Resource extraction. This category includes needs associated with nonpoint source activities from mining and quarrying activities.

16. Category VIII h – Brownfields. This category includes needs that address nonpoint source problems associated with real property, the expansion, redevelopment or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant.

17. Category VIII i – Storage tanks. This category includes the needs that address nonpoint source problems caused by tanks designed to hold gasoline or other petroleum products or chemicals.

18. Category VIII j – Landfills. This category includes the needs to address nonpoint source problems caused by sanitary landfills.

19. Category VIII k – Hydromodification. This category includes the needs to address nonpoint source problems associated with channelization and channel modification, dam, and streambank and shoreline erosion.

20. Category VIII l - Individual/decentralized sewage treatment. This category includes needs associated with the rehabilitation or replacement of individual or community sewage disposal systems and the treatment portion of other decentralized sewage disposal technologies.

21. Category VIII m - Concentrated animal feeding operations (CAFO). This category includes the needs for a combination of unit processes or best management practices designed to address water quality or public health problems caused by agricultural activities related to animal production that are subject to the federal concentrated animal feeding operation regulations.

22. Category IX - Point source mining. This category addresses the needs for a combination of unit processes or best management practices designed to address water quality or public health problems caused by point source mining and quarrying activities.

“*Nontraditional project*” means a project where the primary purpose of the project is not to protect or improve water quality. A secondary purpose of the project does include water quality improvement or protection.

“*Onsite wastewater treatment system,*” “*onsite treatment system*” or “*onsite system*” means the same as “onsite wastewater treatment and disposal system” as defined in rule 567—69.2(455B).

“*Project completion*” means the date operations of the project are initiated or are capable of being initiated, whichever is earlier.

“*Quasi-public agency*” means an agency that provides public services and is under private ownership or control.

“*State project priority list (PPL)*” means the list of projects in priority order that may qualify for CWRSF loan assistance. The list is developed in accordance with 567—Chapter 91.

**567—90.3(455B,17A) Forms.** The following forms are used to apply for assistance and to provide required documentation. All forms may be obtained from Environmental Services Division, Department of Natural Resources, Henry A. Wallace Building, 502 E. Grand, Des Moines, Iowa 50319. Recipients of assistance shall also comply with applicable requirements of the department’s rules.

**90.3(1)** *Point source water pollution control project forms.*

a. Application package - Form 542-1320.

b. and c. Rescinded IAB 3/15/06, effective 4/19/06.

**90.3(2)** *Livestock water quality facilities forms.*

a. Application form for loan assistance - Form 542-8159.

b. Reserved.

**90.3(3)** *Local water protection project forms.* Rescinded IAB 3/15/06, effective 4/19/06.

**90.3(4)** *General nonpoint source project forms.*

a. Application form for loan assistance - Form 542-8156.

b. Reserved.

**90.3(5)** *Onsite wastewater treatment assistance forms.*

- a. Application form for loan assistance - Form 542-8045.
- b. Reserved.

These rules are intended to implement Iowa Code sections 455B.291 to 455B.298.

[Filed emergency 6/3/83—published 6/22/83, effective 7/1/83]

[Filed emergency 11/14/86—published 12/3/86, effective 12/3/86]

[Filed 9/25/03, Notice 7/9/03—published 10/15/03, effective 11/19/03]

[Filed 2/24/06, Notice 12/21/05—published 3/15/06, effective 4/19/06]

CHAPTER 91  
CRITERIA FOR RATING AND RANKING PROJECTS  
FOR THE WATER POLLUTION CONTROL STATE REVOLVING FUND

[Prior to 7/1/83, DEQ 19.2(12)]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—91.1(455B) Statutory authority.** The authority for the Iowa department of natural resources to administer the clean water state revolving fund (CWSRF) to assist in the construction of wastewater treatment facilities and water pollution control works is provided in Iowa Code sections 455B.291 to 455B.299. The requirement to have selection criteria and a method for selecting projects or programs for loans is provided in 40 CFR Part 35.3150, July 1, 2002.

**567—91.2(455B) Scope of title.** The department has jurisdiction over the surface water and groundwater of the state to prevent, abate and control pollution. As part of that general responsibility, the department and the Iowa finance authority are jointly designated to conduct the administration of the CWSRF loan assistance program to assist in the financing of infrastructure projects pursuant to the Clean Water Act. A project must comply with this chapter and 567—Chapter 92 or 567—Chapter 93 to be eligible for a CWSRF loan. This chapter provides the rating criteria to be used to rank eligible projects for funding. Rating criteria are provided for point source projects and nonpoint source projects. The nonpoint source projects are divided into three activities:

1. Livestock water quality facilities;
2. Local water protection projects; and
3. General nonpoint source projects.

Rating criteria for onsite wastewater systems are not included at this time because the loan assistance is based on a first-come, first-funded concept.

**567—91.3(455B) Purpose of water pollution control state revolving fund.** The WPCSRF provides financial assistance to eligible water pollution control works for the design and construction of facilities to protect and improve the state's water quality. The fund reserves a percentage of money each year for administrative purposes. The Iowa department of natural resources (department) administers the program, along with the Iowa finance authority (authority). The director will coordinate with the authority under the terms of an interagency agreement entered into pursuant to Iowa Code chapter 28E. The department establishes priorities for the use of the WPCSRF and publishes them each year in its intended use plan (IUP).

The financial assistance is described in more detail in 567—Chapter 92. This chapter identifies the criteria that are used to rate projects and activities, both point source and nonpoint source projects and activities. This chapter describes how the criteria will be used to calculate a total score for ranking projects. The commission is to set funding targets for point source and nonpoint source activities and to adjust the fundable project list to ensure that the short- and long-term goals of the IUP are achieved. The public has an opportunity annually to comment on both the fundable list and the short- and long-term goals of the intended use plan.

**567—91.4 and 91.5** Reserved.

**567—91.6(455B) General information—priority rating system.** The department shall use the priority rating system to rate eligible projects for funding. An eligible project may be either a point source project or a nonpoint source project or activity. A nonpoint source project activity must be identified in the most recent Iowa nonpoint source management program to be considered eligible.

**567—91.7** Reserved.

**567—91.8(455B) Project priority rating system.**

**91.8(1) Point source rating criteria.** The point source rating criteria consider the use classification of the receiving waters, water quality of the receiving waters, compliance status of the discharger, project benefits, readiness to proceed and a tiebreaker. Priority ranking for the projects shall be based on the total points awarded for all the categories; the greater the total number of points, the higher the ranking. The ranking will be done annually at the time the IUP is prepared and will not be updated during the year. The tiebreaker category will be used when necessary.

*a. Use classification of receiving waters.* This category addresses the receiving water that is impacted or potentially impacted by the existing situation and that would be improved or protected by the proposed project. Points shall be awarded and shall be cumulative for all designated use classifications of the receiving stream. Points for sludge stabilization, sewers and lift station projects normally will be based on the assigned use of the waters that receive or could receive the effluent discharge.

Use and Classification	Points
Outstanding national resource waters	50
High quality waters	40
High quality resource waters	20
Class A1 waters	50
Class A2 waters	45
Class A3 waters	45
Class C waters	40
Class B (CW1) waters	50
Class B (CW2) waters	30
Class B (WW) waters	30
Class B (LW) waters	35
Class B (LR) waters	25

*b. Water quality of receiving waters.* This category addresses the quality of water in the receiving stream and whether or not the water has been designated as impaired for some uses. Bodies of water that are impaired by pollutants are identified as Section 303(d) waters. The Section 303(d) list of waters also identifies probable pollutant source categories for these impairments. Projects that primarily impact these waters are awarded points if the water body that receives or could receive the wastewater discharge is included on the Section 303(d) list and the probable pollutant source is a point source. Waters are also identified in the Section 305(b) report on their use attainment status. Projects that primarily impact these waters are awarded points depending on the use impairment identified for the water body that receives or could receive the wastewater discharge. If no use impairment is identified indicating the water was not assessed, the partially supporting status points will be awarded. Points will be awarded for both sections and then totaled for this category.

Indication of water quality	Points
A	
Section 303(d) listed water	
High rating for total maximum daily load (TMDL) development	45
Medium rating for TMDL development	35
Low rating for TMDL development	25
B	
Section 305(b) status	
Fully supporting	10

Indication of water quality	Points
Fully supporting/threatened	15
Partially supporting	20
Not supporting	30
Not assessed	20

*c. Compliance status.* This category addresses the compliance status of the proposed project. To provide an incentive for municipal facilities to maintain compliance, more points are given to projects that are in compliance with their NPDES discharge permit when they apply for a loan. Projects that are not in compliance at the time of application, have bypasses, have received administrative orders from the department or have been referred for legal action are given fewer points than a project in compliance. Unsewered community projects will be considered to be in compliance if they are taking action to eliminate public health problems or water quality problems, or both, prior to formal action by the department.

Compliance Status	Points
Has been referred to Iowa attorney general for discharge violation	30
Received administrative order from DNR for discharge violations	25
Compliance schedule in NPDES permit—existing discharge requirements are not being met	20
Compliance schedule in NPDES permit—new discharge requirements are being imposed	40
Bypassing has been reported in previous 12 months	15
Discharge has met all NPDES permit requirements for 24 months (at time of application)	50
Unsewered community and has initiated project on its own	50
Unsewered community and has received an administrative order from DNR	25

*d. Project benefit.* This category incorporates several factors including type of project and the relative level of the impact on public health and the environment. Points will be awarded for the primary benefit.

Project Benefits	Points
Protection of public health; corrective measures for problems that pose a clear and direct impact on human health. Examples are sewer backups into basements and sewer overflows impacting populated areas.	40
Protection of the environment; corrective measures for problems that pose a clear and direct impact on water quality and the environment. Examples are effluent violations and combined sewer overflows.	30
Prevention of the development of problems that will have an impact on public health and the environment. Examples are upgrading a treatment facility for anticipated growth and replacement of a lift station beyond design life.	20

*e. Readiness to proceed.* This category addresses overall readiness to proceed with project construction. Points can be received for reaching multiple milestones.

Project Status	Points
The project is following the permit application process outlined in department guidance.	20
The applicant has prepared the environmental information document including clearances from other agencies and has submitted the materials to the department.	10
The department and the applicant have agreed on the project schedule and design loading criteria.	10

f. *Total points.* Total points are calculated using the following formula:  
 Total Points = Use Classification + Water Quality (A) + Water Quality (B) + Compliance Status + Project Benefit + Readiness

g. *Tiebreaker.* Two or more projects may receive the same total points on the fundable list. If sufficient state revolving loan funds are not available to fund the projects, ties will be broken by determining which project has the highest score in each category in the following order:

- |  |         |
|--|---------|
| • Water Quality of Receiving Streams (A) | Highest |
| • Water Quality of Receiving Streams (B) |         |
| • Use and Classification                 | ↕       |
| • Project Benefits                       |         |
| • Compliance Status                      |         |
| • Readiness to Proceed                   | Lowest  |

**91.8(2)** Reserved.

**567—91.9(455B) Livestock water quality facilities priority rating criteria system.**

**91.9(1) Livestock water quality facilities rating system.** The livestock water quality facilities rating criteria consider the use classification of the receiving waters, water quality of the receiving waters, open feedlot plan rating and a tiebreaker. Priority ranking for the projects is based on the total points awarded for all the categories; the greater the total number of points, the higher the ranking.

a. *Use classification of receiving waters.* This category addresses the receiving water that is impacted or potentially impacted by the existing operation and that would be improved or protected by the proposed project. Points shall be awarded and shall be cumulative for all designated use classifications of the receiving stream. The manure application sites, feedlots, lagoons and basins, and manure and litter storage areas should be considered when determining the points to be awarded.

Use and Classification	Points
Outstanding national resource waters (proposed water use)	50
High quality waters	40
High quality resource waters	20
Class A1 waters	50
Class A2 waters	45
Class A3 waters	45
Class C waters	40
Class B (CW1) waters	50
Class B (CW2) waters	30
Class B (WW) waters	30
Class B (LW) waters	35
Class B (LR) waters	25

b. *Water quality of receiving waters.* This category addresses the quality of water in the receiving stream and whether or not the water has been designated as impaired for some uses. Bodies of water that are impaired by pollutants are identified as Section 303(d) waters. The Section 303(d) list of waters also identifies probable pollutant source categories for these impairments. Projects that primarily impact these waters are awarded points if the water body that receives or could receive the discharge is included on the Section 303(d) list and the probable pollutant source is a nonpoint source. Waters are also identified in the Section 305(b) report on their use attainment status. Projects that primarily impact these waters are awarded points depending on the use impairment identified for the water body that receives or could receive the discharge. If no use impairment is identified, the fully supporting status points will be awarded. Points will be awarded for both sections and then totaled for this category.

Indication of water quality	Points
<b>A</b>	
Section 303(d) listed water	
Identified as probable source or contributing to problem: Nonpoint source (if nonpoint sources are not the probable source of pollution, the following points are to be used)	100
High rating for TMDL development	90
Medium rating for TMDL development	80
Low rating for TMDL development	70
<b>B</b>	
Section 305(b) status	
Fully supporting	10
Fully supporting/threatened	20
Partially supporting	30
Not supporting	40

c. *Iowa open feedlot plan rating.* This category incorporates the rating given the animal feeding operation from the Iowa open feedlot plan.

Iowa Open Feedlot Plan Rating	Points
High	40
Medium	30
Low	20
Unranked	10

d. *Total points.* Total points are calculated using the following formula:  
 Total Points = Use and Classification + Water Quality (A) + Water Quality (B) + Iowa Open Feedlot Plan Rating

e. *Tiebreaker.* Two or more projects may receive the same total priority points. If sufficient state revolving loan funds are not available to fund the projects, ties will be broken by determining which project has the highest score in each category in the following order:

- Water Quality of Receiving Streams (A) Highest
  - Water Quality of Receiving Streams (B)
  - Use and Classification
  - Iowa Open Feedlot Plan Rating Lowest
-

91.9(2) Reserved.

**567—91.10(455B) Local water protection projects rating system.**

**91.10(1) Local water protection projects rating criteria.** The local water protection projects rating criteria consider the use classification of the receiving waters, water quality of the receiving waters, the watershed management planning status in the watershed where the project is located and a tiebreaker. Priority ranking for the projects is based on the total points awarded for all the categories. The greater total number of points, the higher the ranking.

*a. Use classification of receiving waters.* This category addresses the receiving water use classification that would be improved or protected by the proposed project. Points shall be awarded and shall be cumulative for all designated use classifications of the receiving stream.

Use and Classification	Points
Outstanding national resource waters (proposed water use)	50
High quality waters	40
High quality resource waters	20
Class A1 waters	50
Class A2 waters	45
Class A3 waters	45
Class C waters	40
Class B (CW1) waters	50
Class B (CW2) waters	30
Class B (WW) waters	30
Class B (LW) waters	35
Class B (LR) waters	25

*b. Water quality of receiving waters.* This category addresses the quality of water in the receiving stream and whether or not the water has been designated as impaired for some uses. Bodies of water that are impaired by pollutants are identified as Section 303(d) waters. The Section 303(d) list of waters also identifies probable pollutant source categories for these impairments. Projects that primarily impact these waters are awarded points if the water body that receives or could receive the discharge is included on the Section 303(d) list and the probable pollutant source is a nonpoint source. Waters are also identified in the Section 305(b) report on their use attainment status. Projects that primarily impact these waters are awarded points depending on the use impairment identified for the water body that receives or could receive the discharge. If no use impairment is identified, the fully supporting status points will be awarded. Points will be awarded for both sections and then totaled for this category.

Indication of water quality	Points
A	
Section 303(d) listed water	
Identified as probable source or contributing to problem: Nonpoint source (if nonpoint sources are not the probable source of pollution, the following points are to be used)	100
High rating for TMDL development	90
Medium rating for TMDL development	80
Low rating for TMDL development	70
B	
Section 305(b) status	
Fully supporting	10

Use and Classification	Points
Class C waters	40
Class B (CW1) waters	50
Class B (CW2) waters	30
Class B (WW) waters	30
Class B (LW) waters	35
Class B (LR) waters	25

*b. Water quality of receiving waters.* This category addresses the quality of water in the receiving stream and whether or not the water has been designated as impaired for some uses. Bodies of water that are impaired by pollutants are identified as Section 303(d) waters. The Section 303(d) list of waters also identifies probable pollutant source categories for these impairments. Projects that primarily impact these waters are awarded points if the water body that receives or could receive the discharge is included on the Section 303(d) list and the probable pollutant source is a nonpoint source. Waters are also identified in the Section 305(b) report on their use attainment status. Projects that primarily impact these waters are awarded points depending on the use impairment identified for the water body that receives or could receive the discharge. If no use impairment is identified, the fully supporting status points will be awarded. Points will be awarded for both sections and then totaled for this category.

Indication of water quality	Points
A	
Section 303(d) listed water	
Identified as probable source or contributing to problem: Nonpoint source (if nonpoint sources are not the probable source of pollution, the following points are to be used)	100
High rating for TMDL development	90
Medium rating for TMDL development	80
Low rating for TMDL development	70
B	
Section 305(b) status	
Fully supporting	10
Fully supporting/threatened	20
Partially supporting	30
Not supporting	40

*c. Project benefit.* This category incorporates several factors including type of project and the relative level of the impact on the environment. Points for only one benefit shall be awarded: when a project has more than one significant benefit, the benefit with the highest point value shall be used.

Benefits	Points
Implementation of TMDL plan	40
Eliminate pollution source discharging to:	
● Cold water stream	40
● Publicly owned lake	38
● Class C drinking waters	35
● Other surface waters	28
● Disinfection of wastewater	12
Eliminate pollutant source to groundwater	37
Eliminate or reduce public health problem	25

CHAPTER 92  
CLEAN WATER STATE REVOLVING FUND

**567—92.1(455B) Statutory authority.** The authority for the Iowa department of natural resources to administer the clean water state revolving fund (CWSRF) to assist in the construction of wastewater treatment facilities and water pollution control projects is provided by Iowa Code sections 455B.291 to 455B.299.

**567—92.2(455B) Scope of title.** The department has jurisdiction over the surface water and groundwater of the state to prevent, abate and control pollution. As a part of that general responsibility, the department and the Iowa finance authority are jointly delegated the administration of: (1) the clean water state revolving fund (CWSRF) to assist in water pollution prevention and abatement and water quality protection projects pursuant to the Clean Water Act, and (2) the drinking water facilities revolving loan fund (DWSRF) described in 567—Chapter 44. A project must comply with this chapter to be eligible for a CWSRF loan. This chapter provides the general rules of practice for the department's administration of the CWSRF program, including the criteria for loan eligibility, and the general project and program administration rules. Definitions provided in 567—Chapter 90 apply to this chapter.

Section 603(c) of Title VI of the Clean Water Act allows the use of state revolving funds to assist municipalities to construct publicly owned treatment works and to implement a nonpoint source pollution management plan as provided for in Section 319 of the Clean Water Act. Nonpoint source water quality programs are described in 567—Chapter 93.

Water pollution control projects that provide the best water quality improvements or protection based on the rating system and are ready to proceed are to be funded. This chapter provides for the general rules of practice for the department's administration of the CWSRF program based on this principle.

**567—92.3** Reserved.

**567—92.4(455B) General policy.** Loans of up to 100 percent of the eligible costs of water pollution control projects will be made available pursuant to the requirements of these rules, rules established by the authority, and Title VI of the Clean Water Act.

**92.4(1) Administration.** The department, in conjunction with the authority, has been delegated the responsibility of administering the CWSRF program and the DWSRF program described in 567—Chapter 44. The director will coordinate with the authority under the terms of an interagency agreement entered into pursuant to Iowa Code chapter 28E.

The department may enter into agreements with other private, public or quasi-public agencies to assist with the implementation of the CWSRF program.

**92.4(2) Set-aside funding.** Consistent with the pollution sources identified in the department's nonpoint source management program, set-asides will be used to target assistance to nonpoint source activities that are contributors of pollutants to Iowa's waters. Set-asides will be used for assisting construction of water pollution control facilities for livestock operations, local water protection projects, onsite wastewater management systems and general nonpoint source projects. The amount for each set-aside will be determined in the intended use plan.

**92.4(3) Decisions.** Decisions of department staff are final unless the recipient files a written petition for review with the director. The petition must be addressed to the director and clearly state the decision in question and the basis for the requested review. The recipient has the right to appeal a decision to the commission pursuant to Iowa Code chapter 17A or to the state court.

**92.4(4)** Reserved.

**92.4(5) Fundable project determination.** Projects or activities qualifying for CWSRF assistance shall be identified in the IUP. Only those projects or activities on the state project priority list developed pursuant to 567—Chapter 91 may be considered fundable. CWSRF assistance will be available to point source projects in priority order. Funding for nonpoint source activities will be established in the intended use plan.

**92.4(6) State capitalization grant.** The Clean Water Act authorizes the Environmental Protection Agency (EPA) to offer capitalization grants to states for use in a revolving fund loan program. A portion of the capitalization grant, as allowed by Title VI of the Clean Water Act, will be used to administer the CWSRF program.

**92.4(7) Federal funding coordination.** Projects may use CWSRF funds to complete the financing projects partially funded by other federal programs such as Environmental Quality Incentives Program and Community Development Block Grants. Projects that have received a federal construction grant under provisions of the Clean Water Act are not eligible to receive a loan for the nonfederal share of the project.

**567—92.5** Reserved.

**567—92.6(455B) Intended use plan management.**

**92.6(1) Intended use plan preparation.**

*a. Development.* The department shall prepare an intended use plan (IUP) at least annually and on a quarterly basis as needed. The IUP will be subject to a public hearing and approved by the commission.

*b. Notification.* A public hearing process is part of the IUP adoption process to provide opportunity for public participation. Notice is published in a newspaper of general circulation prior to the public hearing, and an announcement is released to television and radio stations. A general notice is also made to all applicants and interested agencies and organizations. The notice explains the purpose of the IUP and how additional information may be obtained.

*c. Comments.* Comments regarding the proposed IUP will be accepted during the notice period, at the public hearing and in writing for five days following the public hearing. After evaluation of all pertinent comments, the IUP will be revised, if necessary, and recommended for approval by the environmental protection commission. Subsequent approval by the EPC will establish the IUP to be used for loan assistance.

**92.6(2) Contents.** The IUP will identify the anticipated uses of loan funds available for that fiscal year and will include the following:

*a. State project priority list.* The state project priority list contains the projects and set-asides eligible for CWSRF loans. The state project priority list will include, for point source projects, the name of the eligible applicant, any applicable NPDES permit number and the projected amount of loan assistance. For nonpoint source set-asides, the IUP will include the name of the program and amount set aside.

*b. Fundable list.* The fundable list includes projects scheduled for loans from funds available during the fiscal year. Projects will be considered in priority order for placement on the fundable list. Subsequent segments of a project which has been awarded financial assistance for Category I and Category II needs will be placed on the fundable list ahead of other new projects whose schedules also would allow funding during the fiscal year. The fundable lists of point source projects and nonpoint source set-asides shall be listed in priority order and shall include a schedule of estimated disbursement of funds, preliminary identification of point source projects that may undergo an environmental impact statement, and the need category(ies) of the projects. The department will consider the following in developing the list of fundable projects for the intended use plan:

- (1) How the project conforms to the short- and long-term goals of the CWSRF;
- (2) The priority rating of the point source project;
- (3) Whether a point source project will be ready to proceed on a schedule consistent with time requirements for outlay of funds;
- (4) Whether the proposed project addresses the need upon which the eligible entity's priority is based;
- (5) The eligible entity's financial capability to service the loan, to provide operation and maintenance, to provide replacement reserves, and, if required, to provide debt service reserves;
- (6) The eligible entity's statement of willingness to accept all loan terms and conditions;

(7) The funds available, department priorities and the administrative capacity of the department; and

(8) The applicant's conformance to process guidelines provided by the department.

*c. Contingency list.* A contingency list will be included so that point source projects on the contingency list could become fundable should a fundable project not proceed in a timely manner.

*d. Goals.* The IUP will include the long- and short-term goals of the CWSRF.

*e. Supported activities.* The IUP will include information on the types of activities to be supported by the CWSRF. The IUP will identify requests for planning and design loans and funds to be directed to the nonpoint source set-asides to implement Iowa's nonpoint source management program.

*f. Assurances.* The IUP will include assurances and specific proposals on how the state intends to meet requirements of the following sections of the Clean Water Act:

(1) 602(a) Environmental reviews;

(2) 602(b)(3) The state will agree to enter binding commitments equal to at least 120 percent of each quarterly federal capitalization grant payment within one year after receipt; and

(3) 602(b)(4) Certify that all funds in the CWSRF will be expended in an expeditious and timely manner.

*g. Rates, terms and fees.* Loan interest rates and terms, interest rates and terms for linked deposit programs, and loan origination fees and servicing fees will be established in the IUP.

*h. Amendments.* The IUP will include the method to be used by the department if the IUP is amended.

*i. Consistency with water quality management plans.* Projects must be consistent with any Iowa water quality management plans in order to be considered for inclusion on the state project priority list.

**92.6(3) Priority for loan assistance.** A fundable project must be technically and administratively complete. A community is responsible for complying with the technical procedures for facility planning and preparation of plans and specifications, including department approval of those documents.

**92.6(4) Annual update.** The state project priority list will be reviewed at least annually or quarterly as needed to update schedules and project cost estimates.

**92.6(5) Notification of revisions.** The department will notify, in writing, all communities that are removed from or placed on an approved fundable list based on revisions.

**92.6(6) Special considerations.** Exemptions to the point source rating criteria may be considered by the department, and funding variances may be granted by the commission for projects that have unique or unusual circumstances but that do not logically fit into the criteria. The commission may grant interest rate reductions or other favorable loan incentives to applicants that sponsor a project that improves impaired waters or restores the physical, chemical or biological integrity of receiving waters impacted by the wastewater treatment facility. Exemptions to the nonpoint source rating criteria may be considered by the department, and funding variances may be granted by the commission for projects that have unique or unusual circumstances which may not logically fit the criteria and are consistent with the short- or long-term goals of the IUP. Examples of projects that may qualify for exemptions and variances are projects targeted to improve impaired waters or projects where the purchase of land or conservation easements by conservation agencies is targeted to improve impaired waters.

### **567—92.7(455B) Point source project procedures.**

**92.7(1) Application forms.** An applicant may request an application package from the department. The applicant shall complete the application for placement on the IUP and shall provide documentation on the project. Forms may be obtained from the Environmental Services Division, Iowa Department of Natural Resources, Henry A. Wallace Building, 502 E. Ninth Street, Des Moines, Iowa 50319-0034. Forms may also be downloaded from [www.iowasrf.com](http://www.iowasrf.com).

**92.7(2) General requirements.** In addition to completing the IUP application and providing documentation required in 92.7(1), the applicant must include the following items in a complete CWSRF application for point source projects:

- a. Two copies of the facility plan. The facility plan shall be certified by a professional engineer licensed to practice in Iowa and shall be in conformance with Chapter 11 of the Iowa Wastewater Facilities Design Standards (567—paragraph 64.2(9) “b”);
- b. A schedule for submission of plans and specifications for the project; and
- c. A project construction schedule.

**92.7(3) Timing.**

- a. All applications received by the department for eligible projects will be given a score using the rating criteria in 567—Chapter 91 and will be placed on the state project priority list. Applications may be submitted on an ongoing basis.
- b. Applications received after the drafting of the IUP will not be placed on the state project priority list but will be considered for loan assistance when the next IUP is prepared.

**92.7(4) Project initiation conference.** The department may require the applicant or the applicant’s representative to meet at a location designated by the department. The eligible applicant’s official representative (and usually the applicant’s consultant) will meet with the department to discuss:

- a. CWSRF program policies, procedures, and guidelines;
- b. Allowable costs;
- c. Wastewater treatment alternatives and technologies;
- d. Environmental impacts and review considerations;
- e. Public participation;
- f. Scheduling; and
- g. Other information as needed.

**92.7(5) Review criteria for point source projects.** The department shall review CWSRF applications from eligible applicants and verify the following items:

- a. The project is on the state project priority list;
- b. The applicant has prepared an adequate facility plan report;
- c. The project will be in conformance with any applicable areawide water quality management plans;
- d. The applicant has adopted or will adopt an acceptable user charge system;
- e. The applicant has demonstrated its ability to provide the necessary legal, institutional, managerial and financial capability to ensure adequate construction, operation and maintenance. If the department has reasonable grounds to believe that an applicant’s wastewater treatment facilities are not viable, the department may require the applicant to submit management and financial plans as prescribed in Iowa Code section 455B.174; and
- f. The applicant has provided an acceptable project schedule for project initiation and completion.

**92.7(6) Allowable and unallowable costs.** Allowable costs shall be limited to those eligible costs deemed necessary, reasonable, and directly related to the efficient completion of the project. Unallowable costs include the following:

- a. Cost of the nonfederal share of any project funded by an EPA grant under the provisions of the Clean Water Act;
- b. Cost of service lines and in-house plumbing;
- c. Administrative costs of the recipient;
- d. Purchase of vehicles and tools;
- e. Land purchase and easement or rights-of-way costs;
- f. Pretreatment program development costs unless required by federal regulations; and
- g. Operation and maintenance costs.

**92.7(7) Audit and inspection.** The recipient shall provide access at all times for the department, the authority, the state auditor, and the U.S. EPA Office of the Inspector General to all project records and documents for inspection and audit purposes for a period of three years after the date of last loan payment. The same access to the project site(s) shall be provided for inspection purposes.

**92.7(8) Cross-cutting laws.** Other federal and state statutes and programs may affect a CWSRF project.

**567—92.8(455B) Point source project requirements.** All wastewater treatment system projects receiving assistance from the CWSRF which entered into binding loan commitments on or after October 1, 1994, and did not initiate construction of the projects in whole or in part prior to October 1, 1994, shall meet the following requirements:

**92.8(1) Planning.** The planning phase of a project consists of those necessary plans and studies which directly relate to facilities needed to comply with enforceable requirements of the Clean Water Act and state statutes. This phase consists of a systematic evaluation of alternatives that are feasible considering the unique demographic, topographic, hydrologic, and institutional characteristics of the planning area. Facilities planning must support selection of the proposed alternative. The planning phase must include the following:

*a. Facility plan.* The facility plan must contain a description of the proposed project and the complete system of which it is a part. The facility plan must be prepared in accordance with Chapter 11 of the Iowa Wastewater Facilities Design Standards and meet the applicable provisions of this subrule.

*b. Environmental review.* Loan recipients shall conduct environmental review of projects using procedures in 40 CFR Part 6, July 1, 2002, as a part of facility planning. The applicant should work with the department as early as possible in the facilities planning process to determine if the project qualifies for a categorical exclusion from 40 CFR Part 6 requirements, or whether a finding of no significant impact or an environmental impact statement is required. In conjunction with the facility planning process as described in 40 CFR 35.2030(c), July 1, 2002, a potential applicant may request formal determination under 40 CFR Part 6. All of 40 CFR Part 6, July 1, 2002, pertaining to Procedures for Implementing the Requirements of the Council on Environmental Quality of the National Environmental Policy Act, is hereby adopted by reference and incorporated herein. However, all references to the U.S. Environmental Protection Agency as performing acts or reviews shall be substituted with references to the department for the purposes of this chapter.

**92.8(2) Point source project design and construction.** The project design and construction phase must include the following:

*a. Recipient capability.* The recipient must demonstrate to the department that it has the legal, institutional, managerial and financial capability to ensure adequate construction, operation and maintenance of treatment works.

*b. Minority business enterprise/women's business enterprise (MBE/WBE).* The recipient must comply with requirements of MBE/WBE participation as found in 40 CFR 31.36(e), July 1, 2002. The director will negotiate with the EPA regional administrator to determine the overall "fair share" objective for CWSRF loan-assisted projects. The recipient shall take the following affirmative steps to ensure that small, minority, and women's business enterprises are utilized where possible as sources of supplies, construction, and services:

- (1) Placing qualified small, minority, and women's business enterprises on solicitation lists;
- (2) Ensuring that small, minority, and women's business enterprises are solicited whenever they are potential sources;
- (3) Dividing total requirements, when economically feasible, into smaller tasks or quantities to permit maximum participation of small, minority, and women's business enterprises;
- (4) Establishing delivery schedules, where requirements of the work allow, which encourage participation by small, minority, and women's business enterprises;
- (5) Using the services and assistance of the Small Business Administration and the Minority Business Development Agency of the U.S. Department of Commerce; and
- (6) Requiring prime contractors to take the affirmative steps listed above when awarding subcontracts.

*c. Site.* When it is necessary that real property be acquired as part of the project and within the project period, the recipient may be required to submit documentation of the acquisition, including the legal description, the date the property was acquired, and an appraisal report by a qualified appraiser. If required, submittal to the department is to occur prior to contract award.

*d. Project changes.* Prior to the final loan disbursement, the recipient must submit to the department for approval all modifications to the project including changes to the plans and specifications

and changes in the contract (change orders). The recipient is responsible for any costs or actions necessary should the changes be implemented prior to departmental review and subsequently found to be unapprovable.

*e. State inspections.* Personnel of the department shall have the right to examine all construction aspects of the project, including materials and equipment delivered and stored on site for use on the project.

These rules are intended to implement Iowa Code sections 455B.291 to 455B.299.

CHAPTER 93  
NONPOINT SOURCE POLLUTION CONTROL SET-ASIDE PROGRAMS

**567—93.1(455B,466) Statutory authority.** The authority for the Iowa department of natural resources to administer the clean water state revolving fund (CWSRF) to assist in the construction of wastewater treatment facilities and water pollution control projects is provided by Iowa Code sections 455B.291 to 455B.299.

**567—93.2(455B,466) Scope of title.** The department has jurisdiction over the surface water and groundwater of the state to prevent, abate and control pollution. As part of that general responsibility, the department and the Iowa finance authority are jointly delegated the administration of the CWSRF. Definitions provided in 567—Chapter 90 apply to this chapter.

**567—93.3(455B,466) Purpose.** Iowa's nonpoint source management plan identifies several sources of nonpoint source pollutants. In addition to assisting publicly owned treatment works, it is the intent of the commission to set aside a portion of the CWSRF for the purpose of making low-interest loans for nonpoint source water pollution control projects. Four separate set-asides are identified as follows:

**93.3(1) Onsite wastewater treatment and disposal systems fund.** The purpose of this fund is to assist rural homeowners to rehabilitate or improve existing onsite wastewater treatment and disposal systems.

**93.3(2) Livestock water quality facilities set-aside.** The purpose of the set-aside is to assist owners of existing animal feeding operations to meet state and federal requirements or to prevent, minimize or eliminate water pollution. Projects may be selected using the rating and ranking process in 567—Chapter 91.

**93.3(3) Local water protection projects set-aside.** The purpose of the set-aside is to assist local water protection projects that will provide water quality improvement or protection. Projects may be selected using the rating and ranking process in 567—Chapter 91.

**93.3(4) General nonpoint source project assistance set-aside.** The purpose of the set-aside is to assist general nonpoint source projects that will provide water quality improvements or water quality protection. This set-aside allows for funding of the water quality protection portion of nontraditional projects. Projects may be selected using the rating and ranking process in 567—Chapter 91.

**567—93.4(455B,466) Onsite wastewater system assistance program.**

**93.4(1) Onsite wastewater assistance fund.** The onsite wastewater assistance fund (OSWAF) is a separate fund within the state treasury. The OSWAF is a revolving loan fund used to provide low-interest loans to homeowners for improving and rehabilitating onsite wastewater treatment systems and consists of two accounts: a financing account and an administration account. Funds deposited in the OSWAF consist of state-appropriated funds, annual capitalization grants provided under Title VI of the federal Clean Water Act, equity fund moneys, loan repayments, interest accrued on funds, and all other moneys specifically designated for use in the OSWAF. The amount to be set aside for the OSWAF is identified in the annual intended use plan.

**93.4(2) Eligibility and restrictions for participation in the onsite wastewater treatment system assistance program.** Assistance under the onsite wastewater treatment system assistance program shall be in the form of low-interest loans made by participating lending institutions through a linked deposit arrangement with the CWSRF. The following eligibility conditions and restrictions apply to such assistance.

*a. Location restrictions.* Assistance is available for the improvement or rehabilitation of onsite wastewater treatment systems located outside of corporate boundaries. Assistance cannot be provided for improvements to or rehabilitation of onsite systems located within incorporated limits.

*b. County eligibility.* Assistance shall be provided only for systems located in counties that have an environmental health program meeting minimum standards for onsite sewage systems. The department shall maintain for public record a list of all counties meeting such standards. At a minimum, counties must carry out statutory responsibilities as provided in Iowa Code section 455B.172 as well as provide

for the following measures. The department will adopt guidance in cooperation with county boards of health to evaluate the adequacy of county programs.

(1) Proper site evaluations to determine the appropriate design and size of onsite wastewater treatment systems prior to permitting and installation.

(2) Inspection of onsite systems by a qualified inspector at the time of renovation or construction.

(3) Enforcement of existing monitoring requirements, in accordance with rule 567—69.2(455B), for existing, permitted onsite systems with secondary treatment which discharge aboveground, such as those authorized by NPDES General Permit No. 4 in rule 567—64.6(455B).

(4) Assurance of regular system maintenance and monitoring for the life of the loan for those systems receiving assistance under the onsite wastewater systems assistance program.

*c. Eligible project costs.* The amount of assistance available shall be limited to the total costs deemed necessary, reasonable, and directly related to the repair, rehabilitation, or replacement of an onsite treatment system needed to meet state or local standards for onsite systems. Eligible costs include all costs directly related to the design, permitting and construction of an onsite wastewater treatment system. Eligible costs include the removal of existing structures, such as septic tanks, earth moving or any land purchases directly related to proper wastewater treatment. Eligible costs do not include additional earthwork, reseeding, replanting, or any other aesthetic improvements. Maintenance or monitoring costs are not considered eligible costs. Eligible costs must be incurred within one year of the issuance of the onsite construction permit by the county.

*d. Applicant eligibility.* Assistance is limited to applicants who meet the applicable provisions of 567—Chapter 69 and all other local provisions for the siting and construction of onsite wastewater treatment and disposal systems and who demonstrate to the satisfaction of the participating lending institution that the applicants can repay the loan.

*e. Project eligibility.* Assistance can be provided only for the repair, rehabilitation, or replacement of existing onsite wastewater treatment and distribution systems. Assistance is not available for new housing. A system serving an equivalent of 16 individuals or more (with an average daily flow of 1500 gallons or more) is considered a public system (requiring permitting by the DNR) and is not eligible under this program.

*f. Property eligibility.* As a qualification of eligibility for the loan program, the department may set a limit on the assessed valuation of the dwelling or building served by the onsite wastewater system needing renovation.

**93.4(3) Participating lending institutions.** Any lending institution as defined in rule 90.2(455B) is eligible to participate in the program by signing an agreement with the department or its financial agent. The agreement will contain the responsibilities of the department to the participating lending institution and vice versa as well as relevant loan conditions and restrictions. The department will provide the format of the agreement. The department or its financial agent will maintain for public record a list of participating lending institutions.

*a. Responsibilities of the department to participating lending institutions.* For participating lending institutions, the department or its financial agent will:

(1) Provide materials such as pamphlets, brochures, loan application forms and other relevant materials necessary to inform applicants about the program and to assist lenders in completing the loan process.

(2) Ensure the timely transfer of funds in accordance with the terms and conditions set forth in the agreement between the department and the lending institution.

*b. Responsibilities of participating lending institutions to the department or its financial agent.* The responsibilities of participating lending institutions include:

(1) Making a determination of whether a loan can be secured.

(2) Rendering a judgment on the applicant's ability to repay the loan.

(3) Approving or denying the loan application. The lending institution may approve a loan agreement when it is determined that the application complies with the requirements of this chapter. The loan agreement between the applicant and the lending institution shall be a binding obligation under Iowa law and shall include loan terms and conditions for the loan period. The state and the department

are not liable to an eligible lending institution in any manner for payment of the principal or interest on the loan to an eligible borrower.

(4) Notifying the department or its financial agent of a loan to reserve funds for the onsite system improvements funded by the loan.

(5) Notifying the department or its financial agent when the onsite system improvements funded by the loan are completed and inspected. The department or its financial agent will then make a linked deposit equal to the amount of the loan in the form of a certificate of deposit to the lending institution. The lending institution will then service the loan with the linked deposit.

(6) Notifying the department, after a reasonable attempt has been made to collect delinquent payments, when a loan has been in default for 90 days.

**93.4(4)** *Onsite wastewater assistance fund financial agent.* To assist the department in administering the onsite wastewater treatment system assistance program, the department may appoint a financial agent responsible for managing the funds in the OSWAF. The responsibilities of the financial agent shall be provided in an agreement between the department and the agent. The responsibilities of the financial agent may include:

*a.* Developing a management plan for the OSWAF. The management plan shall determine how the fund will be managed to provide the lowest interest loans while maintaining financial security and ensuring the perpetuity of the fund. Included in the management plan shall be the methods and terms for transfer of funds from the OSWAF to participating lending institutions and repayment of funds thereto.

*b.* Reserving loan funds equal to the amount of the loan as each loan is approved by participating lending institutions.

*c.* Distributing funds to lending institutions as stipulated in agreements with lending institutions.

*d.* Acting as liaison between the department and the lending institutions.

*e.* Maintaining for public record a list of participating lending institutions.

*f.* Reporting financial information pertaining to the OSWAF.

**93.4(5)** *Applying for assistance.* Prior to applying for a loan from a participating lending institution, an eligible individual or entity must receive approval of the proposed improvements from the county in which the onsite wastewater treatment system is located.

*a. County requirements for individual applicants.* Applicants requesting county approval shall submit forms provided by the county which include:

(1) A description of the type and general specifications of the proposed work.

(2) Project cost estimate(s).

(3) A proposed construction schedule.

*b. County requirements for cluster system applicants.* Applicants seeking financial assistance for cluster systems using onsite technology must include with their application to the county:

(1) A description, if available, of each participating property owner's current onsite wastewater treatment system, including a discussion of existing and potential problems or failures in the current treatment scheme.

(2) An estimate of the population and number of households to be served.

(3) A rationale for the proposed design of the new treatment system.

(4) Descriptions of the management entity and program.

*c. County review.* The county shall review applications to determine if the proposed work meets the applicable provisions of 567—Chapter 69 and all other relevant local provisions for the siting and construction of onsite wastewater treatment and distribution systems. For proposed projects that meet relevant criteria, the county shall issue a permit or certificate. The county permit or certificate shall be accompanied by a cost estimate and proposed construction schedule. A county may deny an application for reasons of noncompliance with applicable state and local criteria. Written notification of the denial shall be provided to the applicant and shall state the reason(s) that the application was denied.

*d. Lender requirements for applicants.* The applicant for a loan shall submit to a participating lending institution an application form as prescribed by the department of natural resources or deemed acceptable by the department's financial agent. Also, the applicant shall include a copy of the county

permit or certificate approving the proposed project. The applicant is obligated to provide any other specific information the lender may deem necessary.

*e. Loan application processing and disbursement of funds.* The process for awarding and managing loans shall be in full accordance with the terms established by the department or its financial agent(s) and the provisions of this chapter.

(1) Loan approval or disapproval. Upon receipt of a completed loan application form with relevant information as described in 93.4(5) “d,” the participating lending institution shall either approve or deny the loan within ten working days. The lending institution shall notify the applicant of loan conditions and limitations at the time of initial application. Before acting on the loan application, the lending institution shall ensure that adequate OSWAF funds are available. If the loan is approved, the lending institution shall notify the loan applicant in writing that the loan has been approved and notify the department’s financial agent within two working days of approval of the loan application in order to reserve funds in that amount to ensure that adequate funds are available at the time of disbursement. If the loan is denied, the lending institution shall notify the loan applicant in writing, clearly stating the reasons for denial. Reasons for denial may include that funds are not available or that the applicant presents an unacceptable level of loan risk.

(2) Disbursement of funds. Upon completion of the onsite wastewater treatment system improvements, the loan applicant shall furnish the lender with copies of all bills relating to the costs of the improvements which were preapproved on the loan application as specified in 93.4(2) “c,” and certification from the county that the improvements were accomplished in accordance with the approved plans and meet relevant state and local requirements for onsite wastewater treatment systems. The loan shall be subject to the conditions and limitations provided in 93.4(5) “f.” If actual costs are less than the amount requested on the loan application, then the actual loan amount will equal those costs. The lending institution is authorized to execute a loan for a principal of up to 10 percent above the amount of the loan application if costs exceed the application amount. In this case, the loan applicant shall provide the lending institution with a written explanation for any cost overruns.

*f. Loan conditions and limitations.*

(1) Loan amount and period. The minimum loan granted under this program shall be \$2,000. The loan period shall not exceed ten years. Loans shall be made contingent on the availability of funds from the OSWAF.

(2) Number of loans. There will be no limit to the number of loans an applicant may receive. Each approved application will be handled as a new loan.

(3) Loan execution. The loan agreements to be executed by the applicant and the lending institution shall be a binding obligation under Iowa law, include conditions and terms to be effective for the loan period, and be accompanied by evidence of satisfactory security, legality, and enforceability.

(4) Eligible costs. All costs directly related to the design, permitting, construction, and financing of the onsite wastewater treatment system are eligible for loans. Eligible costs include the removal of existing structures, such as abandoned septic tanks, earth moving or any land purchases directly related to proper wastewater treatment. Eligible costs do not include additional earthwork, reseeding, replanting, or any other aesthetic improvements. Maintenance or monitoring costs will not be allowed as part of the loan. Eligible costs must be incurred within one year of the issuance of the septic construction permit.

(5) Recipient record keeping. The loan recipient shall maintain adequate records that document all costs associated with the project. The loan recipient shall agree to provide access to these records to the department, the state auditor, the EPA SRF project manager, and the Office of the Inspector General at the Environmental Protection Agency. The loan recipient shall retain all project records and documents for inspection and audit purposes for a period of three years from the date of the final loan payment.

(6) Site access. The loan recipient shall agree to provide the department and the administrative authority access to the construction site to verify that the loan was used for the purpose intended and that the constructed works meet applicable state and local environmental requirements and ordinances for onsite wastewater treatment systems. The loan recipient also shall agree to provide access to the onsite system for periodic monitoring by the department and administrative authority, at times mutually agreed upon with the system owner, for the duration of the loan.

(7) Loan termination. The department or its financial agent(s) shall have the right to terminate any loan when terms of the agreement have been violated.

(8) Repayment. Loans shall be repaid in accordance with the terms and conditions of the executed loan agreement. Repayment of the loan must begin no later than 30 days after the date specified in the selected repayment schedule.

(9) Interest. The loan interest rate shall not exceed 3 percent per year. The actual interest rate charged shall be in accordance with the participating lending institution's agreement with the department or its financial agent.

(10) Prepayment. Prepayment of the principal in whole or in part shall be allowed without penalty.

(11) Property transfer. In the event of a property transfer from the original landowner who secured the loan to another person or entity during the repayment period specified in the loan agreement, the balance of the loan shall be due in full.

(12) Loan delinquency. Failure of the loan recipient to repay the loan in accordance with the schedule contained in the loan agreement will result in the loan's being declared in default. For a loan delinquent more than 90 days, the interest rate shall accelerate immediately to the current legal usury limit, shall be applied to the entire unpaid principal, and shall be prorated for the period for which the installment is delinquent.

**93.4(6) Rectification.** Failure of an onsite wastewater treatment system to conform to approved plans and specifications or failure of a loan recipient to comply with the requirements of 567—Chapter 69 constitutes grounds for the administrative authority to withhold authorization of loan disbursements to the loan recipient. The loan recipient is responsible for ensuring that the identified problem is rectified. Once the deficiency is corrected, the loan funds can be released.

**93.4(7) Disputes with the administrative authority.** A person or entity that disagrees with the withholding of loan funds may request a formal review of the action. The person or entity must submit a request for review in writing to the director within 30 days of the date of notification action.

**93.4(8) Priority allocation of funds and intended use plan.** The department shall, on an annual basis, prepare a plan describing the amount of funding available for loans under the program for the coming state fiscal year. The plan shall also identify those counties qualified to participate in the program and provide an estimate of the loan funds needed in those counties within the coming year. To the extent that the pool of funds available for lending involves funds controlled by Title VI of the federal Clean Water Act, this plan shall be incorporated into the annual intended use plan authorized in 567—Chapter 92.

**93.4(9) Targeted assistance.** The department may set aside a portion of the annual available funds identified in the IUP for financing onsite wastewater treatment systems in targeted areas. Such targeted areas may include impaired watersheds, high-density housing areas, agricultural drainage areas, or other environmentally sensitive or degraded areas where the repair and rehabilitation of onsite wastewater treatment systems are needed to preserve and protect water quality. The annual intended use plan shall specify the need for targeted assistance, the areas covered, and the estimate of funds needed to address the water quality problems.

#### **567—93.5(455B) Livestock water quality facilities requirements.**

**93.5(1) Livestock water quality facilities assistance.** Assistance under the CWSRF shall be in the form of low-interest loans made by participating lending institutions or in other manners as specified in an agreement with a pass-through loan recipient. The following eligibility conditions and restrictions for participation apply to such assistance.

*a. Location preferences.* Livestock water quality facilities located in watersheds with Section 303(d) waters or waters determined to be impaired in the Section 305(b) report will be given a higher priority for funding. See 567—91.9(455B).

*b. Eligible project costs.* The amount of assistance available shall be limited to the total costs deemed necessary, reasonable and directly related to the facilities required to provide water pollution control as required by the department or to prevent, minimize or eliminate water pollution.

*c. Applicant eligibility.* Assistance is limited to livestock producers operating animal feeding operations that are eligible to receive assistance from the state revolving fund according to current federal laws and regulations.

NOTE: Current federal laws and rules as of February 2007 do not allow assistance for concentrated animal feeding operations required to have a National Pollutant Discharge Elimination System permit or assistance for animal feeding operations that will become concentrated animal feeding operations required to have a National Pollutant Discharge Elimination System permit as a result of the project.

Loans will be made only to livestock producers that are operators of record and have legal control of the property containing the animal feeding operation for the duration of the loan.

*d. Project eligibility.* The water pollution control facilities considered eligible for assistance include: lagoons; waste treatment facilities and equipment, including but not limited to land on which waste facilities will be constructed; waste storage or holding structures; composting facilities and equipment; pipes, pumps, and agitation equipment used to move and manage manure; fencing around lagoons and other waste storage structures; water systems used to flush water in waste treatment systems; irrigation systems used for applying liquid wastes to the land; tank wagons, manure spreaders, tractor blades used for scraping waste and other waste collection and processing equipment (including tank trucks, loaders, skid loaders, and waste irrigation equipment); portions of feeding floors and loafing areas used for waste collection and storage; vegetative filters, filter strips, water and sediment control basins, contour buffer strips and diversions used to reduce pollution potential from livestock facilities or land disposal areas; fencing and cross fencing along with any associated watering facilities used as part of managed grazing systems; and other similar structures, equipment or water pollution abatement activities as may be found in manure management plans that fit the requirements of 567—65.17(459), in nutrient management plans, or in comprehensive nutrient management plans as defined by the USDA Natural Resources Conservation Service, provided that portions of the foregoing (except water systems used for flush water in waste treatment systems and composters) located within a poultry house, milk parlor or hog confinement facility (such as a slatted floor) shall be excluded. Assistance for development of manure management plans, nutrient management plans, and comprehensive nutrient management plans is eligible. Assistance may be available for the above-mentioned practices when a replacement animal feeding operation will eliminate an existing animal feeding operation in order to prevent a potential water quality impairment, mitigate a documented impairment, or eliminate a potential or documented pollutant source from a watershed. Assistance may be available for confinement feeding operation structures, including roofed manure storage facilities, in which manure is stored exclusively in a dry form if:

(1) An existing open feedlot operation is completely replaced by confinement feeding operation structures which store manure exclusively in dry form; or

(2) An existing animal feeding operation is expanded by the addition of confinement feeding operation structures which store manure exclusively in dry form, and manure controls meeting the requirements of 567—Chapter 65 are installed or documented for the existing animal feeding operation.

**93.5(2)** *Applying for assistance.* Application for project approval shall be made on forms provided by the department or its agent.

**93.5(3)** *State review and approval.* Prior to receiving assistance, a livestock producer shall submit to the department a description of facilities, equipment or preparation or updating of manure management, nutrient management or comprehensive nutrient management plans to be financed and documentation of project approval as determined by the department and detailed on the project application.

**93.5(4)** *Duration of the project.* The project is to be maintained, kept in place or operated as proposed for the life of the loan.

**93.5(5)** *Manure management plan required.* The livestock producer shall have a manure management plan that fits the requirements of 567—65.17(459), a nutrient management plan, or a comprehensive nutrient management plan as defined by the USDA Natural Resources Conservation Service to be eligible for the loan or, as part of the loan, develop a manure management plan, nutrient management plan or comprehensive nutrient management plan.

**93.5(6) *Eligible costs.*** All costs directly related to the design, permitting, construction and financing of the water pollution control facilities are eligible costs. Costs for development of a manure management plan, nutrient management plan or comprehensive nutrient management plan are eligible costs. Costs for updating a manure management plan, nutrient management plan, or comprehensive nutrient management plan are eligible costs if required for the implementation of a water quality project financed through the livestock water quality facilities program.

**93.5(7) *Ineligible costs.*** Costs for development of new animal feeding operations are not eligible costs. Costs for water pollution control facilities, including design, permitting, construction or financing, that allow for the animal feeding operation to expand and become a concentrated animal feeding operation are not eligible costs. Costs for the purchase of land to be used for application of wastewater or manure are not eligible costs. Costs for operation and maintenance are not eligible costs. Refinancing of water pollution control facilities constructed prior to the implementation of this program is not an eligible cost.

**93.5(8) *Recipient record keeping.*** The loan recipient shall maintain adequate records that document all costs associated with the project. The loan recipient shall agree to provide access to these records to the department, the state auditor, the EPA SRF project manager, and the Office of the Inspector General at the Environmental Protection Agency. The loan recipient shall retain all project records and documents for inspection and audit purposes for a period of three years from the date of the final loan payment.

**93.5(9) *Site access.*** The livestock producer shall agree to provide the department and the department's agent access to the construction site to verify that the loan was used for the purpose intended and that the construction work meets the applicable state and federal requirements for animal feeding operations. The livestock producer also shall agree to provide the department periodic access to the animal feeding operation for the duration of the loan to ensure that the constructed facility is being operated and maintained as designed.

**93.5(10) *Interest rate and fees.*** The loan interest rate and loan fees shall be established annually in the clean water state revolving fund intended use plan. The loan interest rate is not to exceed the prevalent interest rate. The establishment of loan fees will take into account the administration cost of the livestock water quality facilities set-aside.

#### **567—93.6(455B) Local water protection project requirements.**

**93.6(1) *Local water protection project assistance.*** Assistance under the CWSRF shall be in the form of low-interest loans made by participating lending institutions through a linked deposit arrangement with the CWSRF. The following eligibility conditions and restrictions for participation apply to such assistance.

*a. Location preferences.* Local water protection projects to be carried out in watersheds with Section 303(d) waters, waters determined to be impaired in the Section 305(b) report, or watersheds with approved management plans or total maximum daily load implementation plans are to be given a higher priority for funding. See 567—91.10(455B).

*b. Eligible project costs.* The amount of assistance available shall be limited to the total costs deemed necessary, reasonable and directly related to the practices required to provide water quality improvements or protection as identified in an approved watershed management plan or in a total maximum daily load implementation plan prepared by the department.

*c. Applicant eligibility.* Assistance is available to any person who owns land that needs local water protection projects installed to control runoff of sediments, nutrients, pesticides or other nonpoint source pollutants into waters of the state. Loans will be made only to persons who are owners of record of the property where the local water protection projects are to be installed. Assistance is limited to livestock producers operating animal feeding operations that are eligible to receive assistance from the state revolving fund according to current federal laws and regulations.

NOTE: Current federal laws and rules as of February 2007 do not allow assistance for concentrated animal feeding operations required to have a National Pollutant Discharge Elimination System permit or assistance for animal feeding operations that will become concentrated animal feeding operations required to have a National Pollutant Discharge Elimination System permit as a result of the project.

*d. Eligible practices.* The local water protection practices that are considered eligible include, but are not limited to, composting facility, contour buffer strips, diversion, fence, field border, field windbreak, filter strip (with trees, shrubs), filter strip (waste treatment), grade stabilization structure, grassed waterway, pasture and hayland planting, planned grazing system, pond, riparian forest buffer, sediment basin, terrace, underground outlet, waste management system, waste storage facility, waste treatment lagoon, water and sediment control basin, and other practices that are shown to improve or protect water quality.

**93.6(2)** *Applying for assistance.* Application for project approval shall be made on forms provided by the department or its agent.

**93.6(3)** *Local review and approval.* Prior to receiving assistance, the applicant shall submit an application to the local soil and water conservation district. The local soil and water conservation district will evaluate the application, provide an estimated cost, and certify that the practice is compatible with state water quality goals.

**93.6(4)** *Duration of the project.* The project is to be maintained, kept in place or operated as proposed for the life span of the practice, but in no case for less than the life of the loan.

**93.6(5)** *Eligible costs.* All costs directly related to the implementation of local water protection projects approved in the memorandum of project approval are eligible costs. A local water protection project for an animal feeding operation for which the loan amount is \$50,000 or less is eligible for this set-aside on the condition that the applicant has a manure management plan approved by the department.

**93.6(6)** *Ineligible costs.* Costs for the purchase of land are not eligible costs.

**93.6(7)** *Site access.* The applicant shall agree to provide the department or the department's agent access to the project site to verify that the loan was used for the purpose intended.

#### **567—93.7(455B) General nonpoint source project requirements.**

**93.7(1)** *General nonpoint source assistance.* Assistance under the CWSRF general nonpoint source (GNS) set-aside shall be in the form of low-interest loans made directly or by participating lending institutions through a linked deposit arrangement with the CWSRF. The following eligibility conditions and restrictions for participation apply to such assistance.

*a. Location preferences.* General nonpoint source water pollution control projects will be rated according to rule 567—91.11(455B).

*b. Eligible project costs.* The amount of assistance available shall be limited to the total costs deemed necessary, reasonable and directly related to the facilities or practices required to provide water quality improvements, restoration or protection. Participation in nontraditional projects where the primary purpose is not water quality protection or improvement will be limited to the portion of the project that is directly related to water quality improvement, restoration or protection.

*c. Applicant eligibility.* Assistance is available to projects for which facilities are needed to protect, restore or improve water quality from nonpoint source pollution. Only applicants that are owners of record of the property or have long-term control of the property where the project is to be implemented are eligible. In applications where the water pollution control project is a plan or document that will direct water quality protection or improvement efforts, loans will be made to applicants that have the capacity and capability of implementing the plan and repaying the loan.

*d. Project eligibility.* Eligible general nonpoint source projects include, but are not limited to, agricultural well sealing, urban sedimentation basins, construction of wetlands and riparian lands, restoration of habitat, stream bank restoration and stabilization, remediation of underground storage tanks, remediation of aboveground storage tanks, urban storm water runoff best management practices and management facilities, sediment traps, wetland flood prevention areas, water conservation and reuse, and development of environmental management systems. Nontraditional nonpoint source projects that may have a water quality protection or improvement component include, but are not limited to, bird sanctuaries and wildlife enhancement projects, brownfield remediation, environmental insurance for brownfield remediation, vegetative plants, street sweepers and leaf removal equipment, closure of municipal landfills, salt storage sheds, sediment removal, wetland mitigation bank and education programs.

**93.7(2) *Applying for assistance.*** Applications for assistance from the GNS set-aside shall be submitted to the department at Environmental Services, Iowa Department of Natural Resources, Henry A. Wallace Building, 502 E. Ninth Street, Des Moines, Iowa 50319-0034. Application forms will be provided by the department. Applications shall include an explanation of how the water quality will be protected, improved or restored by the proposed project. Applications will be accepted on a continuous basis.

**93.7(3) *Rating and ranking.*** Using information included in the application, the department will rate and rank the projects. The department will identify the highest rated projects and provide the applicant a memorandum of approval for the proposed water pollution control project. The department will earmark the set-aside funds for the water pollution control projects to be funded. These funds will be available for six months after the IUP is approved in order for the applicant to complete the loan.

**93.7(4) *Eligible costs.*** All costs directly related to the implementation of the project approved in the memorandum of approval are eligible costs.

**93.7(5) *Ineligible costs.*** Costs for livestock water quality facilities are not eligible under this set-aside and are provided for in rule 567—93.5(455B). Costs for the purchase of land are not eligible costs unless specifically approved by the commission.

**93.7(6) *Site access.*** The recipient shall agree to provide the department and the department's agent access to the project site to verify that the loan was used for the purpose intended.

These rules are intended to implement Iowa Code sections 455B.291 to 455B.299, 466.8 and 466.9.

TITLE VIII  
SOLID WASTE MANAGEMENT  
AND DISPOSAL

CHAPTER 100

SCOPE OF TITLE — DEFINITIONS — FORMS — RULES OF PRACTICE

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—100.1(455B,455D) Scope of title.** The department has jurisdiction over the management, dumping, depositing, and disposal of solid waste by establishing standards for sanitary disposal projects and by regulating solid waste through a system of general rules and specific permits. The construction and operation of any sanitary disposal project requires a specific permit from the department.

This chapter provides general definitions applicable to this title and rules of practice, including forms, applicable to the public in the department's administration of the subject matter of this title.

Chapter 101 contains the general requirements relating to solid waste management and disposal. Chapter 102 pertains to the permits which must be obtained in order to construct and operate a sanitary disposal project. Chapter 103 details the requirements for all sanitary landfills accepting only coal combustion residue. Chapter 104 details the requirements for sanitary disposal projects with processing facilities. Chapter 105 sets forth the requirements for the planning and operation of all composting facilities. Chapter 106 pertains to design and operating requirements for recycling operations. Chapter 107 sets forth the rules pertaining to beverage container deposits and approval of redemption centers. Chapter 108 pertains to the reuse of solid waste. Chapter 109 contains the procedure for the assessment and collection of fees for the disposal of solid waste at sanitary landfills. Chapter 110 contains design, construction, and operation standards for solid waste management facilities. Chapter 112 details the requirements for all sanitary landfills accepting only biosolids. Chapter 113 details the requirements for all sanitary landfills accepting municipal solid waste. Chapter 114 details the requirements for all sanitary landfills accepting only construction and demolition wastes. Chapter 115 details the requirements for all sanitary landfills that are industrial waste monofills. Chapter 117 details the requirements for outdoor storage and processing of waste tires. Chapter 118 governs removal and disposal of PCBs from white goods. Chapter 119 provides requirements for collection and disposal of waste oil. Title VIII, Chapters 120 and 121, govern land application of sludge and other solid waste.

This rule is intended to implement Iowa Code section 455B.304 and chapter 455D.

**567—100.2(455B,455D) Definitions.** For the purpose of this title, the following terms shall have the meaning indicated in this chapter. The definitions set out in Iowa Code section 455B.301 shall be considered to be incorporated verbatim in these rules.

*"Airport"* means public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities.

*"Annular space"* means the open space formed between the borehole and the well casing.

*"Aquifer"* means a saturated geologic formation or combination of formations which has appreciably greater ability to transmit water than do adjacent formations. Typically, an aquifer is capable of yielding usable quantities of water to a well.

*"Areas susceptible to mass movement"* means those areas of influence (i.e., areas characterized as having an active or substantial possibility of mass movement) where the movement of earth material at, beneath, or adjacent to the MSWLF site, because of natural or man-induced events, results in the down slope transport of soil and rock material by means of gravitational influence. Areas of mass movement include, but are not limited to, landslides, avalanches, debris slides and flows, soil function, block sliding, and rockfall.

*"Attendant"* means an employee of a sanitary disposal project who is not employed or assigned to operate the equipment used on the site.

*"Bird hazard"* means an increase in the likelihood of bird/aircraft collisions that may cause damage to the aircraft or injury to its occupants.

*"Commission"* means the environmental protection commission.

“*Compost*” means organic material resulting from biological decomposition of waste which can be used as a soil conditioner or soil amendment.

“*Composting*” means the controlled, biological decomposition of selected solid organic waste materials under aerobic conditions resulting in an innocuous final product.

“*Confined aquifer*” means an aquifer with a confining bed above and below. Water in a confined aquifer is under pressure such that water rises above the top of the aquifer in a well which penetrates the aquifer.

“*Confining bed*” means a geologic formation exhibiting relatively low ability to transmit water compared to adjacent formations. Confining beds are typically not capable of yielding usable quantities of water to a well.

“*Construction and demolition waste*” means waste building materials including wood, metals and rubble which result from construction or demolition of structures. Such waste shall also include trees.

“*Construction and demolition waste disposal site*” means a sanitary landfill which accepts only construction and demolition wastes.

“*Contaminated animal carcasses*” means waste including carcasses, body parts and bedding of animals that were exposed to infectious agents during research, production of biologicals, or testing of pharmaceuticals.

“*Contaminated sharps*” means all discarded sharp items derived from patient care in medical, research, or industrial facilities including glass vials containing materials defined as infectious, suture needles, hypodermic needles, scalpel blades, and Pasteur pipettes.

“*Cultures and stocks of infectious agents*” means specimen cultures collected from medical and pathological laboratories, cultures and stocks of infectious agents from research and industrial laboratories, wastes from the production of biological agents, discarded live and attenuated vaccines, and culture dishes and devices used to transfer, inoculate or mix cultures.

“*Department*” means the Iowa department of natural resources.

“*Displacement*” means the relative movement of any two sides of a fault measured in any direction.

“*Downgradient*” means direction of decreasing hydraulic head.

“*Downgradient well*” means a well which has been installed downgradient of the site and is capable of detecting the migration of contaminants from the site.

“*FAA certified airport*” means an airport serving air carriers certified by the Civil Aeronautics Board that has been issued an airport operating certificate from the Administrator of the Federal Aviation Administration pursuant to Section 612 of the Federal Aviation Act, 49 U.S.C. §1432, and 49 CFR Part 139. (NOTE: This definition includes the municipal airports in or near Iowa as follows: Moline, Illinois; Omaha, Nebraska; and Burlington, Cedar Rapids, Des Moines, Dubuque, Fort Dodge, Mason City, Ottumwa, Sioux City, and Waterloo, Iowa.)

“*Fault*” means a fracture or a zone of fractures in any material along which strata on one side have been displaced with respect to that on the other side.

“*Firewood processing facilities*” means facilities which process or allow the public to process trees into firewood.

“*Flood plain*” means the area adjoining a river or stream which has been or may be hereafter covered by flood water.

“*Free liquid*” means the liquid produced when a 100-milliliter or 100-gram representative sample is placed on a standard mesh number 60 (fine mesh size) conical paint filter for five minutes. Method 9095 EPA SW 846.

“*Garbage*” means all solid and semisolid, putrescible animal and vegetable wastes resulting from the handling, preparing, cooking, storing, serving and consuming of food or of material intended for use as food, and all offal, excluding useful industrial byproducts, and shall include all such substances from all public and private establishments and from all residences.

“*Geologic cross section*” means a drawing of a subsurface profile showing the various strata encountered based on at least three soil borings.

“*Groundwater flow path*” means the route of water (and contaminant) travel within the groundwater system.

“*High water table*” is the position of the water table which occurs in the spring in years of normal or above normal precipitation.

“*Holocene*” means the most recent epoch of the Quaternary Period, extending from the end of the Pleistocene Epoch to the present.

“*Human blood and blood products*” means human serum, plasma, other blood components, bulk blood, or containerized blood in quantities greater than 20 milliliters.

“*Hydraulic head*” means the energy contained at a point in the groundwater system. Hydraulic head is measured as the elevation to which water rises in a piezometer.

“*Incineration*” means the processing and burning of waste for the purpose of volume and weight reduction in facilities designed for such use.

“*Industrial process wastes*” means waste that is generated as a result of manufacturing activities, product processing or commercial activities. It does not include office waste, cafeteria waste, or other types that are not the direct result of production processes.

“*Infectious*” means containing pathogens with sufficient virulence and quantity so that exposure to an infectious agent by a susceptible host could result in an infectious disease when the infectious agent is improperly treated, stored, transplanted, or disposed of.

“*Infectious waste*” means waste which is infectious, including but not limited to contaminated sharps, cultures and stocks of infectious agents, blood and blood products, pathological waste, and contaminated animal carcasses from hospitals or research laboratories.

“*Karst terranes*” means areas where karst topography, with its characteristic surface and subterranean features, is developed as the result of dissolution of limestone, dolomite, or other soluble rock. Characteristic physiographic features present in karst terranes include, but are not limited to, sinkholes, sinking streams, caves, large springs, and blind valleys.

“*Land application*” means a method through which sludge is applied to the ground surface. Land application may include subsurface injection.

“*Landfill property*” means the entire area of the landfill including the disposal site and any other contiguous property proposed for actual landfill use.

“*Land pollution*” means the presence in or on the land of any solid waste in such quantity, of such nature and for such duration and under such condition as would affect injuriously any waters of the state, cause air pollution or create a nuisance.

“*Leachate*” means a liquid that has percolated through or drained from a solid waste landfill.

“*Lithified earth material*” means all rock, including all naturally occurring and naturally formed aggregates or masses of minerals or small particles of older rock that formed by crystallization of magma or by induration of loose sediments. This term does not include man-made materials, such as fill, concrete, and asphalt, or unconsolidated earth materials, soil, or regolith lying at or near the earth surface.

“*Local governments*” means those counties or municipalities using the sanitary disposal project.

“*Lower explosive limit*” means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 25° Celsius and atmospheric pressure.

“*Maximum horizontal acceleration in lithified earth material*” means the maximum expected horizontal acceleration depicted on a seismic hazard map, with a 90 percent or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on a site-specific seismic risk assessment.

“*Mean*” is the sum of all the measurements divided by the number of measurements.

“*Monitoring well*” means any well installed solely for the sampling of groundwater quality at a given location and depth and constructed in a manner approved by the department.

“*Municipal solid waste landfill (MSWLF)*” means a discrete area of land or an excavation that receives household waste, and that is not a land application site, surface impoundment, injection well, or waste pile, as those terms are defined under 40 Code of Federal Regulations Part 257.2. An MSWLF also may receive other types of RCRA subtitle D wastes, such as commercial solid waste, nonhazardous dry sludge, and industrial solid waste. An MSWLF may be publicly or privately owned. An MSWLF may be a new MSWLF site, an existing MSWLF site, or a lateral expansion.

“*Open burning*” means any burning of combustible materials where the products of combustion are emitted into the open air without passing through a chimney or stack.

“*Open dump*” means any exposed accumulation of solid waste at a site other than a sanitary disposal project operating under a permit from the department.

“*Open dumping*” means the depositing of solid wastes on the surface of the ground or into a body or stream of water.

“*Operating area*” means the immediate portion of a sanitary disposal project used for unloading and handling of solid waste to prepare it for processing or final disposal.

“*Operator*” means an employee of the sanitary disposal project who is employed and assigned to operate the equipment used on the site.

“*Pathological waste*” means human tissues and body parts that are removed during surgery or autopsy.

“*Perched saturated zone*” is a localized saturated zone occurring above the regional zone of saturation. The perched saturated zone’s presence is caused by a lens of relatively impermeable material within the unsaturated zone that impedes the downward movement of water toward the zone of saturation.

“*Piezometers*” are devices used to measure hydraulic head at a specific point in the groundwater system. Piezometers are generally small diameter wells sealed along the entire length and open to water only at the bottom through a short section of well screen, which is the point where hydraulic head is measured. A piezometer may be constructed similar to a monitoring well or may be a driven well point.

“*Planning area*” means the localities and facilities involved in any aspect of the sanitary disposal project(s) management of waste, including out-of-state localities and facilities, if applicable. A planning area may include one or more sanitary disposal projects.

“*Pollution control waste*” means any solid waste residue extracted by, or resulting from, the operation of pollution control equipment.

“*Poor foundation conditions*” means those areas where features exist which indicate that a natural or man-induced event may result in inadequate foundation support for the structural components of an MSWLF site.

“*Potentiometric surface*” is the imaginary surface that represents the level to which water from an aquifer (confined or unconfined) will rise in wells.

“*Private agency*” is defined in Iowa Code section 28E.2.

“*Processing facility*” means the site and equipment for the preliminary and incomplete disposal of solid waste, including but not limited to transfer, open burning, incomplete land disposal, incineration, composting, reduction, shredding and compression.

“*Public agency*” is defined in Iowa Code section 28E.2.

“*Public water supply system*” means a system for the provision to the public of piped water for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Such term includes: (1) any collection, treatment, storage, and distribution facilities under control of the supplier of water and used primarily in connection with such system, and (2) any collection (including wells) or pretreatment storage facilities not under such control which are used primarily in connection with such supply system. A public water supply system is either a “community water system” or a “noncommunity water system.”

a. “*Community water system*” means a public water supply system which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.

b. “*Noncommunity water system*” means a public water supply system that is not a community water system.

“*Recycling*” means any process by which waste or materials which otherwise become waste are collected, separated, or processed and reused or returned to use in the form of raw materials or products. Recycling includes, but is not limited to, the composting of yard waste which has been previously separated from other waste and collected by the sanitary facility, but does not include any form of energy recovery.

“*Refuse*” means putrescible and nonputrescible wastes including but not limited to garbage, rubbish, ashes, incinerator ash, incinerator residues, street cleanings, market and industrial solid wastes and sewage treatment wastes in dry or semisolid form.

“*Refuse collection service*” means a publicly or privately operated agency, business or service engaged in the collecting and transporting of solid waste for disposal purposes.

“*Rubbish*” means nonputrescible solid waste consisting of combustible and noncombustible wastes, such as ashes, paper, cardboard, tin cans, yard clippings, wood, glass, bedding, crockery or litter of any kind.

“*Rubble*” means stone, brick or similar inorganic material.

“*Salvageable material*” means discarded material no longer of value for its original purpose but which has value if reclaimed.

“*Salvaging*” means the systematic removal of salvageable material in a formal and orderly manner as a part of the normal operating procedure of a sanitary disposal project.

“*Sanitary disposal*” means a method of treating solid waste so that it does not produce a hazard to the public health or safety or create a nuisance.

“*Sanitary disposal project*” is defined in Iowa Code section 455B.301.

“*Sanitary landfill*” means a method of disposing of solid waste on land by utilizing the principles of engineering to confine the solid waste to the smallest practical volume and to cover it with a layer of earth so that no nuisance or hazard to the public health is created.

“*Sanitary landfill operator*” means an individual having active, daily, on-site responsibility for day-to-day operation of a department-permitted sanitary landfill. This individual must also have the authority to turn waste away at the gate when the waste is considered unacceptable.

“*Scavenging*” means the uncontrolled removal of materials from the unloading or working area of a sanitary disposal project.

“*Seismic impact zone*” means an area with a 10 percent or greater probability that the maximum horizontal acceleration in the lithified earth material, expressed as a percentage of the earth’s gravitational pull, will exceed 0.10g in 250 years.

“*Sewage sludge*” is defined in 567—Chapter 67.

“*Shelby tube*” is a thin-walled, seamless steel tube with a sharp cutting edge which is used to obtain undisturbed samples of cohesive or moderately cohesive soils (silts and clays).

“*Shoreland*” means land within 300 feet of the high water mark of any natural or artificial, publicly or privately owned lake or any impoundment of water used as a source of public water supply.

“*Site*” means any location, place or tract of land used for collection, storage, conversion, utilization, incineration or landfilling of solid waste, to include the landfill area, nonfill work areas, borrow areas plus a 100-foot wide perimeter surrounding the working areas or the property line if it is closer than 100 feet to the working areas.

“*Sludge*” means any solid, semisolid, or liquid waste generated from a commercial or industrial wastewater treatment plant, water supply treatment plant or air pollution control facility or any other such waste having similar characteristics and effects.

“*Soil boring*” means a hole drilled or driven into the subsurface for the purpose of determining subsurface characteristics.

“*Solid waste*” is defined in Iowa Code section 455B.301.

“*Solid waste collection*” means the gathering of solid waste from public and private places.

“*Solid waste incinerator operator*” means an individual with active, daily, on-site responsibility for day-to-day operation of a department-permitted solid waste incinerator. This individual must also have the authority to turn waste away when it has been determined to be unacceptable.

“*Solid waste storage*” means the holding of solid waste pending intermediate or final disposal.

“*Solid waste transportation*” means the conveying of solid waste from one place to another by means of vehicle, rail car, water vessel, conveyor or other means.

“*Special wastes*” means any industrial process waste, pollution control waste, or toxic waste which presents a threat to human health or the environment or a waste with inherent properties which make the disposal of the waste in a sanitary landfill difficult to manage. Special waste does not include domestic,

office, commercial, medical, or industrial waste that does not require special handling or limitations on its disposal. Special waste does not include hazardous wastes which are regulated under the federal Resource Conservation and Recovery Act (RCRA), hazardous waste as defined in Iowa Code section 455B.411, subsection 3, or hazardous wastes included in the list compiled in accordance with Iowa Code section 455B.464.

*“Specific yield”* is the ratio of the volume of water that a given mass of saturated rock or soil will yield by gravity to the volume of that mass. This ratio is stated as a percentage.

*“Split spoon sampler”* means a device used in conjunction with a drilling rig to obtain core samples from unconsolidated strata.

*“Stabilized sludge”* means sludge that has been processed to a point where it has the ability to resist further change, produces minimal odor, and has achieved a substantial reduction in the pathogenic organism content. (The department recognizes principles of stabilization other than the conventional biological processes. Whether these processes produce a stabilized sludge will be evaluated on an individual basis.)

*“Standard deviation”* means the square root of the variance.

*“Storage coefficient”* is the volume of water an aquifer releases from or takes into storage per unit surface area of aquifer per unit change in head.

*“Structural components”* means liners, leachate collection systems, final covers, run-on/run-off systems, and any other component used in the construction and operation of the MSWLF that is necessary for protection of human health and the environment.

*“Toxic wastes”* means materials containing poisons, biocides, acids, caustics, pathological wastes, and similar harmful wastes which may require special handling and disposal procedures to protect the environment and the persons involved in the storage, transport and disposal of the wastes.

*“Transfer station”* means a fixed or mobile intermediate solid waste disposal facility for transferring loads of solid waste, with or without reduction of volume, to another transportation unit.

*“Transmissivity”* is the rate at which water is transmitted through a unit width of an aquifer under a unit hydraulic gradient.

*“Tree chipping facilities”* means facilities which chip trees and brush for the purpose of mulch production.

*“Trees”* means trunks, limbs, stumps, or branches from trees or shrubs and untreated, uncoated, chemically unchanged wood wastes. This shall not include wood products which are part of an otherwise defined waste or have been contaminated by coatings, treatments or metals.

*“Tremie tube”* means a pipe used to fill the annular space in a well from the bottom up.

*“Unconfined aquifer”* means an aquifer which does not have a confining bed above it. The level of water in a well in an unconfined aquifer is below the top of the aquifer formation.

*“Unsaturated zone”* is the subsurface zone above the water table in which the interstitial spaces are only partially filled with water.

*“Unstable area”* means a location that is susceptible to natural or human-induced events or forces capable of impairing the integrity of some or all of the landfill structural components responsible for preventing releases from a landfill. Unstable areas can include poor foundation conditions, areas susceptible to mass movements, and karst terranes.

*“Upgradient”* means direction of increasing hydraulic head.

*“Upgradient well”* means a well which is capable of yielding groundwater samples that are representative of regional conditions and are not affected by the landfill site. Such a well is typically placed upgradient of the site, if possible, and, if not, is placed in an upgradient direction and as near the site as feasible.

*“Variance”* means the sum of the squared differences between the actual measurement and the mean divided by one less than the number of measurements.

*“Waste reduction”* means practices which reduce, avoid, or eliminate both the generation of solid waste and the use of toxic materials so as to reduce risks to health and the environment and to avoid, reduce or eliminate the generation of wastes or environmental pollution at the source and not merely achieved by shifting a waste output or waste stream from one environmental medium to another

environmental medium. Waste reduction includes, but is not limited to, home yard waste composting, which prevents yard waste from entering the waste stream.

“*Water table*” means the water surface below the ground at which the unsaturated zone ends and the saturated zone begins.

“*Yard waste*” means debris such as grass clippings, leaves, garden waste, brush and trees. Yard waste does not include tree stumps.

“*Zone of saturation*” is the subsurface zone below the water table in which the interstitial spaces are completely filled with water.

This rule is intended to implement Iowa Code section 455B.304 and Iowa Code chapter 455D.

**567—100.3(17A,455B) Forms and rules of practice.**

**100.3(1) Applications for permits and renewals.** Any private or public person or agency desiring to secure any permit or renewal of a permit provided for in Iowa Code chapter 455B, division IV, part 1, or the rules promulgated pursuant thereto, shall file a properly completed application with the program operations division of the department.

a. A properly completed application shall consist of the application form with all blanks filled in by the applicant, all signatures, and all documents and information required by the solid waste disposal rules. Application forms may be obtained from:

Administrative Support Station  
Environmental Protection Division  
Iowa Department of Natural Resources  
Henry A. Wallace Building  
900 East Grand  
Des Moines, Iowa 50319

Properly completed forms should be submitted in accordance with the instructions on the form. Where not specified in the instructions, forms should be submitted to the Solid Waste Section.

b. Application for the following permits or renewals shall be made in triplicate on the forms indicated:

(1) A sanitary disposal project permit pursuant to Iowa Code section 455B.305 — Form 43. 542-3199

(2) A temporary permit pursuant to Iowa Code subsection 455B.307(1) — Form 44. 542-1012

(3) A renewal of a sanitary disposal project permit pursuant to 567—subrule 102.2(1) — Form 45. 542-3208

c. It is strongly recommended that applicants contact the department before engineering plans are drafted, to ensure that the requirements of the rules are understood and to discuss any special problems of the proposed project.

**100.3(2)** Rescinded IAB 3/12/97, effective 4/16/97.

**567—100.4(455B) General conditions of solid waste disposal.** Except as provided otherwise in 567—Chapters 100 to 121, a private or public agency shall not dump or deposit or permit the dumping or depositing of any solid waste at any place other than a sanitary disposal project approved by the director, or pursuant to a permit granted by the department which allows the disposal of solid waste on land owned or leased by the agency.

**100.4(1) Definitions.** For the purposes of this rule:

“*Farm animals*” means cattle, swine, sheep or lambs, horses, turkeys, chickens and other domestic animals;

“*Farm buildings*” means barns, machine sheds, storage cribs, animal confinement buildings, and homes located on the premises and used in conjunction with crop production or with livestock or poultry raising and feeding operations; and

“*Farm waste*” means machinery, vehicles and equipment used in conjunction with crop production or with livestock or poultry raising and feeding operations, trees, brush and grubbed stumps generated

on the same property, or ashes from the burning thereof, but specifically does not include agricultural chemicals, fertilizers or manures, or domestic household wastes.

**100.4(2) *Special requirements for farm waste, farm buildings, and dead animals.***

*a.* A private agency may dispose of farm waste and farm buildings without first having obtained a sanitary disposal project permit, in accordance with paragraph 100.4(2) “c,” provided that:

(1) The farm waste was owned by the private agency and was used on the premises where disposal occurs.

(2) Prior to disposal of vehicles, machinery, and equipment, all fluids shall be drained, including motor oils, motor fuels, lubricating fluids, coolants and solvents, and agricultural chemicals; and all batteries and rubber tires shall be removed.

(3) Prior to disposal of storage or feeding equipment, the equipment shall be emptied of all contents not otherwise authorized for burial pursuant to these rules.

(4) Farm buildings have been emptied of contents not otherwise authorized for burial pursuant to these rules and have been buried on the premises where they were located.

(5) All materials drained or removed from farm waste or farm buildings prior to disposal shall be recycled, reused or disposed of in accordance with Iowa Code chapter 455B and the rules implementing that chapter.

(6) The farm waste and farm buildings are buried in soils listed in tables contained in the county soil surveys and soil interpretation records (published by the U.S. Soil Conservation Service) as being moderately well drained, well drained, somewhat excessively drained, or excessively drained soils. Other soils may be used if artificial drainage is installed to obtain water-level depth more than two feet below the burial depth of the waste.

(7) The lowest elevation of the burial pit is six feet or less below the surface.

(8) The farm waste and farm buildings are immediately covered with a minimum of 6 inches of soil and finally covered with a total minimum of 24 inches of soil.

*b.* A private agency may dispose of dead farm animals without first having obtained a sanitary disposal project permit, provided that the disposal is in accordance with paragraph 100.4(2) “c,” the rules of the department of agriculture and land stewardship, and:

(1) The dead farm animals result from operations located on the premises where disposal occurs.

(2) A maximum loading rate of 7 cattle, 44 swine, 73 sheep or lambs or 400 poultry carcasses on any given acre per year. All other species will be limited to 2 carcasses per acre. Animals that die within two months of birth may be buried without regard to number.

(3) The dead animals are buried in soils listed in tables contained in the county soil surveys and soil interpretation records (published by the U.S. Soil Conservation Service) as being moderately well drained, well drained, somewhat excessively drained, or excessively drained soils. Other soils may be used if artificial drainage is installed to obtain water-level depth more than two feet below the burial depth of the waste.

(4) The lowest elevation of the burial pit is six feet or less below the surface.

(5) The dead farm animals are immediately covered with a minimum of 6 inches of soil and finally covered with a total minimum of 30 inches of soil.

*c.* Farm waste, farm buildings, and dead farm animals must be disposed of in accordance with the following separation distances:

(1) At least 100 feet from any private and 200 feet from any public well which is being used or would be used without major renovation for domestic purposes.

(2) At least 50 feet from adjacent property line.

(3) At least 500 feet from an existing neighboring residence.

(4) More than 100 feet from any body of surface water such as a stream, lake, pond, or intermittent stream, except as provided in (6) below.

(5) Outside the boundaries of a flood plain, wetland, or shoreline area, except as provided in (6) below.

(6) Trees, brush and grubbed stumps generated as a result of clearing, snagging, maintenance or repair of drainage ditches or outlets may be buried within 100 feet of a surface water, and within a flood plain or shoreline area.

**567—100.5(455B) Disruption and excavation of sanitary landfills or closed dumps.** No person shall excavate, disrupt, or remove any deposited material from any active or discontinued sanitary landfill or closed dump without first having notified the department in writing.

**100.5(1)** Notification shall include an operational plan stating the area involved, lines and grades defining limits of excavation, estimated number of cubic yards of material to be excavated, sanitary disposal project where material is to be disposed and estimated time required for excavation procedures.

**100.5(2)** An excavation shall be confined to an area consistent with the number of pieces of digging equipment and trucks used for haulage.

**100.5(3)** The disposal of all solid waste resulting from excavation shall be in conformity with Iowa Code chapter 455B and these rules.

These rules are intended to implement Iowa Code section 455B.307.

CHAPTER 101  
SOLID WASTE COMPREHENSIVE PLANNING REQUIREMENTS

[Prior to 7/1/83, DEQ Ch 26]

[Prior to 12/3/86, Water, Air and Waste Management [900]]

**567—101.1(455B,455D) Purpose and applicability.**

**101.1(1) Purpose.** The purpose of these rules is to provide general definitions and direction for comprehensive integrated solid waste management planning for every city and county of this state and to provide an orderly and efficient process for the assessment and collection of fees for the disposal of solid waste at a sanitary landfill.

**101.1(2) Applicability.** This chapter is intended to implement Iowa Code sections 455B.306, subsection 1 through subsection 5, and subsection 6, paragraph “e,” 455B.301A and 455D.3.

**101.1(3) Authority.** Rescinded IAB 6/8/05, effective 7/13/05.

**567—101.2(455B,455D) Definitions.** For the purpose of this chapter, the following definitions shall apply:

“*Comprehensive plan*” means a course of action developed and established cooperatively between cities, counties and sanitary disposal projects regarding their chosen integrated solid waste management system, its participants, waste reduction strategies, and disposal methods.

“*Comprehensive plan amendment*” means a notification, filed between comprehensive plan updates, that the planning agency seeks to change the participation or change the designated disposal project(s) as set out in the most recent approved comprehensive plan submittal.

“*Comprehensive plan update*” means a planning document that provides status reports on the integrated solid waste management system and that describes revision to the information and evaluation of the integrated solid waste management system and the proposed course of action for the next two planning cycles.

“*Consumer price index*” means the measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. For the purpose of this chapter, consumer price index refers to All Urban Consumers (CPI-U), All Items, as published by the U.S. Bureau of Labor Statistics.

“*Contaminated soil*” means soil(s) that contains any harmful constituent in great enough concentration to harm human health.

“*Fiscal year*” means the state fiscal year from July 1 through June 30.

“*Initial comprehensive plan*” means a first or new comprehensive plan filed with the department of natural resources pursuant to the provisions of Iowa Code section 455B.306.

“*Integrated solid waste management*” means any solid waste management system which is focused on planned development of programs and facilities that reduce waste volume and toxicity, recycle marketable materials and provide for safe disposal of any residuals.

“*Monogenerator facility*” means any permitted facility that accepts waste(s) from a sole generator that is also the owner/operator of the facility.

“*Monowaste facility*” means any permitted facility with special permit provisions which limit the site to a single solid waste including, but not limited to, coal combustion residue, construction and demolition debris, cement kiln dust and foundry sand.

“*Planning agency*” means the designated contact agency on file with the department.

“*Planning area*” means the combined jurisdiction of the local governments and the designated sanitary disposal project(s) involved in a comprehensive plan. A planning area may include one or more sanitary disposal projects.

“*Planning cycle*” means the length of time between the due date for each comprehensive plan update submittal as approved by the department, which is the same frequency as sanitary disposal project permitting.

“*Plan participants*” means any individual, group, government or private entity that has direct involvement in an integrated solid waste management system.

“*Private agency*” means an individual or any form of business organization authorized under the laws of this or any other state.

“*Public agency*” means any political subdivision of this state, including Iowa Code chapter 28E agencies.

“*Sanitary disposal project*” means all facilities and appurtenances including all real and personal property connected with such facilities, which are acquired, purchased, constructed, reconstructed, equipped, improved, extended, maintained, or operated to facilitate the final disposition of solid waste without creating a significant hazard to the public health or safety, and which are approved by the executive director.

“*Service area*” means an area served by a specific sanitary disposal project defined in terms of the jurisdictions of the local governments using the facility. A planning area may include more than one service area.

“*Solid waste*” means garbage, refuse, rubbish, and other similar discarded solid or semisolid materials including, but not limited to, such materials resulting from industrial, commercial, agricultural, and domestic activities. Solid waste may include vehicles as defined by Iowa Code section 321.1, subsection 90. However, division IV of Iowa Code chapter 455B does not prohibit the use of dirt, stone, brick, or similar inorganic material for fill, landscaping, excavation or grading at places other than a sanitary disposal project. Solid waste does not include hazardous waste as defined in Iowa Code section 455B.411 or source, special nuclear, or by-product material as defined in the Atomic Energy Act of 1954, as amended to January 1, 1979, or petroleum contaminated soil which has been remediated to acceptable state or federal standards.

**567—101.3(455B,455D) Waste management hierarchy.** The state’s waste management hierarchy is listed in descending order of preference:

1. Volume reduction at the source;
2. Recycling and reuse, including composting;
3. Other approved techniques of solid waste management including, but not limited to, combustion with energy recovery, combustion for waste disposal, and disposal in sanitary landfills.

**567—101.4(455B,455D) Duties of cities and counties.** Every city and county of this state shall, for the solid waste generated within the jurisdiction of its political subdivision, provide for the establishment and operation of an integrated solid waste management system consistent with the waste management hierarchy under rule 567—101.3(455B,455D) and designed to meet the state’s waste reduction and recycling goals. Integrated systems and sanitary disposal projects may be established separately or through cooperative efforts, including Iowa Code chapter 28E agreements as provided by law.

To meet these responsibilities, cities and counties may execute, with public and private agencies, contracts, leases, or other necessary instruments, purchase land and do all things necessary not prohibited by law for the implementation of waste management programs, collection of solid waste, establishment and operation of sanitary disposal projects, and general administration of the same.

If a city or county facility refuses any particular solid waste type for management or disposal, the city or county facility must identify another waste management facility for that waste within the planning area. In the case of special waste, if no other waste management facility for that waste type exists within the planning area, the city or county must, in cooperation with the waste generator, establish or arrange for access to another waste management facility. Sanitary disposal projects are required to maintain written approval from both the department and the planning area of origin in order to accept any Iowa-generated waste from outside the planning area.

All cities and counties or Iowa Code chapter 28E agencies established for the purpose of managing solid waste or implementing integrated solid waste management systems, or both, on behalf of cities and counties shall demonstrate compliance with the provisions of this chapter by their participation in a comprehensive plan approved by the department.

**567—101.5(455B,455D) Contracts with permitted agencies.**

**101.5(1)** Every city, county, and other public agency which complies with the requirements of Iowa Code chapter 455B for the disposal of solid waste by means of a contract with an agency holding a sanitary disposal project permit or by means of a contract with a hauler that has a contract with an agency holding a sanitary disposal project permit shall submit to the department notification of that executed contract. All such agencies shall have on file at the department at all times a list of valid contracts. Notification of any renewal of the contract or any new or amended contract shall be submitted.

**101.5(2)** All public agencies which contract with a hauler to comply with the requirements of part 1 of division IV of Iowa Code chapter 455B shall include, as terms of that contract, a requirement that all solid waste collected by the hauler for that agency shall be disposed of or deposited at a sanitary disposal project designated within said agency's comprehensive plan in accordance with the rules of the department.

**567—101.6(455B,455D) State volume reduction and recycling goals.** The goal of the state is to reduce the amount of materials in the waste stream existing as of the July 1, 1988, baseline, 25 percent by July 1, 1994, and 50 percent by July 1, 2000, through the practice of waste volume reduction at the source and through recycling. The updated goal progress calculations provided by the department for each planning area shall be used by the department in reporting to the general assembly on the state's progress toward meeting the 25 and 50 percent goals. If at any time the department notifies the planning agency in writing that the planning area has failed to meet the 25 percent waste volume reduction and recycling goal, at a minimum, the solid waste management techniques listed in Iowa Code section 455D.3(4) and subrule 101.13(8) must be implemented throughout the planning area. The specific methodology for determining goal progress is outlined in rule 567—101.7(455B,455D).

**567—101.7(455B,455D) Base year adjustment method.** Using the base year adjustment method, the department will perform a goal progress calculation 12 months prior to the due date of the comprehensive plan update for each planning cycle. This goal progress calculation provided 12 months prior to the due date of the comprehensive plan update is for planning purposes only and is to be used to evaluate progress toward the state's waste volume reduction and recycling goals. Planning agencies may request that the department complete a goal progress recalculation once per fiscal year to resolve any discrepancies and to further evaluate progress toward the state's waste volume reduction and recycling goals. At the time of approval of a comprehensive plan or comprehensive plan update, the department will use the most current complete fiscal year data set available to complete goal progress calculations, which will be used to meet the requirements outlined in subrule 101.13(8) and rule 567—101.14(455B,455D).

**101.7(1)** The base year adjustment method (see Formula 1) controls for population, employment, and taxable sales to more accurately determine progress toward the state's waste volume reduction and recycling goals. Factors included within the base year adjustment method include:

- a. Base year residential waste disposal tonnage – (A).
- b. Base year commercial waste disposal tonnage – (B).
- c. Base year population data (U.S. Bureau of the Census) - (C).
- d. Base year employment data - total nonfarm (Iowa Department of Workforce Development) - (D).
- e. Base year taxable sales data (Iowa Department of Revenue) - (E).
- f. Base year consumer price index - (F).
- g. Most current complete fiscal year data set available for waste disposal tonnage - (G).
- h. Most current complete fiscal year data set available for population (U.S. Bureau of the Census) - (H).
- i. Most current complete fiscal year data set available for employment - total nonfarm (Iowa Department of Workforce Development) - (I).
- j. Most current complete fiscal year data set available for taxable sales (Iowa Department of Revenue) - (J).
- k. Most current complete fiscal year data set available for consumer price index - (K).

## Formula I

$$100\% - \left[ \frac{G}{A \left[ \frac{H}{C} + \frac{\left[ \frac{I}{D} + \frac{J}{E} \right] \frac{F}{K}}{2} \right] + B \left[ \frac{I}{D} + \frac{\left[ \frac{J}{E} \right] \frac{F}{K}}{2} \right]} \right] \times 100\%$$

**101.7(2)** Planning agencies must document the amount of waste disposed of in both the base year and the most current fiscal year where a complete data set is available. If no changes have occurred within the planning area that would affect the base year, then only data for the most current fiscal year for which a complete data set is available need to be presented in the comprehensive plan update, since information on each planning area's base year tonnage is presented in prior comprehensive plan submittals. Tonnage data sources that each planning agency must identify include, but are not limited to:

- a. Landfill(s) within the planning area and its respective service area(s).
- b. Transfer station(s) or hauler(s) transporting waste into or out of the planning area for final disposal.
- c. Incineration with or without energy recovery of waste within the planning area.
- d. Allowable base year adjustment method exemptions, including exceptional events, waste originating from out of state, and solid waste generated outside the planning area.

**101.7(3)** Waste generated as part of an exceptional event should not negatively affect a planning area's goal progress calculation.

- a. Exceptional events include, but are not limited to, such unforeseen disasters as storms, fires, floods, tornadoes, or train wrecks. Exceptional events do not include economic development, derelict housing removal, or other planned activities/demolitions. Written requests to exempt exceptional event debris from goal progress calculations shall be made to the department on the required Quarterly Solid Waste Fee Schedule and Retained Fees Report, DNR Form 542-3276.

Requests for goal progress calculation exemptions must be made within six months after initial disposal of the debris. The determination to exempt exceptional event debris from goal progress calculations shall be made solely by the department and shall not be made independently by individual sanitary disposal projects or planning agencies. Sanitary disposal projects required to remit tonnage fees shall continue to pay solid waste tonnage fees until written notification of fee exemption is received, at which time any applicable fee credit shall be granted by the department. Upon review of the request, the department will notify the sanitary disposal project and planning agency of the determination in writing or request further documentation.

- (1) Exemption requests shall, at a minimum, include:
  1. Date(s) of duration of the exceptional event.
  2. Type of event (i.e., flood, tornado, combination thereof).
  3. Description of affected area(s), including approximate number of buildings and addresses, if available.
  4. Type(s) of waste to be exempted.
  5. Actual tonnage of debris disposed of during the quarter.
  6. Preliminary estimate of the total tonnage to be exempted (i.e., tons already disposed of and potential tons to be disposed of in future quarters).
- (2) Additional documentation to verify the exceptional event and the debris it generated may be requested by the department. Failure to submit requested documentation may result in denial of the goal progress calculation or solid waste tonnage fee exemption request(s), including any fee credits authorized by the department. Documentation may include:
  1. Protocol used by the sanitary disposal project staff for determining which waste(s) coming into the facility was attributed to the exceptional event.

2. Summary of existing policies to divert storm debris from disposal, as well as the amount of waste(s) diverted.

3. Copies of scale tickets and summary report of scale tickets.

4. Federal Emergency Management Agency (FEMA) reports, if any.

5. Newspaper articles or pictures of affected areas.

6. Supporting documentation indicating estimated remaining tonnage expected as a result of the exceptional event (i.e., supporting documentation from local insurance companies or municipal building inspectors).

7. Contact information for the person(s) responsible for compiling the exceptional event report(s).

b. If the governor of the state of Iowa declares a city or county a disaster area as a result of an exceptional event, the sanitary disposal project or planning agency may request that the debris be exempt from solid waste tonnage fees. A request to waive tonnage fees must be submitted in writing on the facility's or planning agency's letterhead prior to or in the same submittal as the Quarterly Solid Waste Fee Schedule and Retained Fees Report, DNR Form 542-3276. Requests to waive tonnage fees, as provided for in this rule, must be made within 6 months after the initial disposal of the debris. A copy of the proclamation of disaster emergency declared by the governor of the state of Iowa is required in order for approval of tonnage fee exemptions. Any continuing documentation shall be submitted with each Quarterly Solid Waste Fee Schedule and Retained Fees Report, DNR Form 542-3276, within the length of time authorized by the department. Solid waste disposed of outside the window of time authorized by the department shall not be eligible for exemption. To be eligible for an exemption, all exceptional event waste must be disposed of within the following time lines:

(1) For debris clearance and emergency protective measures, as defined by FEMA guidelines, 6 months from the end of the exceptional event.

(2) For permanent repair work, as defined by FEMA guidelines, 18 months from the end of the exceptional event.

Upon written request, with supporting rationale, extensions to these time lines may be granted solely by the department on a case-by-case basis.

c. Contaminated soils removed as part of a brownfield or contaminated site cleanup should not negatively affect a planning area's goal progress calculation. If the contaminated soil is to be disposed of in a sanitary disposal project, the sanitary disposal project or planning agency must request the goal progress exemption in writing, in accordance with the procedures outlined in this rule. Written requests to exempt contaminated soil from goal progress calculations shall be made to the department on the Quarterly Solid Waste Fee Schedule and Retained Fees Report, DNR Form 542-3276. Requests for goal progress exemptions must be made within 6 months after initial disposal of the contaminated soil.

The determination to exempt contaminated soil from goal progress calculations shall be made solely by the department and shall not be made independently by individual sanitary disposal projects or planning agencies. The department shall notify the sanitary disposal project or planning agency in writing of the determination or shall request further clarification to make an exemption decision. Failure to submit additional information requested by the department regarding the request to exempt contaminated soil may result in a denial of the goal progress calculation exemption request. Contaminated soil occurrences not eligible for goal progress exemption include, but are not limited to, illegal municipal solid waste disposal sites and contaminated soils formed for the sole purpose of requesting goal progress exemption. Exemption requests shall include, at a minimum, the following:

(1) Contact information of the primary and any other government agency overseeing or involved with site cleanup.

(2) Address of the brownfield or contaminated site.

(3) Date(s) when the site was believed to have been contaminated, if known.

(4) Type of operation and owners of the operation that led to the contamination, if known.

(5) Constituents of concern present in the soil.

(6) Types of miscellaneous waste mixed with the soil, if any.

(7) Appropriate testing for identified contaminants of the contaminated soil.

(8) Actual tonnage of contaminated soil disposed of during the quarter.

(9) Preliminary estimate of the total tonnage to be exempted (i.e., tons of contaminated soil already disposed of and potential tons to be disposed of in future quarters).

(10) Narrative justification to explain why disposal in a sanitary disposal project is the best site cleanup methodology.

**567—101.8(455B,455D) Submittal of initial comprehensive plans and comprehensive plan updates.** Initial comprehensive plans and comprehensive plan updates filed with the department must include a signed electronic submission certificate, which can be printed once all online forms have been submitted to the department for review. When hard-copy portions of the initial comprehensive plan or comprehensive plan update are submitted to the department, an original and two copies are necessary. Initial comprehensive plans and comprehensive plan updates are required to be double-sided and cannot be submitted in three-ring binders. Comprehensive plan updates shall be submitted in accordance with the schedule, as provided by the department 12 months prior to the due date of the first comprehensive plan update for each planning cycle. Planning agencies are not required to submit hard copies of the online forms for comprehensive plan update.

**567—101.9(455B,455D) Review of initial comprehensive plans and comprehensive plan updates.** Initial comprehensive plans and comprehensive plan updates submitted in accordance with rule 567—101.13(455B,455D) shall be reviewed by the department for compliance with this chapter. The director may reject, suggest modification of, or approve a comprehensive plan based upon the criteria outlined in rule 567—101.13(455B,455D).

**567—101.10(455B,455D) Municipal solid waste and recycling survey.** During each planning cycle, local governments are required to complete and submit the Municipal Solid Waste and Recycling Survey, DNR Form 542-8134. The department will not provide access to the comprehensive planning online database, described further in rule 567—101.11(455B,455D), until the department receives copies of all completed Municipal Solid Waste and Recycling Survey forms from the planning area. The department will contact each planning agency 12 months prior to the due date of the comprehensive plan update to determine the planning agency's preferred Municipal Solid Waste and Recycling Survey option. To facilitate the completion, submittal, and data input of the Municipal Solid Waste and Recycling Survey form, the methodology as set forth in one of the following subrules shall be used:

**101.10(1)** The department shall distribute the Municipal Solid Waste and Recycling Survey forms to the planning area's member communities. The department will input the data into the online database after receiving all completed Municipal Solid Waste and Recycling Survey forms from a planning agency. Once all data is inputted into the online database, the department will, upon request, provide copies of the completed Municipal Solid Waste and Recycling Survey forms to the planning agency.

**101.10(2)** The department shall distribute the Municipal Solid Waste and Recycling Survey forms to the planning area's member communities. The planning agency will receive and input the data into the online database.

**101.10(3)** The planning agency shall distribute the Municipal Solid Waste and Recycling Survey forms to its member communities. The planning agency will receive and input the data into the online database.

**101.10(4)** The planning agency shall distribute the Municipal Solid Waste and Recycling Survey forms to its member communities. The department will input the data into the online database after receiving all completed Municipal Solid Waste and Recycling Survey forms. Once all data is inputted into the online database, the department will, upon request, provide copies of the completed Municipal Solid Waste and Recycling Survey forms to the planning agency.

**567—101.11(455B,455D) Online database.** In accordance with rule 567—101.10(455B,455D), the following comprehensive plan data must be completed and inputted into the online database developed by the department. This database may be accessed, with the proper credentials, via the department's

Web site. The following online forms must be completed prior to comprehensive plan approval by the department:

- Choose a City, DNR Form 542-8136.
- Recycling and Waste Collection, DNR Form 542-8137.
- Recycling and Waste Haulers, DNR Form 542-8138.
- Diverted Materials Collection, DNR Form 542-8139.
- Commercial Recycling, DNR Form 542-8140.
- Residential Recycling Program, DNR Form 542-8141.
- Yard Waste Management Programs, DNR Form 542-8142.
- Drop-off Recycling Sites, DNR Form 542-8143.
- Yard Waste Management Sites, DNR Form 542-8144.
- Board Members, DNR Form 542-8145.
- Boards, DNR Form 542-8146.
- Permitted Facilities, DNR Form 542-8147.
- Contacts, DNR Form 542-8148.
- Planning Area Description, DNR Form 542-8149.

**567—101.12(455B,455D) Solid waste comprehensive plan categories.** Public or private entities operating or planning to operate a sanitary disposal project in Iowa, in conjunction with all local governments using the sanitary disposal project, shall file with the director one of two categories of comprehensive plans detailing the method by which the public or private entity, in conjunction with all local governments using the sanitary disposal project, will comply with solid waste comprehensive planning requirements. The first category is a comprehensive plan in which municipal solid waste is disposed of in a sanitary landfill within the planning area. The second category is a comprehensive plan in which all municipal solid waste is consolidated at and transported from a permitted transfer station for disposal at a sanitary landfill in another comprehensive planning area.

**101.12(1)** A planning area that closes all of the municipal solid waste sanitary landfills located in the planning area and chooses to use a municipal solid waste sanitary landfill in another planning area that complies with all requirements under Subtitle D of the federal Resource Conservation and Recovery Act, with all solid waste generated within the planning area being consolidated at and transported from a permitted transfer station, may elect to retain autonomy as a planning area and shall not be required to join the planning area where the landfill being used for final disposal of solid waste is located.

**101.12(2)** If a planning area makes the election to retain autonomy under subrule 101.12(1), the planning area receiving the solid waste from the planning area making the election shall not be required to include the planning area making the election in a comprehensive plan provided no services are shared between the two planning areas other than the acceptance of solid waste for sanitary landfill disposal. The planning area receiving the solid waste shall only be responsible for the permitting, planning, and waste reduction and diversion programs in the planning area receiving the solid waste.

**101.12(3)** If the department determines that solid waste cannot reasonably be consolidated and transported from a particular transfer station (e.g., asbestos or bulky construction and demolition waste), the department may establish permit conditions to address the transport and disposal of the solid waste. An election may be made under this subrule only if the two comprehensive planning areas enter into an agreement, pursuant to Iowa Code chapter 28E, that includes, at a minimum, all of the following:

- a. A detailed methodology of the manner in which solid waste will be tracked and reported between the two planning areas.
- b. A detailed methodology of the manner in which the receiving sanitary landfill will collect, remit, and report tonnage fees, pursuant to Iowa Code section 455B.310, paid by the planning area that is transporting the solid waste. The methodology shall include both the remittances of tonnage fees to the state and the retained tonnage fees.

**567—101.13(455B,455D) Types of comprehensive plan submittals to be filed.** There are three types of comprehensive plan submittals: initial, updates, and amendments. The purpose of these types of

comprehensive plans is the development of a specific plan and schedule for implementing technically and economically feasible solid waste management methods that will prevent or minimize any adverse environmental impact and meet the state's waste volume reduction and recycling goals pursuant to rule 567—101.6(455B,455D).

Cities and counties planning to use a sanitary disposal project in Iowa must participate in a comprehensive plan with all other cities and counties using that sanitary disposal project. Cities and counties planning to use an out-of-state disposal facility(ies) must file a comprehensive plan that identifies the out-of-state facility(ies) used. Cities or counties using an out-of-state disposal facility(ies) are still required to meet all comprehensive plan submittal requirements.

If it is demonstrated to the department that any of the provisions outlined in paragraphs "1" through "3" below will not impact the planning area significantly, then the department may consider accepting a comprehensive plan amendment. This chapter also provides the comprehensive planning requirements that apply to composting, recycling, processing, monowaste, monogenerator, transfer station, and medical waste incineration facilities. If during the planning cycle a change occurs to an existing planning area, the submission of an initial comprehensive plan may be required. An initial comprehensive plan is needed if:

1. A new planning area is established.
2. A change increases or decreases the population or the disposal tonnage of the planning area by more than 30 percent.
3. The solid waste disposal method has changed or a new method has been initiated, including siting of a new municipal solid waste landfill or municipal solid waste incinerator.

**101.13(1)** *Content of an initial comprehensive plan.* In fulfillment of the requirements of Iowa Code section 455B.301A and Iowa Code chapter 455D, an initial comprehensive plan shall include the following information:

*a.* A description of the planning area and the public and private agencies involved in the integrated solid waste management system, including a description of each agency's role in managing solid waste generated in the area.

*b.* A resolution or resolutions from all local governments or 28E agencies established for the purpose of managing solid waste or implementing integrated solid waste management systems, or both, on behalf of local governments, and letters of cooperation from private sanitary disposal projects participating in the comprehensive plan. The resolution(s) shall include a statement that the comprehensive plan participants have reviewed the initial comprehensive plan and will adopt the implementation schedule contained within the initial comprehensive plan. Letters of cooperation from private agencies shall include a statement that the private agencies have reviewed the comprehensive plan and support the waste volume reduction and recycling efforts outlined therein. The letter of cooperation shall briefly summarize the implementation schedule. If a local government included in the planning area refuses to provide a resolution, then that local government must prepare its own comprehensive plan and is no longer considered to be in the original planning area. In such cases, the original comprehensive plan may still be approved if it includes a brief addendum stating the effect of the change on the waste stream, but the sanitary disposal project(s) in the planning area may no longer accept waste from the local government that has withdrawn from the comprehensive plan. Private sanitary disposal projects failing to provide letters of cooperation will be unable to receive a permit or permit renewal. If a city, county, or other public agency complies with comprehensive planning requirements by means of a contract(s) with an agency holding a sanitary disposal project permit or with a hauler(s) that has a contract(s) with an agency holding a sanitary disposal project permit, a list of those contracts shall be submitted as provided in rule 567—101.5(455B,455D).

*c.* A detailed description of public participation, including:

- (1) Details of ongoing strategies to provide the public with opportunities to provide input.
- (2) A list of all public hearings or meetings that were held in conjunction with the development of the initial comprehensive plan and the methods used to publicize public meetings on the initial comprehensive plan.

(3) An account of opportunities for the public to comment on the initial comprehensive plan and minutes from any meetings regarding initial comprehensive plan development.

(4) Proof that a minimum of two public meetings were held during the development of the initial comprehensive plan. The first meeting shall inform the public of the initial comprehensive plan development process, while the second meeting shall provide the public with an opportunity for review and comment on the initial comprehensive plan.

*d.* A description of past local and regional planning activities.

*e.* A report of the base year waste stream in total tons per year. Progress toward meeting the state's waste volume reduction and recycling goals pursuant to rule 567—101.6(455B,455D) shall be demonstrated through methods described in this chapter.

*f.* A description of population, employment, and industrial production as of the planning area's base year waste stream.

*g.* A description of the current waste composition and waste generation rates and a projection of waste composition and waste generation rates spanning two planning cycles. This description should include the effects of anticipated planning area modifications on waste generation and composition in the future. These factors may include economic changes, population changes, loss or addition of communities to the planning area, and any other modification expected to affect the amount of waste generated.

*h.* A description of the current integrated solid waste management system that contains a specific methodology for meeting the state's waste volume reduction and recycling goals pursuant to rule 567—101.6(455B,455D). This description shall include:

(1) Details of strategies and educational efforts designed to:

1. Increase public awareness about proper recycling and disposal options for motor oil and lead-acid batteries.

2. Encourage residents of the planning area to dispose of household appliances properly.

3. Encourage tire stewardship and proper tire recycling and disposal.

4. Encourage backyard composting and proper management of yard waste.

5. Encourage residents of the planning area to properly manage household hazardous waste.

(2) A list of collectors/recyclers used by the permitted sanitary disposal project(s) for the proper management of tires or household appliances.

(3) A detailed narrative of all other existing waste management programs in the planning area that addresses all components of the state's waste management hierarchy. This narrative must include specific methodologies for the separation of glass, paper, plastic and metal. For each specific waste management program, the following shall be included:

1. Program description.

2. Responsibility for program oversight.

3. Funding source(s).

4. Public education strategies employed.

5. Targeted audiences (business and industry, urban residents, rural residents, local governments, and public institutions).

6. The anticipated impact on the waste stream and diversion over at least two planning cycles.

(4) A discussion of the strengths and weaknesses of existing programs, efforts and strategies in the current integrated solid waste management system.

(5) An evaluation of the planning area's progress toward meeting the state's waste volume reduction and recycling goals. This evaluation shall address the goal progress calculation that was most recently provided in writing by the department. The department, upon written notification of intent to submit an initial comprehensive plan, will, within 30 days after receipt of notification, perform a goal progress calculation using the most current complete fiscal year data set available.

*i.* An assessment of alternative waste management systems, programs and strategies that addresses each of the following tiers of the state's waste management hierarchy:

(1) Source reduction options including, but not limited to, backyard composting and management of household hazardous waste.

- (2) Recycling and reuse options.
- (3) Combustion options with or without energy recovery. Any programs using incineration, with or without energy recovery, must include methodologies for prior removal of recyclable and reusable material, material that will result in uncontrolled toxic or hazardous air emissions when burned, and hazardous or toxic materials which are not rendered nonhazardous or nontoxic by incineration.

(4) Use of other existing or planned sanitary landfills or transfer stations.

*j.* If construction of a new or purchase of an existing sanitary disposal project is considered or proposed, an initial comprehensive plan shall include:

(1) A summary of established and anticipated regulatory requirements regarding future siting, operation, closure and postclosure of each facility.

(2) A financial plan detailing the actual cost of the sanitary disposal project, including the funding sources of the project, and a description that spans two planning cycles of the methods of financing. The financial plan shall address:

1. Initial capital expenditures, including land acquisition, if applicable.
2. Local approval costs, including legal, engineering, and administrative fees.
3. Long-term costs, operations, closure and postclosure.
4. A mechanism to fund closure and postclosure costs.
5. Projected annual revenues.

(3) A description of expected environmental impacts from the construction of a new or purchase of an existing sanitary disposal project.

<sup>1</sup>(4) Rescinded IAB 7/4/07, effective 10/1/07.

*k.* A specific plan and schedule spanning two planning cycles for implementing the initial comprehensive plan. Items that shall be addressed include:

- (1) Proposed activities and locations.
- (2) Responsible organization(s).
- (3) Implementation milestones.
- (4) Public education strategies.
- (5) Anticipated impact on the waste stream and diversion.

**101.13(2)** *Comprehensive plan updates: for permitted municipal solid waste landfills, construction and demolition waste disposal sites, and transfer stations.* The department shall notify a planning agency of the due dates of the comprehensive plan update submittal a minimum of 12 months prior to the beginning of the planning cycle. In fulfillment of the requirements of Iowa Code section 455B.301A and Iowa Code chapter 455D, a comprehensive plan update shall include the following information:

*a.* A narrative that describes any permanent change in the planning area that has resulted in change in the waste stream, if applicable. An amendment to the comprehensive plan update is required prior to the facility's receiving waste on an ongoing basis from outside the delineated planning area.

*b.* A resolution or resolutions from all local governments or 28E agencies established for the purpose of managing solid waste or implementing integrated solid waste management systems, or both, on behalf of local governments, and letters of cooperation from private sanitary disposal projects participating in the comprehensive plan update. The resolution(s) shall include a statement that the comprehensive plan participants have reviewed the comprehensive plan update and will adopt the implementation schedule contained in the comprehensive plan update. Letters of cooperation from private agencies shall include a statement that they have reviewed the comprehensive plan update and support the waste reduction and recycling efforts outlined therein. The letter of cooperation shall briefly summarize the implementation schedule. If a local government included in the planning area refuses to provide a resolution, then that local government must prepare its own comprehensive plan and is no longer considered to be in the original planning area. In such cases, the original comprehensive plan update may still be approved if it includes a brief addendum stating the effect of the change on the waste stream, but the sanitary disposal project(s) in the planning area may no longer accept waste from the local government that has withdrawn from the comprehensive plan. Private sanitary disposal projects failing to provide letters of cooperation will be unable to receive a permit or permit renewal. If a city, county, or other public agency complies with comprehensive planning requirements by means

of a contract(s) with an agency holding a sanitary disposal project permit or with a hauler(s) that has a contract(s) with an agency holding a sanitary disposal project permit, a list of those contracts shall be submitted as provided in rule 567—101.5(455B,455D).

*c.* A description of public participation, including:

(1) A summary of ongoing strategies to provide the public with opportunities to provide input.

(2) A list of all public hearings or meetings that were held in conjunction with the development of the comprehensive plan update and the methods used to publicize public meetings.

(3) Proof that a minimum of two public meetings were held during the development of the comprehensive plan update. The first meeting shall inform the public of the comprehensive plan update development process, while the second meeting shall provide the public with an opportunity for review and comment on the comprehensive plan update.

(4) An account of opportunities for the public to comment on the comprehensive plan update and minutes from any meetings regarding comprehensive plan update development.

*d.* A report of the base year waste stream in total tons per year. This base year data and landfill tonnage information for the most current completed fiscal year data set available will be used to demonstrate progress toward meeting the state's waste volume reduction and recycling goals pursuant to rule 567—101.6(455B,455D) through methods described in this chapter.

*e.* A description of changes in population, employment, and industrial production since the last approved comprehensive plan or comprehensive plan update.

*f.* A description of current waste composition and waste generation rates, including:

(1) Changes since the last approved comprehensive plan or comprehensive plan update.

(2) The effects of anticipated planning area modifications on waste generation and composition in the future. These factors may include economic changes, population changes, loss or addition of communities to the planning area and any other modification expected to affect the amount of waste generated.

*g.* A discussion of changes to the integrated solid waste management system since the last approved comprehensive plan or comprehensive plan update, including:

(1) New and evolving strategies, efforts, and programs implemented within the planning area to:

1. Increase public awareness about proper recycling and disposal options for motor oil and lead-acid batteries.

2. Encourage residents of the planning area to dispose of household appliances properly.

3. Encourage tire stewardship and proper tire recycling and disposal.

4. Encourage backyard composting and proper management of yard waste.

5. Encourage residents of the planning area to properly manage household hazardous waste.

6. Provide for the separation of glass, paper, plastic and metal.

(2) A list of collectors/recyclers used by the permitted sanitary disposal project(s) for the proper management of tires or household appliances.

(3) A detailed narrative of all waste management programs implemented since the last approved comprehensive plan or comprehensive plan update that addresses all components of the state's waste management hierarchy. For each specific waste management program implemented since the last approved comprehensive plan or comprehensive plan update, the following shall be included:

1. Program description.

2. Responsibility for program oversight.

3. Public education strategies employed.

4. Targeted audiences (business and industry, urban residents, rural residents, local governments, and public institutions).

5. The anticipated impact on the waste stream and diversion over at least two planning cycles.

*h.* An evaluation of progress toward meeting the state's waste volume reduction and recycling goals using the goal progress calculation provided by the department 12 months prior to the due date of the comprehensive plan update. This analysis may use any combination of the following methodologies:

(1) Trend analysis of goal progress since the initial comprehensive plan.

(2) Formal, stakeholder-based collaborative goal-setting process leading to development of long-range integrated solid waste management system goals. The process shall include development of detailed objective-based strategies to achieve the desired goals. If programs have been implemented since the establishment of the goals, the comprehensive plan update shall include analysis of their impact on the long-range goals.

(3) An analysis of the effectiveness or benefit of existing programs, individually and in aggregate, including a discussion of opportunities and need for improvement, modification or expansion.

*i.* Analysis of the impact of alternative solid waste management methods not currently employed, but being considered within the planning area.

*j.* A specific plan and schedule spanning two planning cycles for implementing the comprehensive plan. Items that shall be addressed include:

- (1) Proposed activities and locations.
- (2) Responsible organization(s).
- (3) Implementation milestones.
- (4) Public education strategies.
- (5) Anticipated impact on the waste stream and diversion.

**101.13(3)** *Transfer stations and construction and demolition waste disposal sites.* If a transfer station or a construction and demolition waste disposal site as defined in 567—Chapter 100 is not part of an existing comprehensive plan, then each facility must submit its own comprehensive plan. A transfer station that takes solid waste generated within Iowa and transports all of it out of state for disposal shall meet the comprehensive planning requirements by filing an operational plan with the department in accordance with 567—paragraph 106.8(1) “k” and by submitting quarterly reports to the department in accordance with rule 567—106.14(455B,455D).

**101.13(4)** *Comprehensive plan updates for permitted monowaste facilities.* If monowaste facilities are not part of an existing comprehensive plan, they must submit their own comprehensive plan. Comprehensive plan updates for these facilities shall include:

*a.* Service area descriptions. These descriptions shall include:

(1) Information about where the landfilled waste(s) is generated, including information about each facility using the landfill, and a description of what waste(s) is being landfilled from each facility. This information and description shall:

1. Provide an explanation of the process(es) in which the waste(s) is generated.
2. Describe why the current management method was chosen.

(2) An evaluation of the environmental impact of this management method.

(3) If the landfill accepts waste(s) from more than one company, letters of cooperation from each company are required. These letters of cooperation express the company’s willingness to work toward the waste reduction and recycling goals outlined in the comprehensive plan.

*b.* A description of all waste(s) managed by the permitted facility, including:

- (1) Landfilled waste at the permitted facility, which includes:
  1. Annual tonnage of each type of waste based upon the fiscal year; and
  2. Current waste composition. A breakdown by percentage of all waste(s) shall be included.
- (2) The amount of waste reused and recycled.
- (3) Projected tonnage spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.

(4) Projected waste composition spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.

(5) Units-of-production for the current fiscal year to normalize waste generation for changes in production in order to evaluate progress toward meeting the state’s solid waste volume reduction and recycling goals.

*c.* Base year tonnage information (the later of fiscal year 1988 tonnage landfilled or first year in operation), including:

(1) Only the waste(s) that is landfilled in the permitted monowaste facility and not all waste(s) generated.

- (2) Units-of-production for the base year.
- d. Alternatives analysis, which shall:
  - (1) Include details of how the waste(s) is recycled or reused.
  - (2) Describe the alternatives or other options that were explored or considered for each type of waste landfilled. If alternatives are not feasible at this time, information explaining why the alternatives are not feasible shall be provided.
  - (3) Indicate the opportunities that exist for source reduction of waste(s).
  - (4) Indicate the opportunities that exist for recycling.
  - (5) Indicate the opportunities that exist for reuse of the waste(s).
- e. A report on other waste(s) managed at the facility, including but not limited to:
  - (1) A description of how other waste(s) is managed, including final disposal.
  - (2) A description of recycling programs employed.
- f. Implementation time line spanning two planning cycles, which shall:
  - (1) Outline plans for increasing recycling/reuse of waste or decreasing the amount landfilled.
  - (2) Include planned activities spanning two planning cycles. Long-term projects should indicate milestones throughout the time span.

**101.13(5) Comprehensive plan updates for permitted monogenerator facilities.** If a monogenerator facility is not part of an existing comprehensive plan, then the facility must submit its own comprehensive plan. Comprehensive plan updates for these facilities shall include:

a. A service area description, including information about where the landfilled waste is generated, and an explanation of the process(es) in which the waste(s) is generated. This description and explanation shall:

- (1) Describe why the current management method was chosen; and
  - (2) Evaluate the environmental impact of this management method.
- b. A description of all waste(s) managed by the permitted facility, including:
- (1) Landfilled waste at the permitted sanitary disposal project, which includes:
    - 1. Annual tonnage of each type of waste(s) based upon the fiscal year; and
    - 2. Current waste composition. A breakdown by percentage of all waste(s) shall be included.
  - (2) The amount of waste reused or recycled.
  - (3) Projected tonnage spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.
  - (4) Projected waste composition spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.
  - (5) Units-of-production for the current fiscal year to normalize waste generation for changes in production in order to evaluate progress toward meeting the state's solid waste volume reduction and recycling goals.

c. Base year tonnage information (the later of fiscal year 1988 tonnage landfilled or first year in operation), including:

- (1) Only the waste(s) that is landfilled in the permitted monogenerator facility and not all waste(s) generated.
  - (2) Units-of-production for the base year.
- d. Alternative analysis, which shall:
- (1) Include details of how the waste(s) is recycled or reused.
  - (2) Describe the alternatives or other options that were explored or considered for each type of waste landfilled. If alternatives are not feasible at this time, information explaining why the alternatives are not feasible shall be provided.
  - (3) Indicate the opportunities that exist for source reduction of the waste(s).
  - (4) Indicate the opportunities that exist for recycling.
  - (5) Indicate the opportunities that exist for reuse of the waste(s).
- e. A report on other waste(s) managed at the facility, including but not limited to:
- (1) A description of how other waste(s) is managed, including final disposal.
  - (2) A description of recycling programs employed.

*f.* Implementation time line spanning two planning cycles, which shall:

- (1) Outline plans for increasing recycling/reuse of waste and decreasing the amount landfilled.
- (2) Include planned activities spanning two planning cycles. Long-term projects should indicate milestones throughout the time span.

**101.13(6) Comprehensive plan updates for permitted incinerators.** If a permitted incinerator is not part of an existing comprehensive plan, then the facility must submit its own comprehensive plan. Comprehensive plan updates for these facilities shall include:

*a.* A service area description, including information about where the incinerated waste(s) is generated, and an explanation of the process(es) in which the waste(s) is generated. If applicable, certification that only infectious waste as defined by Iowa Code section 455B.501 is being treated. This description and explanation shall:

- (1) Describe why the current management method was chosen; and
- (2) Evaluate the environmental impact of this management method.

*b.* A description of all waste(s) incinerated at the permitted facility, including:

- (1) Annual tonnage of each type of waste(s) based upon the fiscal year; and
- (2) Current waste composition. A breakdown by percentage of all waste(s) incinerated shall be included.

*c.* Of the total amount of waste(s) generated, the following shall be included:

- (1) The amount of waste landfilled; and
- (2) The amount of waste reused or recycled.

*d.* Projected tonnage spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.

*e.* Projected waste composition spanning two planning cycles. This projection shall include supporting information and any assumptions used in the projections.

*f.* Units-of-production for the current fiscal year to normalize waste generation for changes in production in order to evaluate progress toward meeting the state's solid waste volume reduction and recycling goals.

*g.* Base year tonnage information (the later of fiscal year 1988 tonnage landfilled or first year in operation), including:

- (1) Only the waste(s) that is incinerated at the permitted incineration facility and not all waste(s) generated.
- (2) Units-of-production for the base year.

*h.* Alternative analysis, which shall:

- (1) Include details of how the incinerated waste(s) is recycled or reused.
- (2) Describe the alternatives or other options that were explored or considered for each type of waste incinerated. If alternatives are not feasible at this time, information explaining why the alternatives are not feasible shall be provided.

(3) Indicate the opportunities that exist for source reduction of the waste(s).

(4) Indicate the opportunities that exist for recycling.

(5) Indicate the opportunities that exist for reuse of the waste(s).

*i.* A report on other waste(s) managed at the facility, including but not limited to:

- (1) A description of how other waste(s) is managed, including final disposal.
- (2) A description of recycling programs employed.

*j.* Implementation time line spanning two planning cycles, which shall:

- (1) Outline plans for increasing recycling/reuse of waste and decreasing the amount incinerated.
- (2) Include planned activities spanning two planning cycles. Long-term projects should indicate milestones throughout the time span.

**101.13(7) Comprehensive plan amendments.** If a sanitary disposal project or city or county requests to be included in a planning area after completion of an initial comprehensive plan or a comprehensive plan update but before the next comprehensive plan update is due, and the planning area participants agree to include the city, county, or sanitary disposal project, the following procedure is required:

a. A letter must be submitted to the department by the facility operator describing the facility's operation and the amount of waste to be managed, or by the city or county describing that local government's intention to participate in the specified comprehensive plan.

b. In a letter that must be submitted to the department, the planning agency must agree to accept the city, county, or sanitary disposal project in the planning agency's planning area and must state how the change will affect the planning area's waste stream, including an explanation of the change in the planning area, the amount of waste involved and details of waste reduction and recycling efforts that will be implemented in any new communities, if applicable.

c. The next comprehensive plan update submitted by the planning agency shall include the amended city, county, or sanitary disposal project.

d. If a city or county joins a planning area, a resolution must be submitted to the department stating the city's or county's commitment to the comprehensive plan of the planning area, and stating that the city or county will work to implement the comprehensive plan of the planning area.

**101.13(8)** *Failure to meet the 25 percent waste volume reduction and recycling goal.* If at any time the department notifies a planning agency in writing that the planning area has failed to meet the 25 percent waste volume reduction and recycling goal, then, at a minimum, the solid waste management techniques listed in Iowa Code section 455D.3(4) must be implemented throughout the planning area. Evidence of implementation of these solid waste management techniques shall be documented in comprehensive plan updates. The planning area shall:

a. Develop draft ordinances no later than 6 months after the date of the goal progress calculation approval letter issued by the department. Ordinances shall be enacted and implemented no later than 12 months after the date of issuance of the goal progress calculation approval letter. Local governments are charged with the responsibility for establishing collection fees that are based on volume or on the number of containers used for disposal by residents, and for submitting documentation of ordinance enactment and implementation.

Local governments shall set the maximum container limit for a base price service at or below 100 gallons of solid waste per household per week. If an ordinance has a base price service limit that is over 100 gallons of solid waste per household per week, communities will be required to justify how the ordinance has been designed to meet the state's waste volume reduction and recycling goals.

b. Conduct an educational and promotional program to inform citizens of the manner and benefits of reducing, reusing, and recycling materials and the procurement of products made with recycled content. The program shall include the following:

(1) Targeted waste reduction and recycling education for residents, including residents of multifamily dwelling complexes having five or more units.

(2) A seminar for the commercial sector regarding the benefits of and opportunities for waste reduction and recycling. The planning area shall provide a description of the methods used to encourage participation in the commercial recycling seminar and a list or count of the businesses attending.

(3) Promotion of recycling through targeted community and media events.

(4) Recycling notification and educational packets to all new residential, commercial, and institutional collection service customers that include, at a minimum, the manner of preparation of materials for collection and the reasons for separation of materials for recycling.

c. Notify the public of the planning area's failure to meet the waste volume reduction goals of this chapter.

(1) The planning area participants shall notify the public using the following standard language:

PUBLIC NOTIFICATION  
(insert NAME OF SOLID WASTE PLANNING AREA)

The Iowa General Assembly mandated that the amount of waste landfilled as of July 1, 1988, be reduced 25 percent by July 1, 1994, and 50 percent by July 1, 2000, through source reduction and recycling activities.

The (insert name of solid waste planning area) did not meet the state's 25 percent waste volume reduction and recycling goal and is now required to implement a number of waste management techniques. Because the (insert name of solid waste planning area) did not meet the 25 percent goal, landfill users will pay 50 cents per ton in addition to the state solid waste fee of \$4.25 per ton of material landfilled. This additional fee will be applied until the (insert name of solid waste planning area) demonstrates it has attained the goal. In contrast, those planning areas meeting the goal may subtract 60 cents per ton from the state solid waste fee.

The (insert name of solid waste planning area) must also do the following:

1. Develop draft ordinances to be used by local governments for establishing fees that are based on volume or on the number of containers used for disposal by residents;
2. Conduct an educational and promotional program to inform citizens of the manner and benefits of reducing, reusing, and recycling materials and the procurement of products made with recycled content.

Everyone—businesses, industries, schools, governments, and citizens—must work together to reduce the amount of valuable resources being landfilled.

To find out how you can help reduce waste and participate in the activities listed above, please contact (insert name of contact person) at (insert telephone number of contact person).

The (insert name of solid waste planning area) includes (insert names of participating local governments—cities and counties).

(2) The planning area participants shall notify the public using the following procedures:

1. Publication of the notice in not less than a one-quarter page format in a daily newspaper(s) of general circulation in each county within the planning area as soon as possible, or within 60 days from the date the department notifies the planning agency that it has failed to meet the 25 percent waste volume reduction and recycling goal.
2. If counties served by the planning area are not served by a daily newspaper(s) of general circulation, notice shall instead be given by publication in a weekly newspaper(s) of general circulation in each county within the planning area.

(3) The planning agency shall submit to the department, within 30 days from the date of publication of the public notice, proof of publication from the newspaper(s) used to satisfy this requirement.

*d.* For sanitary disposal projects required to remit state tonnage fees, require remittance of an additional 50 cents per ton to the department as outlined in subrule 101.14(3).

<sup>1</sup> Effective date of rescission of 101.13(1)“j”(4) delayed 70 days by the Administrative Rules Review Committee at its meeting held September 11, 2007.

### **567—101.14(455B,455D) Fees for disposal of solid waste at sanitary landfills.**

#### **101.14(1) Authority, purpose and applicability.**

*a. Authority.* Pursuant to Iowa Code section 455B.310, the department has authority to collect fees for the disposal of solid waste at sanitary landfills. All tonnage fees received by the department under this rule shall be deposited in the solid waste account of the groundwater protection fund created under Iowa Code section 455E.11(1).

*b. Purpose.* The purpose of this rule is to provide an orderly and efficient process for the assessment and collection of fees for the disposal of solid waste at a sanitary landfill. This rule clarifies the applicability of the fees and sets forth a fee schedule, means of filing, and record-keeping requirements.

*c. Applicability.* Except as provided in subrule 101.14(2), operators of all sanitary landfills located within Iowa and subject to the permitting requirements of the department shall pay a fee for each ton of solid waste disposed of in the landfill.

#### **101.14(2) Exclusions.**

*a.* The fees specified in subrule 101.14(3) do not apply to construction and demolition waste disposed of in an area of a sanitary landfill that has been designated exclusively for the disposal of

construction and demolition waste based on plans and specifications approved by the department; or to solid waste disposal facilities with special permit provisions which limit the site to the management of landscape waste and to disposal of coal combustion waste, cement kiln dust, construction and demolition waste and foundry sand; or to solid waste materials approved by the department for lining or capping or constructing berms, dikes or roads in the project.

*b.* Fees do not apply to wastes which will not be buried at a sanitary landfill if such material is salvaged or recycled in accordance with the provisions of the landfill permit.

**101.14(3)** *Fee schedule.*

*a.* The base tonnage fee is \$4.25 per ton of solid waste.

*b.* The statewide goal progress average is 36 percent, as determined by the department on July 1, 1999.

*c.* If at any time the department notifies a planning agency or sanitary disposal project(s) in writing that the planning area has failed to meet the 25 percent goal, all sanitary disposal projects within that planning area that are required to remit state tonnage fees shall collect an additional 50 cents per ton, in addition to the base tonnage fee starting with the next scheduled fee payment. All sanitary disposal projects within the planning area that are required to remit state tonnage fees shall remit to the department \$3.30 per ton for the tonnage fees collected, and the sanitary landfill operator(s) shall retain the remaining \$1.45 per ton. Of the tonnage fee retained by the sanitary landfill operator(s), 95 cents per ton is to be used for comprehensive plan implementation and 50 cents per ton is to be used for environmental protection activities and for comprehensive planning. Environmental protection activities include the development of a closure or postclosure plan, the development of a plan for the control and treatment of leachate including the preparation of facility plans and detailed plans and specifications, the preparation of a financial plan, or other environmental protection activities. Moneys due to the department under this paragraph shall be remitted until such time as evidence of attainment of the 25 percent goal by the planning area is documented and approved in writing by the department.

*d.* If at any time the department notifies a planning agency and sanitary disposal project(s) in writing that the planning area has met or exceeded the 25 percent goal, all sanitary disposal projects within that planning area that are required to remit state tonnage fees shall reduce by 60 cents per ton the total amount of the base tonnage fee collected, starting with the next scheduled fee payment.

(1) If the planning area meets the 25 percent goal but is under the statewide average described in paragraph 101.14(3) "b," all sanitary disposal projects within that planning area that are required to remit state tonnage fees shall remit to the department \$2.20 per ton for the tonnage fees collected, and the sanitary landfill operator(s) shall retain the remaining \$1.45 per ton. Of the tonnage fee retained by the sanitary landfill operator(s), 95 cents per ton is to be used for comprehensive plan implementation and 50 cents per ton is to be used for environmental protection activities and for comprehensive planning. Environmental protection activities include the development of a closure or postclosure plan, the development of a plan for the control and treatment of leachate including the preparation of facility plans and detailed plans and specifications, the preparation of a financial plan, or other environmental protection activities. Moneys due to the department under this paragraph shall be remitted until such time as evidence of a change in the planning area's progress toward meeting the state's waste volume reduction and recycling goals is documented and approved in writing by the department.

(2) If the planning area meets the 25 percent goal and exceeds the statewide average described in paragraph 101.14(3) "b," all sanitary disposal projects within that planning area that are required to remit state tonnage fees shall remit to the department \$2.10 per ton for the tonnage fees collected, and the sanitary landfill operator(s) shall retain the remaining \$1.55 per ton. Of the tonnage fee retained by the sanitary landfill operator(s), \$1.05 per ton is to be used for comprehensive plan implementation and 50 cents per ton is to be used for environmental protection activities and for comprehensive planning. Environmental protection activities include the development of a closure or postclosure plan, the development of a plan for the control and treatment of leachate including the preparation of facility plans and detailed plans and specifications, the preparation of a financial plan, or other environmental protection activities. Moneys due to the department under this paragraph shall be remitted until such

time as evidence of a change in the planning area's progress toward meeting the state's waste volume reduction and recycling goals is documented and approved in writing by the department.

*e.* If at any time the department notifies a planning agency or sanitary disposal project(s) in writing that the planning area has met or exceeded the 50 percent goal, all sanitary disposal projects within that planning area that are required to remit state tonnage fees shall reduce by \$1.00 per ton the total amount of the base tonnage fee collected, starting with the next scheduled fee payment. All sanitary disposal projects within the planning area that are required to remit state tonnage fees shall remit to the department \$1.95 per ton for the tonnage fees collected, and the sanitary landfill operator(s) shall retain the remaining \$1.30 per ton. Of the tonnage fee retained by the sanitary landfill operator(s), 80 cents per ton is to be used for comprehensive plan implementation and 50 cents per ton is to be used for environmental protection activities and for comprehensive planning. Environmental protection activities include the development of a closure or postclosure plan, the development of a plan for the control and treatment of leachate including the preparation of facility plans and detailed plans and specifications, the preparation of a financial plan, or other environmental protection activities. Moneys due to the department under this paragraph shall be remitted until such time as evidence of a change in the planning area's progress toward meeting the state's waste volume reduction and recycling goals is documented and approved in writing by the department.

Table 1 sets forth the solid waste tonnage fee schedule.

Planning areas with less than 25% diversion level:	
Collect	\$4.75 per ton
Remit	\$3.30 per ton to the department
Retain	\$1.45 per ton (\$0.95 per ton for implementing planning, \$0.50 per ton for environmental protection, comprehensive plan development and implementation)
Planning areas over 25% diversion, under the state average, and under 50%:	
Collect	\$3.65 per ton
Remit	\$2.20 per ton to the department
Retain	\$1.45 per ton (\$0.95 per ton for implementing planning, \$0.50 per ton for environmental protection, comprehensive plan development and implementation)
Planning areas over 25% diversion, over the state average, and under 50%:	
Collect	\$3.65 per ton
Remit	\$2.10 per ton to the department
Retain	\$1.55 per ton (\$1.05 per ton for implementing planning, \$0.50 per ton for environmental protection, comprehensive plan development and implementation)
Planning areas over 50% diversion:	
Collect	\$3.25 per ton
Remit	\$1.95 per ton to the department
Retain	\$1.30 per ton (\$0.80 per ton for implementing planning, \$0.50 per ton for environmental protection, comprehensive plan development and implementation)

*f.* Retained tonnage fees collected pursuant to this subrule shall be approved by the department and used for implementation of programs and services designed to satisfy the requirements of this chapter.

*g.* For purposes of calculating tonnage fees, sanitary landfills shall utilize scales and shall base the fee assessment on the net scale weight of solid wastes disposed of at the landfill during the reporting period.

*h.* If special conditions existing at a sanitary landfill make it impractical to use the landfill's scales to determine waste tonnages, the landfill may propose, for department review and approval, an alternate method for determining the weight of disposed solid waste.

**101.14(4)** *Form, manner, time and place of filing.*

*a. Form.* Any person to whom or entity to which this rule applies shall file a completed DNR Form 542-3276, Quarterly Solid Waste Fee Schedule and Retained Fees Report.

*b. Manner, time and place.* Fees are to be paid on a quarterly basis. Sanitary landfills serving more than one planning area, as expressed in rule 101.12(455B,455D), shall submit separate Quarterly Solid Waste Fee Schedule and Retained Fees Reports for each planning area. The fees and report on retained fees will be due January 1, April 1, July 1, and October 1 for the quarters ending September 30, December 31, March 31, and June 30, respectively. The completed form shall be submitted with the appropriate fees to Accounting, Department of Natural Resources, Wallace State Office Building, 502 East 9th Street, Des Moines, Iowa 50319.

**101.14(5)** *Reporting and record keeping.*

*a. Operating records.* Those sanitary landfill operators who are subject to the fee assessment requirements of this rule shall maintain adequate records to determine and document the weight of solid waste received at and disposed of in the sanitary landfill during the calendar year. Planning areas entering into an agreement pursuant to Iowa Code Supplement section 455B.306(2) shall submit documentation to the department and a planning area receiving the solid waste under such an agreement shall, in addition, submit evidence to the department demonstrating that required retained fees were returned in a timely manner to other planning area(s) under the agreement.

*b. Retention of records.* All records used in determining the solid waste fee assessment must be kept for a period of at least three years from the end of the calendar year which the records represent.

*c. Availability of records.* All records required under this rule must be furnished upon request and be made available at all reasonable times for inspection to any officer, employee, or representative of the department who is duly designated by the director.

**101.14(6)** *Failure to pay fees.* If it is found that a person or entity has failed to pay the fees assessed by this rule, the director shall enforce the collection of the delinquent fees. A person or entity required to pay fees as required by Iowa Code section 455B.310 that fails or refuses to pay the fees by the due date shall be assessed a penalty of 2 percent of the quarterly fee due, to be assessed on January 2, April 2, July 2, and October 2, and on a monthly basis on the first day of each month thereafter, until paid. A person or entity required to retain fees as required by Iowa Code section 455B.310 that fails or refuses to report the use of the retained fees by the due date shall be assessed a penalty of 2 percent of the retained fees due to the department, with said penalty to be assessed on January 2, April 2, July 2, and October 2, and on a monthly basis on the first day of each month thereafter, until paid. All penalties shall be paid in addition to the fees due.

These rules are intended to implement Iowa Code sections 455B.304, 455B.306, and 455D.7.

<sup>2</sup> Effective date of rescission of 101.13(1)“j”(4) delayed 70 days by the Administrative Rules Review Committee at its meeting held September 11, 2007.

## CHAPTER 102

## PERMITS

[Prior to 7/1/83, DEQ Ch 27]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—102.1(455B) Permit required.** No public or private agency shall construct or operate a sanitary disposal project without first obtaining a permit from the director.

**567—102.2(455B) Types of permits.** There are four types of permits issued by the director. These are described in this rule.

**102.2(1) Sanitary disposal project permit.** This permit is issued by the director under the authority of Iowa Code section 455B.305. Such permits are issued for a term of three years and are renewable for similar terms.

*a.* Applications for renewal to be timely filed must be received at the department's office at least 90 days before the expiration date of the existing permit. For application forms, see 567—100.3(17A,455B).

*b.* The department shall conduct an inspection of the sanitary disposal project following receipt of the application for renewal. Following the inspection, the permit holder shall be notified of all measures needed to bring the sanitary disposal project into conformance with Iowa Code chapter 455B and these rules.

*c.* A permit shall be renewed when a properly completed application has been received and all corrective measures required under 102.2(1) "b" have been completed.

**102.2(2) Temporary permit.** This permit is issued by the director under the authority of Iowa Code subsection 455B.307(1) for solid waste disposal sites which do not comply with the requirements of Iowa Code chapter 455B and these rules. Such permits are issued for a term of one year, and are renewable. Temporary permits may be renewed if the director finds that the public interest will be best served by granting a renewal and the terms of the previous temporary permit have been complied with.

*a.* Temporary permits shall incorporate as a condition a compliance schedule specifying how and when the applicant will meet the requirements of Iowa Code chapter 455B and these rules.

*b.* The decision of the director whether to issue a temporary permit, being discretionary, shall be a final decision. Once a temporary permit has been issued, it may be suspended or revoked only as provided in Iowa Code section 455B.305 and 567—Chapter 7.

**102.2(3) Developmental permit.** The director may issue a developmental permit for construction and operation of a sanitary disposal project which is not specifically described in these rules if the permit applicant demonstrates at a public hearing that the proposed project can provide satisfactory disposal of solid waste without adverse health-related or environmental effects.

*a.* No such permit shall be issued until the director, after public hearing, considers and approves the proposed project.

*b.* Developmental permits shall be issued for a term no less than one year and no more than three years.

*c.* Developmental permits may be renewed if the director finds, following public hearing, that the sanitary disposal project provided satisfactory disposal of solid waste without adverse health-related or environmental effects over the term of the prior permit.

**102.2(4) Closure permit.** This permit is issued by the director under the authority of Iowa Code section 455B.305 for sanitary disposal projects which no longer accept solid waste. Such permits are issued for a term of 30 years. The term of subsequent renewal of the permit, if the postclosure period is extended, will be determined on a site-specific basis. A sanitary disposal project shall require a closure permit until the department determines that postclosure maintenance, postclosure monitoring, and operation of required leachate control system are no longer necessary.

*a.* Application shall be filed at the time of departmental notification of intended closure as required by this rule.

*b.* The application for issuance of this permit shall be based on a previously approved comprehensive plan and other rules adopted pursuant to the authority of Iowa Code section 455B.306.

c. This permit shall require submission of an annual audit report detailing the status of the financial instrument and other funds as required to guarantee completion of postclosure and monitoring requirements.

d. This permit may be modified by the issuance of an amendment by the department. Requests for permit amendments may be initiated by the department or by the permit holder.

e. At the end of the applicable postclosure period, and upon satisfactory completion of all required postclosure activities as established by Iowa Code chapter 455B, written notification shall be issued by the director stating that a permit is no longer required for the facility.

This rule is intended to implement Iowa Code section 455B.304.

**567—102.3(455B) Applications for permits.**

**102.3(1)** *Application requirements for permits and renewals.* See 567—100.3(17A,455B).

**102.3(2)** *Time limit on submittal of information.*

a. *Sanitary disposal project permit applications.* If an application for a sanitary disposal project permit is found to be incomplete by the department, the applicant will be notified of that fact and of the specific deficiencies. Thirty days following such notification, the application may be returned by the department as incomplete without prejudice to the applicant's right to reapply. The applicant may be granted, upon request, an additional 30 days to complete the application.

b. *Applications for renewal or amendment of a sanitary disposal project.* If an application for a sanitary disposal project permit renewal or amendment is found to be incomplete by the department, the applicant will be notified of that fact and of the specific deficiencies. Thirty days following such notification, the application may be denied by the department.

This rule is intended to implement Iowa Code section 455B.304.

**567—102.4(455B) Preparation of plans.** All plans and specifications submitted in the application for a sanitary disposal project permit or a developmental permit shall be prepared in conformance with Iowa Code chapter 114 and shall be submitted in triplicate.

**567—102.5(455B) Construction and operation.** All sanitary disposal projects shall be constructed and operated according to the plans and specifications as approved by the department and the terms of the permit. The approved plans and specifications shall constitute a term of the permit.

**567—102.6(455B) Compliance with rule changes.**

**102.6(1)** *Design and construction.* Sanitary disposal projects designed and constructed in accordance with rules in effect at the time of construction shall not be required to be redesigned or reconstructed due to subsequent rule changes unless the department finds that such facilities are causing pollution. Such facilities shall be brought into compliance with rules in effect at the time of reconstruction, enlarging, or otherwise modifying the sanitary disposal project, or at the time of permit renewal.

**102.6(2)** *Operation.* If any new rule conflicts with an operating procedure prescribed in the engineering plans or the permit of a sanitary disposal project, the operation shall conform with the new rule.

**567—102.7(455B) Amendments.** Sanitary disposal project permits, temporary permits, and developmental permits may be modified by the issuance of an amendment by the department, except as provided in 102.6(1).

**567—102.8(455B) Transfer of title and permit.** If title to an operational sanitary disposal project is transferred, and the transferee desires to continue operation of the project, the transferee shall apply in writing to the department within 30 days of the transfer for a transfer of the permit.

**102.8(1)** The department shall transfer the permit when it determines that the sanitary disposal project is in compliance with Iowa Code chapter 455B and these rules and the terms of the permit, and

that the transferee possesses the equipment and personnel to operate the project in conformance with chapter 455B and these rules and the terms of the permit.

**102.8(2)** No permit is valid after 60 days following transfer of title, unless the permit has been transferred by the department to the new titleholder pursuant to this rule.

**567—102.9(455B) Permit conditions.** Any permit may be issued subject to conditions specified in writing which are necessary to ensure the sanitary disposal project can be constructed and operated in compliance with these rules.

**567—102.10(455B) Effect of revocation.** If a permit held by any public or private agency for a sanitary disposal project is revoked by the director, no new permit shall be issued to that agency for that disposal project for a period of one year from the date of revocation. This shall not prohibit the issuance of a permit for the disposal project to another public or private agency.

This rule is intended to implement Iowa Code section 455B.305.

**567—102.11(455B) Inspection prior to start-up.** The department shall be notified when the initial construction of a sanitary disposal project has been completed, in order that an inspection may be made to determine that the project is constructed as designed. No solid waste shall be accepted by a sanitary disposal project until that project has been inspected and approved by the department.

**567—102.12(455B) Primary plan requirements for all sanitary disposal projects.** Every application for any permit issued by the department shall include the following. In addition, every application shall include the particular information required by the chapter describing the type of project to be constructed.

**102.12(1)** The name, address and telephone number of:

- a. Owner of site where project will be located.
- b. Permit applicant.
- c. Official responsible for operation of project.
- d. Design engineer.
- e. Agency to be served by the project, if any.
- f. Responsible official of agency served, if any.

**102.12(2)** A legal description of the site.

**102.12(3)** A map or aerial photograph locating the boundaries of the site and identifying:

- a. North or other principal compass points.
- b. Zoning and land use within one-half mile.
- c. Haul routes to and from the site with load limits or other restrictions.
- d. Homes and buildings within one-half mile.
- e. Section lines or other legal boundaries.
- f. Any nearby runway used or planned to be used by turbojet or piston-type aircraft at FAA certificated airports.

**102.12(4)** Type, source, and expected volume or weight of waste to be handled per day, week or year.

**102.12(5)** An organizational chart.

**102.12(6)** A detailed description of the disposal process to be used.

**102.12(7)** A table listing the equipment to be used, its design capacities and expected loads.

**102.12(8)** A contingency plan detailing specific procedures to be followed in case of equipment breakdown, maintenance downtime, or fire in equipment or vehicles, including methods to be used to remove or dispose of accumulated waste.

**102.12(9)** Proof of the applicant's ownership of the site or legal entitlement to use the site for the disposal of solid waste for the term of the permit for which application is made.

**102.12(10)** Closure/postclosure plan. A closure/postclosure plan shall be submitted which:

- a. Details how and when the facility will be closed in accordance with applicable requirements.

*b.* Describes the proposed groundwater monitoring plan, leachate control system, and site inspection and maintenance activities necessary to comply with 567—Chapter 110.

*c.* States the name, address and telephone number of the person or office to serve as a contact with regard to the facility during the postclosure period.

*d.* The closure/postclosure plan shall be submitted at the time of the first permit renewal after enactment of this rule, but not less than 180 days prior to closure.

**102.12(11)** Such other information as may be required by the director.

This rule is intended to implement Iowa Code section 455B.305.

**567—102.13(455B) Operating requirements for all sanitary disposal projects.** Every application for any permit issued by the department shall detail the means by which the following operating requirements shall be complied with. All sanitary disposal projects shall be operated in conformance with these requirements.

**102.13(1)** Open burning shall be prohibited except when permitted by 567—Chapter 23. Any burning to be conducted at the site shall be at a location and separate and distinct from the operating area.

**102.13(2)** Litter shall be confined to the property on which the sanitary disposal project is located. At the conclusion of each day of operation, any litter strewn beyond the confines of the operating area shall be collected and stored in covered leakproof containers or properly disposed.

**102.13(3)** Scavenging shall be prohibited. Any salvaging to be conducted must be described in the permit application and all salvaged materials must be stored and removed from the sanitary disposal project site in conformance with the permit conditions.

**102.13(4)** Effective means shall be taken to control flies, other insects, rodents and other vermin.

**102.13(5)** Equipment designated in the plans and specifications or equivalent equipment shall be used to operate the site at all times.

**102.13(6)** The major internal roads shall be of all weather construction and maintained in good condition. Dust shall be controlled on internal roads.

**102.13(7)** Sites open to the public shall have a permanent sign posted at the site entrance specifying:

*a.* Name of the operation.

*b.* The site permit number.

*c.* The hours and days the site is open to the public.

*d.* The categories of waste which will be accepted for disposal or, as an alternative, identifies the categories of waste which are prohibited.

*e.* Telephone number of official responsible for the operation.

**102.13(8)** Free liquids or waste containing free liquids. No free liquids or waste containing free liquids shall be disposed in a sanitary landfill.

**102.13(9)** General closure requirements.

*a.* The owner or operator shall notify the department in writing at least 180 days prior to closure of the facility or suspension of operations.

*b.* Notice of closure shall be posted at least 180 days prior to closure at the facility indicating the date of closure and alternative solid waste management facilities. Notice of closure shall also be published at least 180 days prior to closure in a newspaper of local circulation. This notice shall include the date of closure and alternative solid waste management facilities.

*c.* Implementation of the closure/postclosure plan shall be completed within 90 days of the closure of the facility. The owner and an engineer registered in Iowa shall certify that the closure/postclosure plan has been implemented in compliance with the rules, the closure/postclosure plan and the permit.

*d.* Upon completion of closure activities, as-built plans shall be submitted showing changes from the original design plans, test results indicating compliance with final cover as applicable, waste removal, equipment decontamination, and other forms of documentation as required, to include a copy of the notation filed with the county recorder.

This rule is intended to implement Iowa Code section 455B.304.

**567—102.14(455B) Emergency response and remedial action plans.**

**102.14(1) Purpose.** The purpose of this rule is to implement Iowa Code section 455B.306(6) “d” by providing the criteria for developing a detailed emergency response and remedial action plan (ERRAP) for permitted sanitary disposal projects.

**102.14(2) Applicability.** The requirements of this rule apply to the owners or operators of all sanitary disposal projects that are permitted under 567—102.2(455B). Permitted project types include: municipal and industrial waste landfills; construction and demolition waste landfills; coal combustion residue landfills; waste storage facilities; waste processing facilities; recycling and material recovery facilities; transfer stations; composting facilities; incinerator facilities; regional collection centers; land application facilities; and any facility deemed necessary to have a project permit under sanitary disposal project definition. Centralized regional collection center ERRAP documents shall specifically address the ERRAP requirements for each of the regional collection center’s satellite facilities. This rule is not applicable to waste tire management facilities.

**102.14(3) Submittal requirements.**

*a.* The owner or operator of facilities that are subject to this rule and have been permitted prior to October 24, 2001, shall submit a complete detailed ERRAP that meets the requirements set forth in this rule no later than December 31, 2001.

*b.* Applications for a new permit after October 24, 2001, shall incorporate a complete detailed ERRAP that meets the requirements set forth in this rule.

*c.* An updated ERRAP that meets the requirements of this rule shall be submitted at the time of each permit renewal or permit reissuance application that is due after December 31, 2001.

*d.* An updated ERRAP shall be included with any request for permit modification to incorporate a facility expansion or significant changes in facility operation that require modification of the currently approved ERRAP.

*e.* Facilities that submitted an ERRAP meeting the requirements defined under Iowa Code section 455B.306(6) “d” by May 1, 2001, including regional collection centers that, prior to this date, have met the contingency plan submittal requirement described in 567—Chapter 211, and were approved by the department prior to October 24, 2001, are not required to submit an updated ERRAP that meets the requirements of this rule until the next permit renewal application due date after December 31, 2001.

*f.* Three sets of ERRAP documents shall be submitted for department approval.

**102.14(4) Content.** The content of ERRAP documents shall be concise and readily usable as a reference manual by facility managers and operators during emergency conditions. The ERRAP document content shall address at least the following primary issues in detail, unless project conditions render the specific issue as not applicable. The rationale for exclusion of any issue areas that are determined not to be applicable must be provided in either the body of the plan or as a supplement to facilitate department review. Additional emergency response and remedial action plan requirements unique to the facility shall be addressed, as applicable.

*a. Facility information.*

- (1) Permitted agency.
- (2) DNR permit number.
- (3) Facility description.
- (4) Responsible official and contact information.
- (5) Project location.
- (6) Site and environs map.

*b. Regulatory requirements.*

- (1) Iowa Code section 455B.306(6) “d” criteria citation.
- (2) Reference to provisions of the permit.

*c. Emergency conditions—response activities—remedial action.*

- (1) Failure of utilities.
  1. Short-term (48 hours or less).
  2. Long-term (over 48 hours).
- (2) Weather-related events.

1. Tornado.
2. Windstorms.
3. Intense rainstorms and erosion.
4. Lightning strikes.
5. Flooding.
6. Event and postevent conditions.
- (3) Fire and explosions.
  1. Waste materials.
  2. Buildings and site.
  3. Equipment.
  4. Fuels.
  5. Utilities.
  6. Facilities.
  7. Working area.
  8. Hot loads.
  9. Waste gases.
10. Evacuation.
- (4) Regulated waste spills and releases.
  1. Waste materials.
  2. Leachate.
  3. Waste gases.
  4. Waste stockpiles and storage facilities.
  5. Waste transport systems.
  6. Litter and airborne particulates.
  7. Site drainage systems.
  8. Off-site releases.
- (5) Hazardous material spills and releases.
  1. Load check control points.
  2. Mixed waste deliveries.
  3. Fuels.
  4. Waste gases.
  5. Site drainage systems.
  6. Off-site releases.
- (6) Mass movement of land and waste.
  1. Earthquakes.
  2. Slope failure.
  3. Waste shifts.
  4. Waste subsidence.
- (7) Emergency and release notifications and reporting.
  1. Federal agencies.
  2. State agencies.
  3. County and city agencies.
  4. News media.
  5. Public and private facilities with special populations within five miles.
  6. Emergency response agencies and contact information.
  7. Reporting requirements and forms.
- (8) Emergency waste management procedures.
  1. Communications.
  2. Temporary discontinuation of services—short- and long-term.
  3. Facilities access and rerouting.
  4. Waste acceptance.
  5. Wastes in process.

- (9) Primary emergency equipment inventory.
  - 1. Major equipment.
  - 2. Fire hydrants and water sources.
  - 3. Off-site equipment resources.
- (10) Emergency aid.
  - 1. Responder contacts.
  - 2. Medical services.
  - 3. Contracts and agreements.
- (11) ERRAP training requirements.
  - 1. Training providers.
  - 2. Employee orientation.
  - 3. Annual training updates.
  - 4. Training completion and record keeping.
- (12) Reference tables, figures and maps.

**567—102.15(455B) Disposal of special wastes.** Rescinded IAB 4/17/02, effective 5/22/02.

CHAPTER 103  
SANITARY LANDFILLS: COAL COMBUSTION RESIDUE

[Prior to 7/1/83, DEQ Ch 28]

[Prior to 12/3/86, Water, Air and Waste Management [900]]

**567—103.1(455B) Coal combustion residue landfills.** The following are the minimum requirements for siting, designing, and operating a solid waste landfill accepting only coal combustion residue.

This chapter stands alone and is not affected by references in other rules, except for the variance provision in 567—101.2(455B). “Coal combustion residue” means any solid waste produced by the burning of coal, either by itself or in conjunction with natural gas or other carbon-based fuels. “Coal combustion residue” includes, but is not limited to, bottom ash, fly ash, slag and flue gas desulfurization system material generated by coal combustion and associated air pollution control equipment.

**103.1(1) Site requirements.**

a. The site cannot be a wetland, cannot be within a 100-year flood plain and cannot have any sinkholes or similar karst features.

b. No wastes shall be deposited within 300 feet of an inhabitable residence or a commercial enterprise, unless there is a written agreement with the property owner(s) allowing a lesser distance, or within 50 feet of the property boundary. The written agreement shall be filed with the county recorder for abstract of title purposes and a copy shall be submitted to the department.

c. All waste must be a minimum of 5 feet above the high groundwater table.

**103.1(2) Permit application requirements.** The application for a permit shall include the following:

a. A completed application Form 50.542-1542.

b. A copy of the letter from the waste management assistance division approving the comprehensive plan required by 567—101.5(455B).

c. Proof of legal entitlement to use the property as proposed.

d. A topographic map of the site and the adjacent area within 300 feet of the site, with contour intervals not exceeding 10 feet, that shows the location of existing improvements or alterations such as structures, wells, lakes, roads, drain tiles or similar items. The highest point of elevation on the site shall also be identified and given.

e. The results of a minimum of three soil borings for sites of ten acres or less with one additional boring for each additional three acres to determine the hydrogeologic conditions and establish the direction of groundwater flow throughout the site and the minimum depth to groundwater on the site.

f. An adequate number of representative groundwater sample results, minimum of three locations with one sample from each location, to fully characterize the groundwater quality at the site. The following are the analytical parameters that are required to characterize groundwater quality and establish a baseline for those parameters: arsenic, barium, beryllium, cobalt, copper, iron, lead, magnesium, manganese, selenium, zinc, chlorides, and sulfate. The analysis shall be for dissolved metals with filtering in the field.

g. Construction drawings and specifications of the improvements and alterations that are to take place on the site such as roads, structures, utilities, drainage ways, gates and fences.

h. A copy of the local siting approval required by Iowa Code section 455B.305A.

**103.1(3) Design criteria.**

a. The design of a coal combustion residue solid waste landfill shall contain a method for ensuring protection of the groundwater and surface water.

b. The design plan shall include a method of ash transportation that prevents blowing ash and a method for preventing blowing dust and air emissions when the ash is unloaded.

c. Surface runoff must be diverted from all active or closed areas, both during the active life of the facility and during the postclosure period.

d. The site must be secured with a fence and gate(s) to prevent unauthorized entry when the site is unattended.

e. The site must have all-weather access roads adequate to accommodate all delivery vehicles and operating equipment.

*f.* The site must be fenced and gated in a manner that will prevent unauthorized deposition of wastes at the site.

**103.1(4) Operating requirements.**

*a.* An operation plan shall be prepared and submitted to the appropriate department field office prior to initiating operations. The plan, at a minimum, shall include:

(1) An identification of the area to be filled during the period for which a permit is being requested.

(2) The method(s) that will be utilized to prevent illicit municipal or putrescible solid wastes from being deposited as a result of mixing with authorized waste brought to the site.

(3) The frequency, extent and method of spreading and compacting the waste; the optimum layer thickness; and the size and slope of the operating face.

(4) A description of the operating procedures that will be followed when wastes are brought to the site.

(5) If removal of waste from the landfill for beneficial reuse is intended, that activity should be addressed in the original operation plan. If the permit holder decides to remove waste after completion of the original operation plan, the plan must be amended prior to removing any waste.

*b.* After the waste is deposited, it must be treated as necessary to control fugitive dust that would leave the site and to control erosion that would impact operations in the active fill area. If the methods used do not adequately control dust and erosion, the department may require site-specific controls including a soil cover.

*c.* A minimum of one down gradient monitoring well must be installed within one year of initiating operations. Additional wells may be required when it is apparent that more than one potential contaminant pathway exists. Monitoring wells will normally be placed within 50 feet of the waste boundary.

*d.* Quarterly sampling of all monitoring wells and analysis for the parameters specified in paragraph 103.1(2)“*f*” shall commence within one year of initiating operations for the purpose of establishing the average baseline concentrations for each well. Annual sampling of all monitoring wells for the parameters specified in paragraph 103.1(2)“*f*” shall commence within one year of completing the quarterly baseline monitoring. Additional sampling or a site assessment may be required by the department when there is an exceedance of any primary or secondary Maximum Contaminant Level (MCL) or the Health Advisory Level (HAL) of the Drinking Water Standards and Health Advisories of the federal Environmental Protection Agency. When an MCL or HAL does not exist for a parameter and a sample analysis exceeds the average value for that parameter for the most recent two years of data, the department will require the collection and analysis of a sample for three consecutive months. If the average result of those sample analyses equals or exceeds the value that required the monthly samples to be collected, the department may require a site assessment.

*e.* A report of the groundwater monitoring results shall be submitted to the department by the end of the first year’s operation and annually thereafter.

**103.1(5) Closure/postclosure requirements.**

*a.* The owner/operator shall submit a postclosure plan to the department 180 days prior to closure. The plan shall list the date of closure, the actions that will be taken to close the site, the final site contours and final cover design, and the parties responsible for postclosure maintenance.

*b.* The final cover shall consist of not less than two feet of compacted soil and one foot of uncompacted soil capable of sustaining a growth of common grasses.

*c.* The slope of the landfill area after final closure shall be not less than 3 percent or more than 25 percent.

*d.* A growth of common grasses shall be established on the final cover by the end of the first full growing season.

*e.* A minimum of one sample from each monitoring well shall be collected annually during the postclosure period and analyzed for the parameters specified in the permit. The results shall be included in the annual report.

*f.* After closure, an annual inspection of the site shall be conducted. Any differential settling, surface cracks, holes, erosion channels, or any interference with surface drainage shall be corrected

by restoration to the original condition. A report on the findings and corrective actions taken shall be included in the annual report. These postclosure actions are required for a minimum of ten years following closure. The department may extend the monitoring and reporting period if it appears that continued maintenance and monitoring are warranted.

**103.1(6) Permit renewal.** The term for a permit to operate a solid waste landfill accepting only coal combustion residue waste shall be ten years, and the permit shall be renewable for a similar term.

**567—103.2(455B) Emergency response and remedial action plans.**

**103.2(1) Purpose.** The purpose of this rule is to implement Iowa Code section 455B.306(6) “d” by providing the criteria for developing a detailed emergency response and remedial action plan (ERRAP) for permitted sanitary disposal projects.

**103.2(2) Applicability.** The requirements of this rule apply to the owners or operators of all sanitary landfills.

**103.2(3) Submittal requirements.**

*a.* The owner or operator of facilities that are subject to this rule and have been permitted prior to October 24, 2001, shall submit a complete detailed ERRAP that meets the requirements set forth in this rule no later than December 31, 2001.

*b.* Applications for a new permit after October 24, 2001, shall incorporate a complete detailed ERRAP that meets the requirements set forth in this rule.

*c.* An updated ERRAP that meets the requirements of this rule shall be submitted at the time of each permit renewal or permit reissuance application that is due after December 31, 2001.

*d.* An updated ERRAP shall be included with any request for permit modification to incorporate a facility expansion or significant changes in facility operation that require modification of the currently approved ERRAP.

*e.* Facilities that submitted an ERRAP meeting the requirements defined under Iowa Code section 455B.306(6) “d” by May 1, 2001, including regional collection centers that, prior to this date, have met the contingency plan submittal requirement described in 567—Chapter 211, and were approved by the department prior to October 24, 2001, are not required to submit an updated ERRAP that meets the requirements of this rule until the next permit renewal application due date after December 31, 2001.

*f.* Three sets of ERRAP documents shall be submitted for department approval.

**103.2(4) Content.** The content of ERRAP documents shall be concise and readily usable as a reference manual by facility managers and operators during emergency conditions. The ERRAP document content shall address at least the following primary issues in detail, unless project conditions render the specific issue as not applicable. The rationale for exclusion of any issue areas that are determined not to be applicable must be provided in either the body of the plan or as a supplement to facilitate department review. Additional emergency response and remedial action plan requirements unique to the facility shall be addressed, as applicable.

*a. Facility information.*

- (1) Permitted agency.
- (2) DNR permit number.
- (3) Facility description.
- (4) Responsible official and contact information.
- (5) Project location.
- (6) Site and environs map.

*b. Regulatory requirements.*

- (1) Iowa Code section 455B.306(6) “d” criteria citation.
- (2) Reference to provisions of the permit.

*c. Emergency conditions—response activities—remedial action.*

- (1) Failure of utilities.
  1. Short-term (48 hours or less).
  2. Long-term (over 48 hours).
- (2) Weather-related events.

1. Tornado.
2. Windstorms.
3. Intense rainstorms and erosion.
4. Lightning strikes.
5. Flooding.
6. Event and postevent conditions.
- (3) Fire and explosions.
  1. Waste materials.
  2. Buildings and site.
  3. Equipment.
  4. Fuels.
  5. Utilities.
  6. Facilities.
  7. Working area.
  8. Hot loads.
  9. Waste gases.
  10. Evacuation.
- (4) Regulated waste spills and releases.
  1. Waste materials.
  2. Leachate.
  3. Waste gases.
  4. Waste stockpiles and storage facilities.
  5. Waste transport systems.
  6. Litter and airborne particulates.
  7. Site drainage systems.
  8. Off-site releases.
- (5) Hazardous material spills and releases.
  1. Load check control points.
  2. Mixed waste deliveries.
  3. Fuels.
  4. Waste gases.
  5. Site drainage systems.
  6. Off-site releases.
- (6) Mass movement of land and waste.
  1. Earthquakes.
  2. Slope failure.
  3. Waste shifts.
  4. Waste subsidence.
- (7) Emergency and release notifications and reporting.
  1. Federal agencies.
  2. State agencies.
  3. County and city agencies.
  4. News media.
  5. Public and private facilities with special populations within five miles.
  6. Emergency response agencies and contact information.
  7. Reporting requirements and forms.
- (8) Emergency waste management procedures.
  1. Communications.
  2. Temporary discontinuation of services—short- and long-term.
  3. Facilities access and rerouting.
  4. Waste acceptance.
  5. Wastes in process.

- (9) Primary emergency equipment inventory.
  - 1. Major equipment.
  - 2. Fire hydrants and water sources.
  - 3. Off-site equipment resources.
- (10) Emergency aid.
  - 1. Responder contacts.
  - 2. Medical services.
  - 3. Contracts and agreements.
- (11) ERRAP training requirements.
  - 1. Training providers.
  - 2. Employee orientation.
  - 3. Annual training updates.
  - 4. Training completion and record keeping.
- (12) Reference tables, figures and maps.

**567—103.3(455B) Coal combustion residue sanitary landfill financial assurance.**

**103.3(1) Purpose.** The purpose of this rule is to implement Iowa Code sections 455B.304(8) and 455B.306(9) by providing the criteria for establishing financial assurance for closure, postclosure and corrective action at coal combustion residue sanitary landfills (CCR landfills).

**103.3(2) Applicability.** The requirements of this rule apply to all owners and operators of CCR landfills accepting waste as of October 31, 2007, except owners or operators that are state or federal government entities whose debts and liabilities are the debts and liabilities of a state or the United States.

**103.3(3) Financial assurance for closure.** The owner or operator of a CCR landfill must establish financial assurance for closure in accordance with the criteria in this rule. The owner or operator must provide continuous coverage for closure until released from this requirement by demonstrating compliance with subrule 103.1(5). Proof of compliance pursuant to paragraphs 103.3(3)“a” to “e” must be submitted by the owner or operator yearly by April 1 and approved by the department.

*a.* The owner or operator shall submit the current version of department Form 542-8090, Sanitary Landfill Financial Assurance Report Form, which contains, but is not limited to, the amount of the financial assurance, the annual financial statement required by Iowa Code sections 455B.306(9)“e” and 455B.306(7)“c,” and the current balances of the closure and postclosure accounts at the time of submittal as required by Iowa Code section 455B.306(9)“b.”

*b.* The owner or operator shall submit a copy of the financial assurance instruments or the documents establishing the financial assurance instruments in an amount equal to or greater than the amount specified in subrule 103.3(8). Documentation for the mechanism(s) used to demonstrate financial assurance shall contain, at a minimum, the items required to be submitted as specified in paragraphs 103.3(6)“a” to “i.”

*c.* The owner or operator shall submit a detailed written estimate, in current dollars, certified by an Iowa-licensed professional engineer, of the cost of hiring a third party to close the CCR landfill in accordance with the closure/postclosure plan as required by subrule 103.1(5). Such estimate must be available at any time during the active life of the landfill.

(1) The cost estimate must equal the cost of closing the CCR landfill at any time during the permitted life of the facility when the extent and manner of its operation would make closure the most expensive.

(2) The costs contained in the third-party estimate for closure must be accurate and reasonable when compared to the cost estimates used by other similarly situated landfills in Iowa.

(3) During the active life of the CCR landfill, the owner or operator must annually adjust the closure cost estimate for inflation.

(4) The owner or operator must, annually or at the time of application for a permit amendment that increases closure costs, whichever occurs first, increase the closure cost estimate and the amount of financial assurance provided if changes to the closure plan or CCR landfill conditions increase the maximum cost of closure at any time during the remaining active life of the facility.

(5) The owner or operator may reduce the amount of financial assurance for closure if the most recent estimate of the maximum cost of closure at any time during the active life of the facility is less than the amount of financial assurance currently provided. Prior to the reduction, the owner or operator must submit to the department the justification for the reduction of the closure cost estimate and the updated documentation required by paragraphs 103.3(3) "a" to "e" and receive department approval for the reduction. Approval or denial shall be issued within 30 days of receipt of the reduction request.

(6) The third-party estimate submitted to the department must include the site area subject to closure and account for at least the following factors determined by the department to be minimal necessary costs for closure:

1. Closure and postclosure plan document revisions;
2. Site preparation, earthwork and final grading;
3. Drainage control culverts, piping and structures;
4. Erosion control structures, sediment ponds and terraces;
5. Final cap construction;
6. Cap vegetation soil placement;
7. Cap seeding, mulching and fertilizing;
8. Monitoring well and piezometer modifications;
9. Leachate system cleanout and extraction well modifications;
10. Monitoring well installations and abandonments;
11. Facility modifications to effect closed status;
12. Engineering and technical services;
13. Legal, financial and administrative services; and
14. Closure compliance certifications and documentation.

*d.* For CCR landfills owned by local governments, the owner or operator shall submit to the department a copy of the owner's or operator's most recent annual audit report in the form prescribed by the office of the auditor of the state of Iowa.

*e.* Privately held CCR landfills shall submit an affidavit from the owner or operator indicating that a yearly review has been performed by a certified public accountant to determine whether the privately owned landfill is in compliance with this rule. The affidavit shall state the name of the certified public accountant, the dates and conclusions of the review, and the steps taken to rectify any deficiencies identified by the accountant.

**103.3(4) *Financial assurance for postclosure.*** The owner or operator of a CCR landfill must establish financial assurance for the costs of postclosure in accordance with the criteria in this rule. The owner or operator must provide continuous coverage for postclosure until released from this requirement by demonstrating compliance with the closure/postclosure plan and the closure permit. Proof of compliance pursuant to paragraphs 103.3(4) "a" to "e" must be submitted by the owner or operator yearly by April 1 and approved by the department.

*a.* The owner or operator shall submit the current version of department Form 542-8090, Sanitary Landfill Financial Assurance Report Form, which contains, but is not limited to, the amount of the financial assurance, the annual financial statement required by Iowa Code sections 455B.306(9) "e" and 455B.306(7) "c," and the current balances of the closure and postclosure accounts required by Iowa Code section 455B.306(9) "b."

*b.* The owner or operator shall submit a copy of the documents establishing a financial assurance instrument in an amount equal to or greater than the amount specified in subrule 103.3(8). Documentation for the mechanism(s) used to demonstrate financial assurance shall contain, at a minimum, the items required to be submitted as specified in paragraphs 103.3(6) "a" to "i."

*c.* The owner or operator shall submit a detailed written estimate, in current dollars, certified by an Iowa-licensed professional engineer, of the cost of hiring a third party to conduct postclosure for the CCR landfill in compliance with the closure/postclosure plan developed pursuant to subrule 103.1(5). The cost estimate must account for the total cost of conducting postclosure, as described in the plan, for the entire postclosure period.

(1) The cost estimate for postclosure must be based on the most expensive costs of postclosure during the entire postclosure period.

(2) The costs contained in the third-party estimate for postclosure must be accurate and reasonable when compared to the cost estimates used by other similarly situated landfills in Iowa.

(3) During the active life of the CCR landfill and during the postclosure period, the owner or operator must annually adjust the postclosure cost estimate for inflation.

(4) The owner or operator must, annually or at the time of application for a permit amendment that increases postclosure costs, whichever occurs first, increase the estimate and the amount of financial assurance provided if changes in the postclosure plan or CCR landfill conditions increase the maximum cost of postclosure.

(5) The owner or operator may reduce the amount of financial assurance for postclosure if the most recent estimate of the maximum cost of postclosure beginning at any time during the active life of the facility is less than the amount of financial assurance currently provided. Prior to the reduction, the owner or operator must submit to the department the justification for the reduction of the postclosure cost estimate and the updated documentation required by paragraphs 103.3(4) "a" to "e" and must receive department approval for the reduction. Approval or denial shall be issued within 30 days of receipt of the reduction request.

(6) The third-party estimate submitted to the department must include the site area subject to postclosure and account for at least the following factors determined by the department to be minimal necessary costs for postclosure:

1. General site facilities, access roads and fencing maintenance;
2. Cap and vegetative cover maintenance;
3. Drainage and erosion control systems maintenance;
4. Groundwater to waste separation systems maintenance;
5. Groundwater and surface water monitoring systems maintenance;
6. Groundwater and surface water quality monitoring and reports;
7. Groundwater monitoring systems performance evaluations and reports;
8. Leachate control systems maintenance;
9. Leachate management, transportation and disposal;
10. Leachate control systems performance evaluations and reports;
11. Facility inspections and reports;
12. Engineering and technical services;
13. Legal, financial and administrative services; and
14. Financial assurance, accounting, audits and reports.

*d.* For CCR landfills owned by local governments, the owner or operator shall submit to the department a copy of the owner's or operator's most recent annual audit report in the form prescribed by the office of the auditor of the state of Iowa.

*e.* Privately held CCR landfills shall submit an affidavit from the owner or operator indicating that a yearly review has been performed by a certified public accountant to determine whether the privately owned landfill is in compliance with this rule. The affidavit shall state the name of the certified public accountant, the dates and conclusions of the review, and the steps taken to rectify any deficiencies identified by the accountant.

**103.3(5) *Financial assurance for corrective action.***

*a.* An owner or operator required to undertake corrective action must have a detailed written estimate, in current dollars, prepared by an Iowa-licensed professional engineer, of the cost of hiring a third party to perform the required corrective action. The estimate must account for the total costs of the activities described in the approved corrective action plan for the entire corrective action period. The owner or operator must submit to the department the estimate and financial assurance documentation within 30 days of department approval of the corrective action plan.

(1) The owner or operator must annually adjust the estimate for inflation until the corrective action plan is completed.

(2) The owner or operator must increase the cost estimate and the amount of financial assurance provided if changes in the corrective action plan or CCR landfill conditions increase the maximum cost of corrective action.

(3) The owner or operator may reduce the amount of the cost estimate and the amount of financial assurance provided if the estimate exceeds the maximum remaining costs of the remaining corrective action. The owner or operator must submit to the department the justification for the reduction of the cost estimate and documentation of financial assurance.

*b.* The owner or operator of a CCR landfill required to undertake a corrective action plan must establish financial assurance for the most recent corrective action plan by one of the mechanisms prescribed in subrule 103.3(6). The owner or operator must provide continuous coverage for corrective action until released from financial assurance requirements by demonstrating compliance with the following:

(1) Upon completion of the remedy, the owner or operator must submit to the department a certification of compliance with the approved corrective action plan. The certification must be signed by the owner or operator and by an Iowa-licensed professional engineer.

(2) Upon department approval of completion of the corrective action remedy, the owner or operator shall be released from the requirements for financial assurance for corrective action.

**103.3(6) Allowable financial assurance mechanisms.** The mechanisms used to demonstrate financial assurance as required by Iowa Code section 455B.306(9)“a” must ensure that the funds necessary to meet the costs of closure, postclosure, and corrective action for known releases will be available whenever the funds are needed. Owners or operators must choose from options in paragraphs 103.3(6)“a” to “i.”

*a. Trust fund.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by establishing a trust fund which conforms to the requirements of this subrule. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. A copy of the trust agreement must be submitted pursuant to subrules 103.3(3), 103.3(4), and 103.3(5) and placed in the facility’s official files.

(2) Payments into the trust fund must be made annually by the owner or operator over ten years or over the remaining life of the CCR landfill, whichever is shorter, in the case of a trust fund for closure or postclosure; or over one-half of the estimated length of the corrective action plan in the case of a response to a known release. This period is referred to as the pay-in period.

(3) For a trust fund used to demonstrate financial assurance for closure and postclosure, the first payment into the fund must be at least equal to the amount specified in subrule 103.3(8) for closure or postclosure divided by the number of years in the pay-in period as defined in subparagraph 103.3(6)“a”(2). The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{CE} - \text{CB}}{\text{Y}}$$

where CE is the amount specified in 103.3(8) for closure or postclosure (updated for inflation or other changes), CB is the current balance of the trust fund, and Y is the number of years remaining in the pay-in period.

(4) For a trust fund used to demonstrate financial assurance for corrective action, the first payment into the trust fund must be at least equal to one-half of the current cost estimate for corrective action divided by the number of years in the corrective action pay-in period as defined in subparagraph 103.3(6)“a”(2). The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{RB} - \text{CV}}{\text{Y}}$$

where RB is the most recent estimate of the required trust fund balance for corrective action, which is the total cost that will be incurred during the second half of the corrective action period, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

(5) The initial payment into the trust fund must be made before the initial receipt of waste or within 30 days of close of the first fiscal year that begins after October 31, 2007, in the case of existing facilities; before the cancellation of an alternative financial assurance mechanism in the case of closure and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department.

(6) The owner or operator or another person authorized to conduct closure, postclosure, or corrective action activities may request reimbursement from the trustee for these expenditures, including partial closure, as the expenditures are incurred. Requests for reimbursement will be granted by the trustee only if sufficient funds are remaining in the trust fund to cover the remaining costs of closure, postclosure, or corrective action and if justification and documentation of the costs are placed in the operating record. The owner or operator must submit to the department documentation of the justification for reimbursement and verification that reimbursement has been received.

(7) The trust fund may be terminated by the owner or operator only if the owner or operator substitutes alternative financial assurance as specified in this rule or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

(8) After the pay-in period has been completed, the trust fund shall be adjusted annually to correct any deficiency of the fund with respect to the adjusted cost estimate and may be adjusted annually should the balance in the fund exceed the adjusted cost estimate.

*b. Surety bond guaranteeing payment or performance.*

(1) An owner or operator may demonstrate financial assurance for closure or postclosure by obtaining a payment or performance surety bond which conforms to the requirements of this subrule. An owner or operator may demonstrate financial assurance for corrective action by obtaining a performance bond which conforms to the requirements of this subrule. The bond must be effective before the initial receipt of waste or before the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department. The owner or operator must submit a copy of the bond to the department and keep a copy in the facility's official files. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury. The state shall not be considered a party to the surety bond.

(2) The penal sum of the bond must be in an amount at least equal to the amount specified in subrule 103.3(9) for closure and postclosure or corrective action, whichever is applicable.

(3) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond and also upon notice from the department pursuant to subparagraph 103.3(6) "b"(6).

(4) The owner or operator must establish a standby trust fund. The standby trust fund must meet the requirements of paragraph 103.3(6) "a" except the requirements for initial payment and subsequent annual payments specified in subparagraphs 103.3(6) "a"(2) to (5).

(5) Payments made under the terms of the bond will be deposited by the surety directly into the standby trust fund. Payments from the trust fund must be approved by the trustee and the department.

(6) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice from the surety of withdrawal of the cancellation, or proof of a deposit into the standby trust fund of a sum equal to the amount of the bond. If the owner or operator has not complied with this subparagraph within the 60-day time period, this shall constitute a failure to perform, and the department shall notify the surety, prior to the expiration of the 120-day notice period, that such a failure has occurred.

(7) The bond must be conditioned upon faithful performance by the owner or operator of all closure, postclosure, or corrective action requirements of the Code of Iowa and this rule. A failure to comply with subparagraph 103.3(6) "b"(6) shall also constitute a failure to perform under the terms of the bond.

(8) Liability under the bond shall be for the duration of the operation and the closure and postclosure periods.

(9) The owner or operator may cancel the bond only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*c. Letter of credit.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by obtaining an irrevocable standby letter of credit which conforms to the requirements of this paragraph. The letter of credit must be effective before the initial receipt of waste or before the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or no later than 120 days after the corrective action plan is approved by the department. The owner or operator must submit to the department a copy of the letter of credit and place a copy in the facility's official files. The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

(2) A letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the name and address of the facility and the amount of funds assured, must be included with the letter of credit submitted to the department and placed in the facility's files.

(3) The letter of credit must be irrevocable and must be issued for a period of at least one year in an amount at least equal to the amount specified in subrule 103.3(8) for closure, postclosure, or corrective action, whichever is applicable. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the letter of credit into a standby trust fund established pursuant to paragraph 103.3(6) "a." If the owner or operator has not complied with this subrule within the 60-day time period, the issuer of the letter of credit shall deposit a sum equal to the amount of the letter of credit into the standby trust fund established by the owner or operator. The provision of funds by the issuer of the letter of credit shall be considered an issuance of a loan to the owner or operator, and the terms of that loan shall be governed by the letter of credit or subsequent agreement between those parties. The state shall not be considered a party to this credit transaction.

(4) The owner or operator may cancel the letter of credit only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*d. Insurance.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action by obtaining insurance which conforms to the requirements of this paragraph. The insurance must be effective before the initial receipt of waste or prior to cancellation of an alternative financial assurance, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department. At a minimum, the insurer must be licensed to transact the business of insurance or be eligible to provide insurance as an excess or surplus lines insurer in one or more states. The owner or operator must submit to the department a copy of the insurance policy and retain a copy in the facility's official files.

(2) The closure or postclosure insurance policy must guarantee that funds will be available to close the CCR landfill whenever final closure occurs or to provide postclosure for the CCR landfill whenever the postclosure period begins, whichever is applicable. The policy must also guarantee that once closure or postclosure begins, the insurer will be responsible for the paying out of funds to the owner or operator

or other person authorized to conduct closure or postclosure, up to an amount equal to the face amount of the policy.

(3) The insurance policy must be issued for a face amount at least equal to the amount specified in subrule 103.3(8) for closure, postclosure, or corrective action, whichever is applicable. The term “face amount” means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer’s future liability will be lowered by the amount of the payments.

(4) An owner or operator or another person authorized to conduct closure or postclosure may receive reimbursements for closure or postclosure expenditures, including partial closure, as applicable. Requests for reimbursement will be granted by the insurer only if the remaining value of the policy is sufficient to cover the remaining costs of closure or postclosure, and if justification and documentation of the cost are placed in the operating record. The owner or operator must submit to the department documentation of the justification for reimbursement and verification that the reimbursement has been received.

(5) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided that such consent is not unreasonably refused.

(6) The insurance policy must provide that the insurer may not cancel, terminate or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice from the insurer of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the insurance coverage into a standby trust fund established pursuant to paragraph 103.3(6)“a.” If the owner or operator has not complied with this subrule within the 60-day time period, this shall constitute a failure to perform and shall be a covered event pursuant to the terms of the insurance policy. A failure by the owner or operator to comply with this subrule within the 60-day period shall make the insurer liable for the closure and postclosure of the covered facility up to the amount of the policy limits, which shall be equal to the most recently submitted cost estimates.

(7) For insurance policies providing coverage for postclosure, commencing on the date that liability to make payments pursuant to the policy accrues, the insurer will thereafter annually increase the face amount of the policy. Such increase must be equivalent to the face amount of the policy, less any payments made, multiplied by an amount equivalent to 85 percent of the most recent investment rate or of the equivalent coupon-issue yield announced by the U.S. Department of the Treasury for 26-week treasury securities.

(8) The owner or operator may cancel the insurance only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*e. Corporate financial test.* An owner or operator that satisfies the requirements of this paragraph may demonstrate financial assurance up to the amount specified below:

(1) Financial component. The owner or operator must satisfy the requirements of numbered paragraphs 103.3(6)“e”(1)“1,” “2” and “3” to meet the financial component of the corporate financial test.

1. The owner or operator must satisfy one of the following three conditions:

- A current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard & Poor’s or Aaa, Aa, A, or Baa as issued by Moody’s; or
- A ratio of less than 1.5 comparing total liabilities to net worth (net worth calculations may not include future permitted capacity of the subject landfill as an asset); or
- A ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities;

2. The tangible net worth, excluding future permitted capacity of the subject landfill, of the owner or operator must be greater than:

- The sum of the current closure, postclosure, and corrective action cost estimates and any other environmental obligations, including guarantees, covered by this financial test plus \$10 million except as provided in the second bulleted paragraph of numbered paragraph 103.3(6)“e”(1)“2”; or

- Net worth of \$10 million, excluding future permitted capacity of the subject landfill, plus the amount of any guarantees that have not been recognized as liabilities on the financial statements, provided that all of the current closure, postclosure, and corrective action costs and any other environmental obligations covered by a financial test are recognized as liabilities on the owner’s or operator’s audited financial statements, and are subject to the approval of the department; and

3. The owner or operator must have, located in the United States, assets, excluding future permitted capacity of the subject landfill, amounting to at least the sum of current closure, postclosure, and corrective action cost estimates and any other environmental obligations covered by a financial test as described in subparagraph 103.3(6)“e”(5).

(2) Record-keeping and reporting requirements. The owner or operator must submit the following records to the department and place a copy in the facility’s official files prior to the initial receipt of solid waste or cancellation of an alternative financial assurance instrument, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department:

1. A letter signed by a certified public accountant and based upon a certified audit that:

- Lists all the current cost estimates covered by a financial test including, but not limited to, cost estimates required by subrules 103.3(3) to 103.3(5); cost estimates required for municipal solid waste management facilities pursuant to 40 CFR Part 258; cost estimates required for UIC facilities under 40 CFR Part 144, if applicable; cost estimates required for petroleum underground storage tank facilities under 40 CFR Part 280, if applicable; cost estimates required for PCB storage facilities under 40 CFR Part 761, if applicable; and cost estimates required for hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, if applicable; and

- Provides evidence demonstrating that the owner or operator meets the conditions of subparagraph 103.3(6)“e”(1).

2. A copy of the independent certified public accountant’s unqualified opinion of the owner’s or operator’s financial statements for the latest completed fiscal year. To be eligible to use the financial test, the owner’s or operator’s financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion or disclaimer of opinion shall be cause for disallowance of this mechanism. A qualified opinion related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance. If the department does not allow use of the corporate financial test, the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

3. If the certified public accountant’s letter providing evidence of financial assurance includes financial data which shows that the owner or operator satisfies subparagraph 103.3(6)“e”(1) but which differs from data in the audited financial statements referred to in numbered paragraph 103.3(6)“e”(2)“2,” then a special report from the owner’s or operator’s independent certified public accountant to the owner or operator is required. The special report shall be based upon an agreed-upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the certified public accountant’s letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of that comparison, and the reasons for any differences.

4. If the certified public accountant’s letter provides a demonstration that the owner or operator has assured for environmental obligations as provided in the second bulleted paragraph of numbered paragraph 103.3(6)“e”(2)“1,” then the letter shall include a report from the independent certified public accountant that verifies that all of the environmental obligations covered by a financial test have been recognized as liabilities on the audited financial statements and that documents how these obligations

have been measured and reported and verifies that the tangible net worth of the owner or operator is at least \$10 million plus the amount of any guarantees provided.

(3) The owner or operator may cease the submission of the information required by paragraph 103.3(6)“e” only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

(4) The department may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subparagraph 103.3(6)“e”(1), require the owner or operator to provide reports of its financial condition in addition to or including current financial test documentation as specified in subparagraph 103.3(6)“e”(2). If the department finds that the owner or operator no longer meets the requirements of subparagraph 103.3(6)“e”(1), the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

(5) Calculation of costs to be assured. When calculating the current cost estimates for closure, postclosure, corrective action, or the sum of the combination of such costs to be covered, and any other environmental obligations assured by a financial test referred to in paragraph 103.3(6)“e,” the owner or operator must include cost estimates required for subrules 103.3(3) to 103.3(5); cost estimates for municipal solid waste management facilities pursuant to 40 CFR Section 258.74; and cost estimates required for the following environmental obligations, if the owner or operator assures those environmental obligations through a financial test: obligations associated with UIC facilities under 40 CFR Part 144, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265.

*f. Local government financial test.* An owner or operator that satisfies the requirements of this paragraph may demonstrate financial assurance up to the amount specified below:

(1) Financial component.

1. The owner or operator must satisfy one of the following requirements:

- If the owner or operator has outstanding, rated, general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or guarantee, the owner or operator must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody’s, or AAA, AA, A, or BBB, as issued by Standard & Poor’s, on all such general obligation bonds; or

- The owner or operator must satisfy both of the following financial ratios based on the owner’s or operator’s most recent audited annual financial statement: a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05, and a ratio of annual debt service to total expenditures less than or equal to 0.20.

2. The owner or operator must prepare its financial statements in conformity with generally accepted accounting principles or other comprehensive basis of accounting and have its financial statements audited by an independent certified public accountant or the office of the auditor of the state of Iowa. The financial statement shall be in the form prescribed by the office of the auditor of the state of Iowa

3. A local government is not eligible to assure its obligations in paragraph 103.3(6)“f” if it:

- Is currently in default on any outstanding general obligation bonds; or
- Has any outstanding general obligation bonds rated lower than Baa as issued by Moody’s or BBB as issued by Standard & Poor’s; or

- Operated at a deficit equal to 5 percent or more of total annual revenue in each of the past two fiscal years; or

- Receives an adverse opinion or disclaimer of opinion from the independent certified public accountant or office of the auditor of the state of Iowa auditing its financial statement as required under numbered paragraph 103.3(6)“f”(1)“2.” A qualified opinion that is related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance of this mechanism.

4. The following terms used in this paragraph are defined as follows:

“*Cash plus marketable securities*” means all the cash plus marketable securities held by the local government on the last day of a fiscal year, excluding cash and marketable securities designated to satisfy past obligations such as pensions.

“*Debt service*” means the amount of principal and interest due on a loan in a given time period, typically the current year.

“*Deficit*” means total annual revenues minus total annual expenditures.

“*Total expenditures*” means all expenditures, excluding capital outlays and debt repayment.

“*Total revenues*” means revenues from all taxes and fees, excluding revenue from funds managed by local government on behalf of a specific third party, and does not include the proceeds from borrowing or asset sales.

(2) Public notice component. The local government owner or operator must include disclosure of the closure and postclosure costs assured through the financial test in its next annual audit report prior to the initial receipt of waste at the facility or prior to cancellation of an alternative financial assurance mechanism, whichever is later. A reference to corrective action costs must be placed in the next annual audit report after the corrective action plan is approved by the department. For the first year the financial test is used to assure costs at a particular facility, the reference may instead be placed in the facility’s official files until issuance of the next available annual audit report if timing does not permit the reference to be incorporated into the most recently issued annual audit report or budget. For closure and postclosure costs, conformance with Governmental Accounting Standards Board Statement 18 ensures compliance with this public notice component.

(3) Record-keeping and reporting requirements.

1. The local government owner or operator must submit to the department the following items:

- A letter signed by the local government’s chief financial officer that lists all the current cost estimates covered by a financial test, as described in subparagraph 103.3(6) “f”(4); that provides evidence and certifies that the local government meets the conditions of numbered paragraphs 103.3(6) “f”(1)“1,” “2,” and “3”; and that certifies that the local government meets the conditions of subparagraphs 103.3(6) “f”(2) and (4); and

- The local government’s annual financial report indicating compliance with the financial ratios required by numbered paragraph 103.3(6) “f”(1)“1,” second bulleted paragraph, if applicable, and the requirements of numbered paragraph 103.3(6) “f”(1)“2” and the third and fourth bulleted paragraphs of numbered paragraph 103.3(6) “f”(1)“3” and also indicating that the requirements of Governmental Accounting Standards Board Statement 18 have been met.

2. The items required in numbered paragraph 103.3(6) “f”(3)“1” must be submitted to the department and placed in the facility’s official files prior to the receipt of waste or prior to the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or, in the case of corrective action, not later than 120 days after the corrective action plan is approved by the department.

3. After the initial submission of the required items and their placement in the facility’s official files, the local government owner or operator must update the information and place the updated information in the facility’s official files within 180 days following the close of the owner’s or operator’s fiscal year.

4. The owner or operator may cease the submission of the information required by paragraph 103.3(6) “f” only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

5. A local government must satisfy the requirements of the financial test at the close of each fiscal year. If the local government owner or operator no longer meets the requirements of the local government financial test, the local government must, within 180 days following the close of the owner’s or operator’s fiscal year, obtain alternative financial assurance that meets the requirements of this rule, place the required submissions for that assurance in the operating record, and notify the department that the owner or operator no longer meets the criteria of the financial test and that alternative financial assurance has been obtained.

6. The department, based on a reasonable belief that the local government owner or operator may no longer meet the requirements of the local government financial test, may require additional reports of financial conditions from the local government. If the department finds, on the basis of such reports or other information, that the owner or operator no longer meets the requirements of the local government financial test, the local government must provide alternative financial assurance in accordance with this rule

(4) Calculation of costs to be assured. The portion of the closure, postclosure, and corrective action costs which an owner or operator may assure under this paragraph is determined as follows:

1. If the local government owner or operator does not assure other environmental obligations through a financial test, the owner or operator may assure closure, postclosure, and corrective action costs that equal up to 43 percent of the local government's total annual revenue.

2. If the local government assures other environmental obligations through a financial test, including those associated with UIC facilities under 40 CFR Section 144.62, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, the owner or operator must add those costs to the closure, postclosure, and corrective action costs it seeks to assure under this paragraph. The total that may be assured must not exceed 43 percent of the local government's total annual revenue.

3. The owner or operator must obtain an alternative financial assurance instrument for those costs that exceed the limits set in numbered paragraphs 103.3(6) "f"(4)"1" and "2."

*g. Corporate guarantee.*

(1) An owner or operator may meet the requirements of this paragraph by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, an owner or operator whose parent corporation is also the parent corporation of the owner or operator, or an owner or operator with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in paragraph 103.3(6) "e" and must comply with the terms of the guarantee. A certified copy of the guarantee must be placed in the facility's operating record along with copies of the letter from a certified public accountant and the accountant's opinions. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter from the certified public accountant must describe the value received in consideration of the guarantee. If the guarantor is an owner or operator with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

(2) The guarantee must be effective and all required submissions made to the department prior to the initial receipt of waste or before cancellation of an alternative financial mechanism, in the case of closure and postclosure; or, in the case of corrective action, no later than 120 days after the corrective action plan has been approved by the department.

(3) The terms of the guarantee must provide that:

1. If the owner or operator fails to perform closure, postclosure, or corrective action of a facility covered by the guarantee, or fails to obtain alternative financial assurance within 90 days of notice of intent to cancel pursuant to numbered paragraphs 103.3(6) "g"(3)"2" and "3," the guarantor will:

- Perform, or pay a third party to perform, closure, postclosure, or corrective action as required (performance guarantee); or

- Establish a fully funded trust fund as specified in paragraph 103.3(6) "a" in the name of the owner or operator (payment guarantee); or

- Obtain alternative financial assurance as required by numbered paragraph 103.3(6) "g"(3)"3."

2. The guarantee will remain in force for as long as the owner or operator must comply with the applicable financial assurance requirements of this rule unless the guarantor sends prior notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts

3. If notice of cancellation is given, the owner or operator must, within 90 days following receipt of the cancellation notice by the owner or operator and the department, provide to the department adequate proof of alternative financial assurance, notice from the guarantor of withdrawal of the cancellation, or proof of the establishment of a fully funded trust fund pursuant to paragraph 103.3(6)“a.” If the owner or operator fails to comply with the provisions of this numbered paragraph within the 90-day period, the guarantor must provide that alternative financial assurance prior to cancellation of the corporate guarantee.

(4) If a corporate guarantor no longer meets the requirements of paragraph 103.3(6)“e,” the owner or operator must, within 90 days, obtain alternative financial assurance and submit proof of alternative financial assurance to the department. If the owner or operator fails to provide alternative financial assurance within the 90-day period, the guarantor must provide that alternative financial assurance within the next 30 days.

(5) The owner or operator is no longer required to meet the requirements of paragraph 103.3(6)“g” upon the submission to the department of proof of the substitution of alternative financial assurance or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*h. Local government guarantee.* An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action by obtaining a written guarantee provided by a local government or jointly provided by the members of an agency established pursuant to Iowa Code chapter 28E. The guarantor must meet the requirements of the local government financial test in paragraph 103.3(6)“f” and must comply with the terms of a written guarantee.

(1) Terms of the written guarantee. The guarantee must be effective before the initial receipt of waste or before the cancellation of alternative financial assurance, in the case of closure and postclosure; or no later than 120 days after the corrective action plan is approved by the department. The guarantee must provide that:

1. If the owner or operator fails to perform closure, postclosure, or corrective action of a facility covered by the guarantee or fails to obtain alternative financial assurance within 90 days of notice of intent to cancel pursuant to numbered paragraphs 103.3(6)“h”(1)“2” and “3,” the guarantor will:

- Perform, or pay a third party to perform, closure, postclosure, or corrective action as required;

or

- Establish a fully funded trust fund as specified in paragraph 103.3(6)“a” in the name of the owner or operator; or

- Obtain alternative financial assurance as required by numbered paragraph 103.3(6)“h”(1)“3.”

2. The guarantee will remain in force for as long as the owner or operator must comply with the applicable financial assurance requirements of this rule unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.

3. If notice of cancellation is given, the owner or operator must, within 90 days following receipt of the cancellation notice by the owner or operator and the department, provide to the department adequate proof of alternative financial assurance, notice from the guarantor of withdrawal of the cancellation, or proof of the establishment of a fully funded trust fund pursuant to paragraph 103.3(6)“a.” If the owner or operator fails to comply with the provisions of this numbered paragraph within the 90-day period, the guarantor must provide that alternative financial assurance prior to cancellation of the guarantee.

(2) Record-keeping and reporting requirements.

1. The owner or operator must submit to the department a certified copy of the guarantee along with the items required under subparagraph 103.3(6)“f”(3) and place a copy in the facility’s official files before the initial receipt of waste or before cancellation of alternative financial assurance, whichever is later, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department.

2. The owner or operator shall no longer be required to submit the items specified in numbered paragraph 103.3(6)“h”(2)“1” when proof of alternative financial assurance has been submitted to the

department or the owner or operator is no longer required to provide financial assurance pursuant to this rule.

3. If a local government guarantor no longer meets the requirements of paragraph 103.3(6)“f,” the owner or operator must, within the 90-day period, submit to the department proof of alternative financial assurance. If the owner or operator fails to obtain alternative financial assurance within the 90-day period, the guarantor must provide that alternative financial assurance within the next 30 days.

*i. Local government dedicated fund.* The owner or operator of a publicly owned CCR landfill or a local government serving as a guarantor may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by establishing a dedicated fund or account that conforms to the requirements of this paragraph. A dedicated fund will be considered eligible if it complies with subparagraph 103.3(6)“i”(1) or (2) below, and all other provisions of this paragraph, and if documentation of this compliance has been submitted to the department.

(1) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, or order to pay for closure, postclosure, or corrective action costs that arise from the operation of the CCR landfill and shall be funded for the full amount of coverage or funded for part of the required amount of coverage and used in combination with another mechanism(s) that provides the remaining coverage.

(2) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, or order as a reserve fund and shall be funded for no less than the full amount of coverage or funded for part of the required amount of coverage and used in combination with another mechanism(s) that provides the remaining coverage.

(3) Payments into the dedicated fund must be made annually by the owner or operator for ten years or over the permitted life of the CCR landfill, whichever is shorter, in the case of a dedicated fund for closure or postclosure; or over one-half of the estimated length of an approved corrective action plan in the case of a response to a known release. This is referred to as the pay-in period. The initial payment into the dedicated fund must be made before the initial receipt of waste in the case of closure and postclosure or no later than 120 days after the corrective action plan has been approved by the department.

(4) For a dedicated fund used to demonstrate financial assurance for closure and postclosure, the first payment into the dedicated fund must be at least equal to the amount specified in subrule 103.3(8), divided by the number of years in the pay-in period as defined in paragraph 103.3(6)“i.” The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{CE} - \text{CB}}{\text{Y}}$$

where CE is the total required financial assurance for the owner or operator, CB is the current balance of the fund, and Y is the number of years remaining in the pay-in period.

(5) For a dedicated fund used to demonstrate financial assurance for corrective action, the first payment into the dedicated fund must be at least one-half of the current cost estimate, divided by the number of years in the corrective action pay-in period as defined in paragraph 103.3(6)“i.” The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{RB} - \text{CF}}{\text{Y}}$$

where RB is the most recent estimate of the required dedicated fund balance, which is the total cost that will be incurred during the second half of the corrective action period, CF is the current amount in the dedicated fund, and Y is the number of years remaining in the pay-in period.

(6) The initial payment into the dedicated fund must be made before the initial receipt of waste or within 30 days of close of the first fiscal year that begins after October 31, 2007, in the case of existing facilities; before the cancellation of an alternative financial assurance mechanism in the case of closure

and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department.

(7) After the pay-in period has been completed, the dedicated fund shall be adjusted annually to correct any deficiency of the fund with respect to the adjusted cost estimate and may be adjusted annually should the balance in the fund exceed the adjusted cost estimate.

**103.3(7) General requirements.**

*a.* Use of multiple financial mechanisms. An owner or operator may satisfy the requirements of this rule by establishing more than one financial mechanism per facility. The mechanisms must be a combination of those mechanisms outlined in this rule and must provide financial assurance for an amount at least equal to the current cost estimate for closure, postclosure, or corrective action, whichever is applicable. The financial test and a guarantee provided by a corporate parent, sibling or grandparent shall not be combined if the financial statements of the two entities are consolidated.

*b.* Use of one mechanism for multiple facilities. An owner or operator may satisfy the requirements of this rule for multiple CCR landfills by the use of one mechanism if the owner or operator ensures that the mechanism provides financial assurance for an amount at least equal to the current cost estimates for closure, postclosure, or corrective action, whichever is applicable, for all CCR landfills covered.

*c.* Criteria. The language of the financial assurance mechanisms listed in this rule must ensure that the instruments satisfy the following criteria:

(1) The financial assurance mechanisms must ensure that the amount of funds assured is sufficient to cover the costs of closure, postclosure, or corrective action for known releases, whichever is applicable;

(2) The financial assurance mechanisms must ensure that funds will be available in a timely fashion when needed;

(3) The financial assurance mechanisms must be obtained by the owner or operator prior to the initial receipt of solid waste and no later than 120 days after the corrective action remedy has been approved by the department until the owner or operator is released from the financial assurance requirements; and

(4) The financial assurance mechanisms must be legally valid, binding, and enforceable under Iowa law.

*d.* No permit shall be issued by the department pursuant to Iowa Code section 455B.305 unless the applicant has demonstrated compliance with rule 103.3(455B).

**103.3(8) Amount of required financial assurance.** A financial assurance mechanism established pursuant to subrule 103.3(6) shall be in the amount of the third-party cost estimates required by subrules 103.3(3), 103.3(4), and 103.3(5) except that the amount of the financial assurance may be reduced by the sum of the cash balance in a trust fund or local government dedicated fund plus the current value of investments held by said trust fund or local government dedicated fund if invested in one or more of the investments listed in Iowa Code section 12B.10(5).

These rules are intended to implement Iowa Code section 455B.304.

CHAPTER 104  
SANITARY DISPOSAL PROJECTS WITH PROCESSING FACILITIES

[Prior to 7/1/83, DEQ Ch 29]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

[Prior to 6/12/02, see also 567—Ch 106]

**567—104.1(455B) Scope and applicability.** Any sanitary disposal project utilizing any of the equipment described in this chapter shall comply with the requirements for that equipment set out in this chapter, in addition to the requirements of 567—Chapter 102. If a composting process is to be used, the contents of 567—Chapter 105 are applicable.

**104.1(1)** Detailed engineering drawings of the sanitary disposal project shall be submitted showing all conveyor lines, holding areas, loading and unloading areas, transfer points, and initial and permanent roads, buildings and equipment to be installed, unloading and holding areas, fences and gates, landscaping and screening devices, personnel and maintenance facilities, sewer and water lines, lines of flow for all waste and salvaged materials.

**104.1(2)** Design specifications for all equipment shall be as follows:

*a.* All equipment which may be cleaned by washing shall be installed on reasonably smooth impermeable floors so designed as to be easily cleaned and having drainage to a sanitary sewer unless other acceptable provisions are made to control process water or washwater.

*b.* All equipment shall be so designed as to prevent spilling of waste and to be easily cleaned and shall be adequately enclosed so as to prevent blowing of dust or litter or wetting of the waste from precipitation or runoff.

**567—104.2(455B) Dumping or holding floors or pits.**

**104.2(1)** All unloading area surfaces shall be constructed of impervious, reasonably smooth material so designed as to be easily cleaned, with drainage to a sanitary sewer.

**104.2(2)** All unloading areas shall have a storage capacity of at least one day's processing capacity.

**104.2(3)** All unloading areas shall be adequately enclosed and roofed so as to prevent blowing of dust or litter and to prevent precipitation or drainage onto any accumulated waste.

**567—104.3(455B) Compaction equipment.** All compactors shall be located on reasonably smooth impermeable aprons so designed as to control wash water and area runoff, be easily cleaned, and avoid creation of fly or rodent habitats.

**567—104.4(455B) Hammermills.**

**104.4(1)** All hammermills shall be equipped with adjustable water spray or other dust suppression equipment.

**104.4(2)** All hammermills shall be provided with fire and explosion control or suppression devices or equipment.

**104.4(3)** Solid waste which cannot be processed by the hammermill or is rejected by it shall be stored in enclosed leakproof containers.

**567—104.5(455B) Hydropulping or slurring equipment.** All solid waste which cannot be processed by such equipment or is rejected by it shall be stored in enclosed leakproof containers.

**567—104.6(455B) Air classifiers.** All air classifiers shall be equipped with dust suppression equipment unless air is recirculated.

**567—104.7(455B) Metals separation equipment.**

**104.7(1)** Metals separation equipment shall be installed at that point in the process which minimizes possible organic contamination of the metal.

**104.7(2)** Provisions shall be made for storage of separated materials in enclosed leakproof containers.

**567—104.8(455B) Sludge processing.**

**104.8(1)** If introduced to solid waste, sludges shall be introduced after any resource recovery operation.

**104.8(2)** Sludge addition equipment and storage facilities shall be sanitary and odor free.

**567—104.9(455B) Storage containers and facilities.**

**104.9(1)** *Storage of solid waste.*

*a.* Containers used for the storage of all solid wastes except salvaged materials but including refuse-derived fuels shall be covered, leakproof, durable and of easily cleanable construction.

*b.* Facilities used for the storage of all solid wastes except municipal sewage sludge and salvaged materials but including refuse-derived fuels shall be constructed as follows:

(1) Storage facilities shall have a smooth, impervious, easily cleaned base.

(2) Storage facilities shall provide leachate collection.

(3) Storage facilities shall prevent runoff entering the facility from adjacent areas.

(4) Storage facilities shall be enclosed to prevent blowing litter and roofed to prevent precipitation into any solid waste.

*c.* Facilities used for the storage of municipal sewage sludge shall be constructed as follows:

(1) Storage facilities shall have a smooth, impervious, easily cleaned base.

(2) Storage facilities shall provide leachate monitoring and collection. The executive director may accept contingency plans in lieu of an installed collection system.

(3) Storage facilities shall prevent runoff entering the facility from adjacent areas.

(4) Storage facilities shall be designed and constructed to prevent odor, litter, leaching and vector problems. The acceptability of any such facility shall be based on the materials being stored, duration of storage and conditions to be experienced.

**104.9(2)** *Storage of salvaged materials.* Containers and facilities used for the storage of salvaged materials shall be designed and constructed to prevent odor, litter, leaching and vector problems. The acceptability of any such container shall be based on the materials being stored, duration of storage and conditions to be experienced.

**567—104.10(455B) Operating requirements for all processing facilities.** All sanitary disposal projects with processing facilities shall be operated in conformance with 567—Chapter 102 and this rule. The plan submitted shall detail how the facility will comply with these requirements.

**104.10(1)** All equipment shall be cleaned daily unless the department approves less frequent cleaning on a specific schedule stipulating component part, cleaning method, and schedule.

**104.10(2)** Sewage sludge shall not be handled in such a manner as to present a health hazard or potential source of pollution.

**104.10(3)** All solid waste processed or rejected by the facility shall be disposed in conformance with these rules.

**104.10(4)** Emergency access shall be provided to the material in solid waste storage facilities.

**104.10(5)** Storage time.

*a.* Solid waste. Solid waste, except for composted materials, but including refuse-derived fuels shall not be stored on the site for more than 72 hours.

*b.* Rescinded IAB 10/17/90, effective 11/21/90.

**104.10(6)** Solid waste shall be unloaded at the operating areas only when an operator is on duty at that area. Solid waste may be deposited in storage containers inside the site under the supervision of an attendant or operator.

**104.10(7)** The operating area for solid waste shall be as small as practicable and shall be surrounded with appropriate barriers to prevent litter from blowing beyond the operating area.

**104.10(8)** The site shall be fenced to control access and a gate shall be provided at the entrance to the site and kept locked when an attendant or operator is not on duty.

**104.10(9)** A copy of the permit, engineering plans and reports shall be kept at the site at all times.

**104.10(10)** Sites not open to the public shall have a permanent sign posted at the site entrance specifying:

- a. Name of operation.
- b. The site permit number.
- c. That the site is not open to the public.
- d. The name and telephone number of the responsible official.

**567—104.11(455B) Closure requirements.** All sanitary disposal projects with processing facilities shall close in conformance with their approved closure plan, this rule, and the requirements of 567—Chapter 102.

**104.11(1)** All equipment, storage facilities, holding areas, and drainage collection systems shall be cleaned and decontaminated.

**104.11(2)** All processed waste, stored waste and waste from cleaning and decontaminating the facility shall be removed and disposed of in a permitted disposal facility.

**104.11(3)** Disposal projects with processing facilities may be required to obtain a closure permit, described in 567—subrule 102.2(4), dependent upon the potential of the closed facility for environmental impact.

**567—104.12 to 104.20** Reserved.

#### RECYCLING OPERATIONS

[Prior to 7/1/83, DEQ Ch 31]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

[Prior to 6/12/02, 567—Ch 106]

**567—104.21(455B) Specific design requirements.** The plans required in 567—102.12(455B) shall include a complete description of initial and permanent roads, buildings and equipment to be installed; unloading and holding areas; fences and gates; landscaping and screening devices; personnel and maintenance facilities; sewer and water lines; the method of processing reclaimed salvageable materials, the disposition of such materials, the transfer points to which they will be moved, capacities of such points, and frequency of interchange shall be shown.

**567—104.22(455B) Specific operating requirements for all recycling operations.** The plans required in 567—102.12(455B) shall detail the means by which the following requirements will be complied with.

**104.22(1)** Material which cannot be recycled or removed during processing shall be handled in a manner which will not create pollution or a nuisance and shall be disposed of by another method provided in these rules.

**104.22(2)** Solid waste shall be unloaded at the operating areas only when an operator is on duty at that area. Solid waste may be deposited in storage containers inside the site under the supervision of an attendant or operator.

**104.22(3)** The operating area for solid waste shall be as small as practicable and shall be surrounded with appropriate barriers to prevent litter from blowing beyond the operating area.

**104.22(4)** The site shall be fenced to control access and a gate shall be provided at the entrance to the site and kept locked when an attendant or operator is not on duty.

**104.22(5)** A copy of the permit, engineering plans and reports shall be kept at the site at all times.

**104.22(6)** Sites not open to the public shall have a permanent sign posted at the site entrance specifying:

- a. Name of operation.
- b. The site permit number.
- c. That the site is not open to the public.
- d. The name and telephone number of the responsible official.

These rules are intended to implement Iowa Code section 455B.304.

**567—104.23(455B) Recycling operations processing paper, cans, and bottles.** Recycling operations which handle only paper, cans, and bottles are exempt from 104.21(455B) and 104.22(455B), and 567—Chapters 102 and 104 if the operation has no mechanical processing facilities or if the operation receives on average less than two tons of paper, cans, and bottles per day. Such operations shall submit the following information to the department for distribution to the public: address or legal description of site, organization operating the facility, name and telephone number of the responsible official of the facility, type of waste to be handled, operating days and hours.

**567—104.24(455B) Closure requirements.** All recycling operations shall be closed in conformance with their approved closure plan, this rule, rule 567—104.11(455B), and the requirements of 567—Chapter 102.

**567—104.25(455B) Operator certification.** Solid waste incinerator operators shall be trained, tested, and certified by a department-approved certification program.

**104.25(1)** A solid waste incinerator operator shall be on duty during all hours of operation of a solid waste incinerator, consistent with the respective certification.

**104.25(2)** To become a certified operator, an individual shall complete a basic operator training course that has been approved by the department or alternative, equivalent training approved by the department and shall pass a departmental examination as specified by this rule. An operator certified by another state may have reciprocity subject to approval by the department.

**104.25(3)** A solid waste incinerator operator certification is valid from the date of issuance until June 30 of the following even-numbered year.

**104.25(4)** Basic operator training course. The required basic operator training course for a certified solid waste incinerator operator shall have at least 12 contact hours and shall address the following areas, at a minimum:

- a. Description of types of wastes;
- b. Incinerator design;
- c. Interpreting and using engineering plans;
- d. Incinerator operations;
- e. Environmental monitoring;
- f. Applicable laws and regulations;
- g. Permitting processes;
- h. Incinerator maintenance;
- i. Ash and residue disposal.

**104.25(5)** Alternative basic operator training must be approved by the department. It shall be the applicant's responsibility to submit any documentation the department may require to evaluate the equivalency of alternative training.

**104.25(6)** Fees.

- a. The examination fee for each examination is \$20.
- b. The initial certification fee is \$8 for each one-half year of a two-year period from the date of issuance to June 30 of the next even-numbered year.
- c. The certification renewal is \$24.
- d. The penalty fee is \$12.

**104.25(7)** Examinations.

a. The operator certification examinations will be based on the basic operator training course curriculum.

b. All persons wishing to take the examination required to become a certified operator of a solid waste incinerator shall complete the Operator Certification Examination Application, Form 542-1354. A listing of dates and locations of examinations is available from the department upon request. The application form requires the applicant to indicate the basic operator training course taken. Evidence of training course completion must be submitted with the application for certification. The completed application and the application fee shall be sent to the department addressed to 502 East 9th Street, Des

Moines, Iowa 50319. Application for examination must be received by the department at least 30 days prior to the date of examination.

*c.* A properly completed application for examination shall be valid for one year from the date the application is approved by the department.

*d.* Upon failure of the first examination, the applicant may be reexamined at the next scheduled examination. Upon failure of the second examination, the applicant shall be required to wait a period of 180 days before taking a subsequent examination.

*e.* Upon each reexamination when a valid application is on file, the applicant shall submit to the department the examination fee at least ten days prior to the date of examination.

*f.* Failure to successfully complete the examination within one year from the date of approval of the application shall invalidate the application.

*g.* Completed examinations will be retained by the department for a period of one year after which they will be destroyed.

*h.* Oral examinations may be given at the discretion of the department.

**104.25(8) Certification.**

*a.* All operators who passed the operator certification examination by July 1, 1991, are exempt from taking the required operator training course. Beginning July 1, 1991, all operators will be required to take the basic operator training course and pass the examination in order to become certified.

*b.* Application for certification must be received by the department within 30 days of the date the applicant receives notification of successful completion of the examination. All applications for certification shall be made on a form provided by the department and shall be accompanied by the certification fee.

*c.* Applications for certification by examination which are received more than 30 days but less than 60 days after notification of successful completion of the examination shall be accompanied by the certification fee and the penalty fee. Applicants who do not apply for certification within 60 days of notice of successful completion of the examination will not be certified on the basis of that examination.

*d.* For applicants who have been certified under other state mandatory certification programs, the equivalency of which has been previously reviewed and accepted by the department, certification without examination will be recommended.

*e.* For applicants who have been certified under voluntary certification programs in other states, certification will be considered. The applicant must have successfully completed a basic operator training course and an examination generally equivalent to the Iowa examination. The department may require the applicant to successfully complete the Iowa examination.

*f.* Applicants who seek Iowa certification pursuant to paragraph 104.25(8) "d" or 104.25(8) "e" shall submit an application for examination accompanied by a letter requesting certification pursuant to this subrule. Application for certification pursuant to this subrule shall be received by the department in accordance with paragraphs 104.25(8) "b" and 104.25(8) "c."

**104.25(9) Renewals.** All certificates shall expire every two years, on even-numbered years, and must be renewed every two years to maintain certification. Application and fee are due prior to expiration of certification.

*a.* Late application for renewal of a certificate may be made provided that such late application shall be received by the department or postmarked within 30 days of the expiration of the certificate. Such late application shall be on forms provided by the department and accompanied by the penalty fee and the certification renewal fee.

*b.* If a certificate holder fails to apply for renewal within 30 days following expiration of the certificate, the right to renew the certificate automatically terminates. Certification may be allowed at any time following such termination, provided that the applicant successfully completes an examination. The applicant must then apply for certification in accordance with subrule 104.25(8).

*c.* An operator may not continue to operate a solid waste incinerator after expiration of a certificate without renewal thereof.

*d.* Continuing education must be earned during the two-year certification period. All certified operators must earn ten contact hours per certificate during each two-year period. The two-year period will begin upon certification.

*e.* Only those operators fulfilling the continuing education requirements before the end of each two-year period will be allowed to renew their certificates. The certificates of operators not fulfilling the continuing education requirements shall be void upon expiration, unless an extension is granted.

*f.* All activities for which continuing education credit will be granted must be related to the subject matter of the particular certificate to which the credit is being applied.

*g.* The department may, in individual cases involving hardship or extenuating circumstances, grant an extension of time of up to three months within which the applicant may fulfill the minimum continuing education requirements. Hardship or extenuating circumstances include documented health-related confinement or other circumstances beyond the control of the certified operator which prevent attendance at the required activities. All requests for extensions must be made 60 days prior to expiration of certification.

*h.* The certified operator is responsible for notifying the department of the continuing education credits earned during the period. The continuing education credits earned during the period shall be shown on the application for renewal.

*i.* A certified operator shall be deemed to have complied with the continuing education requirements of this rule during periods that the operator serves honorably on active duty in the military service; or for periods that the operator is a resident of another state or district having a continuing education requirement for operators and meets all the requirements of that state or district for practice there; or for periods that the person is a government employee working as an operator and is assigned to duty outside of the United States; or for other periods of active practice and absence from the state approved by the department.

**104.25(10)** Discipline of certified operators.

*a.* Disciplinary action may be taken on any of the following grounds:

(1) Failure to use reasonable care or judgment or to apply knowledge or ability in performing the duties of a certified operator. Duties of certified operators include compliance with rules and permit conditions applicable to incinerator operation.

(2) Failure to submit required records of operation or other reports required under applicable permits or rules of the department, including failure to submit complete records or reports.

(3) Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

*b.* Disciplinary sanctions allowable are:

(1) Revocation of a certificate.

(2) Probation under specified conditions relevant to the specific grounds for disciplinary action. Additional education or training or reexamination may be required as a condition of probation.

*c.* The procedure for discipline is as follows:

(1) The department shall initiate disciplinary action. The commission may direct that the department investigate any alleged factual situation that may be grounds for disciplinary action under paragraph 104.25(10)“*a*” and report the results of the investigation to the commission.

(2) A disciplinary action may be prosecuted by the department.

(3) Written notice shall be given to an operator against whom disciplinary action is being considered. The notice shall state the informal and formal procedures available for determining the matter. The operator shall be given 20 days to present any relevant facts and indicate the operator’s position in the matter and to indicate whether informal resolution of the matter may be reached.

(4) An operator who receives notice shall communicate verbally, in writing, or in person with the department, and efforts shall be made to clarify the respective positions of the operator and department.

(5) The applicant’s failure to communicate facts and positions relevant to the matter by the required date may be considered when appropriate disciplinary action is determined.

(6) If agreement as to appropriate disciplinary sanction, if any, can be reached with the operator and the commission concurs, a written stipulation and settlement between the department and the operator shall be entered into. The stipulation and settlement shall recite the basic facts and violations alleged, any facts brought forth by the operator, and the reasons for the particular sanctions imposed.

(7) If an agreement as to appropriate disciplinary action, if any, cannot be reached, the department may initiate formal hearing procedures. Notice and formal hearing shall be in accordance with 561—Chapter 7 related to contested and certain other cases pertaining to licensee discipline.

**104.25(11)** Revocation of certificates. Upon revocation of a certificate, application for certification may be allowed after two years from the date of revocation. Any such applicant must successfully complete an examination and be certified in the same manner as a new applicant.

**104.25(12)** A temporary operator of a solid waste incinerator may be designated for a period of six months when an existing certified operator is no longer available to the facility. The facility must make application to the department, explain why a temporary certification is needed, identify the temporary operator, and identify the efforts which will be made to obtain a certified operator. A temporary operator designation shall not be approved for greater than a six-month period except for extenuating circumstances. In any event, not more than one six-month extension to the temporary operator designation may be granted. Approval of a temporary operator designation may be rescinded for cause as set forth in subrule 104.25(10).

<sup>1</sup> October 1, 2007, effective date of rule 567—104.25(455B) was delayed 70 days by the Administrative Rules Review Committee at its meeting held September 11, 2007.

**567—104.26(455D) Financial assurance for solid waste processing facilities.** Permitted solid waste processing facilities must obtain and submit a financial assurance instrument to the department for preprocessed and postprocessed waste storage in accordance with this rule. The financial assurance instrument shall provide monetary funds to properly dispose of any materials that may remain at a facility due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

**104.26(1)** *No permit without financial assurance.* The department shall not issue or renew a permit to an owner or operator of a solid waste processing facility until a financial assurance instrument has been submitted to and approved by the department.

**104.26(2)** *Proof of compliance.* Proof of the establishment of the financial assurance instrument and compliance with this rule, including a current closure cost estimate, shall be submitted to the department by July 1, 2008, or at the time of application for a permit for a new solid waste processing facility or application for a permit renewal, whichever occurs first. The owner or operator must provide continuous coverage for closure and submit proof of compliance, including an updated closure cost estimate, with each permit renewal thereafter until released from this requirement by the department.

**104.26(3)** *Use of one financial assurance instrument for multiple permitted activities.* Solid waste processing facilities required to maintain financial assurance pursuant to any other provisions of 567—Chapters 100 to 123 may satisfy the requirements of this rule by the use of one financial assurance instrument if the permit holder ensures that the instrument provides financial assurance for an amount at least equal to the current cost estimates for closure of all sanitary disposal project activities covered.

**104.26(4)** *Financial assurance amounts required.* The estimate submitted to the department must be certified by an Iowa-licensed professional engineer and must account for at least the following factors determined by the department to be minimal necessary costs for closure:

*a.* The cost of hiring a third party to properly clean and decontaminate all equipment, storage facilities, holding areas and drainage collection systems pursuant to subrule 104.11(1). This estimate shall include the cost of properly disposing of a one-week volume of washwater from the processing facility. If the facility utilizes washwater storage tanks, then this estimate shall assume that the storage tanks are full and add that volume to the one-week volume.

*b.* Third-party labor and transportation costs and total tip fees to properly dispose of all preprocessed and postprocessed waste equal to the maximum storage capacity of the processing facility

pursuant to subrule 104.11(2). If materials are temporarily stored on site in transportation vehicles or waste receptacles, then this estimate shall include disposal costs for the maximum number of transportation vehicles and waste receptacles that can be on site at any one time.

c. The costs for maintaining financial assurance pursuant to any other provisions of 567—Chapters 100 to 123, if any, in accordance with subrule 104.26(3).

**104.26(5) *Acceptable financial assurance instruments.*** The financial assurance instrument shall be established in an amount equal to the cost estimate prepared in accordance with subrule 104.26(4) and shall not be canceled, revoked, disbursed, released, or allowed to terminate without the approval of the department. Financial assurance may be provided by cash in the form of a secured trust fund or local government dedicated fund, surety bond, letter of credit, or corporate or local government guarantee as follows:

a. *Secured trust fund.* The owner or operator of a solid waste processing facility or entity serving as a guarantor may demonstrate financial assurance for closure by establishing a secured trust fund that conforms to the requirements of this paragraph.

(1) The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. The fund shall be restricted for the sole purpose of funding closure activities at the facility, and a copy of the trust agreement must be submitted to the department and placed in the facility's official files.

(2) A secured trust fund shall name the department of natural resources as the entity authorized to draw funds from the trust, subject to the provision of proper notification to the trust officer of failure by the permittee to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) Moneys in the fund shall not be assigned for the benefit of creditors with the exception of the state.

(4) Moneys in the fund shall not be used to pay any final judgment against a permit holder arising out of the ownership or operation of the site during its active life or after closure.

(5) The owner or operator or another person authorized to conduct closure activities may request reimbursement from the trustee for closure expenditures as they are incurred. Requests for reimbursement shall be granted by the trustee only if sufficient funds are remaining in the trust fund to cover the remaining costs of closure and if documentation of the justification for reimbursement has been submitted to the department for prior approval.

(6) If the balance of the trust fund exceeds the current cost estimate for closure at any time, the owner or operator may request withdrawal of the excess funds from the trustee so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

b. *Local government dedicated fund.* The owner or operator of a publicly owned solid waste processing facility or a local government serving as a guarantor may demonstrate financial assurance for closure by establishing a dedicated fund that conforms to the requirements of this paragraph.

(1) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, resolution or order as a restricted fund to pay for closure costs arising from the operation of the solid waste processing facility.

(2) A copy of the document establishing the dedicated fund must be submitted to the department and placed in the facility's official files.

(3) If the balance of the dedicated fund exceeds the current cost estimate for closure at any time, the owner or operator may withdraw excess funds so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

c. *Surety bond.* A surety bond must be written by a company authorized by the commissioner of insurance to do business in the state. The surety bond shall comply with the following:

(1) The bond shall be in a form approved by the commissioner of insurance and shall be payable to the department of natural resources.

(2) The bond shall be specific to a particular facility for the purpose of properly disposing of any preprocessed and postprocessed waste that may remain on site due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) The owner or operator shall provide the department with a statement from the surety with each permit application renewal, noting that the bond is paid and current for the permit period for which the owner or operator has applied for renewal.

*d. Letter of credit.* The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

(1) The owner or operator must submit to the department a copy of the letter of credit and place a copy in the facility's official files.

(2) A letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the name and address of the facility and the amount of funds assured, must be included with the letter of credit submitted to the department and placed in the facility's files.

(3) The letter of credit must be irrevocable and must be issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the owner or operator and to the department 90 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the letter of credit into a secured trust fund that meets the requirements of paragraph 104.26(5) "a." If the owner or operator has not complied with this subrule within the 60-day time period, the issuer of the letter of credit shall deposit a sum equal to the amount of the letter of credit into the secured trust fund established by the owner or operator. The provision of funds by the issuer of the letter of credit shall be considered an issuance of a loan to the owner or operator, and the terms of that loan shall be governed by the letter of credit or subsequent agreement between those parties. The state shall not be considered a party to this credit transaction.

*e. Corporate guarantee.* An owner or operator may meet the requirements of this rule by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, an owner or operator whose parent corporation is also the parent corporation of the owner or operator, or an owner or operator with a "substantial business relationship" with the owner or operator.

(1) The terms of the written guarantee must provide that within 30 days of the owner's or operator's failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);
2. Establish a fully funded secured trust fund as specified in paragraph 104.26(5) "a" in the name of the owner or operator (payment guarantee); or
3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following three conditions:

1. A current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard & Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or
2. A ratio of less than 1.5 comparing total liabilities to net worth; or
3. A ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities.

(3) The tangible net worth of the guarantor must be greater than the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(4) The guarantor must have assets amounting to at least the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(5) Record-keeping and reporting requirements. The guarantor must submit the following records to the department and place a copy in the facility's official files:

1. A copy of the written guarantee between the owner or operator and the guarantor.
2. A letter signed by a certified public accountant and based upon a certified audit that:
  - Lists all the current cost estimates covered by a guarantee including, but not limited to, cost estimates required by subrule 104.26(4); cost estimates required for municipal solid waste management facilities pursuant to 40 CFR Part 258; cost estimates required for UIC facilities under 40 CFR Part 144, if applicable; cost estimates required for petroleum underground storage tank facilities under 40

CFR Part 280, if applicable; cost estimates required for PCB storage facilities under 40 CFR Part 761, if applicable; and cost estimates required for hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, if applicable; and

- Provides evidence demonstrating that the guarantor meets the conditions of subparagraphs 104.26(5)“e”(2), (3) and (4).

3. A copy of the independent certified public accountant’s unqualified opinion of the guarantor’s financial statements for the latest completed fiscal year. In order for the guarantor to be eligible to use the guarantee, the guarantor’s financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion or disclaimer of opinion shall be cause for disallowance of this instrument. A qualified opinion related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance. If the department does not allow use of the corporate guarantee, the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

*f. Local government guarantee.* An owner or operator may demonstrate financial assurance for closure by obtaining a written guarantee provided by a local government or jointly provided by the members of an agency established pursuant to Iowa Code chapter 28E.

(1) The terms of the written guarantee must provide that within 30 days of the owner’s or operator’s failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);
2. Establish a fully funded secured trust fund as specified in paragraph 104.26(5)“a” in the name of the owner or operator (payment guarantee); or
3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following requirements:

1. If the guarantor has outstanding, rated, general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or guarantee, the guarantor must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody’s, or AAA, AA, A, or BBB, as issued by Standard & Poor’s, on all such general obligation bonds; or
2. The guarantor must satisfy each of the following financial ratios based on the guarantor’s most recent audited annual financial statement: a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05, and a ratio of annual debt service to total expenditures less than or equal to 0.20.

(3) The guarantor must prepare its financial statements in conformity with generally accepted accounting principles or other comprehensive basis of accounting and have its financial statements audited by an independent certified public accountant or the office of the auditor of the state of Iowa. The financial statement shall be in the form prescribed by the office of the auditor of the state of Iowa.

(4) A guarantor is not eligible to assure its obligations if:

1. The guarantor is currently in default on any outstanding general obligation bonds; or
2. The guarantor has any outstanding general obligation bonds rated lower than Baa as issued by Moody’s or BBB as issued by Standard & Poor’s; or
3. The guarantor operated at a deficit equal to 5 percent or more of total annual revenue in each of the past two fiscal years; or
4. The guarantor receives an adverse opinion or disclaimer of opinion from the independent certified public accountant or office of the auditor of the state of Iowa auditing its financial statement. A qualified opinion that is related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance of this mechanism; or
5. The closure costs to be assured are greater than 43 percent of the guarantor’s total annual revenue.

(5) The local government guarantor must include disclosure of the closure costs assured through the guarantee in its next annual audit report prior to the initial receipt of waste at the facility or prior to cancellation of an alternative financial assurance instrument, whichever is later. For the first year the guarantee is used to assure costs at a particular facility, the reference may instead be placed in the

guarantor's official files until issuance of the next available annual audit report if timing does not permit the reference to be incorporated into the most recently issued annual audit report or budget. For closure costs, conformance with Governmental Accounting Standards Board Statement 18 ensures compliance with this public notice component.

(6) The local government owner or operator must submit to the department the following items:

1. A copy of the written guarantee between the owner or operator and the local government serving as guarantor for the closure costs at the facility.

2. A copy of the guarantor's most recent annual financial audit report indicating compliance with the financial ratios required by numbered paragraph 104.26(5) "f"(2) "2," if applicable, and the requirements of subparagraphs 104.26(5) "f"(3) and (4).

3. A letter signed by the local government's chief financial officer that lists all the current cost estimates covered by the guarantor, as described in subrule 104.26(4); and that provides evidence and certifies that the local government meets the conditions of subparagraphs 104.26(5) "f"(2), (3), (4) and (5).

**104.26(6) *Financial assurance cancellation and permit suspension.***

a. A financial assurance instrument may be terminated by the owner or operator only if the owner or operator substitutes alternate financial assurance prior to cancellation, as specified in this rule, or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

b. A financial assurance instrument shall be continuous in nature until canceled by the financial assurance provider or until the department gives written notification to the owner, operator, and financial assurance provider that the covered site has been properly closed. The financial assurance provider shall give at least 90 days' notice in writing to the owner or operator and the department in the event of any intent to cancel the instrument.

c. Within 60 days of receipt of a written notice of cancellation of financial assurance by the financial assurance provider, the owner or operator must provide the department an alternative financial assurance instrument. If a means of continued financial assurance is not provided within that 60 days, the department shall suspend the permit.

d. The owner or operator shall perform proper closure within 30 days of the permit suspension. For the purpose of this rule, "proper closure" means completion of all items pursuant to rule 104.11(455B) and subrule 104.26(4).

e. If the owner or operator does not properly close the site within the 30-day period allowed, the department shall file a claim with the financial assurance instrument provider to collect the amount of funds necessary to properly close the site.

f. An owner or operator who elects to terminate a permitted activity, whose renewal application has been denied, or whose permit has been suspended or revoked for cause must submit within 30 days of the termination of the permit a schedule for completing proper closure of the terminated activity. Closure completion cannot exceed 60 days from the date of termination of the permit.

g. The director may also request payment from any financial assurance provider for the purpose of completing closure when the following circumstances exist:

(1) The owner or operator is more than 15 days late in providing a schedule for closure or for meeting any date in the schedule for closure.

(2) The owner or operator declares an economic inability to comply with this rule, either by sending written notification to the director or through an action such as, but not limited to, filing for bankruptcy.

These rules are intended to implement Iowa Code section 455B.304.

CHAPTER 105  
ORGANIC MATERIALS COMPOSTING FACILITIES

**567—105.1(455B,455D) General.** This chapter shall apply to the composting of solid and yard wastes. Composting facilities may include vermicomposting, turned windrows, aerated static piles, aerated in-vessel systems, or other methods approved by the department. Composting facilities existing as of June 19, 2002, must comply with the requirements of this chapter within two years or by the permit renewal date, whichever is later.

**105.1(1) Definitions.** For the purposes of this chapter, the following definitions apply:

*“Agricultural waste”* means organic materials normally discarded during the production of plants and animals from agronomic, horticultural or silvicultural operations. “Agricultural waste” includes but is not limited to manure, crop residuals, bedding, and other vegetative by-products produced during farm processing. Dead animals are not included.

*“Best management practices”* means the practices described in the most recent version of the Compost Facility Operating Guide published by the United States Composting Council or other best management practices as approved by the department.

*“Bulking agent”* means a material that contributes structure and porosity, usually a dry, rigid material such as shredded wood or tire chips.

*“Compostable”* means an organic material that undergoes degradation by biological processes during composting to yield carbon dioxide, water, inorganic compounds and biomass.

*“Compostable plastics”* means a plastic that undergoes degradation by biological processes at a rate consistent with other known compostable materials and leaves no visually distinguishable or toxic residue. Testing according to ASTM D6400-00 criteria should be used to designate compostable plastics.

*“Composting”* means the accelerated biological decomposition of organic matter under managed aerobic conditions resulting in a stable, innocuous final product.

*“Composting facility”* means all related receiving, processing, production, curing, and storage areas and necessary roads, buildings, equipment, litter control devices, pollution control devices, fire control devices, landscaping, gates, personnel and maintenance facilities, sewer and water lines, and process water.

*“Compost leachate”* means a liquid that has percolated through or drained from compost.

*“Compost maturity,”* according to Test Methods for the Examination of Composting and Compost (TMECC), means an organo-chemical state of compost that indicates the presence or lack of organic phytotoxic chemicals in stable compost. Measurements for maturity are based on the amount of volatile fatty acids present. Mature compost will have fatty acids of no more than 2 mg/g dry weight solids or as specified in the most recent version of TMECC.

*“Compost stability,”* according to TMECC, means a stage in the composting process when microbial activity is diminished with the corresponding decrease of available organic carbon and other energy sources. Stability is measured through respiration. Stable compost will have oxygen uptake rates in the range of 0-3.5 mg O<sub>2</sub>/g BVS/hr. or as specified in the most recent version of TMECC.

*“Cured compost”* means compost that is both stable and mature according to the definitions found in this chapter.

*“Curing”* means a process in which compost is further monitored to control pathogen regrowth while increasing stability and maturity.

*“Finished compost”* means cured and, if necessary, screened or refined.

*“Household organic waste”* means general household compostable items such as food residuals and paper produced on premises.

*“Infectious waste”* means waste that is infectious, including but not limited to contaminated sharps, cultures, and stocks of infectious agents, blood and blood products, pathological waste, and contaminated animal carcasses from hospitals or research laboratories.

*“Municipality”* means any city or county in the state.

*“Nuisance”* means whatever is injurious to health, indecent, or unreasonably offensive to the senses, or an obstruction to the free use of property, so as essentially to unreasonably interfere with the

comfortable enjoyment of life or property, and a civil action by ordinary proceedings may be brought to enjoin and abate the same and to recover damages sustained on account thereof.

“*Organic materials*” means any material of animal or plant origin.

“*Premises*” means a geographically contiguous property owned by a generator or noncontiguous property owned by a generator and that is connected by a controlled right-of-way to which the public does not have access. Two or more pieces of property that are geographically contiguous and divided by public or private right-of-way are a single premises.

“*Small compost facilities*” means facilities meeting the requirements set forth in rule 105.5(455B,455D).

“*Solid waste composting*” means the composting of any organic material with or without yard waste. For the purposes of this chapter, facilities exempt under 105.2(455B,455D) are not considered solid waste composting facilities. In addition, facilities in compliance with 105.4(455B,455D), 105.5(455B,455D) or 105.6(455B,455D) are not considered solid waste composting facilities. Only facilities that are required to obtain or have a permit are considered solid waste composting facilities.

“*Vector*” means a carrier organism that is capable of transmitting a pathogen from one organism to another. Vectors include, but are not limited to, birds, rats and other rodents, and insects.

“*Yard waste*” means vegetative matter such as grass clippings, leaves, garden waste, brush and trees, and any clean wood waste which is necessary as bulking agent and which is free of coatings and preservatives.

**105.1(2)** There are three different levels of compost facility regulation:

a. Exempt operations in accordance with 105.2(455B,455D).

b. Permit by rule. Yard waste composting facilities are exempt from permitting if operated in conformance with 105.3(455B,455D) and 105.4(455B,455D). Facilities that compost dead farm animals are exempt from permitting if operated in conformance with 105.3(455B,455D) and 105.6(455B,455D). Small quantity solid waste compost operations as defined in 105.5(455B,455D) are exempt from permitting if operated in conformance with 105.3(455B,455D) and 105.5(455B,455D).

c. Solid waste composting. Solid waste composting facilities must obtain a permit from the department. Solid waste composting facilities involving municipal sewage sludge shall also operate in conformance with 567—Chapter 67.

**105.1(3)** Burial of yard waste at a sanitary landfill is prohibited. Acceptance of yard waste by a hauling firm or at a transfer station for burial at a sanitary landfill is also prohibited. However, yard waste that has been separated at its source from other solid waste may be accepted by a sanitary landfill for the purposes of soil conditioning or composting. Yard waste accepted by a sanitary landfill for the purposes of soil conditioning shall be used only on finished areas of the landfill that have received the final earthen cover, developed areas with intermediate cover, and restoration of soil borrow areas. Burning of yard waste at a sanitary disposal project is prohibited.

**105.1(4)** Each city and county shall, by ordinance, require persons within the city or county to separate yard waste from other solid waste generated. Municipalities which provide for collection of solid waste shall also provide for separate collection of yard waste.

**105.1(5)** Land application of yard waste shall be in conformance with 567—Chapter 121.

**567—105.2(455B,455D) Exemptions.** The following projects are exempt from this chapter. This exemption is not a defense to a nuisance action brought pursuant to Iowa Code chapter 657.

**105.2(1)** Yard waste or household organic waste composted and used on the same premises where it originated.

**105.2(2)** Composting facilities involving agricultural waste, excluding dead animals, and clean wood waste which is necessary as bulking agent and which is free of coatings and preservatives. Use of any other materials as bulking agent shall require prior approval by the department. If agricultural waste is mixed with other wastes including dead animals for the purpose of composting, then this chapter shall apply unless the other wastes have been preapproved by the department as necessary as bulking agent.

**105.2(3)** Yard waste, household organic waste, and agricultural waste generated, composted together in any combination and used on the same premises where they originated.

**567—105.3(455B,455D) General requirements for all composting facilities not exempt pursuant to 105.2(455B,455D).** This rule applies to all composting facilities not exempt under 105.2(455B,455D). Facilities exempt from permitting that do not operate in accordance with this chapter may as a result be required to obtain a solid waste composting permit. Composting facilities shall also operate in accordance with all applicable city and county ordinance and permitting requirements.

**105.3(1)** The composting facility shall be 500 feet from any existing inhabited residence, not including the residence of the person owning/operating the compost facility, at the time the permit application was received by the department. Composting must be done outside of wetlands, at least 200 feet from public wells, 100 feet from private wells, 50 feet from property lines, and 100 feet from flowing or intermittent streams, lakes, or ponds. Composting done inside the 100-year flood plain shall be in accordance with all local and department regulations including 567—71.5(455B). Sediment ponds, engineered wetlands or other constructed waterways for the purpose of pollution control are excluded from this requirement.

**105.3(2)** Composting shall be performed in a manner that minimizes the formation of compost leachate by the facility.

**105.3(3)** Measures shall be taken to prevent water from running onto the facility from adjacent land and to prevent compost leachate and runoff from leaving the composting facility. Runoff from the composting facility must be properly managed.

**105.3(4)** Facilities shall be designed, constructed, and maintained so as to minimize ponding of water or liquids. Any ponding that does occur shall be corrected through routine facility maintenance within 48 hours after the termination of the event causing the ponding.

**105.3(5)** Composting must be done on an all-weather surface of compacted soil, compacted granular aggregates, asphalt, concrete or similar relatively impermeable material that will permit accessibility during periods of inclement weather and prevent contamination of surface water and groundwater.

**105.3(6)** Solid waste which cannot be composted or which is removed during processing shall be properly disposed of. Infectious waste shall not be accepted for composting at any composting facility unless approved by the department in writing.

**105.3(7)** Solid waste materials shall be managed through the entire process in accordance with best management practices to minimize conditions such as odors, dust, noise, litter and vectors which may create nuisance conditions or a public health hazard.

**105.3(8)** Storage of cured or finished compost shall be limited to 18 months. The 18-month period may be extended with prior written approval from the department.

**105.3(9)** If compost is offered for sale as a soil conditioner or fertilizer, the compost must be registered by the department of agriculture and land stewardship under Iowa Code chapter 200, Fertilizers and Soil Conditioners. Sale shall be in compliance with all applicable federal and state laws and local ordinances and regulations.

**105.3(10)** Compost shall not be applied to land, sold or given away unless the concentration of human-made inert materials such as glass, metal, and plastic is less than 1.5 percent by dry weight.

Compost shall not be applied to land, sold or given away unless the size of any human-made inert materials is less than 13 mm (0.512 inches).

**567—105.4(455B,455D) Specific requirements for yard waste composting facilities.** Yard waste composting facility operators are encouraged to be trained, tested, and certified by a department-approved certification program upon approval of such a program by the department.

**105.4(1)** Before the composting facility commences operation, the department and the field office of the department serving the composting facility's location shall be notified in writing of the following:

- a. The location of the composting facility.
- b. Legal description of the facility.
- c. Landowner's name, telephone number, and mailing address.
- d. Responsible party's name, telephone number, and mailing address.
- e. Annual capacity of the facility.
- f. Method of composting to be employed.

g. Source of the yard waste and any necessary bulking agent. This description must include a description of service area defined in terms of municipalities wherein sources of the material are located.

**105.4(2)** The facility shall have a permanent sign posted at the entrance specifying:

- a. Name of operation.
- b. Operating hours.
- c. Materials which are accepted or the statement "All materials must have prior approval."
- d. Telephone number of 24-hour emergency contact person.

**105.4(3)** The area of the composting facility must be large enough for the volume of yard waste composted.

**105.4(4)** Yard waste must be taken out of containers before composting, unless the containers are compostable.

**105.4(5)** Aerobic conditions shall be maintained in accordance with best management practices.

**105.4(6)** An annual report for the previous fiscal year beginning July 1 and ending June 30 shall be submitted to the department by July 31 of each year. The report shall be submitted using Form 542-3276C, provided by the department, and all applicable sections of the form must be completed.

These records shall be maintained by the facility for a period of three years for inspection and evaluation by the department.

**567—105.5(455B,455D) Small composting facilities receiving off-premises materials.** Small composting facilities are exempt from obtaining a solid waste composting permit provided the facility complies with 105.3(455B,455D) and 105.5(455B,455D).

**105.5(1) Acceptable materials and amounts.** Yard waste and food residuals may be received from off premises at a total rate of two tons or less per week for composting either singly, in combination, or with agricultural waste. Any clean wood waste free of coating and preservatives may be used as a bulking agent. The two tons per week combined weight limit does not apply to bulking agent. However, the amount of bulking agent received must be appropriate for the amount of compostable materials received. Facilities composting over two tons of food residuals and yard waste per week in any combination from off premises must obtain a permit (Form 50A (542-1542A)) and adhere to the solid waste composting requirements stipulated in 105.7(455B,455D) through 105.14(455B,455D). If only agricultural wastes are collected and composted, this rule does not apply. If only yard wastes are collected and composted, this rule does not apply.

**105.5(2) Notification.** Before the composting facility commences operation, the department and the field office of the department serving the composting facility's location shall be notified in writing of the following:

- a. The location of the composting facility.
- b. Legal description of the facility.
- c. Landowner's name, telephone number, and mailing address.
- d. Responsible party's name, telephone number, and mailing address.
- e. Annual capacity of the facility.
- f. Method of composting to be employed.
- g. Source of the feedstock and any necessary bulking agent. This description must include a description of service area defined in terms of municipalities wherein sources of the material are located.

**105.5(3) Signage.** The facility shall have a permanent sign posted at the entrance specifying:

- a. Name of operation.
- b. Operating hours.
- c. Materials which are accepted or the statement "All materials must have prior approval."
- d. Telephone number of 24-hour emergency contact person.

**105.5(4) Reporting.** An annual report for the previous fiscal year beginning July 1 and ending June 30 shall be submitted to the department by July 31 of each year. The report shall be submitted using Form 542-3276C, provided by the department, and all applicable sections of the form must be completed.

These records shall be maintained by the facility for a period of three years for evaluation by the department.

**567—105.6(455B,455D) Specific requirements for composting of dead farm animals.** Operators of dead farm animal composting facilities are encouraged to be trained, tested, and certified by a department-approved certification program upon approval of such a program by the department. A facility that composts dead farm animals is exempt from permitting if the following operating requirements are met and the facility is in compliance with 105.3(455B,455D). Businesses or individuals that are neither the owner nor operator of any of the sites where dead farm animals are generated and that want to compost dead farm animals must obtain a permit in accordance with 567—105.8(455B,455D).

**105.6(1)** Before commencing operation, the operator is encouraged to notify the department field office with jurisdiction over the facility. The department may provide general assistance, such as locating bulking agents and providing advice in regard to siting considerations such as pad location, sizing and design, to facilities notifying the department and requesting assistance.

**105.6(2)** Farm animals known or suspected to have died from an infectious disease that can be spread by scavengers or insects or that died from a reportable disease shall be disposed of in accordance with the requirements of the Iowa department of agriculture and land stewardship and the department.

**105.6(3)** Transportation vehicles shall be constructed to prevent the release of mortality contaminated materials under normal operating conditions. The most direct haul route that avoids biosecurity risks shall be utilized.

**105.6(4)** The composting facility shall be designed to accommodate at least the average annual death loss for all sites using the composting facility. Facility design shall also take into account space requirements for managing raw materials (e.g., additional bedding and bulking agents needed for mortality composting) and finished compost.

**105.6(5)** Animal mortalities from a catastrophic event, such as a fire or electrical outage, shall not be composted until the department field office is contacted and arrangements are approved for the appropriate treatment or disposal of the animals. The facility shall contact the department field office with jurisdiction over the facility as soon as possible after such a catastrophic event occurs to receive approval of the disposal option.

**105.6(6)** Dead farm animals shall be incorporated into the composting process within 24 hours of death. An adequate base layer (from 12 to 24 inches thick, depending on the size and number of dead farm animals) with 6 to 12 inches of bulking agent between carcasses and an additional 12 inches of cover material shall be maintained around carcasses at all times to control mortality leachate and odors and to prevent access by scavenging domestic and wild animals.

**105.6(7)** Dead farm animals shall not be removed from composting until all soft tissue is fully decomposed.

**105.6(8)** Compost (including bones that have not fully decomposed) shall be applied to cropland in a manner that minimizes the runoff into a water of the state. Application of the compost to lands other than cropland shall require prior approval by the department.

**567—105.7(455B,455D) Permit requirements for solid waste composting facilities.**

**105.7(1)** *Permit required.* Solid waste composting facilities shall not be constructed or operated without a permit from the department. As part of the sanitary disposal project permit issuance procedures, these facilities must meet comprehensive planning requirements. Since these facilities serve as alternatives to landfilling, comprehensive planning requirements are minimal and are satisfied through the information provided in the permit application submittal and by compliance with the reporting requirements set forth in 105.12(455B,455D). If a solid waste composting facility is formally part of a planning area's integrated waste management system, the operator must participate in that area's planning activities and the facility must be included in all plan submittal documents. The issuance of a permit by the department in no way relieves the applicant of the responsibility of complying with all other local, state, or federal statutes, ordinances, and rules or other requirements applicable to the construction and operation of a solid waste composting facility.

**105.7(2)** *Construction and operation.* All solid waste composting facilities shall be constructed and operated according to the plans and specifications as approved by the department and the conditions of the permit. The approved plans and specifications shall constitute a term of the permit.

**105.7(3) *Transfer of title and permit.*** If title to a solid waste composting facility is transferred, then the department shall transfer the permit within 60 days if the department finds that the following requirements have been met:

*a.* The title transferee has applied in writing to the department within 30 days of the transfer of title to request a transfer of the permit.

*b.* The permitted facility is in compliance with the rules and conditions of the permit.

**105.7(4) *Permit conditions.*** Any permit may be issued subject to conditions specified in writing by the department that are necessary to ensure that the sanitary disposal project can be constructed and operated in compliance with Iowa Code chapters 455B and 455D and these rules.

**105.7(5) *Effect of revocation.*** If a permit held by any public or private agency for a solid waste composting facility is revoked by the director, then no new permit shall be issued to that agency for that sanitary disposal project for a period of one year from the date of revocation. This subrule shall not prohibit the issuance of a permit for the sanitary disposal project to another public or private agency.

**105.7(6) *Inspection prior to commencing operation.*** The department shall be notified 30 days prior to scheduled completion of a solid waste composting facility and when the construction has been completed. The department shall then complete an inspection of the facility to determine if the sanitary disposal project has been constructed in accordance with the plans and specifications and permit requirements. No solid waste shall be accepted by the facility until it has been inspected and approved by the department.

**105.7(7) *Duration and renewal of permits.*** Solid waste composting facility permits shall be issued for a period of three years, and are renewable for similar terms, unless otherwise specified pursuant to 105.7(5).

**105.7(8) *Request for and approval of permit renewal.*** Requests for permit renewals shall be in writing and must be filed at least 90 days before the expiration of the current permit and submitted on a Form 50A to the department. The department may request that additional information be submitted for review in order to make a permit renewal decision. Comprehensive plan update requirements are satisfied through the information provided in the permit renewal application submittal and by compliance with the reporting requirements set forth in 105.12(455B,455D). If a solid waste composting facility is formally part of a planning area's integrated waste management system, the operator must participate in that area's plan update submittals. The department shall renew the permit if, after a review and inspection of the facility and its compliance history, the department finds that the facility is in compliance with its current permit and these rules. If the facility is found not to be in compliance with its current permit and these rules, then the sanitary disposal project shall be brought into compliance, or placed on a compliance schedule approved by the department, before the permit is renewed pursuant to 105.7(5).

**105.7(9) *Facility expansion.*** Prior to the facility's expanding the amount or types of materials accepted, the facility shall make a request in writing and obtain approval from the department for an amendment to the permit.

**105.7(10) *Process change.*** Prior to a change in the facility's process, the facility shall make a request in writing and obtain approval from the department for an amendment to the permit.

**567—105.8(455B,455D) Permit application requirements for solid waste composting facilities.**

**105.8(1)** A permit application for a new facility shall include a completed Form 50A (542-1542A) and a map or aerial photograph. This map or aerial photograph shall identify:

- a.* The boundaries of the facility.
- b.* Wells, streams, creeks, rivers, ponds, sinkholes, and drainage wells.
- c.* North or other principal compass points.
- d.* Zoning and land use within one-half mile of the closest portion of the facility.
- e.* Haul routes to and from the facility with load limits or other restrictions.
- f.* Homes and buildings within one-half mile of the closest portion of the facility.
- g.* Section lines or other legal boundaries.

*h.* Any nearby runway used or planned to be used by turbojet or piston-type aircraft at FAA-certified airports.

**105.8(2)** Design requirements. Design documents must be prepared by an Iowa-licensed professional engineer (Iowa Code chapter 542B) and must include the following:

*a.* Equipment to be installed, litter control devices, pollution control devices, fire control devices, landscaping, gates, personnel and maintenance facilities, sewer and water lines, and process water, and dimensions, details, and capacities of the proposed receiving, processing, production, curing, and storage areas.

*b.* Design calculations justifying the size of the composting areas. The areas for composting must be adequate for the volume of solid waste being composted in accordance with best management practices.

*c.* Descriptions, specifications, and capacities of proposed equipment to be used in composting.

*d.* Flow diagram of all operating steps.

*e.* Composition of the operating surface. Receiving, processing, production, and curing must take place on a constructed, impervious base that can support the load of the equipment used under all weather conditions. The permeability coefficient of the base must be less than  $1 \times 10^{-7}$  cm/sec (0.00028 feet/day). Storage areas for cured/finished compost must permit accessibility during periods of inclement weather.

*f.* Dimensions, details, and capacities of storm water run-on and runoff management systems of the composting facility. The facility may need a storm water permit.

*g.* Proof of the applicant's ownership of the site and legal entitlement to use the site as a composting facility.

**105.8(3)** The operating plan shall provide the following:

*a.* Method of composting.

*b.* Duration of composting with a time frame for receiving, processing, production, curing, and storage.

*c.* Description of storage of raw materials including quantity and types.

*d.* Description of the types, amounts, and sources of wastes to be received and processed daily. This description must include a description of service area defined in terms of municipalities wherein sources of the material are located.

*e.* Description of the aeration method and the aeration frequency to be used to maintain aerobic conditions in accordance with best management practices.

*f.* Description of the methods to minimize and manage odors, dust, vectors, noise and litter.

*g.* Description of the specific procedures to be followed in case of equipment breakdown, maintenance downtime, and fire in equipment, composting material or buildings to include methods to be used to remove or dispose of accumulated waste and burned or damaged material.

*h.* Plans for using or marketing the finished compost.

*i.* Method(s) of disposing of collected storm water.

*j.* Method(s) of maintaining storm water management systems to maintain design volume and to locate and repair leaks in the system.

*k.* Description of the monitoring, sampling, and analysis procedures and schedule for testing the composting process and product including sampling frequency, sample size and number, and sample locations. A facility-specific time-temperature monitoring plan for pathogen kill shall be included in the operating plan.

**567—105.9(455B,455D) Specific operating requirements for permitted solid waste composting facilities.** In addition to the following, all permitted solid waste composting facilities shall comply with 105.3(455B,455D).

**105.9(1)** Access.

*a.* Access to the facility shall be restricted with a lockable gate at the entrance to the facility.

*b.* Access to the facility shall be allowed only when an employee, agent or representative of the facility is on duty.

c. Emergency access to the facility shall be provided. Fire lanes shall be maintained to provide access for firefighting equipment as required by the local fire department.

**105.9(2)** The facility shall have a permanent sign posted at the entrance specifying:

- a. Name of operation.
- b. Operating hours.
- c. Materials which are accepted or the statement "All materials must have prior approval."
- d. Telephone number of 24-hour emergency contact person.

**105.9(3)** All materials received must be incorporated into the composting process within 24 hours of receipt unless storage of these materials is specified in the plan and approved by the department.

**105.9(4)** Sample collection, preservation, and analysis must be done in a manner which ensures valid and representative results. Facilities should follow the most recent version of the Test Methods for the Examination of Composting and Compost guidelines or other testing procedures as approved by the department. Unless otherwise proposed in the operating plan and authorized in the permit, the permit holder shall test at a minimum:

a. Twice weekly temperature readings of compost piles, batches, and windrows. Compost must be held at a temperature above 55 degrees Celsius (131 degrees Fahrenheit) for an appropriate amount of time, in accordance with best management practices, in order to achieve pathogen reduction.

b. Weekly moisture levels of compost piles, batches, and windrows.

c. Testing of the finished product. Compost shall not be applied to land, sold or given away for household use unless the following requirements are met. If the following requirements are not met, compost must be applied according to 567—Chapter 121.

(1) The density of fecal coliform shall be less than 1000 most probable number (MPN) per gram of total solids (dry weight basis) or the density of *Salmonella* sp. bacteria in compost shall be less than three MPN per four grams of total solids (dry weight basis).

(2) The concentrations of human-made inert materials comply with 105.3(10), and the concentrations of all metals are less than the following:

Metal	Concentration mg/kg dry weight
Arsenic (As)	41
Cadmium (Cd)	39
Copper (Cu)	1500
Lead (Pb)	300
Mercury (Hg)	17
Nickel (Ni)	420
Selenium (Se)	36
Zinc (Zn)	2800

**567—105.10(455B,455D) Operator certification for permitted solid waste composting facilities.** All permitted solid waste composting facilities shall meet the following requirement. The person responsible for daily operation of the facility shall be certified by a department-approved program upon approval of such a program by the department. The certification must be renewed every three years.

**567—105.11(455B,455D) Record-keeping requirements for solid waste composting facilities.** All permitted solid waste composting facilities shall meet the following requirements. The following records shall be maintained by the facility for a period of three years and at the facility at all times and shall be submitted to the department upon request:

1. Analytical results described in 105.9(4). These results shall be recorded on a department-approved reporting form.
2. Types and weight of compostable materials and bulking agent, in tons, accepted at the facility annually.
3. Weight of compost, in tons, removed from the facility annually.

4. A copy of the plan, the permit, annual reports, and the current storm water pollution prevention plan.

**567—105.12(455B,455D) Reporting requirements for solid waste composting facilities.** An annual report for the previous fiscal year beginning July 1 and ending June 30 shall be submitted to the department by July 31 of each year by all permitted solid waste composting facilities. The report shall be submitted using Form 542-3276C, provided by the department, and all applicable sections of the form must be completed.

**567—105.13(455B,455D) Closure requirements for solid waste composting facilities.** All permitted solid waste composting facilities shall meet the following requirements. For each composting facility, a closure plan shall be submitted to the department containing a description of the steps necessary to close the facility. A permit shall not be issued unless the closure plan is approved.

**105.13(1)** An updated closure plan, including a schedule for closure, shall be submitted to the department at least 60 calendar days prior to the proposed termination date for the facility.

**105.13(2)** Unless an alternative schedule is approved by the department, within six months of the facility's ceasing operation, all waste and unfinished and finished compost shall be removed from the premises.

**105.13(3)** Facilities beneficially reusing material in order to comply with 105.13(2) are required to submit in written form all agreements for this reuse. This beneficial reuse shall include names of parties involved, amount of material utilized, and cost per ton. The closure plan will not be approved until these agreements are submitted to and approved by the department. The department shall also be notified of any changes in the agreements.

**105.13(4)** Upon closure, all permitted solid waste composting facilities shall perform the following activities:

- a. Properly dispose of all organic material, solid waste and litter at the premises.
- b. Lock all doors, gates, entrances, and exits.
- c. Report the completion of these activities to the local political jurisdiction, the department, and the department field office serving the composting facility.

**567—105.14(455B,455D) Composting facility financial assurance.** Permitted solid waste composting facilities receiving more than 5,000 tons of feedstock annually, bulking agent excluded, must obtain and submit a financial assurance instrument to the department for waste materials received and stockpiled by the facility in accordance with this rule. The financial assurance instrument shall provide monetary funds to properly dispose of any preprocessed and postprocessed stockpiled materials that may remain at a facility due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

**105.14(1)** *No permit without financial assurance.* The department shall not issue or renew a permit to an owner or operator of a solid waste composting facility until a financial assurance instrument has been submitted to and approved by the department.

**105.14(2)** *Proof of compliance.* Proof of the establishment of the financial assurance instrument and compliance with this rule, including a current closure cost estimate, shall be submitted to the department within 30 days of the close of the permit holder's first fiscal year that begins after June 19, 2002, or at the time of application for a permit for a new solid waste composting facility. The owner or operator must provide continuous coverage for closure and submit proof of compliance, including an updated closure cost estimate, with each permit renewal thereafter until released from this requirement by the department.

**105.14(3)** *Use of one financial assurance instrument for multiple permitted activities.* Solid waste composting facilities required to maintain financial assurance pursuant to any other provisions of 567—Chapters 100 to 123 may satisfy the requirements of this rule by the use of one financial assurance instrument if the permit holder ensures that the instrument provides financial assurance for an amount at least equal to the current cost estimates for closure of all sanitary disposal project activities covered.

**105.14(4) *Financial assurance amounts required.*** The estimate submitted to the department must be certified by an Iowa-licensed professional engineer and must account for at least the following factors determined by the department to be minimal necessary costs for closure:

*a.* Transportation costs, which include the cost to load the material, and total tip fees to properly dispose of the maximum tonnage of received materials that could be managed and stockpiled by the compost facility. Also included shall be the costs of properly removing any wastewater held at the facility, or

*b.* Cost of a beneficial reuse option, approved pursuant to subrule 105.13(3), for the total amount of material that could be managed and stockpiled by the composting facility. If the total amount of material will not be beneficially reused, the remainder of the cost shall be calculated according to paragraph 105.14(4)“*a.*” Also included shall be the costs of properly removing any wastewater held at the facility.

*c.* The costs for maintaining financial assurance pursuant to any other provisions of 567—Chapters 100 to 123, if any, in accordance with subrule 105.14(3).

**105.14(5) *Acceptable financial assurance instruments.*** The financial assurance instrument shall be established in an amount equal to the cost estimate prepared in accordance with subrule 105.14(4) and shall not be canceled, revoked, disbursed, released, or allowed to terminate without the approval of the department. Financial assurance may be provided by cash in the form of a secured trust fund or local government dedicated fund, surety bond, letter of credit, or corporate or local government guarantee as follows:

*a. Secured trust fund.* The owner or operator of a solid waste composting facility or entity serving as a guarantor may demonstrate financial assurance for closure by establishing a secured trust fund that conforms to the requirements of this paragraph.

(1) The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. The fund shall be restricted for the sole purpose of funding closure activities at the facility, and a copy of the trust agreement must be submitted to the department and placed in the facility’s official files.

(2) A secured trust fund shall name the department of natural resources as the entity authorized to draw funds from the trust, subject to the provision of proper notification to the trust officer of failure by the permittee to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) Moneys in the fund shall not be assigned for the benefit of creditors with the exception of the state.

(4) Moneys in the fund shall not be used to pay any final judgment against a permit holder arising out of the ownership or operation of the site during its active life or after closure.

(5) The owner or operator or another person authorized to conduct closure activities may request reimbursement from the trustee for closure expenditures as they are incurred. Requests for reimbursement shall be granted by the trustee only if sufficient funds are remaining in the trust fund to cover the remaining costs of closure and if documentation of the justification for reimbursement has been submitted to the department for prior approval.

(6) If the balance of the trust fund exceeds the current cost estimate for closure at any time, the owner or operator may request withdrawal of the excess funds from the trustee so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

*b. Local government dedicated fund.* The owner or operator of a publicly owned solid waste composting facility or a local government serving as a guarantor may demonstrate financial assurance for closure by establishing a dedicated fund that conforms to the requirements of this paragraph.

(1) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, resolution or order as a restricted fund to pay for closure costs arising from the operation of the solid waste composting facility.

(2) A copy of the document establishing the dedicated fund must be submitted to the department and placed in the facility’s official files.

(3) If the balance of the dedicated fund exceeds the current cost estimate for closure at any time, the owner or operator may withdraw excess funds so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

*c. Surety bond.* A surety bond must be written by a company authorized by the commissioner of insurance to do business in the state. The surety bond shall comply with the following:

(1) The bond shall be in a form approved by the commissioner of insurance and shall be payable to the department of natural resources.

(2) The bond shall be specific to a particular facility for the purpose of properly disposing of any solid waste that may remain on site due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) The owner or operator shall provide the department with a statement from the surety with each permit application renewal, noting that the bond is paid and current for the permit period for which the owner or operator has applied for renewal.

*d. Letter of credit.* The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

(1) The owner or operator must submit to the department a copy of the letter of credit and place a copy in the facility's official files.

(2) A letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the name and address of the facility and the amount of funds assured, must be included with the letter of credit submitted to the department and placed in the facility's files.

(3) The letter of credit must be irrevocable and must be issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the owner or operator and to the department 90 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the letter of credit into a secured trust fund that meets the requirements of paragraph 105.14(5) "a." If the owner or operator has not complied with this subrule within the 60-day time period, the issuer of the letter of credit shall deposit a sum equal to the amount of the letter of credit into the secured trust fund established by the owner or operator. The provision of funds by the issuer of the letter of credit shall be considered an issuance of a loan to the owner or operator, and the terms of that loan shall be governed by the letter of credit or subsequent agreement between those parties. The state shall not be considered a party to this credit transaction.

*e. Corporate guarantee.* An owner or operator may meet the requirements of this rule by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, an owner or operator whose parent corporation is also the parent corporation of the owner or operator, or an owner or operator with a "substantial business relationship" with the owner or operator.

(1) The terms of the written guarantee must provide that within 30 days of the owner's or operator's failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);
2. Establish a fully funded secured trust fund as specified in paragraph 105.14(5) "a" in the name of the owner or operator (payment guarantee); or
3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following three conditions:

1. A current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard & Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or
2. A ratio of less than 1.5 comparing total liabilities to net worth; or
3. A ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities.

(3) The tangible net worth of the guarantor must be greater than the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(4) The guarantor must have assets amounting to at least the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(5) Record-keeping and reporting requirements. The guarantor must submit the following records to the department and place a copy in the facility's official files:

1. A copy of the written guarantee between the owner or operator and the guarantor.

2. A letter signed by a certified public accountant and based upon a certified audit that:

- Lists all the current cost estimates covered by a guarantee including, but not limited to, cost estimates required by subrule 105.14(4); cost estimates required for municipal solid waste management facilities pursuant to 40 CFR Part 258; cost estimates required for UIC facilities under 40 CFR Part 144, if applicable; cost estimates required for petroleum underground storage tank facilities under 40 CFR Part 280, if applicable; cost estimates required for PCB storage facilities under 40 CFR Part 761, if applicable; and cost estimates required for hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, if applicable; and

- Provides evidence demonstrating that the guarantor meets the conditions of subparagraphs 105.14(5) "e"(2), (3) and (4).

3. A copy of the independent certified public accountant's unqualified opinion of the guarantor's financial statements for the latest completed fiscal year. In order for the guarantor to be eligible to use the guarantee, the guarantor's financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion or disclaimer of opinion shall be cause for disallowance of this instrument. A qualified opinion related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance. If the department does not allow use of the corporate guarantee, the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

*f. Local government guarantee.* An owner or operator may demonstrate financial assurance for closure by obtaining a written guarantee provided by a local government or jointly provided by the members of an agency established pursuant to Iowa Code chapter 28E.

(1) The terms of the written guarantee must provide that within 30 days of the owner's or operator's failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);

2. Establish a fully funded secured trust fund as specified in paragraph 105.14(5) "a" in the name of the owner or operator (payment guarantee); or

3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following requirements:

1. If the guarantor has outstanding, rated, general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or guarantee, the guarantor must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody's, or AAA, AA, A, or BBB, as issued by Standard & Poor's, on all such general obligation bonds; or

2. The guarantor must satisfy each of the following financial ratios based on the guarantor's most recent audited annual financial statement: a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05, and a ratio of annual debt service to total expenditures less than or equal to 0.20.

(3) The guarantor must prepare its financial statements in conformity with generally accepted accounting principles or other comprehensive basis of accounting and have its financial statements audited by an independent certified public accountant or the office of the auditor of the state of Iowa. The financial statement shall be in the form prescribed by the office of the auditor of the state of Iowa.

(4) A guarantor is not eligible to assure its obligations if:

1. The guarantor is currently in default on any outstanding general obligation bonds; or

2. The guarantor has any outstanding general obligation bonds rated lower than Baa as issued by Moody's or BBB as issued by Standard & Poor's; or

3. The guarantor operated at a deficit equal to 5 percent or more of total annual revenue in each of the past two fiscal years; or

4. The guarantor receives an adverse opinion or disclaimer of opinion from the independent certified public accountant or office of the auditor of the state of Iowa auditing its financial statement. A qualified opinion that is related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance of this mechanism; or

5. The closure costs to be assured are greater than 43 percent of the guarantor's total annual revenue.

(5) The local government guarantor must include disclosure of the closure costs assured through the guarantee in its next annual audit report prior to the initial receipt of waste at the facility or prior to cancellation of an alternative financial assurance instrument, whichever is later. For the first year the guarantee is used to assure costs at a particular facility, the reference may instead be placed in the guarantor's official files until issuance of the next available annual audit report if timing does not permit the reference to be incorporated into the most recently issued annual audit report or budget. For closure costs, conformance with Governmental Accounting Standards Board Statement 18 ensures compliance with this public notice component.

(6) The local government owner or operator must submit to the department the following items:

1. A copy of the written guarantee between the owner or operator and the local government serving as guarantor for the closure costs at the facility.

2. A copy of the guarantor's most recent annual financial audit report indicating compliance with the financial ratios required by numbered paragraph 105.14(5) "f"(2)"2," if applicable, and the requirements of subparagraphs 105.14(5) "f"(3) and (4).

3. A letter signed by the local government's chief financial officer that lists all the current cost estimates covered by the guarantor, as described in subrule 105.14(4); and that provides evidence and certifies that the local government meets the conditions of subparagraphs 105.14(5) "f"(2), (3), (4) and (5).

**105.14(6) *Financial assurance cancellation and permit suspension.***

a. A financial assurance instrument may be terminated by the owner or operator only if the owner or operator substitutes alternate financial assurance prior to cancellation, as specified in this rule, or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

b. A financial assurance instrument shall be continuous in nature until canceled by the financial assurance provider or until the department gives written notification to the owner, operator, and financial assurance provider that the covered site has been properly closed. The financial assurance provider shall give at least 90 days' notice in writing to the owner or operator and the department in the event of any intent to cancel the instrument.

c. Within 60 days of receipt of a written notice of cancellation of financial assurance by the financial assurance provider, the owner or operator must provide the department an alternative financial assurance instrument. If a means of continued financial assurance is not provided within that 60 days, the department shall suspend the permit.

d. The owner or operator shall perform proper closure within 30 days of the permit suspension. For the purpose of this rule, "proper closure" means completion of all items pursuant to rule 105.13(455B,455D) and subrule 105.14(4).

e. If the owner or operator does not properly close the site within the 30-day period allowed, the department shall file a claim with the financial assurance instrument provider to collect the amount of funds necessary to properly close the site.

f. An owner or operator who elects to terminate a permitted activity, whose renewal application has been denied, or whose permit has been suspended or revoked for cause must submit within 30 days of the termination of the permit a schedule for completing proper closure of the terminated activity. Closure completion cannot exceed 60 days from the date of termination of the permit.

g. The director may also request payment from any financial assurance provider for the purpose of completing closure when the following circumstances exist:

(1) The owner or operator is more than 15 days late in providing a schedule for closure or for meeting any date in the schedule for closure.

(2) The owner or operator declares an economic inability to comply with this rule, either by sending written notification to the director or through an action such as, but not limited to, filing for bankruptcy.

**567—105.15(455B,455D) Variances.** A request for a variance must be submitted in writing to the department pursuant to 561—Chapter 10.

These rules are intended to implement Iowa Code sections 455B.304 and 455D.9.

CHAPTER 106  
CITIZEN CONVENIENCE CENTERS AND TRANSFER STATIONS

**567—106.1(455B) Compliance.** All existing citizen convenience centers and transfer stations shall be inspected and reviewed by the department to ensure compliance with these rules. These rules do not apply to medical waste transfer stations.

**106.1(1)** If a citizen convenience center or transfer station existing before July 17, 2002, is not in compliance, the department shall notify that facility in writing of the specific deficiencies. The facility shall then submit to the department in writing a compliance schedule for that facility within 30 days of notification by the department. The compliance schedule shall not exceed two years from the date of written notification by the department.

**106.1(2)** If an existing facility does not achieve compliance within two years from the date of written notification by the department, the facility shall close pursuant to 567—106.7(455B) if it is a citizen convenience center or 567—106.17(455B) if it is a transfer station.

**567—106.2(455B,455D) Definitions.** In addition to the definitions set out in Iowa Code section 455B.301, which shall be considered incorporated by reference in these rules, the following definitions shall apply:

*“Citizen convenience center”* means a permanent, fixed-location facility that has the primary purpose of receiving solid waste from citizens and small businesses that do not utilize solid waste collection vehicles or satellite solid waste collection vehicles. A citizen convenience center is a sanitary disposal project and may hold solid waste for a short period of time before collection. A citizen convenience center is not a transfer station or final disposal facility.

*“Hot load”* means solid waste that is smoking, smoldering, emitting flames or hot gases or otherwise indicating that the solid waste is in the process of combustion or close to igniting.

*“Incidental solid waste transfer”* means the truck-to-truck transfer of solid waste from a satellite solid waste collection vehicle to a solid waste collection vehicle, if that solid waste could be collected only by a satellite solid waste collection vehicle due to vehicle access restrictions.

*“Satellite solid waste collection vehicle”* means a small, specialized solid waste collection vehicle that has been specifically designed to service locations that have vehicle access restrictions that would otherwise render solid waste collection technically prohibitive.

*“Solid waste collection vehicle”* means a vehicle that has the primary purpose of collecting solid waste from a variety of locations, including at curbside and from dumpsters, compactors, and roll-off boxes.

*“Solid waste transport vehicle”* means a vehicle that serves the purpose of transporting solid waste received by a transfer station.

*“Surge pit”* means a pit inside a transfer station building that receives solid waste from the tipping floor or directly from solid waste collection vehicles. Surge pits provide more space for temporary storage during peak operating hours and allow for additional compaction of the solid waste before it is loaded into solid waste transport vehicles.

*“Transfer station”* means a permanent, fixed-location, enclosed transportation terminal that has the primary purpose of receiving solid waste from solid waste collection vehicles and loading that solid waste into solid waste transport vehicles. Truck-to-truck transfer of solid waste that is not incidental solid waste transfer is not allowed outside a transfer station building. A transfer station is a sanitary disposal project and may hold or store solid waste before transport for a short period of time. A transfer station is not a final disposal facility.

*“Truck-to-truck transfer”* means the direct transfer of solid waste from one vehicle to a second vehicle with no intermediary handling. Truck-to-truck transfer of solid waste that is not incidental solid waste transfer is not allowed outside a transfer station building.

*“Vector”* means a carrier organism that is capable of transmitting a pathogen from one organism to another. Vectors include, but are not limited to, birds, rats and other rodents, and insects.

“*Washwater*” means a water-based liquid that has either originated from solid waste unloaded inside the enclosed portion of a transfer station or that has come into contact with enclosed transfer station areas that have come into contact with solid waste.

**567—106.3(455B) Citizen convenience center and transfer station permits.**

**106.3(1) *Permit required.*** A citizen convenience center or a transfer station is a sanitary disposal project and shall not be constructed or operated without a permit from the department. In order to be issued a permit, a citizen convenience center or transfer station must satisfy the comprehensive planning requirements set forth in 567—Chapter 101. The issuance of a permit by the department in no way relieves the applicant of the responsibility of complying with all other local, state, or federal statutes, ordinances, and rules or other requirements applicable to the construction and operation of a citizen convenience center or transfer station.

**106.3(2) *Citizen convenience center permit exemption.*** If a citizen convenience center is located at a permitted recycling or composting facility or sanitary disposal project, it shall not require its own permit; instead, the citizen convenience center shall be amended into the host facility’s permit.

**106.3(3) *Construction and operation.*** A citizen convenience center or transfer station shall be constructed and operated according to the plans and specifications approved by the department and the conditions of the permit. The approved plans and specifications shall constitute a condition of the permit.

**106.3(4) *Transfer of title and permit.*** If title to a citizen convenience center or transfer station is transferred, then the department shall transfer the permit within 60 days if the department has found that the following requirements have been met:

*a.* The title transferee has applied in writing to the department to request a transfer of the permit within 30 days of the transfer of title.

*b.* The permitted facility is in compliance with Iowa Code chapters 455B and 455D, these rules and the conditions of the permit.

**106.3(5) *Permit conditions.*** Any permit may be issued subject to conditions specified in writing by the department that are necessary to ensure that the sanitary disposal project is constructed and operated in compliance with Iowa Code chapters 455B and 455D and these rules.

**106.3(6) *Effect of revocation.*** If a permit for a citizen convenience center or transfer station held by any public or private agency is revoked by the director, then no new permit shall be issued to that agency for that sanitary disposal project for a period of one year from the date of revocation. Such revocation shall not prohibit the issuance of a permit for the sanitary disposal project to another public or private agency.

**106.3(7) *Inspection prior to commencing new operation.*** The department shall be notified when the construction of a new citizen convenience center or a transfer station has been completed. The department shall then complete an inspection of the facility to determine if the sanitary disposal project has been constructed in accordance with the plans and specifications and permit requirements. No solid waste shall be accepted by the facility until it has been inspected and approved by the department.

**106.3(8) *Duration and renewal of permits.*** A citizen convenience center or transfer station permit shall be issued for a period of three years and is renewable, unless otherwise specified by conditions set forth in subrule 106.3(5).

**106.3(9) *Request and approval of permit renewal.*** A request for permit renewal shall be in writing and must be filed at least 90 days before the expiration of the current permit by submitting Form 50 (542-1542) to the department. The department may request that additional information be submitted for review in order to make a permit renewal decision. The department shall renew the permit if, after a review and inspection of the facility and its compliance history, the department finds that the facility is in compliance with Iowa Code chapters 455B and 455D, these rules and the conditions of the permit, and is making a good-faith effort to maintain compliance. If the facility is found not to be in compliance with Iowa Code chapters 455B and 455D, these rules, and the conditions of the permit or if a good-faith effort to maintain compliance is not being made, the sanitary disposal project shall be brought into compliance

or placed on a compliance schedule approved by the department before the permit is renewed. The permit may be renewed with new conditions pursuant to subrule 106.3(5).

**106.3(10) Request for permit modification.** A request for permit modification shall be submitted in writing to the department with supporting documentation and materials. The department may request that additional information be submitted for review in order to make a permit modification decision. The department may also request that information pursuant to rule 106.4(455B) for citizen convenience centers or rule 106.8(455B) for transfer stations be resubmitted, in part or in whole, in order to make a permit modification decision. The modified permit may be approved with new conditions pursuant to subrule 106.3(5).

**106.3(11) Emergency solid waste transfer permit.** If a primary sanitary disposal project in a service area becomes inoperable, the department may issue an emergency solid waste transfer permit for a period of time no longer than necessary for a sanitary disposal project that provides replacement capacity to be constructed and become operational. The department may also issue an emergency solid waste transfer permit for a period of time no longer than necessary for a sanitary disposal project to return to permitted capacity if more solid waste is produced by an extraordinary event than can be managed by a sanitary disposal project. The conditions of an emergency solid waste transfer permit shall be determined by the department and may be used as an alternative to the requirements of this chapter. The department shall issue an emergency solid waste transfer permit only if the department has determined that the following conditions apply:

*a.* It is not technically feasible to direct haul with solid waste collection vehicles and manage the solid waste at another sanitary disposal project or combination thereof in the service area or surrounding service areas.

*b.* Solid waste must be transferred from the area in order to protect human health and the environment.

**567—106.4(455B) Citizen convenience center permit application requirements.**

**106.4(1)** A citizen convenience center permit applicant shall submit the following permit application information to the department:

- a.* The name, address, and telephone number of:
- (1) Owner of site where project will be located.
  - (2) Permit applicant.
  - (3) Official responsible for the operation of the project.
  - (4) Professional engineer (P.E.) licensed in the state of Iowa and retained for the design of the facility, if any.
  - (5) Agency to be served by the project, if any.
  - (6) Responsible official of agency to be served, if any.
- b.* A legal description of the site.
- c.* A map or aerial photograph locating the boundaries of the site and identifying:
- (1) North and other principal compass points.
  - (2) Zoning and land use within 250 feet.
  - (3) Homes and buildings within 250 feet.
  - (4) Section lines or other legal boundaries.
- d.* Proof of the applicant's ownership of the site and legal entitlement to use the site as a citizen convenience center.
- e.* Days and hours of operation of the site.
- f.* The service area of the facility and political jurisdictions included in that area.
- g.* Type, source, and expected weight of solid waste to be handled per day, week, and year.
- h.* A description of the disposal process to be used.
- i.* A site design illustrating the facility, which may include engineering plans and specifications completed by the engineer listed in 106.4(1) "a"(4).
- j.* A plan of operations detailing how the site will comply with rule 106.5(455B) and with rule 106.6(455B,455D), if applicable.

*k.* A closure plan detailing how the site will comply with rules 106.7(455B) and 106.18(455B).

*l.* An emergency response and remedial action plan (ERRAP) pursuant to rule 106.19(455B).

**106.4(2)** If the department finds the permit application information to be incomplete, it shall notify the applicant in writing of that fact and of the specific deficiencies and return the application materials to the applicant within 30 days of such notification. The applicant may reapply without prejudice.

**567—106.5(455B) Citizen convenience center operations.**

**106.5(1)** Solid waste shall be accepted only from citizens and small businesses residing in the service area designated in 106.4(1) “*f.*” Solid waste shall not be accepted from solid waste collection vehicles.

**106.5(2)** All solid waste received shall be loaded into dumpsters, compactors, or roll-off boxes and collected by solid waste collection vehicles. Solid waste shall not be loaded into solid waste transport vehicles.

**106.5(3)** Dumpsters, compactors, and roll-off boxes shall not be allowed to overflow, and solid waste shall be collected as often as necessary to prevent the attraction or harborage of vectors and to prevent a nuisance or public health hazard.

**106.5(4)** Litter shall be collected as often as necessary to prevent a nuisance or public health hazard.

**567—106.6(455B,455D) Citizen convenience center reporting requirements.** A citizen convenience center that directly disposes of solid waste outside Iowa shall report the following information, on a form provided by the department, to the department and local solid waste authority on a quarterly basis:

**106.6(1)** Tons of solid waste disposed of.

**106.6(2)** Comprehensive planning areas from which the solid waste originated, and the tons of solid waste disposed from each county and comprehensive planning area.

**106.6(3)** Destinations of all outgoing solid waste.

**567—106.7(455B) Citizen convenience center closure requirements.** The facility shall submit to the local political jurisdiction, the department, and department field office with jurisdiction over the citizen convenience center written notice of intent to permanently close the facility at least 180 days before closure. Closure shall be in conformance with the closure plan pursuant to 106.4(1) “*k.*” and shall not be official until the department field office has given written certification of the completion of the closure plan and the following activities:

**106.7(1)** Proper disposal of all solid waste and litter at the site.

**106.7(2)** Removal of all dumpsters, compactors, roll-off boxes, and other solid waste receptacles.

**106.7(3)** Reporting of the completion of these activities to the local political jurisdiction, the department, and the department field office with jurisdiction over the citizen convenience center.

**567—106.8(455B) Transfer station permit application requirements.**

**106.8(1)** A transfer station permit applicant shall submit the following permit application information to the department:

*a.* The name, address, and telephone number of:

(1) Owner of site where project will be located.

(2) Permit applicant.

(3) Official responsible for the operation of the project.

(4) Professional engineer (P.E.) licensed in the state of Iowa and retained for the design of the facility.

(5) Agency to be served by the project, if any.

(6) Responsible official of agency to be served, if any.

*b.* A legal description of the site.

*c.* A map or aerial photograph locating the boundaries of the site and identifying:

(1) North and other principal compass points.

(2) Zoning and land use within 750 feet.

(3) Homes and buildings within 750 feet.

- (4) Haul routes to and from the site with load limits or other restrictions.
- (5) Section lines or other legal boundaries.
- d.* Proof of the applicant's ownership of the site and legal entitlement to use the site as a transfer station.
- e.* Days and hours of operation of the site.
- f.* The service area of the facility and political jurisdictions included in that area.
- g.* Type, source, and expected weight of solid waste to be handled per day, week, and year.
- h.* A description of the waste transfer and disposal process to be used.
- i.* An organizational chart.
- j.* An engineering design including applicable approvals from responsible government agencies and public entities, and triplicate engineering plans and specifications completed by the engineer listed in 106.8(1)"a"(4), detailing how the site will comply with rules 106.9(455B), 106.10(455B), 106.12(455B), and 106.15(455B).
- k.* A plan of operations detailing how the site will comply with rules 106.11(455B) through 106.16(455B).
- l.* A closure plan detailing how the site will comply with rules 106.17(455B) and 106.18(455B).
- m.* An emergency response and remedial action plan (ERRAP) pursuant to rule 106.19(455B).

**106.8(2)** If the department finds the permit application information to be incomplete, it shall notify the applicant in writing of that fact and of the specific deficiencies and return the application materials to the applicant within 30 days of such notification. The applicant may reapply without prejudice.

**567—106.9(455B) Transfer station siting and location requirements.** A transfer station shall meet the following requirements:

**106.9(1)** A transfer station shall not be located within a 100-year floodplain unless the design includes structures to prevent floodwater inundation from a 100-year flood of any area that comes into contact with solid waste or washwater.

**106.9(2)** A transfer station shall not be located within 500 feet of an educational or health care facility or permanent residence unless screening is utilized to minimize noise and visibility of operations. Such screening shall utilize natural components to the maximum extent possible. This requirement shall not apply if construction of the educational or health care facility or permanent residence began after the transfer station permit application was received by the department.

**567—106.10(455B) Transfer station design standards.**

**106.10(1) *Transfer station building.*** A transfer station shall include a building inside which all solid waste is unloaded from solid waste collection vehicles and loaded into solid waste transport vehicles. Truck-to-truck transfer of solid waste that is not incidental solid waste transfer is not allowed outside a transfer station building. A rear-loading solid waste transport vehicle that does not have any other open access and securely abuts the transfer station building so that minimal amounts of solid waste escape during loading shall qualify as being inside the building. The transfer station building shall meet the following requirements:

*a.* All surfaces that come into contact with solid waste shall be enclosed by walls and a roof satisfactory to:

- (1) Minimize dust and litter exiting the building.
- (2) Keep precipitation out of the building.
- (3) Prevent the attraction or harboring of vectors.

*b.* All surfaces that come in contact with solid waste or washwater shall be impervious to liquids.

*c.* The transfer station building shall have a drainage system that maintains a separation between stormwater and washwater.

*d.* The transfer station building shall have a washwater collection system that directs washwater to a storage tank for later disposal, a sanitary sewer system, or equivalent as approved by the department. Storage tanks shall have high-level indicators or gauges.

- e.* Each area where unloaded solid waste is stored during nonoperating hours shall be clearly marked and include a fire detection system.
  - f.* If solid waste is to be managed or stored in a surge pit, then effective odor control mechanisms such as, but not limited to, mist systems and air filters shall be required.
  - g.* If solid waste is to be managed or stored in a surge pit, then a sprinkler system shall be installed over that area.
  - h.* Each area where salvaged materials are stored shall be clearly marked.
  - i.* The transfer station building shall have adequate indoor and outdoor lighting that minimizes the difference in lighting when entering or exiting the building.
  - j.* The transfer station building shall have doors at each entrance and exit.
- 106.10(2) Other transfer station design requirements.** A transfer station shall:
- a.* Provide a secure perimeter fence, with lockable gate(s).
  - b.* Use a scale certified by the Iowa department of agriculture and land stewardship.
  - c.* Provide adequate queuing distance for vehicles entering and exiting the property such that lines of vehicles will not extend onto public streets during peak hours, unless approved by the appropriate local government authority.
  - d.* Provide signs or pavement markings indicating safe and proper on-site traffic patterns.
  - e.* Post a sign at the primary entrance to the facility specifying:
    - (1) Name and permit number of facility.
    - (2) Operating hours.
    - (3) Materials that are accepted or the statement “All materials must have prior approval.”
    - (4) Telephone number of emergency contact person(s).

**567—106.11(455B) Transfer station operating requirements.** A transfer station shall perform its operations in a manner that complies with the following requirements:

**106.11(1)** Site access shall be controlled and limited to a time when a transfer station operator who has met the following training requirements is on duty:

- a.* Has read, understands, and is able to implement the plan of operations pursuant to 106.8(1) “*k.*”
- b.* Has read, understands, and is able to implement the emergency response and remedial action plan pursuant to 106.8(1) “*m.*”
- c.* Is able to visually recognize universal symbols and markings, and indications of unacceptable materials pursuant to subrule 106.11(4).
- d.* Is certified by a training program approved by the department such as, but not limited to, the Solid Waste Association of North America’s Managing Transfer Station Systems Training and Certification Course, if the facility is permitted for 20,000 tons or more per year of solid waste.

**106.11(2)** Solid waste shall be accepted only from generators within the service area designated in 106.8(1) “*f.*”

**106.11(3)** All unloading, handling, processing, screening, open storage, loading, and similar activities or processes involving solid waste shall be performed inside the transfer station building. Truck-to-truck transfer of solid waste that is not incidental solid waste transfer is not allowed outside a transfer station building. A rear-loading solid waste transport vehicle that does not have any other open access and securely abuts the transfer station building so that minimal amounts of solid waste escape during loading shall qualify as being inside the building. Salvaged materials that do not attract or harbor vectors may be stored outside the building in clearly marked designated areas.

**106.11(4)** All solid waste accepted by the transfer station shall, at a minimum, be visually inspected by personnel capable of identifying hot loads and hazardous, infectious, radioactive, and other wastes not acceptable for disposal in a sanitary landfill.

**106.11(5)** Transfer station operators shall segregate and manage unacceptable wastes and hot loads in accordance with applicable laws, and in a manner as safe and responsible as practical.

**106.11(6)** Transfer station operators shall be allowed to salvage materials. Scavenging shall not be allowed.

**106.11(7)** The operation of the facility shall be carried out in a manner that attempts to minimize litter, dust, odor, noise, vibration, and the attraction or harborage of vectors.

**106.11(8)** The transfer station building shall be maintained at a level of cleanliness necessary to prevent a nuisance or public health hazard.

**106.11(9)** On-site litter shall be maintained at a level of cleanliness necessary to prevent a nuisance or public health hazard. Off-site litter shall be collected daily.

**106.11(10)** The exterior of all buildings shall be maintained in a reasonable aesthetic condition, and that prevents the attraction or harborage of vectors, so as not to create a nuisance or public health hazard.

**106.11(11)** Washwater management systems shall not be allowed to overflow and shall be inspected monthly and maintained in proper operating condition.

**106.11(12)** Any breach of a surface that prevents washwater from entering the ground and groundwater shall be repaired within 24 hours to make that surface impervious to liquids. If such repairs cannot be made within 24 hours, the facility shall not allow solid waste or washwater to come into contact with the breached area until repairs are complete. If the facility cannot prevent solid waste or washwater from coming into contact with the breached area, the department may require the facility to shut down until repairs are completed.

**106.11(13)** Adequate provisions shall be made for the routine operational maintenance of the facility.

**567—106.12(455B) Temporary solid waste storage at transfer stations.**

**106.12(1)** *Areas permitted for storage.* Solid waste shall be stored at the transfer station in the following manner:

- a. Inside a transfer station building in a clearly marked designated area; or
- b. Inside a transfer station building in a surge pit; or
- c. Inside a secure solid waste transport vehicle, protected from precipitation and vectors.

**106.12(2)** *Storage time requirements.* Solid waste shall be stored no longer than the following periods of time, unless shorter storage times are required by the department or local government authority to prevent a nuisance or public health hazard:

- a. Inside a transfer station building without a surge pit or similar operational structure for not more than 48 hours, excluding Sundays and national holidays.
- b. Inside a transfer station building in a surge pit for not more than seven days, including Sundays and national holidays.
- c. Inside a solid waste transport vehicle designated to travel only via roadway for not more than 48 hours, excluding Sundays and national holidays.
- d. Inside a solid waste transport vehicle designated to travel via rail or navigable waterway, including intermodal container systems, for not more than seven days, including Sundays and national holidays.

**567—106.13(455B,455D) Transfer station record-keeping requirements.**

**106.13(1)** A transfer station shall maintain a copy of the following documents:

- a. Current permit(s), on site.
- b. Plan of operation, on site.
- c. Emergency response and remedial action plan, on site.
- d. Proof of financial assurance, on file.

**106.13(2)** A transfer station shall maintain records of the following information for a period of three calendar years:

- a. Tons of all solid waste disposed of quarterly.
- b. Destination of all outgoing solid waste.
- c. Washwater management system inspection log.
- d. Hot loads and hazardous, infectious, radioactive, or other unacceptable wastes found.
- e. Training received by transfer station operator(s) pursuant to 106.11(1).

**567—106.14(455B,455D) Transfer station reporting requirements.**

**106.14(1)** A transfer station shall report the following information, on a form provided by the department, to the department and local solid waste authority on a quarterly basis:

- a. Tons of solid waste disposed of.
- b. Comprehensive planning areas from which the solid waste originated, and the tons of solid waste disposed from each county and comprehensive planning area.
- c. Destinations of all outgoing solid waste.

**106.14(2)** A transfer station shall be inspected annually by an Iowa-licensed professional engineer (P.E.). The inspection shall, at a minimum, cover the design standards pursuant to rule 106.10(455B). The inspection report shall reflect the facility's compliance with respect to the department-approved design and construction. The annual report shall be submitted to the department and department field office with jurisdiction over the facility by the first workday in November each year.

**567—106.15(455B) Solid waste transport vehicle construction and maintenance requirements.**

**106.15(1)** The portion of a solid waste transport vehicle that contains solid waste shall be designed to prevent the accidental discharge of its contents, the attraction or harborage of vectors, and infiltration of precipitation. This design shall include a suitable cover that is not easily torn, shredded, broken, or otherwise breached under normal use.

**106.15(2)** Any solid waste transport vehicle that fails to meet the requirements of this rule shall be repaired before it is utilized in the transport or storage of solid waste.

**106.15(3)** All solid waste transport vehicles shall be cleaned at intervals frequent enough to prevent a nuisance or vector attraction.

**106.15(4)** Wastewater generated from the cleaning of the areas of the solid waste transport vehicles that hold solid waste shall be considered washwater and shall be managed accordingly.

**567—106.16(455B) Solid waste transport vehicle operation requirements.**

**106.16(1)** A solid waste transport vehicle's openings shall be securely closed before transport and during solid waste storage so as to prevent the loss of solid waste.

**106.16(2)** A solid waste transport vehicle shall be loaded with solid waste inside a transfer station building and in a manner that minimizes the spilling of materials. Truck-to-truck transfer of solid waste that is not incidental solid waste transfer is not allowed outside a transfer station building. A rear-loading solid waste transport vehicle that does not have any other open access and securely abuts the transfer station building so that minimal amounts of solid waste escape during loading shall qualify as being inside the building. Solid waste spilled from a solid waste transport vehicle during loading shall be collected as often as necessary to minimize litter, dust, or other fugitive debris.

**106.16(3)** If solid waste is spilled from a solid waste transport vehicle during transport that is not on transfer station property, the spilled solid waste shall be collected as soon as possible. The transfer station shall immediately report the spill to the department and the department field office with jurisdiction over the transfer station and spill location.

**567—106.17(455B) Transfer station closure requirements.** The facility shall submit to the local political jurisdiction, the department, and department field office with jurisdiction over the transfer station written notice of intent to permanently close the facility at least 180 days before closure. Closure shall be in conformance with the closure plan pursuant to 106.8(1) "I" and shall not be official until the department field office has given written certification of the completion of the closure plan and the following activities:

**106.17(1)** Proper disposal of all solid waste and litter at the site.

**106.17(2)** Cleaning the transfer station building, including the rinsing of all surfaces that have come in contact with solid waste or washwater.

**106.17(3)** Cleaning of all solid waste transport vehicles that will remain on site, including the rinsing of all surfaces that have come in contact with solid waste.

**106.17(4)** Removal and proper management of all washwater in the washwater management system.

**106.17(5)** Locking all doors, gates, entrances, and exits.

**106.17(6)** Reporting of the completion of these activities to the local political jurisdiction, the department, and the department field office with jurisdiction over the transfer station.

**567—106.18(455B) Citizen convenience center and transfer station financial assurance.** Permitted solid waste citizen convenience centers and transfer stations must obtain and submit a financial assurance instrument to the department for solid waste storage in accordance with this rule. The financial assurance instrument shall provide monetary funds to properly dispose of any solid waste that may remain at a facility due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

**106.18(1)** *No permit without financial assurance.* The department shall not issue or renew a permit to an owner or operator of a citizen convenience center or transfer station until a financial assurance instrument has been submitted to and approved by the department.

**106.18(2)** *Proof of compliance.* Proof of the establishment of the financial assurance instrument and compliance with this rule, including a current closure cost estimate, shall be submitted to the department within 30 days of the close of the permit holder's first fiscal year that begins after July 17, 2002, or at the time of application for a permit for a new citizen convenience center or transfer station. The owner or operator must provide continuous coverage for closure and submit proof of compliance, including an updated closure cost estimate, with each permit renewal thereafter until released from this requirement by the department.

**106.18(3)** *Use of one financial assurance instrument for multiple permitted activities.* Citizen convenience centers and transfer stations required to maintain financial assurance pursuant to any other provisions of 567—Chapters 100 to 123 may satisfy the requirements of this rule by the use of one financial assurance instrument if the permit holder ensures that the instrument provides financial assurance for an amount at least equal to the current cost estimates for closure of all sanitary disposal project activities covered.

**106.18(4)** *Financial assurance amounts required.* The estimate submitted to the department must be certified by an Iowa-licensed professional engineer and must account for at least the following factors determined by the department to be minimal necessary costs for closure pursuant to rule 106.7(455B) for citizen convenience centers and rule 106.17(455B) for transfer stations, as applicable:

*a.* Third-party labor and transportation costs and total tip fees to properly dispose of all solid waste and litter at the facility equal to twice the maximum storage capacity of the facility. If materials are temporarily stored on site in transportation vehicles or waste receptacles, then this estimate shall include disposal costs for the maximum number of transportation vehicles and waste receptacles that can be on site at any one time.

*b.* The cost of hiring a third party to properly clean and decontaminate all equipment, storage facilities, holding areas and drainage collection systems. This estimate shall include the cost of properly disposing of a one-week volume of washwater from the facility. If the facility utilizes washwater storage tanks, then this estimate shall assume that the storage tanks are full and add that volume to the one-week volume.

*c.* The costs for maintaining financial assurance pursuant to any other provisions of 567—Chapters 100 to 123, if any, in accordance with subrule 106.18(3).

**106.18(5)** *Acceptable financial assurance instruments.* The financial assurance instrument shall be established in an amount equal to the cost estimate prepared in accordance with subrule 106.18(4) and shall not be canceled, revoked, disbursed, released, or allowed to terminate without the approval of the department. Financial assurance may be provided by cash in the form of a secured trust fund or local government dedicated fund, surety bond, letter of credit, or corporate or local government guarantee as follows:

*a. Secured trust fund.* The owner or operator of a citizen convenience center or transfer station or entity serving as a guarantor may demonstrate financial assurance for closure by establishing a secured trust fund that conforms to the requirements of this paragraph.

(1) The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. The fund shall be restricted for the sole purpose of funding closure activities at the facility, and a copy of the trust agreement must be submitted to the department and placed in the facility's official files.

(2) A secured trust fund shall name the department of natural resources as the entity authorized to draw funds from the trust, subject to the provision of proper notification to the trust officer of failure by the permittee to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) Moneys in the fund shall not be assigned for the benefit of creditors with the exception of the state.

(4) Moneys in the fund shall not be used to pay any final judgment against a permit holder arising out of the ownership or operation of the site during its active life or after closure.

(5) The owner or operator or another person authorized to conduct closure activities may request reimbursement from the trustee for closure expenditures as they are incurred. Requests for reimbursement shall be granted by the trustee only if sufficient funds are remaining in the trust fund to cover the remaining costs of closure and if documentation of the justification for reimbursement has been submitted to the department for prior approval.

(6) If the balance of the trust fund exceeds the current cost estimate for closure at any time, the owner or operator may request withdrawal of the excess funds from the trustee so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

*b. Local government dedicated fund.* The owner or operator of a publicly owned citizen convenience center or transfer station or a local government serving as a guarantor may demonstrate financial assurance for closure by establishing a dedicated fund that conforms to the requirements of this paragraph.

(1) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, resolution or order as a restricted fund to pay for closure costs arising from the operation of the facility.

(2) A copy of the document establishing the dedicated fund must be submitted to the department and placed in the facility's official files.

(3) If the balance of the dedicated fund exceeds the current cost estimate for closure at any time, the owner or operator may withdraw excess funds so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

*c. Surety bond.* A surety bond must be written by a company authorized by the commissioner of insurance to do business in the state. The surety bond shall comply with the following:

(1) The bond shall be in a form approved by the commissioner of insurance and shall be payable to the department of natural resources.

(2) The bond shall be specific to a particular facility for the purpose of properly disposing of any solid waste that may remain on site due to the owner's or operator's failure to properly close the site within 30 days of permit suspension, termination, revocation, or expiration.

(3) The owner or operator shall provide the department with a statement from the surety with each permit application renewal, noting that the bond is paid and current for the permit period for which the owner or operator has applied for renewal.

*d. Letter of credit.* The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

(1) The owner or operator must submit to the department a copy of the letter of credit and place a copy in the facility's official files.

(2) A letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the name and address of the facility and the amount of funds assured, must be included with the letter of credit submitted to the department and placed in the facility's files.

(3) The letter of credit must be irrevocable and must be issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation

by certified mail to the owner or operator and to the department 90 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the letter of credit into a secured trust fund that meets the requirements of paragraph 106.18(5)“a.” If the owner or operator has not complied with this subrule within the 60-day time period, the issuer of the letter of credit shall deposit a sum equal to the amount of the letter of credit into the secured trust fund established by the owner or operator. The provision of funds by the issuer of the letter of credit shall be considered an issuance of a loan to the owner or operator, and the terms of that loan shall be governed by the letter of credit or subsequent agreement between those parties. The state shall not be considered a party to this credit transaction.

*e. Corporate guarantee.* An owner or operator may meet the requirements of this rule by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, an owner or operator whose parent corporation is also the parent corporation of the owner or operator, or an owner or operator with a “substantial business relationship” with the owner or operator.

(1) The terms of the written guarantee must provide that within 30 days of the owner’s or operator’s failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);
2. Establish a fully funded secured trust fund as specified in paragraph 106.18(5)“a” in the name of the owner or operator (payment guarantee); or
3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following three conditions:

1. A current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard & Poor’s or Aaa, Aa, A, or Baa as issued by Moody’s; or
2. A ratio of less than 1.5 comparing total liabilities to net worth; or
3. A ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities.

(3) The tangible net worth of the guarantor must be greater than the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(4) The guarantor must have assets amounting to at least the sum of the current closure cost estimate and any other environmental obligations, including other financial assurance guarantees.

(5) Record-keeping and reporting requirements. The guarantor must submit the following records to the department and place a copy in the facility’s official files:

1. A copy of the written guarantee between the owner or operator and the guarantor.
2. A letter signed by a certified public accountant and based upon a certified audit that:
  - Lists all the current cost estimates covered by a guarantee including, but not limited to, cost estimates required by subrule 106.18(4); cost estimates required for municipal solid waste management facilities pursuant to 40 CFR Part 258; cost estimates required for UIC facilities under 40 CFR Part 144, if applicable; cost estimates required for petroleum underground storage tank facilities under 40 CFR Part 280, if applicable; cost estimates required for PCB storage facilities under 40 CFR Part 761, if applicable; and cost estimates required for hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, if applicable; and
  - Provides evidence demonstrating that the guarantor meets the conditions of subparagraphs 106.18(5)“e”(2), (3) and (4).

3. A copy of the independent certified public accountant’s unqualified opinion of the guarantor’s financial statements for the latest completed fiscal year. In order for the guarantor to be eligible to use the guarantee, the guarantor’s financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion or disclaimer of opinion shall be cause for disallowance of this instrument. A qualified opinion related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance. If the department does not allow use of the corporate guarantee, the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

*f. Local government guarantee.* An owner or operator may demonstrate financial assurance for closure by obtaining a written guarantee provided by a local government or jointly provided by the members of an agency established pursuant to Iowa Code chapter 28E.

(1) The terms of the written guarantee must provide that within 30 days of the owner's or operator's failure to perform closure of a facility covered by the guarantee, the guarantor will:

1. Perform closure or pay a third party to perform closure as required (performance guarantee);
2. Establish a fully funded secured trust fund as specified in paragraph 106.18(5)“a” in the name of the owner or operator (payment guarantee); or
3. Establish an alternative financial assurance instrument in the name of the owner or operator as required by this rule.

(2) The guarantor must satisfy one of the following requirements:

1. If the guarantor has outstanding, rated, general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or guarantee, the guarantor must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody's, or AAA, AA, A, or BBB, as issued by Standard & Poor's, on all such general obligation bonds; or

2. The guarantor must satisfy each of the following financial ratios based on the guarantor's most recent audited annual financial statement: a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05, and a ratio of annual debt service to total expenditures less than or equal to 0.20.

(3) The guarantor must prepare its financial statements in conformity with generally accepted accounting principles or other comprehensive basis of accounting and have its financial statements audited by an independent certified public accountant or the office of the auditor of the state of Iowa. The financial statement shall be in the form prescribed by the office of the auditor of the state of Iowa.

(4) A guarantor is not eligible to assure its obligations if:

1. The guarantor is currently in default on any outstanding general obligation bonds; or
2. The guarantor has any outstanding general obligation bonds rated lower than Baa as issued by Moody's or BBB as issued by Standard & Poor's; or
3. The guarantor operated at a deficit equal to 5 percent or more of total annual revenue in each of the past two fiscal years; or
4. The guarantor receives an adverse opinion or disclaimer of opinion from the independent certified public accountant or office of the auditor of the state of Iowa auditing its financial statement. A qualified opinion that is related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance of this mechanism; or
5. The closure costs to be assured are greater than 43 percent of the guarantor's total annual revenue.

(5) The local government guarantor must include disclosure of the closure costs assured through the guarantee in its next annual audit report prior to the initial receipt of waste at the facility or prior to cancellation of an alternative financial assurance instrument, whichever is later. For the first year the guarantee is used to assure costs at a particular facility, the reference may instead be placed in the guarantor's official files until issuance of the next available annual audit report if timing does not permit the reference to be incorporated into the most recently issued annual audit report or budget. For closure costs, conformance with Governmental Accounting Standards Board Statement 18 ensures compliance with this public notice component.

(6) The local government owner or operator must submit to the department the following items:

1. A copy of the written guarantee between the owner or operator and the local government serving as guarantor for the closure costs at the facility.
2. A copy of the guarantor's most recent annual financial audit report indicating compliance with the financial ratios required by numbered paragraph 106.18(5)“f”(2)“2,” if applicable, and the requirements of subparagraphs 106.18(5)“f”(3) and (4).
3. A letter signed by the local government's chief financial officer that lists all the current cost estimates covered by the guarantor, as described in subrule 106.18(4); and that provides evidence and

certifies that the local government meets the conditions of subparagraphs 106.18(5) “f”(2), (3), (4) and (5).

**106.18(6) *Financial assurance cancellation and permit suspension.***

*a.* A financial assurance instrument may be terminated by the owner or operator only if the owner or operator substitutes alternate financial assurance prior to cancellation, as specified in this rule, or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*b.* A financial assurance instrument shall be continuous in nature until canceled by the financial assurance provider or until the department gives written notification to the owner, operator, and financial assurance provider that the covered site has been properly closed. The financial assurance provider shall give at least 90 days’ notice in writing to the owner or operator and the department in the event of any intent to cancel the instrument.

*c.* Within 60 days of receipt of a written notice of cancellation of financial assurance by the financial assurance provider, the owner or operator must provide the department an alternative financial assurance instrument. If a means of continued financial assurance is not provided within that 60 days, the department shall suspend the permit.

*d.* The owner or operator shall perform proper closure within 30 days of the permit suspension. For the purpose of this rule, “proper closure” means completion of all items pursuant to rule 106.7(455B) or 106.17(455B), as applicable, and subrule 106.18(4).

*e.* If the owner or operator does not properly close the site within the 30-day period allowed, the department shall file a claim with the financial assurance instrument provider to collect the amount of funds necessary to properly close the site.

*f.* An owner or operator who elects to terminate a permitted activity, whose renewal application has been denied, or whose permit has been suspended or revoked for cause must submit within 30 days of the termination of the permit a schedule for completing proper closure of the terminated activity. Closure completion cannot exceed 60 days from the date of termination of the permit.

*g.* The director may also request payment from any financial assurance provider for the purpose of completing closure when the following circumstances exist:

(1) The owner or operator is more than 15 days late in providing a schedule for closure or for meeting any date in the schedule for closure.

(2) The owner or operator declares an economic inability to comply with this rule, either by sending written notification to the director or through an action such as, but not limited to, filing for bankruptcy.

**567—106.19(455B) Emergency response and remedial action plans.** A citizen convenience center or transfer station shall develop, submit to the department for approval, and maintain on site a detailed emergency response and remedial action plan (ERRAP).

**106.19(1) *Submittal requirements.***

*a.* The owner or operator of facilities that have been permitted prior to the effective date of these rules shall submit a complete detailed ERRAP that meets the requirements set forth in this rule no later than December 31, 2001.

*b.* Applications for a new permit after the effective date of this rule shall incorporate a complete detailed ERRAP that meets the requirements set forth in these rules.

*c.* An updated ERRAP that meets the requirements of this rule shall be submitted at the time of each permit renewal or reissuance application that is due after December 31, 2001.

*d.* An updated ERRAP shall be included with any request for permit modification to incorporate a facility expansion or significant changes in facility operation that require modification of the currently approved ERRAP.

*e.* Three sets of ERRAP documents shall be submitted for department approval.

**106.19(2) *Content.*** The content of ERRAP documents shall be concise and readily usable as a reference manual by facility managers and operators during emergency conditions. The ERRAP document content shall address at least the following primary issues in detail, unless project conditions render the specific issue as not applicable. To facilitate department review, the rationale for exclusion of

any issues that are not determined to be applicable must be provided either in the body of the plan or as a supplement. Additional ERRAP requirements unique to the facility shall be addressed, as applicable.

- a. Facility information.
  - (1) Permitted agency.
  - (2) DNR permit number.
  - (3) Facility description.
  - (4) Responsible official and contact information.
  - (5) Site and environs map.
- b. Regulatory requirements.
  - (1) Iowa Code section 455B.306(6) “d” criteria citation.
  - (2) Reference to provisions of the permit.
- c. Emergency conditions—response activities—remedial action.
  - (1) Failure of utilities.
    - 1. Short-term (48 hours or less).
    - 2. Long-term (over 48 hours).
  - (2) Weather-related events.
    - 1. Tornado.
    - 2. Windstorms.
    - 3. Intense rainstorms and erosion.
    - 4. Lightning strikes.
    - 5. Flooding.
    - 6. Event and postevent conditions.
  - (3) Fire and explosions.
    - 1. Waste materials.
    - 2. Buildings and site.
    - 3. Equipment.
    - 4. Fuels.
    - 5. Utilities.
    - 6. Facilities.
    - 7. Working area.
    - 8. Hot loads.
    - 9. Waste gases.
    - 10. Evacuation.
  - (4) Regulated waste spills and releases.
    - 1. Waste materials.
    - 2. Washwater.
    - 3. Waste gases.
    - 4. Waste stockpiles or storage facilities.
    - 5. Waste transport systems.
    - 6. Litter and airborne particulate.
    - 7. Site drainage systems.
    - 8. Off-site releases.
  - (5) Hazardous material spills and releases.
    - 1. Load-check control points.
    - 2. Mixed waste deliveries.
    - 3. Fuels.
    - 4. Waste gases.
    - 5. Site drainage systems.
    - 6. Off-site releases.
  - (6) Mass movement of land and waste.
    - 1. Earthquakes.
    - 2. Slope failure.

3. Waste shifts.
- (7) Emergency and release notifications and reporting.
  1. Federal agencies.
  2. State agencies.
  3. County and city agencies.
  4. News media.
  5. Public and private facilities with special populations within five miles.
  6. Emergency response agencies and contact information.
  7. Reporting requirements and forms.
- (8) Emergency waste management procedures.
  1. Communications.
  2. Temporary discontinuation of services—short- and long-term.
  3. Facilities access and rerouting.
  4. Waste acceptance.
  5. Wastes in process.
- (9) Primary emergency equipment inventory.
  1. Major equipment.
  2. Fire hydrants and water sources.
  3. Off-site equipment resources.
- (10) Emergency aid.
  1. Responder contacts.
  2. Medical services.
  3. Contracts and agreements.
- (11) ERRAP training requirements.
  1. Training providers.
  2. Employee orientation.
  3. Annual training updates.
  4. Training completion and record keeping.
- (12) Reference tables, figures and maps.

These rules are intended to implement Iowa Code section 455B.304.

[Filed 5/24/02, Notice 3/20/02—published 6/12/02, effective 7/17/02]

CHAPTER 107  
BEVERAGE CONTAINER DEPOSITS

[Prior to 7/1/83, DEQ Ch 34]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—107.1(455C) Scope.** This chapter is intended to implement the provisions of Iowa Code chapter 455C. The Act requires that every alcoholic liquor container, beer, mineral water, soda water or carbonated soft drink container sold in Iowa for consumption off the premises of the dealer be subject to a deposit of 5 cents or more. Such container must have indicated on it that the container is subject to a minimum refund of 5 cents or must be exempt from the requirement of having the refund value indicated on it. An empty container on which an Iowa deposit was made may be returned to any dealer in the state who sells the kind, brand and size of container or may be returned to a redemption center. The dealer or redemption center must accept the empty container and refund the deposit.

Iowa Code section 455C.2(2) provides in part: “A dealer, dealer agent, or person operating a redemption center may compact empty metal beverage containers with the approval of the distributor required to accept the containers.” So far as metal beverage containers are concerned, such right of approval by the distributor would be meaningless if the dealer were required to accept and redeem crushed metal beverage containers from consumers. Since there appears to be no reason to treat distributors of nonrefillable glass beverage containers differently from distributors of metal beverage containers, there is presumably a corresponding right for the distributors of nonrefillable glass beverage containers to approve the destruction of the containers.

The Act also prohibits the sale at retail of any metal beverage container so designed and constructed that a part of the container is detachable in opening, the so-called “pop-top can.”

This chapter contains rules specifying the minimum size of type to be used for indicating the minimum refund value on beverage containers, rules relating to approval of redemption centers for beverage containers and rules relating to exemptions from labeling the refund value on beverage containers. This chapter also contains interpretive rules that clarify or interpret the statute or apply the statute to specific factual situations.

**567—107.2(455C) Definitions.** As used in this chapter:

“*Act*” means Iowa Code chapter 455C.

“*Alcoholic beverage*” means any beverage containing more than one-half of 1 percent of alcohol by volume including alcoholic liquor, wine, and beer.

“*Alcoholic liquor*” or “*intoxicating liquor*” means the varieties of liquor defined hereunder in paragraphs 1 and 2 which contain more than 5 percent of alcohol by weight, beverages made as described in the definition of “beer” which beverages contain more than 5 percent of alcohol by weight but which are not wine as defined in this rule, and every other liquid or solid, patented or not, containing spirits and every beverage obtained by the process described in the definition of “wine” containing more than 17 percent alcohol by weight, and susceptible of being consumed by a human being, for beverage purposes.

1. “*Alcohol*” means the product of distillation of any fermented liquor rectified one or more times, whatever may be the origin thereof, and includes synthetic ethyl alcohol.

2. “*Spirits*” means any beverage which contains alcohol obtained by distillation mixed with drinkable water and other substances in solution, including, but not limited to, brandy, rum, whiskey, and gin.

3. Rescinded effective July 1, 1985.

“*Approved redemption center*” means a redemption center approved by the department pursuant to 107.4(1).

“*Beer*” means any liquid capable of being used for beverage purposes made by the fermentation of an infusion in potable water of barley, malt, and hops, with or without unmalted grains or decorticated and degerminated grains or made by the fermentation of or by distillation of the fermented products of fruit, fruit extracts, or other agricultural products, containing more than one-half of 1 percent of alcohol

by volume but not more than 5 percent of alcohol by weight but not including mixed drinks or cocktails mixed on the premises.

*“Beverage”* means wine as defined in Iowa Code section 123.3, subsection 7, alcoholic liquor as defined in Iowa Code section 123.3, subsection 8, beer as defined in Iowa Code section 123.3, subsection 9, mineral water, soda water or similar carbonated soft drinks in liquid form intended for human consumption.

*“Beverage container”* means any sealed glass, plastic, or metal bottle, can, jar or carton containing a beverage.

*“Carbonated”* means charged under pressure with carbon dioxide.

*“Commission”* means the environmental protection commission of the department of natural resources.

*“Consumer”* means any person who purchases a beverage in a beverage container for use or consumption.

*“Dealer”* means any person who engages in the sale of beverages in beverage containers to a consumer.

*“Dealer agent”* means a person who solicits or picks up empty beverage containers from a dealer for the purpose of returning the empty beverage containers to a distributor or manufacturer.

*“Department”* means the department of natural resources.

*“Director”* means the director of the department of natural resources.

*“Distributor”* means any person who engages in the sale of beverages in beverage containers to a dealer in this state, including any manufacturer who engages in such sales.

*“Emboss”* means to raise the surface in relief.

*“Exempt beverage container”* means a beverage container that is not marked with the words “Iowa Refund 5¢” because it is a refillable glass beverage container having a brand name permanently marked on it and having a refund value of 5 or more cents or because it is a refillable metal or plastic beverage container that has been exempted, in accordance with the procedure of 107.3(7), from the requirement of having the refund value marked on the container. An exempt beverage container is exempt from having the words “Iowa Refund 5¢” indicated on the container, but is not necessarily exempt from the minimum deposit.

*“Exempt dealer”* means a dealer named in a department order that approves a redemption center pursuant to 107.4(1).

*“High-contrasting color”* in reference to labeling requirements means a clear differentiation in hue, value, and intensity with the background on which the redemption message appears, surrounding artwork, and other nearby printed information.

*“Incise”* means to scratch the surface to produce legible letters or characters at a precise width and depth.

*“Indelibly”* means that the refund value is permanently affixed on the beverage container and cannot be smeared or removed during regular use from the point of being offered for sale until the point of redemption.

*“Manufacturer”* means any person who bottles, cans, or otherwise fills beverage containers for sale to distributors or dealers.

*“Mineral water”* means water naturally or artificially infused with mineral salts or gases. Mineral water may be carbonated or uncarbonated.

*“Redemption center”* means any establishment other than a dealer’s premises at which consumers may return empty beverage containers and receive payment of the refund value of the containers, or means the premises of a dealer if the dealer voluntarily chooses to accept, and refund the deposit on, empty beverage containers (other than alcoholic liquor containers) that are not of the kind, size and brand sold by the dealer. A redemption center is either an approved redemption center or an unapproved redemption center.

*“Redemption center for a dealer”* means a redemption center that provides beverage container sorting and handling services for a dealer and that has been certified by the department pursuant to 107.4(3).

“*Registered redemption center*” means a redemption center registered with the department pursuant to 107.4(4).

“*Soda water*” means water that has been carbonated.

“*Soft drink*” means any nonalcoholic liquid other than mineral water or soda water intended for human consumption.

“*Unapproved redemption center*” means a redemption center that is not an approved redemption center or a registered redemption center.

“*Wine*” means any beverage containing more than 5 percent but not more than 17 percent alcohol by weight obtained by the fermentation of the natural sugar contents of fruits or other agricultural products but excluding any product containing alcohol derived from malt or by the distillation process from grain, cereal, molasses, or cactus.

This rule is intended to implement Iowa Code sections 455C.1 and 455C.9.

### **567—107.3(455C) Labeling requirements.**

**107.3(1)** All beer, wine, alcoholic liquor, mineral water, soda water and similar carbonated soft drink containers (other than exempt containers) sold or offered for sale in Iowa by a dealer shall have the words “Iowa Refund 5¢” or “IA 5¢” clearly, indelibly and legibly indicated on the container. If the refund value is more than 5 cents, the greater value may be indicated, e.g., “Iowa Refund 10¢” or “IA 10¢.” Any abbreviation of the words “Iowa Refund” other than as provided in this subrule shall be submitted to and approved by the department.

**107.3(2)** The minimum size of the words “Iowa Refund 5¢” or “IA 5¢” and all approved abbreviations shall be a minimum of 9-point type (approximately .125 inch or 3 millimeters) if the words are embossed or incised and 18-point type (approximately .25 inch or 6 millimeters) if the words are otherwise affixed to the container. A stamp or label may have the words “Iowa Refund 5¢” or “IA 5¢” in less than 18-point type if the label is submitted to the department and the department determines that the high-contrasting color or the characteristics of the stamp or label make the stamp or label as easy to discern as a stamp or label with 18-point type.

**107.3(3)** The words “Iowa Refund 5¢” or “IA 5¢” shall be indicated by embossing (raised letters), by incising, by printing in high-contrasting color, by a stamp or label of high-contrasting color, or other method approved by the department securely and permanently affixed to the container.

**107.3(4)** Rescinded IAB 4/17/02, effective 5/22/02.

**107.3(5)** The words “Iowa Refund 5¢” or “IA 5¢” shall be on the top of a metal beverage container. The words “Iowa Refund 5¢” or “IA 5¢” shall be on the conical portion of a glass or plastic beverage container so that the words are visible from above or shall be on the product label. The placement of refund information solely on the bottom of the beverage container is prohibited.

**107.3(6)** An example of the label or labeled container may, but need not, be submitted to the department for informal approval.

**107.3(7)** An application for exemption from the requirement of having the words “Iowa Refund 5¢” or “IA 5¢” indicated on the container shall be on Form LQ 37 or on 8½” × 11” paper and shall contain:

- a. The name, address and telephone number of the applicant;
- b. The refund value of the container; and
- c. A statement of why the container can be readily and permanently identified by consumers as subject to a deposit.

**107.3(8)** An example of the container for which the exemption is being requested shall be sent to the department along with the application required in 107.3(7).

**107.3(9)** The department may exempt the container if the department determines that the container is subject to a deposit of 5 or more cents and that consumers can readily and permanently identify the container as one subject to a deposit.

**567—107.4(455C) Redemption centers.** The Act provides for both approved and unapproved redemption centers. Both approved and unapproved redemption centers redeem empty beverage containers and pay the refund value to consumers. Additionally, the Act recognizes “a redemption

center for a dealer." Unapproved redemption centers in existence on May 22, 2002, and served by distributors on a voluntary basis may formalize the status quo by registering with the department pursuant to 107.4(4).

**107.4(1)** Approved redemption centers.

- a.* Any person may file with the department an application for approval of a redemption center.
- b.* An application for approval of a redemption center shall be submitted on Form LQ38 or on 8½" × 11" paper and shall contain the following information:
  - (1) Name, address and telephone number of the redemption center;
  - (2) Name, address and telephone number of the person or persons responsible for the establishment and operation of the redemption center;
  - (3) Indication that the redemption center will accept all kinds, sizes, and brand names of beverage containers sold by the dealers served by the redemption center;
  - (4) Names and addresses of the dealers to be served by the redemption center and the written consent of those dealers to be served by the redemption center;
  - (5) Distance, in blocks or other appropriate measure, from the redemption center to each dealer to be served by the redemption center;
  - (6) Names and addresses of the distributors whose beverage containers will be redeemed;
  - (7) Hours during which the redemption center is to be open;
  - (8) Whether metal, glass or plastic beverage containers will be crushed or broken and, if so, the written consent of the distributor or manufacturer to the crushing or breaking;
  - (9) Reasons why the redemption center and the dealers to be served by it believe that the redemption center will provide a convenient service to consumers.
- c.* A redemption center shall be approved as a redemption center for a dealer if the department determines that the redemption center will provide a convenient service to the dealer's customers. The department order that approves the redemption center shall name the dealers to be served by the redemption center.
- d.* An approved redemption center may file with the department a supplemental application to serve additional dealers. The supplemental application shall be in the form and contain the information required by paragraph "b." If the department finds that the redemption center will provide a convenient service to the customers of those additional dealers which the redemption center proposes to serve, the department shall supplement its order approving the redemption center to name the additional dealers.
- e.* A dealer named in the department order that approves a redemption center or named in a supplemental order shall be an exempt dealer.
- f.* The department may at any time rescind the order approving a redemption center or terminate the exemption of a dealer if the department determines, after notice and hearing, that the redemption center is in violation of the Act or this chapter or that the redemption center is no longer meeting the above criteria or is no longer providing a convenient service to a dealer's customers.
- g.* A dealer may withdraw its consent to be served by a redemption center which is approved as a redemption center for the dealer by filing with the department written notice of withdrawal of consent. A dealer which has withdrawn its consent is no longer an exempt dealer, and the approval of its redemption center as a redemption center for the dealer is thereby terminated.
- h.* An approved redemption center shall accept from consumers and shall pay the refund value for all beverage containers that bear an Iowa refund value and are of the kinds, sizes and brand names sold by the dealers for which it is an approved redemption center.
- i.* An approved redemption center shall be in operation and open to the public for redemption of beverage containers at least 20 hours per week, 4 hours of which shall be between the hours of 6 p.m. and 10 p.m. or on Saturday or Sunday, or a combination thereof.
- j.* When an approved redemption center is closing permanently, it shall give to the department notice that includes the redemption center's final date of operation. As of the final date of operation, the redemption center's approval as a redemption center shall be terminated and a dealer it was approved to serve shall no longer be an exempt dealer.

**107.4(2)** Unapproved redemption centers. Nothing in the Act or this chapter prevents a person from establishing a redemption center that has not been approved by, certified by, or registered with the department. Before commencing operations, unapproved redemption centers shall provide the following to the department:

- a. Name, address and telephone number of the redemption center;
- b. Name, address and telephone number of the person or persons responsible for the establishment and operation of the redemption center; and
- c. Operating hours of the redemption center.

When the redemption center is closing permanently, it shall give to the department notice that includes the redemption center's final date of operation.

**107.4(3)** Redemption center for a dealer.

a. A redemption center that proposes to provide beverage container sorting or handling services for a dealer but that is not an approved redemption center for the dealer may file with the department an application for certification as a redemption center for the dealer.

b. An application for certification as a redemption center for a dealer shall be on a form provided by the department on 8½" × 11" paper and shall contain the following information:

- (1) Name, address and telephone number of the redemption center;
- (2) Name, address and telephone number of the person or persons responsible for the establishment or operation of the redemption center;
- (3) Names and addresses of the dealers for whom the redemption center is to provide beverage container sorting or handling services, the services to be provided to each dealer and the written consents of those dealers to be served by the redemption center;
- (4) Names and addresses of the distributors for which the redemption center will provide beverage container sorting or handling services;
- (5) Whether metal, glass or plastic beverage containers will be crushed or broken and, if so, the written consent of the distributor or manufacturer to the crushing or breaking.

c. A redemption center which meets the above criteria shall be certified as a redemption center for that dealer.

d. A dealer for which the redemption center is certified is not an exempt dealer.

e. The department may at any time terminate the certification of a redemption center as a redemption center for that dealer if the department determines, after notice and hearing, that the redemption center is in violation of the Act or this chapter or no longer meets the above criteria.

f. A dealer may withdraw its consent to be served by a redemption center for that dealer by filing with the department written notice of withdrawal of consent, and the certification of the redemption center as a redemption center for that dealer is thereby terminated.

g. When a redemption center for a dealer is no longer serving a dealer for which it is certified, the redemption center shall notify the department. When a redemption center is no longer serving any dealers for which it is certified, its certification as a redemption center for a dealer is terminated.

**107.4(4)** Registered redemption centers.

a. A redemption center which was in operation and open to the public for redemption of beverage containers on May 22, 2002, may on or before 90 days from December 17, 2002, file an application for registration with the department. The department shall not accept an application for registration of a redemption center after 90 days from December 17, 2002.

b. An application for registration of a redemption center shall be on a form provided by the department or on an 8½" × 11" paper and shall contain the following information:

- (1) Name, physical address, and telephone number of the redemption center;
- (2) Name, address and telephone number of the person or persons responsible for the operation of the redemption center;
- (3) Kinds, sizes and brand names of the beverage containers that are accepted by the redemption center;
- (4) Hours the redemption center is open;

(5) Names and addresses of the distributors that are picking up beverage containers from the redemption center;

(6) Whether metal, glass or plastic beverage containers will be crushed or broken and, if so, the written consent of the distributor or manufacturer to the crushing or breaking;

(7) Proof that the redemption center was in operation and open to the public for redemption of beverage containers on May 22, 2002.

*c.* A redemption center shall be accepted for registration if the department is satisfied the redemption center was in operation and open to the public for redemption of beverage containers on May 22, 2002, at the location specified in its application. The registration shall be specific to the location in business on May 22, 2002, and may not be expanded to encompass additional locations, but a registered redemption center, with the approval of the department, may relocate to a new location within five miles of its original location so long as the existing location is closed.

*d.* The department may at any time terminate the registration of a redemption center if the department determines, after notice and hearing, that the redemption center is in violation of the Act or this chapter.

*e.* A registered redemption center shall accept from consumers and shall pay the refund value for all beverage containers bearing an Iowa refund value which are of the kinds, sizes and brand names listed in its application for registration.

*f.* A registered redemption center shall be in operation and open to the public for redemption of beverage containers at least 20 hours per week.

*g.* When a registered redemption center is closing permanently, it shall give notice to the department, including the final date of operation, and its registration as a registered redemption center is terminated as of that date.

**107.4(5)** An exempted dealer must prominently post on the premises of the dealer a sign provided at no cost by the department. The sign will include the location and hours of the redemption center.

**107.4(6)** An approved redemption center must notify the department and any exempted dealers with which it has agreements 30 days prior to the redemption center's closing.

**567—107.5(455C) Redeemed containers—use.** Distributors are requested to inform the department of the intended ultimate use or disposal of redeemed beverage containers. The commission requires the reuse or recycling of empty beverage containers, and the department will assist distributors in finding and examining alternatives to burial of empty containers in sanitary landfills.

**567—107.6(455C) Rules relating to alcoholic liquor containers and wine containers purchased from state-owned liquor stores.** Rescinded IAB 4/17/02, effective 5/22/02.

**567—107.7(455C) Redeemed containers must be reasonably clean.** Consumers shall take care to return containers in a reasonably clean and intact condition. In order to be redeemed, an empty beverage container shall be dry and free of foreign materials other than the dried residue of the beverage.

**567—107.8(455C) Interpretive rules.**

**107.8(1)** Beverage containers "sold" on interstate carriers. It is common practice for interstate carriers to provide or sell soft drinks, beer, wine, or alcoholic liquor to passengers for consumption on the conveyance. Such containers are not a litter problem and their return would be impractical. Since statutes should be construed to avoid a strained or impractical result, the commission believes that control of the beverage containers "sold" on interstate carriers is beyond the objectives sought to be obtained by the Act and that these containers are not subject to the deposit and labeling requirements of the Act.

**107.8(2)** Beverage containers must be reasonably intact. In order to be redeemed, an empty beverage container must be returned reasonably intact. For a refillable beverage container, the container must hold liquid, be able to be resealed and be in its original shape. A nonrefillable glass container may be chipped, but it may not have the bottom broken out or the neck broken off. A nonrefillable metal container may

be dented or partially crushed, but may not be crushed flat. A returned beverage container should be able to stand on its own base.

**107.8(3) Vending machines.**

*a.* When a beverage container is dispensed from a vending machine in exchange for money, there is presumed to be a sale of a beverage in a beverage container to a consumer. Therefore some person must be the “dealer” who is responsible for collecting the deposit at the time of sale and for refunding the deposit when the empty beverage container is returned. Because of the variety of contractual relationships surrounding operation of a vending machine, the person who is the “dealer” might be the owner of the vending machine, the lessee of the vending machine, the owner of the premises on which the vending machine is located, or the person who stocks the vending machine. It is incumbent upon the parties involved in the operation of a vending machine to determine the person who is the “dealer” and to indicate prominently on the vending machine the name, location and normal operating hours of the dealer (or an approved redemption center) if the dealer does not have personnel on its premises.

*b.* If the vending machine is located on premises where personnel of the dealer are not normally working, there is no obligation to provide personnel to redeem beverage containers at the site of the vending machine. However, the “dealer” must provide for redemption of beverage containers at the dealer’s usual working place.

**107.8(4) Transfer tanks, premix tanks and beer kegs.** Because transfer tanks, premix tanks and beer kegs (half-kegs, quarter kegs or pony kegs) are refillable, are returned to distributors and are not a litter problem, the commission believes that control of these containers is beyond the objectives sought to be obtained by the Act and that these containers are not subject to the deposit and labeling requirements of the Act.

**107.8(5) Return limits.** Dealers may limit the number of containers returned by an individual to 120 containers in a 24-hour period. Redemption centers may limit the number of containers returned by an individual to 500 containers in a 24-hour period.

**107.8(6) Hours of returns for dealers.** A dealer, unless exempted pursuant to 107.4(4), must accept returns, at a minimum, from 7 a.m. to 10 p.m. unless the dealer’s operating hours are shorter, in which case returns shall be limited to the dealer’s hours of operation. If a dealer chooses to limit the hours of returns, the dealer must post a sign stating the hours during which beverage containers are accepted for return.

**107.8(7)** A dealer shall provide to the department upon request the name, telephone number and address of the distributor of any or all beverages sold by the dealer.

**567—107.9(455C) Pickup and acceptance of redeemed containers.**

**107.9(1) Pickup from dealers.** A distributor shall accept and pick up from a dealer served by the distributor, other than an exempt dealer, all empty beverage containers that bear an Iowa refund value and are of the kinds, sizes and brand names sold by the distributor. The distributor shall pick up the empty beverage containers at least weekly, or when the distributor delivers the beverage product to the dealer if deliveries are less frequent than weekly, unless otherwise agreed to by both the distributor and the dealer.

**107.9(2) Pickup from approved redemption centers and redemption centers certified as a redemption center for a dealer.** A distributor shall pick up from an approved redemption center for a dealer served by the distributor and from a redemption center certified as a redemption center for a dealer served by the distributor all empty beverage containers that bear an Iowa refund value and are of the kinds, sizes and brand names sold by the distributor. The distributor shall pick up the empty beverage containers at least weekly, or when the distributor delivers the beverage product to the dealer for which the redemption center is certified as a redemption center if deliveries are less frequent, unless otherwise agreed to by both the distributor and the approved redemption center or the certified redemption center for a dealer, as the case may be.

**107.9(3) Pickup from registered redemption centers.** A distributor shall pick up from a registered redemption center at the physical address specified in the redemption center’s application, or at a new location approved by the department pursuant to 107.4(4), all empty beverage containers that bear an

Iowa refund value and are of the kinds, sizes and brand names sold by the distributor. The distributor shall pick up the empty beverage containers according to the following schedule:

*a.* At least as frequently as the distributor picks up empty beverage containers from a dealer served by the distributor and located within three road miles of the registered redemption center, but not less frequently than once every ten calendar days;

*b.* At least once every ten calendar days for a registered redemption center located more than three road miles from the closest dealer served by the distributor; or

*c.* As agreed to by both the distributor and the registered redemption center.

**107.9(4) *Acceptance of redeemed containers from redemption centers.*** A distributor shall accept delivery of empty beverage containers from and pay the refund value and handling fee to a redemption center located within the distributor's geographic service area provided that the containers bear an Iowa refund value and are of the kinds, sizes and brand names sold by the distributor.

**107.9(5) *Acceptance of redeemed containers from dealer agents.*** A distributor shall accept delivery of empty beverage containers from and pay the refund value and handling fee to a dealer agent provided that the containers were picked up by the dealer agent within the distributor's geographic service area and that they bear an Iowa refund value and are of the kinds, sizes and brand names sold by the distributor.

**107.9(6) *Notification of frequency.*** A distributor shall notify each dealer served by the distributor of the intended frequency of pickup. A distributor shall notify each redemption center from which the distributor is required to pick up containers of the intended frequency of pickup.

**107.9(7) *Partial pickup.*** A distributor which picks up containers more often than the required frequency shall not be required to pick up all available containers from a dealer or redemption center at each pickup provided that all available containers are picked up from the dealer or redemption center within the required frequency.

**567—107.10(455C) Dealer agent lists.** A dealer agent shall provide to a distributor upon request a list of the dealers that the dealer agent is serving.

**567—107.11(455C) Refund value stated on containers—exceptions.** Exceptions in Iowa Code section 455C.5(2) are limited to once in a 24-hour period.

**567—107.12(455C) Education.** Dealers who are not exempt dealers pursuant to 107.4(4) and redemption centers shall maintain and prominently display at the point of redemption easily readable signage using language developed by the department in cooperation with dealers and redemption centers. The signage shall provide information regarding prohibited practices, consumers' responsibilities when returning containers, and the ability of dealers to limit the number of containers returned in accordance with 107.8(5). The department shall provide language for the signs on the department's Web site.

**567—107.13(455C) Refusing payment when a distributor discontinues a specific beverage product.** A distributor, dealer or redemption center may refuse to pay the refund value and the handling fee in the following situations:

**107.13(1)** A distributor may refuse to pay the refund value if the distributor has given notice, in writing, to dealers to whom the distributor sold similar beverage containers and to the redemption centers served by the distributor and if at least four months have elapsed since the mailing of such notice. The notice shall state that the particular kind, size and brand of container offered for refund has been discontinued. This notice will be mailed not more than 30 days before the final delivery of the product.

**107.13(2)** A dealer or redemption center may refuse to pay the refund value of beverages discontinued by the distributor, in accordance with subrule 107.13(1), no sooner than three months after the distributor has mailed the notice required by subrule 107.13(1). In no event shall a dealer or redemption center refuse to pay the refund value of discontinued beverages unless such dealer or redemption center shall have posted for at least 30 days a conspicuous notice advising consumers of the final date of acceptance.

**567—107.14(455C) Payment of refund value.**

**107.14(1) *Payment to dealers.*** A distributor shall issue to a dealer payment of the refund value and handling fee within one week following pickup or when the dealer pays the distributor for the beverages, if payment is less frequent than weekly.

**107.14(2) *Payment to approved redemption centers and redemption centers certified as a redemption center for a dealer.*** A distributor shall issue to an approved redemption center and to a redemption center for a dealer payment of the refund value and handling fee within one week following pickup unless otherwise agreed to by both the distributor and the redemption center.

**107.14(3) *Payment to registered redemption centers.*** A distributor shall issue to a registered redemption center payment of the refund value and handling fee within one week following pickup or when the dealer which is served by the distributor and which is closest to the registered redemption center pays the distributor for the beverages supplied by the distributor, if payment is less frequent than weekly. Payment to a registered redemption center shall be issued by a distributor at least every 14 calendar days unless otherwise agreed to by both the distributor and the registered redemption center.

**107.14(4) *Payment to redemption centers and dealer agents delivering containers to distributors.*** A distributor shall issue to a redemption center or dealer agent payment of the refund value and handling fee within one week of delivery and acceptance of empty beverage containers, unless otherwise agreed to by both the redemption center and the distributor or by both the dealer agent and the distributor, as the case may be.

**567—107.15(455C) Sales tax on deposits.** The department of revenue has determined that the payment of the deposit by a consumer is not a sale subject to the payment of additional sales tax.

**567—107.16(82GA, HF2700) Independent redemption center grant program.** An independent redemption center grant program is established in the department, with funds provided from the independent redemption center grant fund established in the state treasury and under the authority of the natural resources department. The purpose of the program is to award grants for improvements to independent redemption centers. No grant shall exceed \$15,000 for any redemption center. The department shall issue awards in accordance with the availability of moneys in the independent redemption center grant fund.

**107.16(1) *Goals.*** The goals of the program are to enable independent redemption centers to become more:

*a. Sustainable.* This goal includes measures that help independent redemption centers continue to operate and succeed. Such measures include, but are not limited to, physical improvements to sites owned by independent redemption centers or equipment purchases that can help reduce operational costs.

*b. Convenient.* This goal includes measures that help independent redemption centers better serve customers.

*c. Accessible.* This goal includes measures that enable customers to more easily use independent redemption centers' services.

**107.16(2) *Application.*** The department shall develop an application for redemption centers to complete and submit to the department in order to apply for a grant under this program. The application shall include, but not be limited to:

*a.* An explanation of how the grant will enable the redemption center to become more sustainable, convenient or accessible.

*b.* A statement and substantiation of the specific amount of grant funds that will be expended to pay for the improvement or improvements.

*c.* If the applicant's beverage container redemption function is one part of a business enterprise that includes one or more other commercial activities that are not beverage container redemption, a clear explanation must be provided as to how the proposed grant-funded improvement or improvements will be implemented exclusively for the beverage container redemption function.

**107.16(3) *Eligibility.*** To be eligible for the independent redemption center grant program, a redemption center must meet both of the following criteria:

- a.* Have no affiliation with or in any way be a subsidiary of a dealer, a distributor, or a manufacturer.
- b.* Have been in business prior to July 1, 2008. A redemption center registered with the department as an approved redemption center, unapproved redemption center, redemption center for a dealer or registered redemption center prior to July 1, 2008, meets this criterion. A redemption center that was not registered with the department prior to July 1, 2008, must provide documentation that the redemption center was in business prior to July 1, 2008.

**107.16(4) *Evaluation of applications.*** The department will evaluate all eligible grant applications submitted in the manner prescribed in the application. The applications will be evaluated based on their compatibility with the goals of the program.

*a.* Physical improvements to a site owned by an independent redemption center or equipment purchases that will improve the sustainability, convenience, or accessibility of a redemption center will receive highest consideration. Although a cash match is not required, applications that include statements of cash match will be evaluated more favorably.

*b.* Labor costs associated with improving the sustainability, convenience or accessibility of a redemption center will receive secondary consideration.

*c.* Direct cash payments for general compensation will not be considered.

**107.16(5) *Grant denial.*** An application may be denied for reasons that include, but are not limited to, the following:

*a.* The applicant does not meet the eligibility requirements set forth in subrule 107.16(3).

*b.* The applicant does not provide sufficient information requested for the application proposal.

*c.* The project is not consistent with the goals of the program.

*d.* Funds are insufficient to award financial assistance to all qualified applicants.

*e.* The applicant has not met contractual obligations of previous grant awards.

*f.* The department received the application after the deadline stated in the application.

**107.16(6) *Grant contracts, reporting and accountability.*** Each grant awarded under this program shall be conveyed by means of a contract with each grantee. The department shall develop and provide the form of the grant contracts, which shall include, at a minimum:

*a.* A description and explanation of the improvement or improvements being funded, including a statement of cash match, if any, that will be expended by the grantee.

*b.* The dollar amount of the grant award and the manner in which funds will be transferred.

*c.* The requirement for the grantee to submit to the department a report following the implementation of the funded improvement or improvements. The report shall state how the grant funds, and cash match, if any, were expended in the execution of the contract and shall include copies of any supporting documents.

*d.* The department's remedies in the event of a grantee's breach of contract.

These rules are intended to implement Iowa Code chapter 455C.

<sup>1</sup> The Administrative Rules Review Committee at their January 4, 1979, meeting delayed [DEQ 34.8(1)] 107.8(1) under provisions of 67 GA, SF 244, §19.

<sup>2</sup> Effective date of amendments to 567—107.1(455C) to 567—107.15(455C) adopted as ARC 1538B delayed 70 days by the Administrative Rules Review Committee at its meeting held May 15, 2002. At its meeting held July 9, 2002, the Committee delayed the effective date until adjournment of the 2003 Session of the General Assembly. At its meeting held August 13, 2002, the Committee lifted the delay, with the exception of 107.4(3)“d,” 107.4(4), 107.9(2), 107.9(3) and the second paragraph of 107.14, which were placed under Session Delay and remained delayed until December 17, 2002, when amendments published January 8, 2003, became effective.

CHAPTER 108  
BENEFICIAL USE DETERMINATIONS:  
SOLID BY-PRODUCTS AS RESOURCES AND ALTERNATIVE COVER MATERIAL

[Prior to 7/1/83, DEQ Ch 39]

[Prior to 12/3/86, Water, Air and Waste Management[900]]

**567—108.1(455B,455D) Purpose.** The purpose of this chapter is to establish rules for determining when a solid by-product is a resource and not a solid waste. Solid by-products determined by the department not to be a solid waste through a beneficial use determination may not be subject to all sanitary disposal project (SDP) permitting requirements. Furthermore, the purpose of this chapter is to encourage the utilization of solid by-products as resources when such utilization improves, or at a minimum does not adversely affect, human health and the environment.

**567—108.2(455B,455D) Applicability and compliance.**

**108.2(1)** These rules apply to industrial, commercial, and institutional generators and users or proposed users of solid by-products and to sanitary landfills utilizing or desiring to utilize alternative cover material. These rules apply to solid by-products that before receiving a beneficial use determination by the department were being disposed of as solid waste. These rules do not apply to solid by-products that have already been disposed of as solid waste by the generator.

**108.2(2)** These rules do not pertain to the land application of solid waste. For rules pertaining to the land application of solid waste, see 567—Chapter 121. However, for solid by-products that are land-applied pursuant to 567—Chapter 121, a variance from some or all of the requirements of 567—Chapter 121 may be gained through receipt of a beneficial use determination from the department.

**108.2(3)** These rules do not pertain to solid waste processing operations pursuant to 567—Chapter 104. However, for solid by-products that are processed pursuant to 567—Chapter 104, a variance from some or all of the requirements of 567—Chapter 104 may be gained through receipt of a beneficial use determination from the department.

**108.2(4)** These rules do not pertain to solid waste composting pursuant to 567—Chapter 105. However, for solid by-products that are composted pursuant to 567—Chapter 105, a variance from some or all of the requirements of 567—Chapter 105 may be gained through receipt of a beneficial use determination from the department.

**108.2(5)** Beneficial use determinations granted by the department before April 23, 2003, shall remain in effect unless specifically addressed by these rules or by written notification pursuant to 567—108.11(455B,455D).

**108.2(6)** The issuance of a beneficial use determination by the department relieves the generator and user(s) of all Iowa solid waste requirements specifically noted in the written determination. Requirements that may be relieved by a beneficial use determination may include rules, SDP permits, and permit conditions and variances. Solid by-products that have not received a beneficial use determination by the department are subject to all of Iowa's regulations pertaining to solid waste. The issuance of a beneficial use determination by the department in no way relieves the generator or user of the responsibility of complying with all other local, state, and federal statutes, ordinances, and rules or other applicable requirements.

**567—108.3(455B,455D) Definitions.** For the purposes of this chapter, the following terms shall have the meaning indicated in this chapter. The definitions set out in Iowa Code section 455B.301 shall be considered to be incorporated verbatim in these rules.

*“Alternative cover material”* means a substitute material or mix of materials that can be utilized in lieu of soil as cover material at a sanitary landfill.

*“Beneficial use”* means a specific utilization of a solid by-product as a resource, that constitutes reuse rather than disposal, does not adversely affect human health or the environment, and is approved by the department.

*“Beneficial use determination”* means a written formal decision or rule issued by the department as approval for a solid by-product to be utilized in a specific manner as a beneficial use.

“*Coal combustion by-product*” means any solid by-product produced by the burning of coal, by itself or in conjunction with natural gas or other fossil fuel, which is suitable for disposal as solid waste in a sanitary landfill. Examples include boiler slag, bottom ash, fly ash, and flue gas desulfurization by-products from pollution control equipment. Coal combustion by-products are also referred to as coal combustion residue.

“*Cover material*” means soil placed as daily, intermediate, or final cover at a sanitary landfill.

“*Fill material*” means material that is used to raise the elevation of, take up space in, or build up the level of the land. For the purposes of this chapter, fill material is not considered subbase for hard-surface road construction.

“*Foundry sand*” means a solid by-product from the foundry industry that is derived from molding, core-making, and casting cleaning processes that primarily contain sand, olivine, or clay and that is suitable for disposal as solid waste in a sanitary landfill.

“*High water table*” is the position of the water table which occurs in the spring in years of normal or above-normal precipitation.

“*Resource*” means a solid by-product that can provide greater benefit to the environment or human welfare in its beneficial use as a safe and effective substitute for a raw material, fuel or energy source, or natural resource, rather than being disposed of as a solid waste in a sanitary landfill.

“*Solid by-product*” means a secondary material or residual, produced or created by an industrial, commercial or institutional process or activity, that has been source separated by the generating entity and that would otherwise be disposed of as solid waste. Solid by-products are composed of materials suitable for disposal as solid waste in a sanitary landfill.

“*Subbase for hard-surface road construction*” means material that is used in subsurface applications for the construction of roads, including their shoulders, and parking lots that have hard surfaces such as concrete or asphalt. For the purposes of this chapter, subbase for hard-surface road construction is not considered fill material.

“*Suitable for disposal as solid waste in a sanitary landfill*” means that the material is in compliance with all state and federal rules and regulations pertaining to what may be disposed of in an Iowa sanitary landfill. Such materials are at a minimum nonhazardous and nonradioactive, are solid or semisolid, and do not contain free liquids pursuant to the Paint Filter Liquids Test (Reference: 40 CFR 258.28).

“*Vector*” means a carrier organism that is capable of transmitting a pathogen from one organism to another. Vectors include, but are not limited to, birds, rats and other rodents, and insects.

“*Water table*” means the water surface below the ground at which the unsaturated zone ends and the saturated zone begins.

**567—108.4(455B,455D) Universally approved beneficial use determinations.** The following solid by-products may be utilized as resources in the specific manners listed provided that such utilization is in compliance with 567—108.6(455B,455D) and 567—108.7(455B,455D). Unless a user is otherwise notified by the department pursuant to 567—108.11(455B,455D), such utilization does not require further approval from the department.

**108.4(1) Alumina.** Alumina may be used as a raw material in the manufacture of cement or concrete products. Alumina includes refractory brick for the purpose of this subrule.

**108.4(2) Asphalt shingles.** Asphalt shingles that are certified, consistent with federal regulations (Reference: Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy), as not containing more than 1 percent asbestos may be used as follows:

- a. Raw material in the manufacture of asphalt products.
- b. Subbase for hard-surface road construction.
- c. Road surfacing granular material.
- d. Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(3) Cement kiln dust.** Cement kiln dust may be used as follows:

- a. Raw material in the manufacture of absorbents.
- b. Raw material in the manufacture of cement or concrete products.
- c. Subbase for hard-surface road construction.

*d.* A soil amendment pursuant to 567—Chapter 121 and the rules of the Iowa department of agriculture and land stewardship or a compost amendment.

*e.* A stabilizer for manure and waste sludge.

*f.* A soil stabilizer for construction purposes.

*g.* Fill material pursuant to 108.6(1).

**108.4(4) Coal combustion by-products.**

*a.* Coal combustion fly ash and flue gas desulfurization by-products may be used as follows:

(1) Raw material in manufactured gypsum, wallboard, plaster, or similar product.

(2) Raw material in manufactured calcium chloride.

(3) Raw material in the manufacture of absorbents.

(4) Fill material pursuant to 108.6(1).

(5) Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

*b.* Coal combustion fly ash or bottom ash or boiler slag may be used as follows:

(1) Raw material in the manufacture of cement or concrete products.

(2) Raw material to be used in mineral recovery.

(3) Raw material in the manufacture of asphalt products.

(4) Raw material in plastic products.

(5) Subbase for hard-surface road construction.

(6) Soil stabilization for construction purposes.

(7) Fill material pursuant to 108.6(1).

(8) Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

*c.* Coal combustion bottom ash may also be used as follows:

(1) Traction agent for surfaces used by vehicles.

(2) Sandblasting abrasive.

**108.4(5) Compost.** Cured or finished compost, as defined in 567—Chapter 105, is not solid waste and may be used for any purpose recognized by the U.S. Composting Council or the department.

**108.4(6) Foundry sand.** Foundry sand may be used as follows:

*a.* Raw material in the manufacture of asphalt products.

*b.* Raw material in the manufacture of cement or concrete products.

*c.* Leachate control drainage material at a sanitary landfill.

*d.* Subbase for hard-surface road construction.

*e.* Fill material pursuant to 108.6(1).

*f.* Emergency flood control use for sandbags.

*g.* Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(7) Glass.** Uncontaminated, unleaded glass may be used as follows:

*a.* Raw material in the manufacture of asphalt products.

*b.* Fill material pursuant to 108.6(1).

*c.* Sandblasting or other abrasive.

*d.* Leachate control drainage material at a sanitary landfill.

*e.* Filter media.

*f.* Subbase for hard-surface road construction.

*g.* Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(8) Gypsum and gypsum wallboard.**

*a.* All gypsum and gypsum wallboard may be used as follows:

(1) Raw material in the manufacture of absorbents.

(2) Raw material in the manufacture of other gypsum products, wallboard, plaster, or similar products.

(3) Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

*b.* Gypsum and gypsum wallboard that have not been treated to be water-resistant or flame-retardant may be used as a calcium additive for agricultural use or soil amendment pursuant to 567—Chapter 121 or a compost amendment.

**108.4(9) Lime.** Lime produced as a by-product of public water supplies may be used as follows:

a. A soil amendment pursuant to 567—Chapter 121 and the rules of the Iowa department of agriculture and land stewardship or a compost amendment.

b. Raw material in the manufacture of calcium carbonate or similar substance.

**108.4(10) *Lime kiln dust.*** Lime kiln dust may be used as follows:

a. Raw material in the manufacture of absorbents.

b. Raw material in the manufacture of cement or concrete products.

c. Subbase for hard-surface road construction.

d. A soil amendment pursuant to 567—Chapter 121 and the rules of the Iowa department of agriculture and land stewardship or a compost amendment.

e. A stabilizer for manure and waste sludge.

f. A soil stabilizer for construction purposes.

g. Fill material pursuant to 108.6(1).

**108.4(11) *Paper mill sludge.*** Uncontaminated, dewatered paper mill sludge may be used as follows:

a. A fuel or energy source.

b. Bulking agent or carbon source for composting.

c. Animal bedding.

d. Raw material in the manufacture of absorbents.

e. Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(12) *Rubble.*** Uncontaminated rubble such as concrete, brick, asphalt pavement, soil and rock may be used for fill, landscaping, excavation or grading or as a substitute for conventional aggregate. Asphalt, however, shall not be used for any of the aforementioned uses if the use will cause the asphalt to be placed in a waterway or wetland or any waters of the state or within the high water table.

**108.4(13) *Sandblasting abrasives.*** Sandblasting abrasives that do not contain lead-based paint may be used as follows:

a. Raw material in the manufacture of cement or concrete products.

b. Raw material in the manufacture of asphalt products.

c. Subbase for hard-surface road construction.

d. Raw material in the manufacture of abrasive products.

e. Fill material pursuant to 108.6(1).

f. Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(14) *Soil, including petroleum-contaminated soil.***

a. Uncontaminated soil may be used for fill, landscaping, excavation or grading, or other suitable purpose.

b. Petroleum-contaminated soils that have been decontaminated to the satisfaction of the department pursuant to 567—Chapter 120 may be used as follows:

(1) Fill material at the original excavation site pursuant to 108.6(1).

(2) Alternative cover material at a sanitary landfill pursuant to 567—108.8(455B,455D).

**108.4(15) *Tires.*** This chapter does not pertain to tires other than those used as alternative cover material pursuant to 567—108.8(455B,455D). Refer to 567—Chapter 117 for rules regarding the beneficial use of tires.

**108.4(16) *Wastewater filter sand.*** Wastewater filter sand may be used as follows:

a. Fill material pursuant to 108.6(1).

b. Subbase for hard-surface road construction.

**108.4(17) *Wood.*** Uncontaminated, untreated or raw wood may be used as follows:

a. A fuel or energy source.

b. Bulking agent for composting.

c. Mulch.

d. Animal bedding.

e. Raw material in the manufacture of paper products, particle board, or similar materials.

**108.4(18) *Wood ash.*** Ash from the combustion of uncontaminated, untreated or raw wood may be used as follows:

a. A soil amendment pursuant to 567—Chapter 121.

- b. A carbon source for composting.
- c. Raw material in the manufacture of cement or concrete products.
- d. Fill material pursuant to 108.6(1).

**567—108.5(455B,455D) Application requirements for beneficial use determinations other than alternative cover material.** Unless the beneficial use is approved pursuant to 567—108.4(455B,455D), the applicant shall submit the following application information to the department. The department may request that additional information be submitted in order to make a beneficial use determination. The department may also require specific conditions on a beneficial use determination and issue a temporary beneficial use determination on a trial basis.

The generator of a solid by-product may apply to the department in writing for a beneficial use determination. If the department finds the application information to be incomplete, then it shall notify the applicant in writing of that fact and of the specific deficiencies and return the application materials to the applicant within 30 days of such notification. The applicant may reapply without prejudice.

**108.5(1)** The name, address, and telephone number of:

- a. Owner of the site where the project will be located.
- b. Applicant for the beneficial use determination.
- c. Official responsible for the operation of the project.
- d. Professional engineer (P.E.) licensed by the state of Iowa and retained for the project, if any.

The department may, at its sole discretion, require the applicant to retain a professional engineer for the project or specific parts thereof.

e. Agency to be served by the project, if any.

f. Responsible official of agency to be served.

**108.5(2)** A description of the solid by-product under review and its proposed use.

**108.5(3)** The chemical and physical characteristics of the solid by-product under review and of each type of proposed product.

**108.5(4)** A demonstration that there is a known or reasonably probable market for the intended use of the solid by-product under review by providing one or more of the following:

- a. A contract to purchase or utilize the solid by-product for the use proposed.
- b. A description of how the solid by-product will be used.
- c. A demonstration that the solid by-product complies with industry standards and specifications for that product.
- d. Other documentation that a market for the solid by-product exists.

**108.5(5)** A demonstration that the proposed use of the solid by-product will not adversely affect human health or the environment. The demonstration may include, but is not limited to, a toxicity characteristics leaching procedure (TCLP, EPA Method 1311) analysis and total metals testing of a representative sample of the solid by-product.

**108.5(6)** A solid by-product management plan pursuant to 108.6(2).

**567—108.6(455B,455D) Requirements for beneficial uses other than alternative cover material.**

**108.6(1)** *Solid by-products beneficially used as fill material.* All beneficial uses, including those listed in 567—108.4(455B,455D) other than rubble and soil, shall meet the following requirements, unless a variance is granted in writing by the department for a specific location, if the beneficial use entails the solid by-product's being used as fill material:

a. Leachate characteristics of the solid by-product shall be measured by the synthetic precipitation leaching procedure (SPLP, EPA Method 1312) and shall be less than or equal to ten times the maximum contaminant levels (MCL) for drinking water. Foundry sand and coal combustion by-products may limit the SPLP analytes to total metals for drinking water.

b. Total metals testing results, which shall include thallium, shall be consistent with the department's statewide standards for soil pursuant to 567—Chapter 137. Arsenic levels shall be consistent with the statewide standards for soil or the naturally occurring (i.e., background) arsenic levels of the soil, whichever are greater.

- c.* The solid by-product shall produce a fill that has a pH:
- (1) Greater than or equal to 5 and less than or equal to 8 if the fill may be used as growing media either now or in the future.
  - (2) Greater than or equal to 5 and less than 12 if the fill is specifically intended not to be used as growing media either now or in the future. In this category of fill, materials with a pH equal to or greater than 10 but less than 12 shall be used only in areas where direct physical contact by humans for long periods of time is not expected to occur.
  - (3) For deep fills where only the surface may serve as growing media either now or in the future, then at a minimum the top three feet shall have a pH greater than or equal to 5 and less than or equal to 8. Fill material below the top three feet shall have a pH greater than or equal to 5 and less than or equal to 12.
- d.* The by-product shall not be placed in a waterway or wetland or any waters of the state or extend below or within five feet of the high water table.
- e.* The by-product shall not be placed within the 100-year flood plain unless in accordance with all local and department regulations including rule 567—71.5(455B).
- f.* The by-product shall not be placed closer than 200 feet to a sinkhole or to a well that is being used or could be used for human or livestock water consumption.
- g.* The by-product shall not be putrescible.

**108.6(2) Solid by-product management plans.** All recipients of beneficial use determinations granted pursuant to 567—108.5(455B,455D) and coal combustion by-product and foundry sand beneficial uses listed in 567—108.4(455B,455D) shall develop and maintain a solid by-product management plan that satisfies the following requirements:

- a.* Lists the source(s) of the solid by-product.
- b.* Lists procedures for periodic testing of the solid by-product to ensure that the chemical and physical composition has not changed significantly.
- c.* Provides a description of storage procedures including:
  - (1) Storage location(s).
  - (2) Maximum anticipated inventory, including dimensions of any stockpiles.
  - (3) Run-on and run-off controls, which may include a storm water National Pollutant Discharge Elimination System (NPDES) permit.
  - (4) Management practices to minimize uncontrolled dispersion of the solid by-product.
  - (5) Maximum storage time, not to exceed six months unless authorized in writing by the department.

**567—108.7(455B,455D) Record-keeping and reporting requirements for beneficial use projects other than alternative cover material.**

**108.7(1)** Any entity that engages in the beneficial use of a solid by-product, other than for alternative cover material, and that satisfies at least one of the following criteria shall comply with record-keeping and reporting requirements set forth in this rule:

- a.* The entity has been granted a beneficial use determination pursuant to 567—108.5(455B,455D).
- b.* The solid by-product is not rubble or soil and is being beneficially used as fill material.
- c.* The solid by-product is a coal combustion by-product or foundry sand.

**108.7(2)** Record keeping. Generators shall maintain all records related to the solid by-product management plan for a minimum duration of five years.

**108.7(3)** Reporting. Reports shall be filed with the department's central office and the field office with jurisdiction over the generator as follows:

- a.* Unless otherwise directed by the department, generators shall submit to the department a copy of the solid by-product management plan whenever that plan is revised or within 60 days of the end of the calendar year, whichever is earlier.
- b.* Generators whose solid by-products are being beneficially used as fill material shall submit to the department within 60 days of the end of the calendar year the following information for each beneficial use project or activity:

- (1) The location of the project.
- (2) The tons of solid by-product utilized for the project.

**567—108.8(455B,455D) Universally approved beneficial use determinations for alternative cover material.** Unless the landfill is otherwise notified pursuant to 567—108.11(455B,455D), the following alternative cover materials may be beneficially used as daily cover material at sanitary landfills in the manner and volume specified by sanitary landfill rules. However, sanitary landfills shall amend their sanitary landfill permits by notifying the department, and the department field office with jurisdiction over the facility, of their intent to utilize solid by-products pursuant to this rule at least 30 days prior to actual utilization of the by-products as alternative cover material.

**108.8(1) Asphalt shingles.** Asphalt shingles that are certified, consistent with federal regulations (Reference: Appendix E, Subpart E, 40 CFR Part 763, Section 1, Polarized Light Microscopy), as not containing more than 1 percent asbestos and are ground to an average size of 3 inches or less in any dimension may be mixed with soil in a 50/50 volume.

**108.8(2) Coal combustion by-products.** Coal combustion by-products may be mixed with soil in a 50/50 volume.

**108.8(3) Compost.** One hundred percent cured or finished compost, and compost rejects, may be used.

**108.8(4) Diatomaceous earth.** Diatomaceous earth may be mixed with soil in a 50/50 volume.

**108.8(5) Foundry sand.** Foundry sand may be mixed with soil in a 50/50 volume.

**108.8(6) Glass.** Glass that has been ground to an average size of ½ inch or less in any dimension may be mixed with soil in a 10 percent glass and 90 percent soil by volume mixture.

**108.8(7) Gypsum and gypsum wallboard.** Gypsum and gypsum wallboard that have been ground to an average size of 3 inches or less in any dimension may be mixed with soil in a 50/50 volume.

**108.8(8) Paper mill sludge.** Uncontaminated, dewatered paper mill sludge may be mixed with soil in a 50/50 volume.

**108.8(9) Sandblasting abrasive.** Sandblasting abrasive and residuals may be mixed with soil in a 50/50 volume.

**108.8(10) Soil, including petroleum-contaminated soil.** Petroleum-contaminated soils that have been decontaminated to the satisfaction of the department pursuant to 567—Chapter 120 may be utilized.

**108.8(11) Tire chips.** Tire chips that are an average size of 3 inches or less in any dimension may be mixed with soil in a 50/50 volume.

**567—108.9(455B,455D) Beneficial use determination application requirements for alternative cover material.** Unless the alternative cover material beneficial use is approved pursuant to 567—108.8(455B,455D), the applicant shall submit the following application information to the department to amend the sanitary landfill permit. The department may request that additional information be submitted in order to make a beneficial use determination. The department may also require specific beneficial use determination conditions and issue a temporary beneficial use determination on a trial basis.

If the department finds the application information to be incomplete, then it shall notify the applicant in writing of that fact and of the specific deficiencies and return the application materials to the applicant within 30 days of such notification. The applicant may reapply without prejudice.

**108.9(1)** The name, address, and telephone number of:

- a. Owner of the site where the project will be located.
- b. Applicant for the beneficial use determination.
- c. Official responsible for the operation of the project.
- d. Professional engineer (P.E.) licensed by the state of Iowa and retained for the project, if any.

The department may, at its sole discretion, require the applicant to retain a professional engineer for the project or specific parts thereof.

- e. Agency to be served by the project, if any.

*f.* Responsible official of agency to be served.

**108.9(2)** A description of the proposed alternative cover material and whether it is to be used as daily, intermediate, or final cover.

**108.9(3)** The chemical and physical characteristics of the alternative cover material.

**108.9(4)** The proposed volume ratio of the alternative cover material(s) to soil or other alternative cover material(s).

**108.9(5)** A demonstration that there is a known or reasonably probable suitability of the alternative cover material as cover material by providing previous case studies of the alternative cover material being utilized as cover material's or the following information:

*a.* Information on the ability of the alternative cover material to reduce or maintain current odor levels.

*b.* Information on the ability of the alternative cover material to reduce or deter vectors.

*c.* Information on the ability of the alternative cover material to reduce or maintain the current risk of fire.

*d.* Information on the ability of the alternative cover material to control litter and dust.

*e.* Information on the ability of the alternative cover material to impede the infiltration of liquids and precipitation.

*f.* Information on the ability of the alternative cover material to control landfill gas migration.

*g.* Information on the ability of the alternative cover material to provide a safe and effective working surface.

*h.* Information on the ability of the alternative cover material to provide effective growing media.

*i.* Other documentation that the alternative cover material is suitable for cover material.

**108.9(6)** A demonstration that the proposed use of the alternative cover material will not adversely affect human health or the environment. The demonstration may include, but is not limited to, a toxicity characteristics leaching procedure (TCLP, EPA Method 1311) analysis of a representative sample of the alternative cover material.

**567—108.10(455B,455D) Beneficial use of alternative cover material and state goal progress.** Alternative cover material placed at no more than the thickness required by sanitary landfill rules shall be exempt from landfill tonnage measurements used for state goal progress and waste diversion calculations.

**567—108.11(455B,455D) Revocation of beneficial use determinations.** The department may revoke any beneficial use determination given pursuant to this chapter if it finds one or more of the following:

1. The matters serving as the basis for the department's determination were incomplete or incorrect or are no longer valid.

2. The department finds that there has been a violation of any law, rule, permit or other authorization in its jurisdiction.

3. The department has reasonable cause to suspect a significant risk to or adverse affect on human health or the environment.

These rules are intended to implement Iowa Code sections 455B.304 and 455D.4.

CHAPTER 109  
SPECIAL WASTE AUTHORIZATIONS

**567—109.1(455B,455D) Purpose.** The purpose of this chapter is to implement Iowa Code section 455B.304 and chapter 455D by providing rules for the disposal of special waste. The intent of these rules is to provide safe and proper management for disposal of special waste.

**567—109.2(455B,455D) Special waste authorization required.** No special wastes shall be delivered to or accepted by a municipal solid waste landfill unless disposal is authorized by a special waste authorization (SWA) issued by the department. Wastes for which an SWA has been issued shall be disposed of in accordance with the instructions, conditions, and limitations contained in the SWA. An SWA in effect on May 22, 2002, shall remain in effect until the SWA expires or until it is amended. Any amendment requests shall be handled under these rules.

**567—109.3(455B,455D) Definitions.**

*“General special waste”* means special wastes that are commonly accepted by landfills and have specific handling requirements for disposal that are explicitly listed in rule 567—109.11(455B,455D). General special wastes are required to be included in the landfill’s special waste acceptance criteria (SWAC), but do not require a special waste authorization (SWA). The following wastes are approved as general special wastes: asbestos-containing material; petroleum-contaminated soil; and stabilized grit, bar screenings and grease skimmings.

*“Industrial process waste”* means waste that is generated as a result of manufacturing activities, product processing or commercial activities. It does not include office waste, cafeteria waste, or other types of waste that are not the direct result of production processes.

*“Municipal solid waste landfill”* or *“MSWLF”* means a discrete area of land or an excavation that receives household waste, and that is not a land application site, surface impoundment, injection well, or waste pile, as those terms are defined under 40 CFR Part 257.2. An MSWLF may also receive other types of the federal Resource Conservation and Recovery Act (RCRA) Subtitle D wastes, such as commercial solid waste, nonhazardous dry sludge, and industrial solid waste. An MSWLF may be publicly or privately owned. An MSWLF may be a new MSWLF site, an existing MSWLF site, or a lateral expansion.

*“Pollution control waste”* means any solid waste residue extracted by, or resulting from, the operation of pollution control processes.

*“Solid waste”* is defined in Iowa Code section 455B.301.

*“Special handling”* means a specific procedure required for handling certain waste to protect the health and safety of employees, the public and the environment.

*“Special waste”* means any industrial process waste, pollution control waste, or toxic waste which presents a threat to human health or the environment or a waste with inherent properties which make the disposal of the waste in a sanitary landfill difficult to manage. Special waste does not include domestic, office, commercial, medical, or industrial waste that does not require special handling or limitations on its disposal. Special waste does not include hazardous wastes which are regulated under the federal Resource Conservation and Recovery Act (RCRA), hazardous waste as defined in Iowa Code section 455B.411, subsection 3, or hazardous wastes included in the list compiled in accordance with Iowa Code section 455B.464.

*“Toxic waste”* means material containing poisons, biocides, acids, caustics, pathological wastes, and similar harmful wastes which may require special handling and disposal procedures to protect the environment and the persons involved in the storage, transport, and disposal of the waste.

**567—109.4(455B,455D) Types of special wastes.** Rescinded IAB 6/11/03, effective 7/16/03.

**567—109.5(455B,455D) Applications.**

**109.5(1)** Generators of special waste shall make application for an SWA by submitting the form “Request for Special Waste Authorization” accompanied by supporting data as required by the

department. Two copies shall be submitted to the department, and the department will forward one of the copies to the disposal site after the department review process is completed. The application shall include the following information when applicable:

- a. Appropriate chemical analysis of the waste,
- b. Physical form of the waste,
- c. Weight or volume of the waste,
- d. Material safety data sheet (MSDS) for the waste or for the materials from which the waste is generated, if applicable,
- e. Toxicity characteristic leaching procedure (TCLP) test results when appropriate, which show that none of the federal limits in 40 CFR Part 261 are exceeded, and
- f. Any other information requested by the department.

**109.5(2) Additional requirements.**

- a. The waste shall not contain free liquids as defined at 567—100.2(455B,455D). The point of compliance shall be the working face.
- b. The waste shall not be a listed hazardous waste or meet the criteria for characteristic hazardous waste pursuant to the federal Resource Conservation and Recovery Act (RCRA).
- c. Wastes with PCB concentrations equal to or greater than 50 ppm shall not be authorized for disposal at a landfill.
- d. Polynuclear aromatic hydrocarbon (PAH) (SW 846 Method 8270) contaminated soil shall not be authorized for disposal at a landfill if the total PAH level exceeds 1600 ppm for the following compounds: acenaphthene, acenaphthylene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, naphthalene, phenanthrene, and pyrene or if the total carcinogenic PAH level exceeds 200 ppm for the following compounds: benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene or if the cyanide level exceeds 1,000 ppm.
- e. Special waste authorizations may be issued for a period not to exceed three years.

**567—109.6(455B,455D) Restrictions.**

**109.6(1)** The department may revoke an SWA for cause at any time. Such cause may include, but is not limited to, evidence that indicates that the characteristics of the authorized quality of the waste vary from the authorized values, evidence that the continued disposal of the waste as authorized may pose a threat to the public health or the environment, or failure to comply with any condition in the SWA or the landfill's SWAC.

**109.6(2)** The holder of an SWA must apply for a renewal at least 30 days prior to the expiration of the SWA.

**109.6(3)** The issuance of an SWA does not obligate any waste disposal facility to accept the waste nor does it preclude the facility from imposing conditions or restrictions other than those listed in the SWA.

**109.6(4)** The issuance of an SWA does not exempt the party disposing of the waste from any local, state, or federal laws or regulations.

**567—109.7(455B,455D) Landfill responsibilities.**

**109.7(1)** Any public or private municipal solid waste landfill that refuses any particular solid waste type for management or disposal must identify another waste management facility for that waste within the planning area. In the case of special waste, if no other waste management facility for that waste type exists within the planning area, the city or county, in cooperation with the waste generator, must establish or arrange access to one.

**109.7(2)** All municipal solid waste landfills shall submit special waste acceptance criteria to the department. The SWAC shall list the different kinds of special waste that each landfill (facility specific) will accept and the instructions for disposal for each of those wastes. The SWAC shall be submitted within 90 days after May 22, 2002. The SWAC shall be submitted on forms provided by the department.

**109.7(3)** Landfills are required to ensure that special wastes delivered to the facility conform to the SWAC on file with the department.

**109.7(4)** Each municipal solid waste landfill shall provide to the department, on a quarterly basis, a report of SWA activity including each SWA number and the quantities of waste disposed of during the reporting period. This information shall be submitted as part of the Quarterly Solid Waste Fee Schedule and Retained Fees Report, Form 542-3276.

**567—109.8(455B,455D) Special waste generator responsibilities.** Special waste generator responsibilities shall include, but are not limited to, the following:

**109.8(1)** Prior to submission of an SWA application, the generator shall adhere to the solid waste management hierarchy. Alternatives include volume reduction at the source; recycling and reuse, including composting and land application; and other approved techniques of solid waste management including, but not limited to, combustion with energy recovery and combustion for waste disposal. The generator shall include, as part of the SWA application, a description of the review of the alternatives to landfilling for each waste for which an SWA is requested. The description should detail to what extent the waste could be recycled, reduced or reused so that landfilling is not necessary.

**109.8(2)** The generator shall follow the guidelines for submission of an SWA application as given in 109.5(455B,455D).

**109.8(3)** The generator shall ensure that special waste coming into the landfill shall arrive as a separate load and not be commingled with any other waste.

**109.8(4)** The generator shall submit analytical results supporting an SWA at a frequency to be determined by the landfill.

**109.8(5)** After receiving an SWA, the generator must contact the designated landfill for instructions on delivering the waste and instructions for adhering to the landfill's SWAC.

**109.8(6)** The generator shall notify the department and landfill, prior to disposal, of any change in the characteristics of the special wastes being disposed.

**109.8(7)** Generators shall notify the landfill in writing when a one-time disposal under an SWA has been completed. This requirement is for one-time disposals only.

**567—109.9(455B,455D) Infectious waste.** Infectious waste which is generated and treated at a medical clinic, doctor's office, nursing care facility, health care facility, dentist's office or other similar facility may be placed with municipal solid waste and not handled in a special way if it is rendered nonpathological, does not contain free liquids, and sharps are shredded, blunted, granulated, incinerated or mechanically destroyed. The generator of the infectious waste must notify the waste hauler and the sanitary landfill that infectious waste is being placed with the regular municipal solid waste and, with the notice, certify that the infectious waste is properly treated in accordance with the requirements of this rule.

**567—109.10(455B,455D) Other special wastes.**

**109.10(1) Radioactive waste.** Radioactive materials shall not be disposed of by a sanitary disposal project. Luminous timepieces are exempt.

**109.10(2) Sewage sludge.**

*a.* Sewage sludge, including unstabilized septic tank pumpings, shall not be disposed of in a sanitary landfill if it meets the criteria for Class I or II sewage sludge in 567—Chapter 67, except for use in daily, interim, or final cover according to the approved plan for the landfill. Class III sewage sludge may be disposed of at a sanitary landfill as provided in 567—Chapter 112.

*b.* Sewage sludge may be handled at processing facilities as provided in 567—Chapter 104.

*c.* Sewage sludge may be utilized for land application in accordance with 567—Chapter 67.

**109.10(3) Waste tires.** Pursuant to Iowa Code section 455D.11(2), land disposal of waste tires, as defined in 567—Chapter 117, is prohibited as of July 1, 1991, unless each tire is processed by, at a minimum, shredding, cutting or chopping each tire into pieces that are no longer than 18 inches on any side.

**567—109.11(455B,455D) Conditions and requirements for the disposal of general special wastes.**

**109.11(1) *Asbestos-containing material.*** The sanitary landfill permit holder shall comply with the following conditions and requirements whenever asbestos-containing waste materials are accepted and disposed of in a sanitary landfill.

*a.* Asbestos-containing material (ACM) wastes with 1 percent or less asbestos are not regulated and can be disposed of at the working face, the same as any other waste.

*b.* ACM wastes that contain greater than 1 percent asbestos are regulated under federal asbestos National Emission Standards for Hazardous Air Pollutants (NESHAP) and shall be managed in accordance with federal regulations defined in 40 CFR Part 61, Subpart M. Testing to determine asbestos content shall utilize the method specified in 40 CFR Part 763, Section 1, Appendix A of Subpart F.

*c.* Nonfriable ACM waste is defined as waste containing greater than 1 percent asbestos that when dry cannot be crumbled, pulverized, or reduced to powder by hand pressure. Nonfriable ACM waste includes asbestos-containing floor covering and asphalt roofing materials that show no evidence that they contain crumbled, pulverized or powdered ACM residues upon delivery to the landfill.

*d.* Friable ACM waste is defined as waste containing greater than 1 percent asbestos that when dry can be crumbled, pulverized or reduced to powder by hand pressure. Friable ACM waste includes acoustical, thermal and fireproofing insulation, as well as numerous building products with incorporated asbestos material. Waste transite siding shall be considered friable ACM waste.

*e.* ACM waste transporters should be encouraged by the landfill operator to notify the landfill at least 24 hours in advance when ACM waste will be arriving at the landfill. Upon arrival at the sanitary landfill, the transporter shall present to the landfill operator the ACM waste shipment records, which shall include a determination whether the ACM waste is friable or nonfriable, if known. The landfill operator must through visual inspection or testing verify whether the ACM waste is friable or nonfriable. If not verified as nonfriable, the waste must be handled as friable ACM waste.

*f.* Any federal NESHAP-regulated ACM waste shipments that show evidence of visible dust emissions or that are not properly containerized, wrapped, wetted, and covered shall be rejected upon arrival at the landfill.

*g.* ACM wastes with greater than 1 percent asbestos content that are nonfriable when received at the landfill may be disposed of at the working face. Care shall be taken when unloading and covering the waste so that it does not become friable at the working face.

*h.* ACM wastes with greater than 1 percent asbestos content, as determined by laboratory tests, which are confirmed as friable when received at the landfill shall be disposed of in an area separate from the regular working face. The wastes shall be covered carefully with a minimum of six inches of soil cover and compacted by no later than the end of the operating day. Care shall be taken at all times during disposal and covering to prevent rupture of asbestos-containing containers and wrapped waste systems. Covered ACM waste areas shall be protected from erosion at all times.

*i.* Upon delivery, friable ACM wastes must be wet and contained in labeled, leak-tight containers or wrapping which prevents asbestos from becoming airborne. Bulk demolition wastes with friable ACM need not be placed in leak-tight containers, but must remain wet at all times and be properly labeled and wrapped to prevent asbestos from becoming airborne during transport and disposal and covering at the landfill.

*j.* Extreme care shall be taken at all times when transporting, depositing, and covering federal NESHAP-regulated ACM waste to control the evolution of dust and airborne asbestos fibers and to not allow the rupture of asbestos containers and wraps.

*k.* After landfill acceptance, if any federal NESHAP-regulated ACM waste becomes dry prior to disposal, rewetting, or an approved alternative means of dust emissions control, is mandatory. When disposed of, the wet ACM waste must be properly covered before it can dry again.

*l.* In the event that any visible dust emissions from federal NESHAP-regulated ACM waste occur, protective safety equipment, consistent with federal NESHAP and OSHA regulations, shall be immediately utilized by landfill operating staff.

*m.* Daily records of the acceptance and disposal of all ACM wastes shall be maintained. Landfill records for each NESHAP-regulated ACM waste shipment shall include the following:

- (1) The date of ACM waste receipt.
- (2) The names, addresses, and telephone numbers of the originating waste generation site, facility owner, agent responsible for performing removal and the waste transporter.
- (3) The description of ACM wastes, quantity in cubic yards, weight and the number and type of containers or systems received.
- (4) The waste shipment record and any accompanying asbestos content laboratory test and friable status documentation.
- (5) The operational log notation relative to the landfill operator's visual confirmation of waste type compared to waste shipment records and the friable or nonfriable status for each federal NESHAP-regulated ACM waste shipment.
- (6) The operational log notation of any rejected ACM waste and the reasons for rejection by landfill staff.
- (7) The site operational area, coordinates location and vertical elevation keyed to site mapping and the quantity of buried waste in cubic yards for each federal NESHAP-regulated waste shipment disposed of within the disposal site.

*n.* Records for all federal NESHAP-regulated ACM wastes accepted at the landfill in accordance with 40 CFR Part 61, including required federal and state asbestos NESHAP program operational and site closure reports, shall be maintained. All records, except for waste shipment records, shall be maintained through site closure. Waste shipment records shall be retained for at least two years.

*o.* A copy of an Affidavit Explanatory of Title which has been file stamped by the county recorder shall be submitted to the department within 60 days of site closure. The affidavit shall appear at part of the property deed record and shall indicate that:

- (1) The landfill has been used for the disposal of ACM waste.
- (2) The survey plot and all records of the location and quantity of regulated ACM wastes have been filed with federal and state NESHAP program officials. Such documentation must be filed with the department, along with the notification.
- (3) The site is subject to the regulations under 40 CFR Part 61, Subpart M, and the site closure permit requirements issued by the department.

*p.* Strict adherence to federal NESHAP asbestos regulations under 40 CFR Part 61 is mandatory for all federal regulated ACM wastes. Questions on federal and state regulations should be addressed to the U.S. Environmental Protection Agency at (913)551-7391 or the department's air quality bureau at (515)281-8443. Questions regarding state asbestos abatement certification requirements should be addressed to the Iowa division of labor services at (515)281-6768.

**109.11(2) *Petroleum-contaminated soil.*** The sanitary landfill operator, the generator, and the hauler shall comply with the following conditions and requirements whenever petroleum-contaminated soil is disposed of in a sanitary landfill.

- a.* The waste cannot be a hazardous waste.
- b.* The waste cannot contain free liquids as determined by the paint filter liquids test.
- c.* Upon arrival at the landfill, the hauler shall identify the waste to the landfill attendant.
- d.* The landfill operator shall direct the hauler to the evaporation area. The soil borrow area or an area with intermediate cover may be used.
- e.* The contaminated soil may be spread up to a depth of 4 inches. The contaminated soil shall be allowed to aerate for at least 14 days and until the hydrocarbon level is less than 100 ppm. Fourteen days is a minimum. Longer times may be needed if weather conditions are unfavorable or if contamination levels are unusually high.
- f.* The soil shall be turned or disked at least three times per week.
- g.* Alternative procedures other than those procedures defined in 109.11(2) "e" and 109.11(2) "f" may be used if it can be demonstrated that soil treatment meeting the requirements of 109.11(2) "h" can be consistently achieved and if approved under permit amendment.
- h.* After the contaminant has evaporated and the total hydrocarbon content is less than 100 ppm, the soil may be used as daily cover material or incorporated into the working face. The soil may not be used for capping or lining.

*i.* Once every three months, petroleum-contaminated soil that has been treated at the evaporation area shall be sampled and analyzed for total hydrocarbon content. This sampling can be done at any time during the three-month period depending on the availability of treated soil.

**109.11(3) *Stabilized grit, bar screenings, and grease skimmings.*** The sanitary landfill operator, the generator, and the hauler shall comply with the following conditions and requirements whenever stabilized grit, bar screenings, or grease skimmings are disposed of in a sanitary landfill.

- a.* The waste cannot contain any free liquids as determined by the paint filter liquids test.
- b.* The generator shall stabilize the grit, bar screenings, and grease skimmings prior to their disposal at the landfill in order to destroy any pathogenic organisms. Stabilization can be done by addition of lime to raise the pH to at least 12 for two hours.
- c.* The generator shall prearrange a delivery schedule with the landfill operator.
- d.* Upon arrival at the landfill, the hauler shall identify the waste to the landfill attendant.
- e.* The landfill operator shall direct the hauler to the working face.
- f.* The waste shall be deposited at the working face, covered with regular refuse or soil and compacted.

These rules are intended to implement Iowa Code section 455B.304.

[Filed 11/21/02, Notice 9/18/02—published 12/11/02, effective 1/15/03]

[Filed 5/22/03, Notice 3/19/03—published 6/11/03, effective 7/16/03]

CHAPTER 110  
HYDROGEOLOGIC INVESTIGATION AND MONITORING REQUIREMENTS

**567—110.1(455B) Applicability.** This chapter pertains to the hydrologic monitoring system standards for solid waste disposal facilities.

**567—110.2(455B) Hydrologic monitoring system planning requirements.**

**110.2(1)** All plans, specifications and other documentation required herein must be developed by an engineer registered in Iowa.

**110.2(2)** All sanitary disposal projects shall conduct a soil and hydrogeologic investigation which conforms to the requirements of this chapter. The purpose of soil and hydrogeologic investigation is to obtain data which will enable a determination of potential routes of contaminant migration from a site via groundwater. The following items are minimum requirements for such investigations. Additional work and use of other methods (e.g., geophysical techniques) are encouraged.

**567—110.3(455B) Soil investigation.**

**110.3(1) Soil borings.**

*a. Number of borings.* A sufficient number of soil borings shall be made to accurately identify the hydrogeologic variations of the site. For new sites, the minimum number of borings required is 10 for sites of 10 acres or less, 20 for sites of 10 to 50 acres, and 20 plus an additional boring for every 10 acres above 50 acres for sites larger than 50 acres. Fewer borings may be needed for existing sites, depending on previous work done at the site. Also, no borings will be required in existing fill areas. The department may require additional borings based on the geological complexity of the site.

*b. Depth of borings.* All borings must extend a minimum of 25 feet deep and at least 10 feet deep below the water table. However, borings in proposed fill areas shall be terminated 10 feet above the uppermost aquifer or grouted to provide such separation. At least half the borings located outside the existing or proposed fill area shall extend 10 feet into the uppermost aquifer, 50 feet below the water table, or 10 feet into bedrock. At least one boring shall go 10 feet into bedrock, or 100 feet below the lowest ground surface elevation.

*c. Boring method.* Borings shall comply with the applicable portions of rule 567—110.11(455B). The preferred boring method is hollow stem auger, although it may be necessary to use other methods at greater depths and in bedrock. When wet drilling methods are used for boring in which monitoring wells or piezometers are installed, the drilling fluid and methods and development procedures shall be approved by and documented with the department.

*d. An assurance that soil boring samples have been taken at the site.* The soil boring samples must be kept by the permit applicant until the permit is issued and must be made available to the department if the department requests them.

**110.3(2) Soil samples.** Samples shall be collected at 5-foot intervals plus at every change in stratum. These samples should be obtained using a split spoon sampler and the procedures of the standard penetration test, conducted in accordance with American Society of Testing and Materials (ASTM) Standard D1586. This test simply counts the blows of a 140-pound hammer falling 30 inches on the sampler per foot penetration of the sampler. A minimum of one undisturbed shelly tube sample shall be obtained in the uppermost cohesive stratum at or below the lowest depth at which solid waste will be disposed. Shelly tube sampling shall be in accordance with ASTM Standard D1587. Samples should be clearly marked, preserved, and maintained for future inspection. Samples selected for laboratory analysis shall be preserved and transported to the laboratory in accordance with ASTM Standard D422.

**110.3(3) Laboratory test of discrete soil samples.** Laboratory tests of discrete soil samples shall be conducted to correlate strata between soil borings, obtain permeability data on each stratum, and design monitoring wells.

*a. Permeability tests.* Permeability tests using a constant-head or falling head permeameter shall be run on a minimum of one sample from each shelly tube sample. Each sample shall be from a different soil boring representing a different area of the site.

*b. Grain size distribution.* Grain size distribution tests should be conducted on a minimum of one sample from each distinct stratum. Analysis should be conducted in accordance with ASTM Standards D422 and D1140. Estimates of permeability shall be developed for each sample tested based on grain size distribution and standard penetration blow counts.

**567—110.4(455B) Hydrogeologic investigation.**

**110.4(1) Groundwater level measurements.** The elevation of the water table shall be determined at or near the location of each soil boring which penetrates the water table. The water table may be determined using a completed water table monitoring well, or piezometer. The bottom of a piezometer used to measure water table elevation shall be no more than 5 feet below the water table.

The apparent horizontal groundwater flow direction should be determined based on water table measurements. Vertical groundwater flow shall then be assessed in at least two profiles approximately parallel to the apparent horizontal flow direction. Vertical groundwater flow shall be assessed using at least two well clusters per profile. Each well cluster shall contain a water table monitoring well or piezometer and additional water level monitoring points based on site conditions as follows:

*a.* If the water table is in the uppermost aquifer, one additional water level monitoring point is to be located near the base of the aquifer or at least 20 feet below the base of the water table monitoring point. This additional monitoring point may not be required if the aquifer is less than 20 feet thick.

*b.* If the uppermost aquifer is less than 50 feet below the water table, an additional water level monitoring point shall be located at the top of the aquifer.

*c.* If the uppermost aquifer is more than 50 feet below the water table, additional water level monitoring points shall be placed at depths of 30 feet and 50 feet below the water table.

*d.* If required, the one deeper soil boring into bedrock shall be used as a site for one well cluster. Water table monitoring points in this cluster shall correspond to the other well cluster used for a profile. In addition, water level monitoring points shall be placed at the bottom of the boring and, if possible, at the top and bottom of the uppermost aquifer.

Groundwater level measurements should be made after the water levels have stabilized in the monitoring point; at least 24 hours after completion and bailing of the monitoring well, or installation of the piezometer. The water level in existing wells shall be observed and recorded prior to bailing. Each set of water level measurements shall be made in as short a time frame as possible within an eight-hour period maximum.

**110.4(2) In-situ permeability tests.** In-situ permeability tests shall be conducted on each monitoring well and piezometer in each well cluster.

*a. Pumping test.* If more than one monitoring point is located in the uppermost aquifer, a pumping test should be conducted at one or more upper aquifer monitoring point. A pumping test involves pumping at constant rate from one well while observing water levels in other wells. The pumping rate should be as high as possible without dewatering the well. Water level measurements in other uppermost aquifer wells should be measured at frequent intervals near the start of the test and then at progressively longer intervals (e.g., 1-minute intervals to 10 minutes, 5-minute intervals to an hour, 15-minute intervals to 2 hours, and half-hour intervals thereafter). Continuous water level recording is preferable. Water levels in wells not located in the uppermost aquifer should be recorded throughout the test at regular intervals (e.g., every half hour). Water levels in all wells should be measured 24 hours prior to the test and just before the test. The test duration should be at least 4 hours and continuing until a stabilized drawdown condition is observed. Longer tests may be necessary if other uppermost aquifer monitoring points are slow to respond. Water level readings should be recorded through the recovery phase of the water table.

*b. Bail and slug tests.* Monitoring wells and piezometers located in materials with low permeabilities should be tested using bail or slug tests. These tests involve rapidly removing or adding a known volume of water to a well and then recording water levels in the well as it recovers to its original level. Typically, the necessary frequency of measurements will be similar to that required of pumping tests. In materials of very low permeability, less frequent measurements are necessary; and in materials of higher permeability, more frequent measurements may be necessary.

**567—110.5(455B) Hydrologic monitoring system planning report requirements.** The hydrologic monitoring system planning report shall contain a description of field investigations and presentation of results including a description of the field and laboratory testing methods; a presentation of the test results and field measurements; a reasonable effort to inventory all active, unused, and abandoned wells within one mile of the facility shall be made; and the identification of all public water supply wells and wells with water withdrawal permits pursuant to 567—Chapters 50, 51 and 52 within three miles of the facility. Well logs, other available information on well construction, static water levels, and usage shall be obtained. The well inventory should be based on thorough reviews of state and local collections of well logs and, when possible, interviews or surveys of well owners.

Also to be included are maps showing the location of soil borings, other field tests/measurements, and existing wells.

**567—110.6(455B) Evaluation of hydrogeologic conditions.**

**110.6(1)** Based on soil boring and other available information, a description of the site geology shall be made. This shall include preparation of geologic cross sections of sufficient number and spacing (no fewer than four at every site) to adequately define all areas of the site and of sufficient detail to adequately depict major stratigraphic and structural trends and reflect geologic structural features in relation to groundwater flow. Each pair of cross sections must be as near to perpendicular as possible to adequately portray the site geology.

**110.6(2)** A description of the hydrogeologic unit(s) within the saturated zone shall be made including: thickness; depth, hydraulic properties, such as transmissivity and storage coefficient or specific yield; description of the role of each as confining bed, aquifer, or perched saturated zone, and their actual or potential use as water supply aquifers.

**110.6(3)** All groundwater flow paths from the site shall be identified, including both horizontal and vertical components of flow. A contour map of the water table shall be presented showing horizontal flow paths. A potentiometric surface map of the uppermost aquifer showing horizontal flow paths shall also be presented, if different than the water table. Vertical flow paths shall be shown in at least two profiles approximately parallel to the direction of horizontal flow. Vertical flow paths shall be determined by water level measurements from clustered wells at different depth, if possible. An evaluation of vertical groundwater flow based on the hydrologic properties of the various strata encountered at the site, estimated groundwater flow and recharge rates, and known information on hydraulic head shall also be made.

**110.6(4)** The seasonal, temporal and artificially induced variations in groundwater flow shall be evaluated. Temporal variations would occur due to natural events, such as rainfall. The addition of tile lines, removal of overburden, or deposition of wastes would constitute artificially induced variations.

**110.6(5)** Surface water flow paths from the site shall be identified on topographic contour maps.

**567—110.7(455B) Monitoring system plan.** A hydrologic monitoring system shall be designed to intercept the groundwater and surface water flow paths from the site. The plan shall include proposed locations and depths for monitoring wells in accordance with monitoring well siting criteria in 110.1(2). Monitoring wells shall be designed in accordance with 110.1(3).

The surface water monitoring plan shall include monitoring points on all standing and flowing bodies of water which will receive surface runoff or groundwater discharge from the site. For streams, sampling points upstream and downstream of areas of potential impact from the site should be selected.

**567—110.8(455B) Sampling protocol.** At a minimum, the sampling protocol must include procedures or descriptions of the:

Order in which monitoring points are to be sampled, all tests and procedures needed at each monitoring point and the order in which these procedures will be carried out, equipment and containers to be used, procedures and precautions for their use; precautions to avoid introducing contaminants from outside sources into monitoring wells or samples; and how equipment must be cleaned between uses,

Procedures for evacuating each monitoring well prior to each water quality sampling,

Procedures for handling field blanks and other quality assurance samples at the facility and in transit to and from the laboratory,

Procedures for field filtration of samples, if required,

Procedures for sample preservation,

Procedures for sample collection, labeling and handling at the facility and during transport to the laboratory,

Procedures for recording field observations and measurements,

Procedures for records maintenance and data analysis, and

Procedures for sampling surface water monitoring points including exact sampling locations and depths.

**567—110.9(455B) Monitoring well maintenance performance reevaluation plan.**

**110.9(1)** A monitoring well performance reevaluation plan shall be included as part of the hydrogeologic monitoring system plan. The plan shall ensure that all monitoring points remain reliable.

**110.9(2)** The plan shall include the following items:

*a.* Every two years an examination of high and low water levels accompanied by a discussion of the acceptability of well location (vertically and horizontally) and exposure of the screened interval to the atmosphere.

*b.* A biannual evaluation of water level conditions in the monitoring wells to ensure the effects of waste disposal or well operation have not resulted in changes in the hydrologic setting and resultant flow paths.

*c.* Annually conducting well depth measurements to ensure wells are physically intact and not filling with sediment.

*d.* Every five years conduct in-situ permeability tests on monitoring wells; comparing test data with those collected originally to determine if well deterioration is occurring.

**567—110.10(455B) Monitoring well siting requirements.**

**110.10(1)** *Downgradient monitoring wells.* Downgradient monitoring wells must be located to provide a high level of certainty that releases of contaminants from the site can be promptly detected. Downgradient monitoring wells should be placed along the site perimeter, within 50 feet of the planned liner or waste boundary unless site conditions dictate otherwise, downgradient of the facility with respect to the hydrologic unit being monitored. For those facilities which are long-term, multiphase operations, the department may establish temporary waste boundaries in order to define locations for monitoring wells. Downgradient monitoring well placement may consider the convergence of groundwater paths to minimize the overall length of the downgradient dimension.

**110.10(2)** *Water table wells.* At least three downgradient water table monitoring wells shall be installed at each facility. The maximum spacing between wells shall be 600 feet.

**110.10(3)** *Uppermost aquifer monitoring wells.* If different than water table monitoring wells, at least three uppermost aquifer monitoring wells shall be installed at each facility. Uppermost aquifer monitoring wells shall be spaced no more than 600 feet apart. If the uppermost aquifer is located more than 50 feet below the water table, this requirement may be relaxed, although at least one downgradient uppermost aquifer monitoring well will be required.

**110.10(4)** *Other downgradient monitoring wells.* Additional downgradient monitoring wells will be required if the water table and uppermost aquifer monitoring wells do not intercept most vertical flow paths from the site. In such situations, monitoring wells shall be placed at the appropriate depths to intercept the remaining flow paths and shall be spaced at no more than 600 feet apart.

**110.10(5)** *Upgradient monitoring wells.* Upgradient monitoring wells shall not be affected by the site. At least one upgradient monitoring well shall be installed into each stratum being monitored by downgradient monitoring wells. If it is not possible to actually locate a monitoring well upgradient of the site, the well should be placed as near the site as feasible without being affected by the site.

**110.10(6)** *Monitoring point identification system.* The various types of monitoring points should be identified as follows:

Monitoring Well	MW# _____
Surface Water Monitoring Point	SW# _____
Piezometer	PZ# _____

Each monitoring point must have a unique number, regardless of the type of monitoring point, and that number must never change.

**567—110.11(455B) Monitoring well/soil boring construction standards.**

**110.11(1) General considerations.**

*a.* Contractors involved in construction of monitoring wells and piezometers and soil boring activities shall be registered with the department as required in 567—Chapter 37.

*b.* To the extent possible, all monitoring well construction materials must not absorb, desorb, react or otherwise alter the screened soil stratum or the quality of the groundwater being sampled. Galvanized metal, glues, welding solvents, pipe thread lubricants and other foreign substances must not be used.

*c.* All monitoring well construction materials must be protected from contamination prior to installation.

*d.* A typical cross section of a property constructed monitoring well is shown in Figure 1 at the end of this chapter.

**110.11(2) Casings.**

*a.* As a minimum, the diameter of the inner casing (see Figure 1) of a monitoring well must be at least 2 inches.

*b.* Plastic cased wells must be constructed of materials with threaded, nonglued joints which do not allow water infiltration under natural subsurface pressure conditions or when the well is evacuated for sampling.

*c.* Well casings must provide structural stability to prevent casing collapse during installation as well as drill hole integrity when installed. Flush joint casing is required for small diameter wells installed through hollow stem augers.

*d.* Well casings must be constructed of inert materials such as polytetrafluorethylene, stainless steel or polyvinyl chloride. The department may approve other casing materials if the owner or operator can demonstrate the material has a low potential for biasing the water quality parameters of samples. The department may approve the construction of composite well casings (casings with less inert materials in the unsaturated zone).

**110.11(3) Well screens.**

*a.* Slot size will be based on sieve analysis of the sand and gravel stratum or filter pack. The slot size must hold out 35 percent to 60 percent of the formation material and not less than 90 percent of the filter pack.

*b.* Slot configuration and open area must permit effective development of the well.

*c.* Screen length. Maximum screen length shall be 10 feet except for water table wells in which the screen must be of sufficient length to accommodate expected seasonal fluctuations of the water table. The screen should be placed 5 feet above and below the observed water table, unless local conditions are known to produce greater fluctuations. Screen length for piezometers should be 2 feet or less.

Multiple screened single-cased wells are prohibited.

**110.11(4) Filter pack.**

*a.* To prevent other materials from coming in contact with the well screen, extend the filter pack 18 inches above and 12 inches below the well screen.

*b.* Size must be based on sieve analysis of sand and gravel stratum. The filter pack material must be 2.5 to 3 times larger than 50 percent grain size of the zone being monitored.

**110.11(5) Grouting.**

*a.* The annular space above the filter pack must be sealed with expanding cement or bentonite grout. The vertical dimension of this seal must be a minimum of 3 feet.

b. The annular space between the seal and to just below the frostline must be backfilled with an impervious material such as bentonite or expanding cement.

c. The remaining annular space must be sealed with bentonite grout to the ground surface.

d. Grouting materials must be installed from the top of the filter pack up in one continuous operation with a tremie tube.

**110.11(6) Well protection.**

a. Plastic cased wells. A protective metal casing must be installed around the well casing. The inside diameter of the protective metal casing should be at least 2 inches larger than the outside diameter of the well casing. Extend the protective metal casing from a minimum of 1 foot below the frostline to slightly above the well casing top. The protective casing should be shortened or omitted if it covers part of the well screen. Seal or immobilize the protective casing with a concrete plug around the outside. The bottom of the concrete plug must extend at least 1 foot below the frostline. The concrete plug should be shortened if it covers part of the well screen. Extend the top of the plug approximately 3 to 6 inches above the ground surface and slope it away from the well approximately 3 feet. Soil may be placed above the plug. Seal the inside of the protective casing with a bentonite grout. Place a vented cap on the well casing and a protective locking cap on the metal casing. The lockable cap must be kept locked when the well is not in use.

b. Metal cased wells. Extend the concrete plug from at least 1 foot below the frostline to approximately 3 to 6 inches above the ground surface and slope it away from the well approximately 3 feet. Soil may be placed on top of the concrete plug. Place a vented, locking cap on the casing. The lockable cap must be kept locked when the well is not in use. See Figure 1.

c. To protect against accidental damage, a ring of brightly colored posts or other protective devices must be installed around all wells.

**110.11(7) Well drilling.**

a. The owner or operator must ensure that in all phases of drilling, well installation and completion, the methods and materials used do not introduce substances that may alter the results of water quality analyses.

b. Well drilling equipment coming into contact with contaminants in the borehole or above ground must be thoroughly cleaned to avoid spreading contamination to other depths or locations. Contaminated materials or leachate from wells must not be discharged onto the ground surface or into ponds or streams so as to cause environmental harm in the processes of drilling or well development.

c. The owner or operator must ensure that, at a minimum, the following well design and construction log information be retained at the site and a copy of this information be sent to the department.

Date/time of construction;

Name and address of the driller;

Drilling method and drilling fluid used;

Soil sampling methods;

Surveyed location ( $\pm 0.5$  ft.);

Soil and rock classifications;

Field observations;

Well name/number;

Borehole diameter and well casing diameter;

Well depth ( $\pm 0.1$  ft.);

Water level measurements;

Drilling and lithologic logs;

Casing materials, inside diameter and weight or wall thickness;

Screen materials;

Casing and screen joint type;

Screen slot size/length;

Filter pack material/size; (depths from \_\_\_\_ to \_\_\_\_ )

Filter pack volume;

Filter pack replacement method;  
Sealant materials; (depths from \_\_\_\_ to \_\_\_\_ )  
Sealant volume;  
Sealant placement method;  
Grouting schedule and materials;  
Surface seal design/construction; (depths from \_\_\_\_ to \_\_\_\_ )  
Type of protection well cap;  
Ground surface elevation ( $\pm 0.1$  ft.);  
Well cap elevation ( $\pm 0.01$  ft.);  
Top of casing elevation ( $\pm 0.01$  ft.); and  
Detailed drawing of well (include dimensions).

**110.11(8) *Well development.*** Prior to use of the monitoring well for water quality monitoring purposes, well development is required to ensure the collection of representative groundwater samples. Procedures used in well development involve using a surge block, bailing or surging by pumping of compressed inert gas to produce a movement of water at alternately high and low velocities into and out of the well screen and gravel pack in order to loosen and remove fine materials. Development of low hydraulic conductivity wells may require the circulation of water down the well casing, out through the screen and gravel pack, and up the open borehole prior to the placement of grout or seal in the annulus. Any additional water used must be of a quality so as not to interfere with future groundwater quality determinations. Following surging, the well is pumped until the water does not contain significant quantities of suspended solids.

**567—110.12(455B) Sealing abandoned wells and boreholes.** Boreholes, piezometers and observation wells not used for groundwater monitoring must be sealed. Document in writing the location of the abandoned well or borehole with reference to the landfill's coordinate system and method of sealing. The document must be retained at the landfill with a copy sent to the department.

**110.12(1) *Sealing boreholes.*** Fill the borehole by extending a tremie tube to the bottom of the hole. Apply bentonite or expanding cement grout through the tube to the bottom of the hole and raise the tremie tube as the hole is filled from the bottom upward. Keep the end of the tremie tube submerged in the grout while filling. Fill the borehole from the base of the boring all the way to the ground surface.

**110.12(2) *Sealing abandoned monitoring wells.***

a. Well is known to be constructed properly with impermeable grout that was installed from the bottom up using a tremie tube. Remove any existing protective metal casing by vertically pulling it off the well. Using a tremie tube, fill the inner well casing with an impermeable grout slurry from the bottom to ground surface. After 24 hours, retop the grout if it has settled below the existing ground surface.

b. Well construction is improper or undocumented. Attempt to remove the well casing. If this fails, either drill around the well casing using a hollow stem auger of large inside diameter or drill out the well casing using a standard casing bit or solid stem auger with a boring diameter greater than the initial diameter of the hole. Drill to the maximum depth of the previously drilled boring. Clean the drilling debris from the interior of the auger or borehole. Seal the borehole with an impermeable grout using a tremie tube. If the soil conditions permit the sealing to be conducted in a continuous operation, keep the tremie tube submerged in the grout at all times. After 24 hours, retop the grout if it has settled below the ground surface.

c. Monitoring wells in future fill areas. Remove well and seal as described in the procedures for sealing boreholes per 110.12(1).

**567—110.13(455B) Variance from design, construction, and operation standards.** Pursuant to the authority of Iowa Code section 455B.303, a variance from the specific requirements of Chapter 110 may be issued, modified, or denied by the director. The request should also include any supporting information to be considered by the director in the formulation of a decision.

These rules are intended to implement Iowa Code section 455B.304.

CHAPTER 111  
FINANCIAL ASSURANCE REQUIREMENTS  
FOR MUNICIPAL SOLID WASTE LANDFILLS

Rescinded IAB 7/4/07, effective 10/1/07

CHAPTER 112  
SANITARY LANDFILLS: BIOSOLIDS MONOFILLS

[Prior to 12/11/02, see 567—Chs 102, 103, 110]

**567—112.1(455B) Scope and applicability.** This chapter details the plan and operating requirements for all sanitary landfills accepting only municipal sewage sludge (i.e., biosolids). All sanitary landfills accepting only municipal sewage sludge (i.e., biosolids) must conform with the provisions of these rules. This chapter also pertains to the hydrologic monitoring system standards for these solid waste disposal facilities.

**567—112.2(455B) Permit required.** No public or private agency shall construct or operate a sanitary disposal project without first obtaining a permit from the director.

**567—112.3(455B) Types of permits.** There are four types of permits issued by the director.

**112.3(1) Sanitary disposal project permit.** This permit is issued by the director under the authority of Iowa Code section 455B.305 for sanitary disposal projects which comply with the requirements described in 567—Chapters 102 to 106, 109 to 116, and 118 to 122. Such permits are issued for a term of three years, and are renewable for similar terms.

*a.* Applications for renewal shall be received at the department office at least 90 days before the expiration date of the existing permit. For application forms, see 567—100.3(17A,455B).

*b.* The department shall conduct an inspection of the sanitary disposal project following receipt of the application for renewal. Following the inspection, the permit holder shall be notified of all measures needed to bring the sanitary disposal project into conformance with Iowa Code chapter 455B and these rules.

*c.* A permit shall be renewed when a properly completed application has been received and all corrective measures identified in 112.3(1) “*b*” have been completed.

**112.3(2) Temporary permit.** This permit is issued by the director under the authority of Iowa Code subsection 455B.307(1) for solid waste disposal sites which do not comply with the requirements of Iowa Code chapter 455B and these rules. Such permits are issued for a term of one year and are renewable. Temporary permits may be renewed if the director finds that the public interest will be best served by granting a renewal and the applicant has complied with the terms of the previous temporary permit.

*a.* Temporary permits shall incorporate as a condition a compliance schedule that specifies how and when the applicant will meet the requirements of Iowa Code chapter 455B and these rules.

*b.* The decision of the director whether to issue a temporary permit, which is discretionary, shall be a final decision. Once a temporary permit has been issued, it may be suspended or revoked only as provided in Iowa Code section 455B.305 and 567—Chapter 7.

**112.3(3) Developmental permit.** The director may issue a developmental permit for construction and operation of a sanitary disposal project which is not specifically described in these rules if the permit applicant demonstrates at a public hearing that the proposed project can provide satisfactory disposal of solid waste without adverse health-related or environmental effects.

*a.* No such permit shall be issued until the director, after public hearing, considers and approves the proposed project.

*b.* A developmental permit shall be issued for a term of no less than one year and no more than three years.

*c.* A developmental permit may be renewed if the director finds, following public hearing, that the sanitary disposal project provided satisfactory disposal of solid waste without adverse health-related or environmental effects over the term of the prior permit.

**112.3(4) Closure permit.** This permit is issued by the director under the authority of Iowa Code section 455B.305 for sanitary disposal projects which no longer accept solid waste. Such permits are issued for a term of 30 years. If the postclosure period is extended, the term of subsequent renewal of the permit will be determined on a site-specific basis. A sanitary disposal project shall require a

closure permit until the department determines that postclosure maintenance, postclosure monitoring, and operation of the required leachate control system are no longer necessary.

*a.* Application shall be filed at the time of department notification of intended closure as required by this rule.

*b.* The application for issuance of this permit shall be based on a previously approved comprehensive plan and other rules adopted pursuant to the authority of Iowa Code section 455B.306.

*c.* This permit shall require submission of an annual audit report detailing the status of the financial instrument and other funds as required to guarantee completion of postclosure and monitoring requirements.

*d.* This permit may be modified by the issuance of an amendment by the department. Requests for permit amendments may be initiated by the department or by the permit holder.

*e.* At the end of the applicable postclosure period, and upon satisfactory completion of all required postclosure activities as established by Iowa Code chapter 455B, written notification shall be issued by the director stating that a permit is no longer required for the facility.

**567—112.4(455B) Applications for permits.**

**112.4(1)** *Application requirements for permits and renewals.* See 567—100.3(17A,455B).

**112.4(2)** *Time limit on submittal of information.*

*a.* Sanitary disposal project permit applications. If an application for a sanitary disposal project permit is found by the department to be incomplete, the applicant will be notified of that fact and of the specific deficiencies. Thirty days following such notification, the application may be returned by the department as incomplete without prejudice to the applicant's right to reapply. The applicant may be granted, upon request, an additional 30 days to complete the application.

*b.* Application for renewal or amendment of a sanitary disposal project. If an application for a sanitary disposal project permit renewal or amendment is found by the department to be incomplete, the applicant will be notified of that fact and of the specific deficiencies. Thirty days following such notification, the application may be denied by the department.

**567—112.5(455B) Preparation of plans.** All plans and specifications submitted in the application for a sanitary disposal project permit or a developmental permit shall be prepared in conformance with Iowa Code chapter 542B and shall be submitted in triplicate.

**567—112.6(455B) Construction and operation.** All sanitary disposal projects shall be constructed and operated according to the plans and specifications as approved by the department and the terms of the permit. The approved plans and specifications shall constitute a term of the permit.

**567—112.7(455B) Compliance with rule changes.**

**112.7(1)** *Design and construction.* Sanitary disposal projects designed and constructed in accordance with rules in effect at the time of construction shall not be required to be redesigned or reconstructed due to subsequent rule changes unless the department finds that such facilities are causing pollution. Such facilities shall be brought into compliance with rules in effect at the time of reconstructing, enlarging, or otherwise modifying the sanitary disposal project, or at the time of permit renewal.

**112.7(2)** *Operation.* If any new rule conflicts with an operating procedure prescribed in the engineering plans or the permit of a sanitary disposal project, the operation shall conform with the new rule.

**567—112.8(455B) Amendments.** Sanitary disposal project permits, temporary permits, and developmental permits may be modified by the issuance of an amendment by the department, except as provided in 112.7(1).

**567—112.9(455B) Transfer of title and permit.** If title to an operational sanitary disposal project is transferred, and the transferee desires to continue operation of the project, the transferee shall apply in writing to the department within 30 days of the transfer for a transfer of the permit.

**112.9(1)** The department shall transfer the permit when it determines that the sanitary disposal project is in compliance with Iowa Code chapter 455B and these rules and the terms of the permit, and that the transferee possesses the equipment and personnel to operate the project in conformance with Iowa Code chapter 455B and these rules and the terms of the permit.

**112.9(2)** No permit shall be valid after 60 days following transfer of title, unless the permit has been transferred by the department to the new titleholder pursuant to this rule.

**567—112.10(455B) Permit conditions.** Any permit may be issued subject to conditions specified in writing which are necessary to ensure that the sanitary disposal project can be constructed and operated in compliance with these rules.

**567—112.11(455B) Effect of revocation.** If a permit for a sanitary disposal project held by any public or private agency is revoked by the director, no new permit shall be issued to that agency for that disposal project for a period of one year from the date of revocation. Such revocation shall not prohibit the issuance of a permit for the disposal project to another public or private agency.

**567—112.12(455B) Inspection prior to start-up.** The department shall be notified when the initial construction of a sanitary disposal project has been completed in order that an inspection may be made to determine that the project is constructed as designed. No solid waste shall be accepted by a sanitary disposal project until that project has been inspected and approved by the department.

**567—112.13(455B) Primary plan requirements for all sanitary disposal projects.** Every application for any permit issued by the department shall include the following. In addition, every application shall include the particular information required by the chapter describing the type of project to be constructed.

**112.13(1)** The name, address and telephone number of:

- a. Owner of site where project will be located.
- b. Permit applicant.
- c. Official responsible for operation of project.
- d. Design engineer.
- e. Agency to be served by the project, if any.
- f. Responsible official of agency served, if any.

**112.13(2)** A legal description of the site.

**112.13(3)** A map or aerial photograph locating the boundaries of the site and identifying:

- a. North or other principal compass points.
- b. Zoning and land use within one-half mile.
- c. Haul routes to and from the site with load limits or other restrictions.
- d. Homes and buildings within one-half mile.
- e. Section lines or other legal boundaries.
- f. Any nearby runway used or planned to be used by turbojet or piston-type aircraft at FAA-certified airports.

**112.13(4)** Type, source, and expected volume or weight of waste to be handled per day, week or year.

**112.13(5)** An organizational chart.

**112.13(6)** A detailed description of the disposal process to be used.

**112.13(7)** A table listing the equipment to be used, its design capacities and expected loads.

**112.13(8)** A contingency plan detailing specific procedures to be followed in case of equipment breakdown, maintenance downtime, or fire in equipment or vehicles, including methods to be used to remove or dispose of accumulated waste.

**112.13(9)** Proof of the applicant's ownership of the site or legal entitlement to use the site for the disposal of solid waste for the term of the permit for which application is made.

**112.13(10)** Closure/postclosure plan.

*a.* A closure/postclosure plan shall be submitted which:

(1) Details how and when the facility will be closed in accordance with applicable requirements of this chapter.

(2) Describes the proposed groundwater monitoring plan, leachate control system, and site inspection and maintenance activities necessary to comply with this chapter.

(3) States the name, address and telephone number of the person or office to serve as a contact with regard to the facility during the postclosure period.

*b.* The closure/postclosure plan shall be submitted at the time of the first permit renewal after January 15, 2003, but not less than 180 days prior to closure.

**112.13(11)** Such other information as may be required by the director.

**567—112.14(455B) Hydrologic monitoring system planning requirements.**

**112.14(1)** All plans, specifications and other documentation required herein must be developed by an engineer registered in Iowa.

**112.14(2)** All sanitary disposal projects shall conduct a soil and hydrogeologic investigation which conforms to the requirements of this chapter. The purpose of soil and hydrogeologic investigation is to obtain data to determine potential routes of contaminant migration from a site via groundwater. The rules that follow set forth minimum requirements for such investigations. Additional work and use of other methods (e.g., geophysical techniques) are encouraged.

**567—112.15(455B) Soil investigation.**

**112.15(1)** *Soil borings.*

*a. Number of borings.* A sufficient number of soil borings shall be made to accurately identify the hydrogeologic variations of the site. For new sites, the minimum number of borings required is 10 for sites of less than 10 acres, 20 for sites of 10 to 50 acres, and 20 plus an additional boring for every 10 acres above 50 acres for sites larger than 50 acres. Fewer borings may be needed for existing sites, depending on previous work done at the site. Also, no borings will be required in existing fill areas. The department may require additional borings based on the geological complexity of the site.

*b. Depth of borings.* All borings must extend a minimum of 25 feet deep and at least 10 feet deep below the water table. However, borings in proposed fill areas shall be terminated 10 feet above the uppermost aquifer or be grouted to provide such separation. At least half the borings located outside the existing or proposed fill area shall extend 10 feet into the uppermost aquifer, 50 feet below the water table, or 10 feet into bedrock. At least one boring shall extend 10 feet into bedrock or 100 feet below the lowest ground surface elevation.

*c. Boring method.* Borings shall comply with the applicable portions of rule 112.23(455B). The preferred boring method is hollow stem auger, although it may be necessary to use other methods at greater depths and in bedrock. When wet drilling methods are used for boring in which monitoring wells or piezometers are installed, the drilling fluid and methods and development procedures shall be approved by and documented with the department.

*d. Assurance that soil boring samples have been taken at the site.* The soil boring samples must be kept by the permit applicant until the permit is issued and must be made available to the department if the department requests them.

**112.15(2)** *Soil samples.* Samples shall be collected at 5-foot intervals and at every change in stratum. These samples shall be obtained using a split spoon sampler and the procedures of the standard penetration test, conducted in accordance with American Society of Testing and Materials (ASTM) Standard D1586. This test simply counts the blows of a 140-pound hammer falling 30 inches on the sampler per foot penetration of the sampler. A minimum of one undisturbed Shelby tube sample shall be obtained in the uppermost cohesive stratum at or below the lowest depth at which solid waste will be disposed of. Shelby tube sampling shall be in accordance with ASTM Standard D1587. Samples shall

be clearly marked, preserved, and maintained for future inspection. Samples selected for laboratory analysis shall be preserved and transported to the laboratory in accordance with ASTM Standard D422.

**112.15(3) Laboratory test of discrete soil samples.** Laboratory tests of discrete soil samples shall be conducted to correlate strata between soil borings, obtain permeability data on each stratum, and design monitoring wells.

*a. Permeability tests.* Permeability tests using a constant-head or falling-head permeameter shall be run on a minimum of one sample from each Shelby tube sample. Each sample shall be from a different soil boring representing a different area of the site.

*b. Grain size distribution.* Grain size distribution tests shall be conducted on a minimum of one sample from each distinct stratum. Analysis shall be conducted in accordance with ASTM Standards D422 and D1140. Estimates of permeability shall be developed for each sample tested based on grain size distribution and standard penetration blow counts.

**567—112.16(455B) Hydrogeologic investigation.**

**112.16(1) Groundwater level measurements.** The elevation of the water table shall be determined at or near the location of each soil boring which penetrates the water table. The water table may be determined using a completed water table monitoring well, or piezometer. The bottom of a piezometer used to measure water table elevation shall be no more than 5 feet below the water table.

The apparent horizontal groundwater flow direction shall be determined based on water table measurements. Vertical groundwater flow shall then be assessed in at least two profiles approximately parallel to the apparent horizontal flow direction. Vertical groundwater flow shall be assessed using at least two well clusters per profile. Each well cluster shall contain a water table monitoring well or piezometer and additional water level monitoring points based on site conditions as follows:

*a.* If the water table is in the uppermost aquifer, one additional water level monitoring point shall be located near the base of the aquifer or at least 20 feet below the base of the water table monitoring point. This additional monitoring point may not be required if the aquifer is less than 20 feet thick.

*b.* If the uppermost aquifer is less than 50 feet below the water table, an additional water level monitoring point shall be located at the top of the aquifer.

*c.* If the uppermost aquifer is more than 50 feet below the water table, additional water level monitoring points shall be placed at depths of 30 feet and 50 feet below the water table.

*d.* If required, the one deeper soil boring into bedrock shall be used as a site for one well cluster. Water table monitoring points in this cluster shall correspond to the other well cluster used for a profile. In addition, water level monitoring points shall be placed at the bottom of the boring and, if possible, at the top and bottom of the uppermost aquifer. Groundwater level measurements shall be made after the water levels have stabilized in the monitoring point, at least 24 hours after completion and bailing of the monitoring well, or installation of the piezometer. The water level in existing wells shall be observed and recorded prior to bailing. Each set of water level measurements shall be made in as short a time frame as possible not to exceed 8 hours.

**112.16(2) In-situ permeability tests.** In-situ permeability tests shall be conducted on each monitoring well and piezometer in each well cluster.

*a. Pumping test.* If more than one monitoring point is located in the uppermost aquifer, a pumping test shall be conducted at one or more upper aquifer monitoring points. A pumping test involves pumping at a constant rate from one well while observing water levels in other wells. The pumping rate shall be as high as possible without dewatering the well. Water level measurements in other uppermost aquifer wells shall be measured at frequent intervals near the start of the test and then at progressively longer intervals (e.g., 1-minute intervals to 10 minutes, 5-minute intervals to an hour, 15-minute intervals to 2 hours, and half-hour intervals thereafter). Continuous water level recording is preferable.

Water levels in wells not located in the uppermost aquifer shall be recorded throughout the test at regular intervals (e.g., every half hour). Water levels in all wells shall be measured 24 hours prior to the test and just before the test. The test duration shall be at least 4 hours and continue until a stabilized drawdown condition is observed. Longer tests may be necessary if other uppermost aquifer monitoring

points are slow to respond. Water level readings shall be recorded through the recovery phase of the water table.

*b. Bail and slug tests.* Monitoring wells and piezometers located in materials with low permeabilities shall be tested using bail or slug tests. These tests involve rapidly removing or adding a known volume of water to a well and then recording water levels in the well as the well recovers to its original level. Typically, the necessary frequency of measurements will be similar to that required of pumping tests. In materials of very low permeability, less frequent measurements are necessary. In materials of higher permeability, more frequent measurements may be necessary.

**567—112.17(455B) Hydrologic monitoring system planning report requirements.** The hydrologic monitoring system planning report shall contain a description of field investigations and presentation of results including a description of the field and laboratory testing methods; a presentation of the test results and field measurements; documentation of a reasonable effort to inventory all active, unused, and abandoned wells within one mile of the facility; and the identification of all public water supply wells and wells with water withdrawal permits pursuant to 567—Chapters 50 to 52 within three miles of the facility. Well logs, other available information on well construction, static water levels, and usage shall be obtained. The well inventory shall be based on thorough reviews of state and local collections of well logs and, when possible, interviews or surveys of well owners. Also to be included are maps showing the location of soil borings, other field tests/measurements, and existing wells.

**567—112.18(455B) Evaluation of hydrogeologic conditions.**

**112.18(1)** Based on soil boring and other available information, a description of the site geology shall be made. The description shall include preparation of geologic cross sections of sufficient number and spacing (no fewer than four at every site) to adequately define all areas of the site and of sufficient detail to adequately depict major stratigraphic and structural trends and reflect geologic structural features in relation to groundwater flow. Each pair of cross sections must be as near to perpendicular as possible to adequately portray the site geology.

**112.18(2)** A description of the hydrogeologic unit(s) within the saturated zone shall be made including thickness; depth; hydraulic properties, such as transmissivity and storage coefficient or specific yield; description of the role of each as confining bed, aquifer, or perched saturated zone and its actual or potential use as a water supply aquifer.

**112.18(3)** All groundwater flow paths from the site shall be identified, including both horizontal and vertical components of flow. A contour map of the water table shall be presented showing horizontal flow paths. A potentiometric surface map of the uppermost aquifer showing horizontal flow paths shall also be presented, if different from the water table. Vertical flow paths shall be shown in at least two profiles approximately parallel to the direction of horizontal flow. Vertical flow paths shall be determined by water level measurements from clustered wells at different depths, if possible. An evaluation of vertical groundwater flow based on the hydrologic properties of the various strata encountered at the site, estimated groundwater flow and recharge rates, and known information on hydraulic head shall also be made.

**112.18(4)** The seasonal, temporal and artificially induced variations in groundwater flow shall be evaluated. Temporal variations occur due to natural events, such as rainfall. The addition of tile lines, removal of overburden, or deposition of wastes would constitute artificially induced variations.

**112.18(5)** Surface water flow paths from the site shall be identified on topographic contour maps.

**567—112.19(455B) Monitoring system plan.** A hydrologic monitoring system shall be designed to intercept the groundwater and surface water flow paths from the site. The plan shall include proposed locations and depths for monitoring wells in accordance with monitoring well siting criteria in rule 112.22(455B). Monitoring wells shall be designed in accordance with rule 112.23(455B). The surface water monitoring plan shall include monitoring points on all standing and flowing bodies of water which will receive surface runoff or groundwater discharge from the site. For streams, sampling points upstream and downstream of areas of potential impact from the site shall be selected.

**567—112.20(455B) Sampling protocol.** At a minimum, the sampling protocol must include the following:

1. Order in which monitoring points are to be sampled, all tests and procedures needed at each monitoring point and the order in which these procedures will be carried out, equipment and containers to be used, procedures and precautions for their use; precautions to avoid introducing contaminants from outside sources into monitoring wells or samples; and how equipment must be cleaned between uses;
2. Procedures for evacuating each monitoring well prior to each water quality sampling;
3. Procedures for handling field blanks and other quality assurance samples at the facility and in transit to and from the laboratory;
4. Procedures for field filtration of samples, if required;
5. Procedures for sample preservation;
6. Procedures for sample collection, labeling and handling at the facility and during transport to the laboratory;
7. Procedures for recording field observations and measurements;
8. Procedures for records maintenance and data analysis; and
9. Procedures for sampling surface water monitoring points including exact sampling locations and depths.

**567—112.21(455B) Monitoring well maintenance and performance reevaluation plan.**

**112.21(1)** A monitoring well maintenance and performance reevaluation plan shall be included as part of the hydrologic monitoring system plan. The plan shall ensure that all monitoring points remain reliable.

**112.21(2)** The plan shall provide for the following:

- a. A biennial examination of high and low water levels accompanied by a discussion of the acceptability of well location (vertically and horizontally) and exposure of the screened interval to the atmosphere.
- b. A biennial evaluation of water level conditions in the monitoring wells to ensure that the effects of waste disposal or well operation have not resulted in changes in the hydrologic setting and resultant flow paths.
- c. Annual measurements of well depths to ensure that wells are physically intact and not filling with sediment.
- d. Every five years conduct in-situ permeability tests on monitoring wells to compare test data with those collected originally to determine if well deterioration is occurring.

**567—112.22(455B) Monitoring well siting requirements.**

**112.22(1) Downgradient monitoring wells.** Downgradient monitoring wells must be located to provide a high level of certainty that releases of contaminants from the site can be promptly detected. Downgradient monitoring wells shall be placed along the site perimeter, within 50 feet of the planned liner or waste boundary unless site conditions dictate otherwise, downgradient of the facility with respect to the hydrologic unit being monitored. For those facilities which are long-term, multiphase operations, the department may establish temporary waste boundaries in order to define locations for monitoring wells. The convergence of groundwater paths to minimize the overall length of the downgradient dimension may be taken into consideration in the placement of downgradient monitoring wells.

**112.22(2) Water table wells.** At least three downgradient water table monitoring wells shall be installed at each facility. The maximum spacing between wells shall be 600 feet.

**112.22(3) Uppermost aquifer monitoring wells.** If different from water table monitoring wells, at least three uppermost aquifer monitoring wells shall be installed at each facility. Uppermost aquifer monitoring wells shall be spaced no more than 600 feet apart. If the uppermost aquifer is located more than 50 feet below the water table, this requirement may be relaxed, although at least one downgradient uppermost aquifer monitoring well will be required.

**112.22(4) Other downgradient monitoring wells.** Additional downgradient monitoring wells will be required if the water table and uppermost aquifer monitoring wells do not intercept most vertical flow paths from the site. In such situations, monitoring wells shall be placed at the appropriate depths to intercept the remaining flow paths and shall be spaced no more than 600 feet apart.

**112.22(5) Upgradient monitoring wells.** Upgradient monitoring wells shall not be affected by the site. At least one upgradient monitoring well shall be installed into each stratum being monitored by downgradient monitoring wells. If it is not possible to actually locate a monitoring well upgradient of the site, the well shall be placed as near the site as feasible without being affected by the site.

**112.22(6) Monitoring point identification system.** The various types of monitoring points shall be identified as follows:

a. Monitoring Well	MW#	_____
b. Surface Water Monitoring Point	SW#	_____
c. Piezometer	PZ#	_____

Each monitoring point must have a unique number, regardless of the type of monitoring point, and that number must never change.

### **567—112.23(455B) Monitoring well/soil boring construction standards.**

#### **112.23(1) General considerations.**

a. Contractors involved in construction of monitoring wells and piezometers and soil boring activities shall be registered with the department as required in 567—Chapter 82.

b. To the extent possible, all monitoring well construction materials must not absorb, desorb, react or otherwise alter the screened soil stratum or the quality of the groundwater being sampled. Galvanized metal, glues, welding solvents, pipe thread lubricants and other foreign substances must not be used.

c. All monitoring well construction materials must be protected from contamination prior to installation.

d. A typical cross section of a properly constructed monitoring well is shown in Figure 1 at the end of this chapter.

#### **112.23(2) Casings.**

a. As a minimum, the diameter of the inner casing (see Figure 1) of a monitoring well must be at least 2 inches.

b. Plastic cased wells must be constructed of materials with threaded, nonglued joints which do not allow water infiltration under natural subsurface pressure conditions or when the well is evacuated for sampling.

c. Well casings must provide structural stability to prevent casing collapse during installation as well as drill hole integrity when installed. Flush joint casing is required for small diameter wells installed through hollow stem augers.

d. Well casings must be constructed of inert materials such as polytetrafluorethylene, stainless steel or polyvinyl chloride. The department may approve other casing materials if the owner or operator can demonstrate that the material has a low potential for biasing the water quality parameters of samples.

The department may approve the construction of composite well casings (casings with less inert materials in the unsaturated zone).

#### **112.23(3) Well screens.**

a. Slot size will be based on sieve analysis of the sand and gravel stratum or filter pack. The slot size must hold out 35 percent to 60 percent of the formation material and not less than 90 percent of the filter pack.

b. Slot configuration and open area must permit effective development of the well.

c. Screen length. Maximum screen length shall be 10 feet except for water table wells in which the screen must be of sufficient length to accommodate expected seasonal fluctuations of the water table. The screen shall be placed 5 feet above and below the observed water table, unless local conditions are

known to produce greater fluctuations. Screen length for piezometers shall be 2 feet or less. Multiple screened single-cased wells are prohibited.

**112.23(4) Filter pack.**

a. To prevent other materials from coming in contact with the well screen, the filter pack shall extend 18 inches above and 12 inches below the well screen.

b. Size must be based on sieve analysis of sand and gravel stratum. The filter pack material must be 2.5 to 3 times larger than 50 percent grain size of the zone being monitored.

**112.23(5) Grouting.**

a. The annular space above the filter pack must be sealed with expanding cement or bentonite grout. The vertical dimension of this seal must be a minimum of 3 feet.

b. The annular space between the seal and to just below the frostline must be backfilled with an impervious material such as bentonite grout or expanding cement.

c. The remaining annular space must be sealed with bentonite grout to the ground surface.

d. Grouting materials must be installed from the top of the filter pack up in one continuous operation with a tremie tube.

**112.23(6) Well protection.**

a. Plastic cased wells. A protective metal casing must be installed around the well casing. The inside diameter of the protective metal casing shall be at least 2 inches larger than the outside diameter of the well casing. The protective metal casing shall extend from a minimum of 1 foot below the frostline to slightly above the well casing top. The protective casing should be shortened or omitted if it covers part of the well screen. The protective casing shall be sealed or immobilized with a concrete plug around the outside. The bottom of the concrete plug must extend at least 1 foot below the frost-line. The concrete plug shall be shortened if it covers part of the well screen. The top of the plug shall be extended approximately 3 to 6 inches above the ground surface and shall slope away from the well approximately 3 feet. Soil may be placed above the plug. The inside of the protective casing shall be sealed with a bentonite grout. A vented cap shall be placed on the well casing and a protective locking cap on the metal casing. The lockable cap must be kept locked when the well is not in use.

b. Metal cased wells. The concrete plug shall be extended from at least 1 foot below the frostline to approximately 3 to 6 inches above the ground surface and sloped away from the well approximately 3 feet. Soil may be placed on top of the concrete plug. A vented, locking cap shall be placed on the casing. The lockable cap must be kept locked when the well is not in use. See Figure 1.

c. To protect against accidental damage, a ring of brightly colored posts or other protective devices must be installed around all wells.

**112.23(7) Well drilling.**

a. The owner or operator must ensure that in all phases of drilling, well installation and completion the methods and materials used do not introduce substances that may alter the results of water quality analyses.

b. Well drilling equipment coming into contact with contaminants in the borehole or aboveground must be thoroughly cleaned to avoid spreading contamination to other depths or locations. Contaminated materials or leachate from wells must not be discharged onto the ground surface or into ponds or streams so as to cause environmental harm in the processes of drilling or well development.

c. The owner or operator must ensure that, at a minimum, the following well design and construction log information be retained at the site and a copy of this information be sent to the department:

- (1) Date/time of construction;
- (2) Name and address of the driller;
- (3) Drilling method and drilling fluid used;
- (4) Soil sampling methods;
- (5) Surveyed location ( $\pm 0.5$  ft.);
- (6) Soil and rock classifications;
- (7) Field observations;
- (8) Well name/number;

- (9) Borehole diameter and well casing diameter;
- (10) Well depth ( $\pm 0.1$  ft.);
- (11) Water level measurements;
- (12) Drilling and lithologic logs;
- (13) Casing materials, inside diameter and weight or wall thickness;
- (14) Screen materials;
- (15) Casing and screen joint type;
- (16) Screen slot size/length;
- (17) Filter pack material/size (depths from \_\_\_ to \_\_\_);
- (18) Filter pack volume;
- (19) Filter pack replacement method;
- (20) Sealant materials (depths from \_\_\_ to \_\_\_);
- (21) Sealant volume;
- (22) Sealant placement method;
- (23) Grouting schedule and materials;
- (24) Surface seal design/construction (depths from \_\_\_ to \_\_\_);
- (25) Type of protection well cap;
- (26) Ground surface elevation ( $\pm 0.1$  ft.);
- (27) Well cap elevation ( $\pm 0.01$  ft.);
- (28) Top of casing elevation ( $\pm 0.01$  ft.); and
- (29) Detailed drawing of well (include dimensions).

**112.23(8) Well development.** Prior to use of the monitoring well for water quality monitoring purposes, well development is required to ensure the collection of representative groundwater samples. Procedures used in well development involve using a surge block, bailing or surging by pumping of compressed inert gas to produce a movement of water at alternately high and low velocities into and out of the well screen and gravel pack in order to loosen and remove fine materials. Development of low hydraulic conductivity wells may require the circulation of water down the well casing, out through the screen and gravel pack, and up the open borehole prior to the placement of grout or seal in the annulus. Any additional water used must be of a quality so as not to interfere with future groundwater quality determinations. Following surging, the well is pumped until the water does not contain significant quantities of suspended solids.

**567—112.24(455B) Sealing abandoned wells and boreholes.** Boreholes, piezometers and observation wells not used for groundwater monitoring must be sealed. The location of the abandoned well or borehole shall be documented in writing with reference to the landfill's coordinate system and method of sealing. The document must be retained at the landfill with a copy sent to the department.

**112.24(1) Sealing boreholes.** The borehole shall be filled by extending a tremie tube to the bottom of the hole. Bentonite or expanding cement grout shall be applied through the tube to the bottom of the hole and the tremie tube shall be raised as the hole is filled from the bottom upward. The end of the tremie tube shall be submerged in the grout while filling. The borehole shall be filled from the base of the boring all the way to the ground surface.

**112.24(2) Sealing abandoned monitoring wells.**

*a.* Well is known to be constructed properly with impermeable grout that was installed from the bottom up using a tremie tube. Any existing protective metal casing shall be removed by vertically pulling it off the well. With a tremie tube, the inner well casing shall be filled with an impermeable grout slurry from the bottom to ground surface. After 24 hours, the grout shall be retopped if it has settled below the existing ground surface.

*b.* Well construction is improper or undocumented. An attempt to remove the well casing should be made. If the well casing cannot be removed, the well casing shall either be drilled around with a hollow stem auger of large inside diameter or shall be drilled out with a standard casing bit or solid stem auger with a boring diameter greater than the initial diameter of the hole. Drilling shall be to the maximum depth of the previously drilled boring. The drilling debris shall be cleaned from the interior

of the auger or borehole. The borehole shall be sealed with an impermeable grout using a tremie tube. If the soil conditions permit the sealing to be conducted in a continuous operation, the tremie tube shall be submerged in the grout at all times. After 24 hours, the grout shall be retopped if it has settled below the ground surface.

c. Monitoring wells in future fill areas. The well shall be removed and sealed as described in the procedures for sealing boreholes in 112.24(1).

**567—112.25(455B) Variance from design, construction, and operation standards.** Pursuant to the authority of Iowa Code section 455B.303, a variance from the specific requirements of rules 112.14(455B) to 112.25(455B) may be issued, modified, or denied by the director. The request shall also include any supporting information to be considered by the director in the formulation of a decision.

**567—112.26(455B) General requirements for all sanitary landfills.**

**112.26(1) Plan requirements.** The plans for all sanitary landfills shall include the following:

a. The map and aerial photograph required in subrule 112.13(3) of sufficient scale to show all homes, buildings, lakes, ponds, watercourses, wetlands, dry runs, rock outcroppings, roads and other applicable details including topography and drainage patterns. All wells shall be identified on the map or aerial photograph and a bench mark shall be indicated.

b. A plot drawing in appropriate scale of the site and the immediately adjacent area showing dimensions, topography with appropriate contour intervals, drainage patterns, known existing drainage tiles, locations where any geologic samples were taken, all water wells with their uses, and present and planned pertinent features including but not limited to roads, fencing, and cover stockpiles.

c. Detailed engineering drawing of the site showing all initial and permanent roads, buildings and equipment to be installed; unloading and holding areas; fences and gates; landscaping and screening devices; personnel and maintenance facilities; and sewer and water lines.

d. A liner system that meets the following requirements, depending upon the type of waste material disposed of:

(1) Municipal solid waste landfills (MSWLFs) shall have a composite liner system consisting of two components. The upper component must consist of a minimum 30-mil flexible membrane liner (FML), and the lower component must consist of at least a two-foot layer of compacted soil as specified in subparagraph 112.26(1)“d”(2). FML components consisting of high-density polyethylene (HDPE) shall be at least 60-mil thick. The FML must be installed in direct and uniform contact with the compacted soil component. The requirements for MSWLF facilities under this subparagraph were effective November 13, 1996, and apply to liner and cover systems that had not been installed by that date.

(2) Nonmunicipal solid waste landfills may utilize a liner system meeting 112.26(1)“d”(1) or shall have a soil liner consisting of at least four feet of recompacted soil. The description, source and volume of the material to be used for the landfill liner, including the method of installation, must be provided. The coefficient of permeability must be  $1 \times 10^{-7}$  cm/sec (0.00028 ft/day) or less as determined by appropriate laboratory analysis. The percent of standard or modified proctor density at moisture contents consistent with expected field conditions and corresponding to a measured coefficient of permeability equal to or less than  $1 \times 10^{-7}$  cm/sec shall be determined in the laboratory. The soil shall be placed in lifts not to exceed 8 inches in thickness. A minimum of one field density test shall be performed per lift per acre to verify that the density determined by the laboratory analysis as correlated to permeability has been achieved. Results of field density tests shall be submitted to the department prior to the placement of solid waste.

e. Alternative liner systems.

(1) The department may approve an alternative to the liner system specified in subparagraph 112.26(1)“d”(1) provided that the alternative liner system design has included certification by a professional engineer registered in Iowa stating that the proposed alternative liner system will ensure that the contaminant concentration values listed in federal regulations under 40 CFR 258, Subpart D, Table 1, will not be exceeded in the uppermost aquifer at the designated monitoring points of

compliance as specified by the department. This point of compliance shall be no more than 150 meters from the waste management boundary.

This point of compliance is to be utilized for the purpose of certifying the alternative design only. All operational issues related to monitoring systems, compliance determinations, groundwater assessments, and remedial measures are governed by the appropriate relevant rules in this chapter and 567—Chapter 111. The certification shall be on a form furnished by the department which shall include space for identification of the sources of data utilized; formulas, models, tests or other methods utilized to determine contaminant concentrations at the points of compliance; and all references or guidance documents relied upon for the techniques or methods applied. A copy of all data utilized, formulas, models, tests or other methods utilized to determine contaminant concentrations at the point of compliance shall be placed in the facility's official files prior to operation of the landfill.

(2) An alternative liner system to that required in subparagraph 112.26(1) "d"(2) may be approved by the director if the design of the liner system is equivalent to the soil liner required in subparagraph 112.26(1) "d"(2) in performance, longevity and protection of the groundwater; or, based on the specific type of waste to be disposed of, the design of the liner system offers equivalent protection of the groundwater. Undisturbed soil will not be allowed for use as liner material.

*f.* Diversion and drainage structures designed to prevent ponding, infiltration, inundation, erosion, slope failure and washout from surface runoff due to a 25-year, 24-hour rainfall event, as shown in the department of agriculture and land stewardship publication "Climatology of Iowa Series #2-1980."

*g.* A leachate collection, storage and treatment and disposal system designed to protect the soils, surface water, and groundwater from leachate contamination. This system shall be designed to operate during the active life of the site and during the postclosure period required by Iowa Code section 455B.304.

(1) The design and construction of the system must be in accordance with subrule 112.26(3) and be coordinated with the planned phase development of the site and the timing of leachate generation.

(2) The potential for leachate generation shall be evaluated in determining the design for the facility.

(3) The plan must include proposed quality assurance and quality control testing to be performed during installation and operation of the system. The plan shall include procedures that will be followed during installation of the leachate collection system and during normal landfill operations to ensure the system's integrity and design standards.

*h.* A drawing of the scheme of development including any excavation, trenching, and fill shown progressively with time. The methods to be used to ensure compliance with the scheme and to provide vertical and horizontal controls shall be described.

*i.* Cross-sectional drawings showing progressively with time the original and proposed elevation of excavating, trenching, and fill.

*j.* Evidence that the proposed plan has been reviewed by the local soil conservation district commissioner and that the technical assistance of the soil conservation district will be utilized to facilitate compliance with wind and water soil loss limit regulations provided for in Iowa Code sections 467A.42 to 467A.51.

*k.* An ultimate land use proposal, including intermediate stages, with time schedules indicating the total and complete land use. Final elevations, grades, permanent drainage structures, monitoring or treatment facilities and permanent improvements of the completed landfill shall be included. Any supporting drawings to the ultimate land use proposal shall be in appropriate scale.

*l.* Information describing:

(1) Source, volume, and characteristics of cover material;

(2) Area of site in acres;

(3) Areas to be used for salvaging and the burning of diseased trees.

*m.* A report consisting of information verifying that the portion of the site to be filled is:

(1) So situated as to obviate any predictable lateral movement of significant quantities of leachate from the site to standing or flowing surface water or to shallow aquifers that are in actual use or are deemed to be of potential use as a water resource.

(2) So situated that the base of the proposed site is at least 5 feet above the high water table unless a greater separation is required to ensure that there will be no significant adverse effect on groundwater or surface waters or a lesser separation is unlikely to have a significant adverse effect on groundwater and surface waters.

(3) Outside a flood plain or shoreland, unless proper engineering and sealing of the site will render it acceptable and prior approval of the department under Title V of these rules and, when necessary, the U.S. Corps of Engineers is obtained.

(4) So situated to ensure no adverse effect on any well within 1,000 feet of the site existing at the time of application for the original permit which is being used or could be used without major renovation for human or livestock consumption or at least 1,000 feet from any such well unless hydrologic conditions are such that a greater distance is required to ensure there is no adverse effect on the well.

(5) So situated to ensure no adverse effect on the source of any community water system in existence at the time of application for the original permit within one mile of the site or at least one mile from the source of any community water system in existence at the time of application for the original permit unless hydrologic conditions are such that a greater distance is required to ensure no adverse effect on the water system.

(6) At least 20 feet from the adjacent property line unless there is a written agreement with the owner of the abutting property. The report shall verify that the portion to be filled is at least 50 feet from the adjacent property line. The written agreement shall be filed with the county recorder and shall become a permanent record of the property.

(7) Beyond 500 feet from any existing habitable residence unless there is written agreement with the owner of the residence and the site is screened by natural objects, plantings, fences or by other appropriate means. The residence must be in existence on the date of application for the original permit from the department. The written agreement shall be filed with the county recorder and recorded for abstract of title purposes, and a copy submitted to the department.

*n.* Should conditions in violation of 112.26(1) “*m*”(1), (2), (3), (4), or (5) exist, the original plan shall detail how the site is to be engineered to provide equivalent protection to the water resources. The applicant shall have the burden of showing that equivalent protection will be provided.

*o.* If sewage sludge is to be disposed of at the site, the characteristics of the sludge and the method of disposal shall be described. If sludge is to be utilized for land application, such utilization shall be in conformance with 567—Chapter 67.

*p.* The required soil and hydrogeologic design information specified in rules 112.14(455B) through 112.25(455B).

*q.* Such additional data and information as may be deemed necessary by the director to evaluate a proposed sanitary landfill.

*r.* When a new landfill or lateral expansion is located within 10,000 feet of any airport runway end used by turbojet aircraft or within 5,000 feet of any airport runway end used by only piston-type aircraft, the plan must contain a notice that the landfill’s official files will include the following demonstration: that the site is designed and will be operated so that it does not pose a bird hazard to aircraft. For any new site or a lateral expansion within a five-mile radius of any airport runway end used for turbojet or piston-type aircraft, the plan must show that the Federal Aviation Administration has been notified. For existing landfills located within 10,000 feet of any airport runway end used by turbojet aircraft or within 5,000 feet of any runway end used by only piston-type aircraft, the owner or operator must prepare the demonstration required by this paragraph and notify the director that it has been placed in the facility’s official files.

*s.* When a new landfill or lateral expansion is located within 200 feet of a fault that has had displacement in Holocene time, the plan must contain a notice that the facility’s official files will include the following demonstration: that an alternative setback distance of less than 200 feet will prevent damage to the structural integrity of the site and will be protective of human health and the environment.

*t.* When a new landfill or a lateral expansion is located in seismic impact zones, the plan must contain a notice that the facility’s official files will include the following demonstration: that all

containment structures, including liners, leachate collection systems, and surface water control systems, are designed to resist the maximum horizontal acceleration in the lithified earth material for the site.

*u.* When a new facility or lateral expansion is located in an unstable area, the plan must contain a notice that the facility's official files will include the following demonstration: that engineering measures have been incorporated into the site design to ensure that the integrity of the structural components of the site will not be disrupted. The demonstration must consider the on-site or local soil conditions that may result in significant differential settling, on-site or local geologic or geomorphologic features, and on-site or local human-made features or events (both surface and subsurface). For existing facilities located in an unstable area, the owner or operator must prepare the above demonstration required in this paragraph and notify the director that it has been placed in the facility's official files.

**112.26(2)** *General operating requirements for all sanitary landfills.* All sanitary landfills shall be operated in conformance with this subrule. The plan submitted shall detail how the sanitary landfill will comply with these requirements.

*a.* Solid waste shall be unloaded at the operating area only when an operator is on duty at that area. Solid waste may be deposited in storage containers inside the site under the supervision of an attendant or operator.

*b.* Access to the site shall be restricted and a gate shall be provided at the entrance to the site and shall be kept locked when an attendant or operator is not on duty.

*c.* A copy of the permit, engineering plans and reports shall be kept at the site at all times unless the applicant demonstrates to the department that, on the basis of the characteristics of the waste to be handled at the site and the times of operation of the site, such is unnecessary.

*d.* Sites not open to the public shall have a permanent sign posted at the site entrance specifying:

- (1) Name of operation.
- (2) The site permit number.
- (3) That the site is not open to the public.
- (4) The name and telephone number of the responsible official.

*e.* Solid waste shall not be deposited in such a manner that material or leaching therefrom may cause pollution of groundwater or surface waters.

*f.* Provision shall be made for an all-weather fill area which is accessible for solid waste disposal during all weather conditions under which solid waste is received and disposed of at the site. Such all-weather areas shall be operated at all times in accordance with Iowa Code chapter 455B and these rules.

*g.* Provisions shall be made to have cover material available for winter and wet weather operations.

*h.* Each site shall be graded and provided with drainage facilities to meet the requirements of 112.26(1) "*f*" to minimize flow of surface water onto and into the portion of the site being filled, and to prevent soil erosion and ponding of water.

*i.* The finished surface of the site shall be repaired as required, covered with soil, and seeded with native grasses or other suitable vegetation immediately upon completion or promptly in the spring on areas terminated during winter conditions. If necessary, seeded slopes shall be covered with straw or similar material to prevent erosion.

*j.* Each sanitary landfill shall be staked as necessary and inspected annually, or as otherwise specified in the permit, by a professional engineer registered in Iowa. A brief report by the engineer indicating areas of conformance or nonconformance with the approved plans and specifications shall be submitted to the department by the permit holder within 30 days of the inspections. In specifying alternate inspection frequencies, the department shall consider the types and quantities of waste disposed of, the rate of development of the site, the degree of control over site development inherent in the design and topography of the site and the quality of prior operation.

*k.* If any pockets, seams or layers of sand or other highly permeable material are encountered at the sanitary landfill, the permit holder shall promptly notify the department and shall ensure that a professional engineer registered in Iowa has certified that all sands encountered were totally excavated or sealed off properly or otherwise handled as explicitly provided for in the permit before solid waste is disposed of in that area of the site.

*l.* The total volume of leachate collected for each month shall be recorded, and the elevation of leachate in the landfill shall be provided to the department in accordance with the schedule specified in the permit.

**112.26(3) Hydrologic monitoring system.** The owner or operator of a solid waste disposal facility shall operate and maintain a hydrologic monitoring system which includes a sufficient number of groundwater monitoring wells and surface water monitoring points to determine the impact, if any, that the sanitary disposal project is having on the adjacent water. The hydrologic monitoring systems shall enable early detection of the escape of pollutants from a sanitary landfill.

The hydrologic monitoring system shall be planned, designed and constructed in accordance with the provisions of rules 112.14(455B) through 112.25(455B), and implemented in accordance with the following schedule:

*a.* A hydrologic monitoring system plan shall be submitted to the department for review and approval with any application for a new permit. Installation of the approved system shall be completed prior to the deposition of solid waste into the landfill.

*b.* A hydrologic monitoring system plan shall be submitted with applications for permit renewal, not later than the date of renewal, with completion of installation and operation within one year of approval of the plan. Installation of the plan shall be completed within one year of the date of department approval.

*c.* Upon notice by the department, a hydrologic monitoring system plan may be required to be submitted within six months of such notification, with completion of installation and operation of the approved plan within one year of the date of department approval.

**112.26(4) Hydrologic monitoring system operating requirements.**

*a. Operational sampling requirements.* All sampling shall be conducted in accordance with an approved sampling protocol, components of which are described in rule 112.20(455B).

*b. Groundwater levels.* The elevation of water in each monitoring well shall be measured monthly and recorded to the nearest 0.01 foot. Level measurements must be made before a well is evacuated for sample collection.

*c. Surface water levels.* The water level or flow rate of each surface water body sampled shall be measured and recorded at the time of sample collection.

*d. First-year water sampling.* During the first year of operation of the hydrologic monitoring system, a sample shall be collected quarterly from each groundwater monitoring well and surface water monitoring point. The purpose of this sample is to determine baseline water quality information and enable initial estimation of water quality variability. Each sample shall be analyzed for the following parameters in addition to the parameters listed in paragraph “e” of this subrule and any additional parameter deemed necessary by the department:

- (1) Arsenic, dissolved.
- (2) Barium, dissolved.
- (3) Cadmium, dissolved.
- (4) Chromium, total dissolved.
- (5) Lead, dissolved.
- (6) Mercury, dissolved.
- (7) Magnesium, dissolved.
- (8) Zinc, dissolved.
- (9) Copper, dissolved.
- (10) Benzene.
- (11) Carbon tetrachloride.
- (12) 1,2-Dichloroethane.
- (13) Trichloroethylene.
- (14) 1,1,1-Trichloroethane.
- (15) 1,1-Dichloroethylene.
- (16) Paradichlorobenzene.

*e. Routine semiannual water sampling.* After the first year, each monitoring point must be sampled semiannually as specified in the facility's operation permit and analyzed for the following parameters:

- (1) Chloride.
- (2) Specific conductance (field measurement).
- (3) pH (field measurement).
- (4) Ammonia nitrogen.
- (5) Iron, dissolved.
- (6) Chemical oxygen demand.
- (7) Temperature (field measurement).
- (8) Any additional parameters deemed necessary by the department.

*f. Routine annual water sampling.* One sample per year from each monitoring point collected in a quarter specified in the facility's operation permit must be analyzed for the following parameters:

- (1) Total organic halogen.
- (2) Phenols.
- (3) Any additional parameters deemed necessary by the department.

**112.26(5) Laboratory procedures.** The owner or operator of the solid waste facility must have the groundwater and surface water samples analyzed only by laboratories that are certified by the state of Iowa. Until the department adopts rules regarding certification of laboratories, analyses shall be conducted at a laboratory that certifies to the department that the appropriate analytical procedure is utilized.

All analyses of parameters not covered in the Safe Drinking Water Act (SDWA) must be performed according to methods specified in SW-846 or approved by the United States Environmental Protection Agency. Any analytical method used on non-SDWA parameters deviating from those specified in SW-846 or approved by EPA must be approved by the department.

All analyses must be recorded on forms which, in addition to the analytical results, show the precision of the data set, bias, and limit of detection.

**112.26(6) Analysis of sampling data.** For each parameter analyzed during the first year of operation of the hydrologic monitoring system, as listed in paragraph 112.26(4) "d" above, the mean and standard deviation for each upgradient monitoring well shall be determined using the first year of data. For routine semiannual monitoring parameters, as listed in paragraph 112.26(4) "e" above, mean and standard deviation shall be recalculated annually using all available analytical data. If the analytical results for a downgradient monitoring point do not fall within the control limits of two standard deviations above the mean parameter(s) level in a corresponding upgradient monitoring point, the owner or operator shall submit this information to the department within 30 days of receipt of the analytical results. If the analytical results from an upgradient monitoring point do not fall within two standard deviations of the mean parameter(s) level for that monitoring point, the department shall also be notified within 30 days.

**112.26(7) Additional sampling.** The department will determine if additional sampling is warranted, after receipt of information indicating a possible release as required in subrule 112.26(6) above. The department may require any additional samples to be split and analyzed to determine if the values obtained outside the control limits were the result of laboratory or sampling error. Any additional analytical results shall be submitted to the department by the owner or operator within seven days of receipt.

The department will review the information and determine if additional monitoring or preparation of a groundwater quality assessment plan, in accordance with subrule 112.26(9), is necessary.

**112.26(8) Record keeping and recording.**

*a.* The persons conducting the sampling must record the procedures, measurements, and observations at the time of sampling. The field records must be sufficient to document whether the procedures and requirements specified in the sampling protocol have been followed. The records must also contain the names of the persons conducting the sampling, the time and date each monitoring point

was sampled, and the required field measurement or test result. The owner or operator must submit copies of these field records to the department if requested.

b. The owner or operator shall keep records of analyses and the associated groundwater surface elevations for the active life and postclosure period of the facility. These records shall be kept at the site or in the administrative files of the owner or operator, and shall be available for review by the department upon request in the county in which the landfill is located.

c. The owner or operator shall provide the department with copies of the quarterly monitoring analytical results by the dates specified in the facility's operation permit.

d. An annual report summarizing the effect of the facility on groundwater and surface water quality shall be submitted to the department by November 30 each year. The summary is to be prepared by an engineer registered in the state of Iowa and incorporated in the November semiannual engineer inspection report. The contents of this summary are to include the following items:

- (1) Amounts and kinds of wastes accepted under Special Waste Authorizations.
- (2) A narrative describing the effects of the facility on surrounding surface water and groundwater quality and any changes made or maintenance needed in the monitoring network.
- (3) Graphs showing concentrations versus time for all monitoring parameters for each well for as long as records exist for that parameter. Control limits ( — two standard deviations from the initial background value) must be shown in each graph.
- (4) Results of activities and tests required by the well maintenance and performance reevaluation plan described in rule 112.21(455B) shall be submitted to the department.

**112.26(9) Groundwater quality assessment plan.**

a. If leachate migration occurs, the owner or operator, as required by the department, shall develop and submit for approval a specific plan to conduct a groundwater quality assessment study at the facility to determine the rate of migration and the extent and constituent composition of the leachate release. At a minimum, the assessment monitoring plan must contain the following elements:

- (1) Discussion of the hydrogeologic conditions at the site with an identification of potential contaminant pathways.
- (2) Description of the present detection monitoring system.
- (3) A description of the approach the owner or operator will take to substantiate any contention that the contamination may have been falsely indicated.
- (4) Description of the investigatory approach used to characterize the rate and extent of leachate migration.
- (5) Discussion of the number, location and depth of wells that will be initially installed as well as a strategy for installing more wells in subsequent investigatory phases.
- (6) Information on well design and construction.
- (7) Description of the sampling and analytical program used to obtain and analyze groundwater monitoring data.
- (8) Description of data collection and analysis procedures.
- (9) Schedule for the implementation of each phase of the assessment study.

b. After the plan has been approved by the department, the owner or operator shall implement the plan according to the schedule in the plan.

c. Within 90 days after the activities prescribed in the groundwater assessment plan have been completed, the owner or operator shall submit a written groundwater quality assessment report to the department.

d. If the department determines that no waste or waste constituents from the facility have entered the groundwater, the owner or operator shall reinstate the routine monitoring program.

If the department determines that waste or waste constituents have been released from the facility and have entered the groundwater, the owner or operator shall continue to make the determinations described by the assessment plan and develop a remedial action/mitigation plan to alleviate or reduce contamination to the fullest extent possible.

**112.26(10) Postclosure monitoring requirements.**

a. At least six months prior to closing the site, the owner or operator of a sanitary landfill shall submit a plan to the department for approval detailing a 30-year postclosure monitoring program.

b. The department will review the facility's postclosure monitoring records at five-year intervals to determine if changes in the monitoring frequencies or parameters are required.

c. The commission may adopt rules on a site-specific basis identifying additional monitoring requirements for sanitary landfills for which the postclosure monitoring period is to be extended.

**112.26(11) Leachate control systems for new landfills.** Every new landfill must have a leachate collection, storage, and treatment and discharge system in place prior to accepting waste. This system shall be operated in conformance with the approved design during the active life of the site and during the postclosure period.

a. *Leachate collection system.*

(1) The leachate collection system shall be designed to allow not more than 1 foot of head above the top of the landfill liner. The collection system must include a method for measuring the leachate head in the landfill at the lowest area(s) of the collection system.

(2) The landfill liner must be graded toward the leachate collection pipe at a slope greater than 2 percent, but not to exceed 10 percent. The side slopes of the landfill liner must be less than 25 percent.

(3) A drainage layer must be placed immediately above the landfill liner. This drainage layer shall consist of a minimum of 1 foot of soil with a coefficient of permeability of  $1 \times 10^{-3}$  cm/sec (2.8 ft/day) or greater.

(4) Leachate collection pipe shall be placed in a trench excavated a minimum of 18 inches into the liner. The liner system beneath the trench shall meet the applicable requirements specified under 112.26(1) "d."

(5) Leachate collection pipe shall be surrounded by a gravel protection and drainage layer, and by either a graded filter layer or by a geotextile filter fabric.

(6) The collection pipe must be covered with a filter material to encourage flow and to prevent infiltration of fine-grained materials into the pipe. The collection pipe must be perforated or slotted, of a sufficient diameter to handle the expected flow, but not less than 4 inches in inside diameter; capable of being cleaned throughout the active life of the site and during the postclosure period; chemically resistant to the wastes and the expected leachate; and of sufficient strength to support maximum static and dynamic loads imposed by the overlying wastes, cover materials, and equipment used during the construction and operation of the site. Documentation shall be submitted which includes methods and specifications for cleaning of the pipes, chemical compatibility of the pipes, and calculations and specifications for pipe strength.

(7) The leachate collection system shall be equipped with valves to enable the flow of leachate from the facility to be shut off during periods of maintenance.

(8) The leachate collection system shall be cleaned out once every three years, or more frequently if leachate head or the volume of leachate collected indicates cleanout is necessary. A report of the methods and results of the cleanout shall be submitted at the time of permit renewal.

b. *Leachate storage system.* The leachate storage system must be:

(1) Capable of storing at least seven days' accumulation of leachate based on mathematical simulated volume using average precipitation; and

(2) Constructed of materials which are compatible with the expected leachate; and

(3) Accessible at all times of the year and under all weather conditions.

c. *Leachate treatment and disposal system.*

(1) Leachate shall be treated by such physical, chemical or biological processes as necessary to meet the pretreatment limits, if any, imposed by a treatment agreement between the landfill and a publicly owned treatment works, or by the effluent discharge limitation established by an NPDES permit issued to the landfill.

(2) Leachate recirculation systems shall be designed to minimize detrimental effects to vegetative cover, to minimize erosion and damage to the soil cover, and to promote rapid stabilization of the waste. Such systems shall not be allowed for sites which do not satisfy all of the requirements of 112.26(11).

(3) All leachate treatment systems, except as described in (2) above, shall conform to wastewater treatment design standards as established by the department.

*d. Inspection prior to start-up.* The department shall be notified when the initial construction of the leachate collection, storage, and treatment and discharge system has been completed in order that an inspection may be made to determine that the leachate control system is constructed as designed. Prior to this inspection, construction certification reports from the project engineer must be submitted discussing quality assurance and quality control testing done to ensure that all materials and equipment for the leachate control system have been placed in accordance with the approved engineering plans, reports and specifications. The results of all testing must be included, along with documentation of any failed tests, a description of the procedures used to correct the failures, and results of any retesting performed. This inspection may be incorporated with the inspection required by rule 112.12(455B).

**112.26(12) Leachate control systems for existing landfills.**

*a.* All existing landfills must submit a leachate control plan, as described in paragraph “*b*” below, when any of the following occur:

- (1) At the time of permit renewal;
- (2) When requesting a change in the existing permit for expansion or modification of the waste fill area;
- (3) Within 180 days of notification by the department of the detection of any leachate seep or contamination of the groundwater or surface waters from leachate; or
- (4) At least 180 days prior to landfill closure.

*b.* The design of the leachate control system must include leachate collection, storage, and treatment and disposal.

(1) New fill areas of a landfill that have not previously received waste must address the design standards of subrules 112.26(1) and 112.26(11).

(2) Existing fill areas must address the design standards of subrule 112.26(11), except paragraph “*a*,” subparagraphs (1) to (4). The leachate collection system must be designed to achieve the lowest possible leachate head above the landfill liner and must include a method of measuring the leachate head.

*c.* The leachate control plan must be implemented within one year of department approval of the leachate control plan.

**112.26(13) Closure requirements.** The owner or operator of the landfill must close the site in a manner that minimizes the potential for postclosure release of pollutants to the air, groundwater or surface waters.

*a.* A minimum of two permanent surveying monuments must be installed by a registered land surveyor from which the location and elevation of wastes, containment structures, and monitoring facilities can be determined throughout the postclosure period.

*b.* The final cover of a nonmunicipal solid waste landfill shall consist of:

(1) Not less than 2 feet of compacted soil. The permeability must be  $1 \times 10^{-7}$  cm/sec or less as determined by appropriate laboratory analysis. The percent of standard or modified proctor density at moisture content consistent with expected field conditions and corresponding to a measured coefficient of permeability equal to or less than  $1 \times 10^{-7}$  cm/sec shall be determined in the laboratory. The soil shall be placed in lifts not to exceed 8 inches in thickness. A minimum of one field density test shall be performed per lift per acre to verify that the density determined by the laboratory analysis as correlated to permeability has been achieved. Results of field density tests shall be submitted to the department. The compacted soil shall be keyed into the bottom liner at the waste cell boundary.

(2) Not less than 2 feet of uncompacted soil, containing sufficient organic matter to support vegetation. The thickness of this soil layer must be at least the root depth of the planned vegetative cover to prevent root penetration into the underlying soil layers. This layer shall be placed as soon as possible to prevent desiccation, cracking and freezing of the compacted soil layer described in 112.26(13) “*b*”(1).

(3) A layer of compacted soil, incinerator ash, or similar material permitted by the department may be used to prepare the site for placement of the compacted soil layer described in 112.26(13) “*b*”(1). The use of such material will not serve as a replacement for the compacted soil layer described in 112.26(13) “*b*”(1).

(4) Alternate methods and materials may be permitted if shown to provide equal or superior performance.

c. The final cover for a municipal solid waste landfill shall consist of:

(1) An erosion layer underlaid by an infiltration layer. The infiltration layer must be comprised of a minimum of 18 inches of earthen material that has a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present, or a permeability no greater than  $1 \times 10^{-5}$  cm/sec, whichever is less. The erosion layer must consist of a minimum of 6 inches of earthen material that is capable of sustaining native plant growth.

(2) The department may approve an alternate final cover design that includes an infiltration layer that achieves an equivalent reduction in infiltration as the infiltration layer specified above in subparagraph (1) and an erosion layer that provides equivalent protection from wind and water erosion as the erosion layer specified above in subparagraph (1).

d. Those portions of existing landfills demonstrating placement of final cover in conformance with previously approved plans and specifications or regulations in effect at the time of such approval shall not be required to apply additional cover solely to achieve compliance with 112.26(13) "b" and 112.26(13) "c." Those areas of existing landfills which have not been completed in conformance with the exemptions provided herein prior to January 15, 2003, shall complete all such areas in conformance with an approved closure plan pursuant to subrule 112.13(10) which shall include compliance with the provisions of 112.26(13) "b" and 112.26(13) "c." This paragraph shall not preclude a requirement to provide additional cover to such exempted areas as a result of the conclusions of a groundwater assessment or remedial action plan.

e. The final cover shall be designed and graded to meet the drainage requirements of 112.26(1) "f." The final cover must have a minimum slope of 5 percent, and shall not exceed a slope of 25 percent. Those portions of existing landfills demonstrating placement of final cover in conformance with previously approved plans and specifications shall not be required to reconstruct the cover to meet either the minimum or maximum slope established by this subrule. Those areas which have not been completed by placement of final cover pursuant to this exemption on January 15, 2003, shall be completed in conformance with an approved closure plan pursuant to subrule 112.13(10) and shall meet the minimum and maximum slope requirements stated herein. This subrule shall not preclude a requirement to modify the slope of any portion of the landfill as a result of the conclusion of a groundwater assessment or remedial action plan.

f. The final cover shall be seeded with native grasses or other suitable vegetation as soon as practical upon completion to prevent soil erosion. If seeding must be delayed due to summer or winter conditions, silt fences or other structures shall be used to minimize erosion of the final cover until the next season suitable for planting. The placement of cover in conformance with 112.26(13) "b" and 112.26(13) "c" shall not be delayed due to season and shall be placed as soon as the solid waste has reached its maximum design elevation within the cell. Vegetation type shall be based on density and root depth, nutrient availability, soil thickness, and soil type. Alternatives to vegetative cover may be considered to control erosion and promote runoff.

g. An approved groundwater monitoring system as required by the closure permit and the rules must be in place and operating.

h. An approved leachate collection and treatment system as required by the closure permit and the rules must be in place and operating.

i. An approved landfill gas monitoring and collection or ventilation system as required by the closure permit and the rules must be in place and operating unless determined not to be necessary by the director.

j. An approved financial assurance instrument, adequate to cover costs of all postclosure activities as required by the closure plan and the closure permit, must be provided upon promulgation of the appropriate rules.

k. All requirements of the closure plan, the closure permit, and the rules must be satisfied.

**112.26(14)** *Postclosure requirements for 30 years following closure of the site.* The owner or operator of the site must comply with all postclosure requirements.

*a.* The diversion and drainage system as required in 112.26(1) “*f*” must be maintained to approved specifications to prevent run-on and runoff from eroding or otherwise damaging the final cover.

*b.* The integrity and effectiveness of the final cover must be maintained by making repairs as necessary to correct the effects of settling, subsidence, erosion, or other events. If damage to the compacted soil layer described in 112.26(13) “*b*”(1) occurs, repairs shall be made to correct the damage and return it to its original specifications.

*c.* The vegetative cover shall be reseeded as necessary to maintain good vegetative growth. Any invading vegetation whose root system could damage the compacted soil layer shall be removed or destroyed immediately.

*d.* The groundwater monitoring system shall be operated and maintained and shall comply with all applicable rules and closure permit requirements.

*e.* The leachate collection, removal and treatment systems shall be operated and maintained and shall comply with all applicable rules and closure permit requirements.

*f.* The landfill gas monitoring and collection systems shall be operated and maintained and shall comply with all applicable rules and closure permit requirements.

*g.* Semiannual reports shall be submitted to the department. These reports shall contain information concerning the general conditions at the site, groundwater monitoring results, amount of leachate collected and treated, information concerning the landfill gas monitoring and collection system, and other information as may be required by the closure permit. In addition, locations and elevations of all permanent monuments, required in 112.26(13) “*a*,” shall be determined at least once every three years or more frequently in the event of obvious disturbance of the monument. The reports are due by April 30 and October 31 for the preceding six-month period.

*h.* The permanent surveying monuments required in 112.26(13) “*a*” shall be maintained.

**112.26(15) Control of explosive gases.**

*a.* Owners or operators of all sanitary landfills must ensure that:

(1) The concentration of methane gas generated by the facility does not exceed 25 percent of the lower explosive limit for methane gas in facility structures (excluding gas control or recovery system components); and

(2) The concentration of methane gas does not exceed the lower explosive limit for methane gas at the facility property boundary.

*b.* Owners or operators of all sanitary landfills must monitor quarterly for compliance with paragraph “*a*” of this subrule. An annual report shall be submitted by November 30 summarizing the methane gas monitoring results and any action taken resulting from gas levels exceeding the limits during the previous year.

*c.* If methane gas levels exceeding the limits specified in paragraph “*a*” of this subrule are detected, the owner or operator must:

(1) Immediately take all necessary steps to ensure protection of human health and notify the director;

(2) Within seven days after detection, submit to the director a report stating the methane gas levels detected and a description of the steps taken to protect human health;

(3) Within 60 days of detection, implement a plan for remediation of the methane gas releases and send a copy of the remediation plan to the director. The plan shall describe the nature and extent of the problem and the proposed remedy.

**567—112.27(455B) Operating requirements for all sanitary disposal projects.** Every application for any permit issued by the department shall detail the means by which the applicant will comply with the following operating requirements. All sanitary disposal projects shall be operated in conformance with these requirements.

**112.27(1)** Open burning shall be prohibited except when permitted by 567—Chapter 23. Any burning to be conducted at the site shall be at a location that is separate and distinct from the operating area.

**112.27(2)** Litter shall be confined to the property on which the sanitary disposal project is located. At the conclusion of each day of operation, any litter strewn beyond the confines of the operating area shall be collected and stored in covered leakproof containers or properly disposed of.

**112.27(3)** Scavenging shall be prohibited. Any salvaging to be conducted must be described in the permit application, and all salvaged materials must be stored and removed from the sanitary disposal project site in conformance with the permit conditions.

**112.27(4)** Effective means shall be taken to control flies, other insects, rodents and other vermin.

**112.27(5)** Equipment designated in the plans and specifications or equivalent equipment shall be used to operate the site at all times.

**112.27(6)** The major internal roads shall be of all-weather construction and maintained in good condition. Dust shall be controlled on internal roads.

**112.27(7)** Sites open to the public shall have a permanent sign posted at the site entrance specifying:

a. Name of the operation.

b. The site permit number.

c. The hours and days the site is open to the public.

d. The categories of waste which will be accepted for disposal or, as an alternative, the identification of the categories of waste which are prohibited.

e. Telephone number of official responsible for the operation.

**112.27(8)** Free liquids or waste containing free liquids. No free liquids or waste containing free liquids shall be disposed of in a sanitary landfill.

**112.27(9)** General closure requirements.

a. The owner or operator shall notify the department in writing at least 180 days prior to closure of the facility or suspension of operations.

b. Notice of closure shall be posted at the facility at least 180 days prior to closure indicating the date of closure and alternative solid waste management facilities. Notice of closure shall also be published at least 180 days prior to closure in a newspaper of local circulation. This notice shall include the date of closure and alternative solid waste management facilities.

c. Implementation of the closure/postclosure plan shall be completed within 90 days of the closure of the facility. The owner and an engineer registered in Iowa shall certify that the closure/postclosure plan has been implemented in compliance with the rules, the closure/postclosure plan and the permit.

d. Upon completion of closure activities, the following documentation shall be submitted: as-built plans showing changes from the original design plans; test results indicating compliance with final cover as applicable, waste removal, equipment decontamination; a copy of the notation filed with the county recorder; and other forms of documentation as required.

**567—112.28(455B) Specific requirements for a sanitary landfill proposing to accept no solid waste other than municipal sewage sludge.**

**112.28(1) Plan requirements.** The plans for sanitary landfills proposing to accept only sewage sludge shall include information required by rules 112.2(455B) through 112.13(455B), 112.27(455B), 112.29(455B), and 112.30(455B) and subrule 112.26(1) and the following:

a. The source of the sludge, a description of the process(es) which produce the sludge and a description of the sources and characteristics of the treatment plant influent.

b. Detailed analysis of the sludge to be disposed of at the site including:

(1) Total residue;

(2) Volatile residue;

(3) pH;

(4) Total nitrogen;<sup>1</sup>

(5) Ammonia nitrogen (NH<sub>3</sub>-N);<sup>1</sup>

(6) Nitrate-nitrogen (NO<sub>3</sub>-N);<sup>1</sup>

(7) Total phosphorous;<sup>1</sup>

(8) Potassium;<sup>1</sup>

(9) The following metals<sup>1</sup>: arsenic (As), cadmium (Cd), chromium (Cr), copper (Cu), lead (Pb), mercury (Hg), molybdenum (Mo), nickel (Ni), selenium (Se), and zinc (Zn); and

(10) Such other tests as are determined by the department to be necessary to establish the constituents and stability of the sludge.

The collection and preservation of samples shall be done by the highest grade operator at the plant producing the sludge, or the operator's designee. The collection and preservation of samples shall be done in a manner and frequency approved by the director and intended to ensure that the sampling results are representative of the sludge being disposed.

Analyses shall be performed at a laboratory approved by the state hygienic laboratory. All analyses shall be performed in accordance with the methods described in "Methods for Chemical Analysis of Water and Wastes," 1974 (U.S. EPA) or "Standard Methods for the Examination of Water and Waste Water," 14th Edition, 1976. Alternate methods may be substituted only if acceptable to the state hygienic laboratory and approved by the department.

*c.* The detailed description of the disposal process required in subrule 112.13(6) shall include:

(1) Method of operation;

(2) Daily and annual loading of the sludge and the significant components of the sludge as identified in the analyses of 112.28(1) "b"; and

(3) Times of use (including durations and frequencies).

*d.* Information indicating how the operating requirements of rule 112.29(455B) and subrules 112.26(2) and 112.28(2) shall be met.

*e.* Engineering plans and reports detailing how the site will be designed, constructed, and operated to protect groundwater and surface water resources.

*f.* Proof of the applicant's ownership of the site or legal entitlement to use the site for the disposal of solid waste for the term of the permit for which application is made.

*g.* Such other information as is required by the director to determine the adequacy of the applicant's plan.

**112.28(2) Operating requirements.** Sanitary landfills accepting only sewage sludge shall be operated in conformance with rules 112.2(455B) through 112.13(455B), 112.27(455B), 112.29(455B), and 112.30(455B), subrule 112.26(2), and this subrule. Compliance with the surface disposal provision of federal regulations at 40 CFR Part 503, Subpart C, as adopted on February 19, 1993, is also required. The plan submitted shall detail how the sanitary landfill will comply with these requirements.

*a.* Sludge at the site shall be covered after each day of operation with a layer of at least 1 foot of earth. In no event shall sludge be exposed for more than 24 hours.

*b.* At least 2 feet of intermediate cover of earth shall be applied to any area of the site which will not be utilized for further disposal of sludge for more than one week. The cover shall be graded to allow surface water runoff without creating erosion or pollution problems.

*c.* The final cover shall be consistent with the proposed land use, but in no event shall it be less than 2 feet.

*d.* Analyses of the sludge shall be performed and submitted to the department on a stipulated schedule and shall include such tests as required to confirm the constituents of the sludge.

<sup>1</sup> on a dry weight basis

**567—112.29(455B) Operator certification.** Sanitary landfill operators and solid waste incinerator operators shall be trained, tested, and certified by a department-approved certification program.

**112.29(1)** A sanitary landfill operator or a solid waste incinerator operator shall be on duty during all hours of operation of a sanitary landfill or solid waste incinerator, consistent with the respective certification.

**112.29(2)** To become a certified operator, an individual shall complete a basic operator training course that has been approved by the department or an alternative, equivalent training approved by the

department and shall pass a departmental examination as specified by this rule. An operator certified by another state may have reciprocity subject to approval by the department.

**112.29(3)** A sanitary landfill operator certification or solid waste incinerator operator certification is valid until June 30 of the following even-numbered year.

**112.29(4)** Basic operator training course.

*a.* The required basic operator training course for a certified sanitary landfill operator will have at least 25 contact hours and will address the following areas, at a minimum:

- (1) Description of types of wastes;
- (2) Interpreting and using engineering plans;
- (3) Construction surveying techniques;
- (4) Waste decomposition processes;
- (5) Geology and hydrology;
- (6) Landfill design;
- (7) Landfill operation;
- (8) Environmental monitoring;
- (9) Applicable laws and regulations;
- (10) Permitting processes;
- (11) Leachate control and treatment.

*b.* The required basic operator training course for a certified solid waste incinerator operator will have at least 12 contact hours and will address the following areas, at a minimum:

- (1) Description of types of wastes;
- (2) Incinerator design;
- (3) Interpreting and using engineering plans;
- (4) Incinerator operations;
- (5) Environmental monitoring;
- (6) Applicable laws and regulations;
- (7) Permitting processes;
- (8) Incinerator maintenance;
- (9) Ash and residue disposal.

**112.29(5)** Alternate basic operator training must be approved by the department. It shall be the applicant's responsibility to submit any documentation the department may require to evaluate the equivalency of alternate training.

**112.29(6)** Fees.

*a.* The examination fee for each examination shall be \$20.

*b.* The initial certification fee shall be \$8 for each one-half year of a two-year period from the date of issuance to June 30 of the next even-numbered year.

*c.* The certification renewal shall be \$24.

*d.* The penalty fee shall be \$12.

**112.29(7)** Examinations.

*a.* The operator certification examinations will be based on the basic operator training course curriculum.

*b.* All persons wishing to take the examination required to become a certified operator of a sanitary landfill or a solid waste incinerator shall complete the Operator Certification Examination Application, Form 542-1354. A listing of dates and locations of examinations is available from the department upon request. The application form requires the applicant to indicate the basic operator training course taken. Evidence of training course completion must be submitted with the application for certification. The completed application and the application fee shall be sent to the director and addressed to the central office in Des Moines. Application for examination must be received by the department at least 30 days prior to the date of examination.

*c.* A properly completed application for examination will be valid for one year from the date the application is approved by the department.

*d.* Upon failure of the first examination, the applicant may be reexamined at the next scheduled examination. Upon failure of the second examination, the applicant shall be required to wait a period of 180 days between each subsequent examination.

*e.* Upon each reexamination when a valid application is on file, the applicant shall submit to the department the examination fee at least ten days prior to the date of examination.

*f.* Failure to successfully complete the examination within one year from the date of approval of the application shall invalidate the application.

*g.* Completed examinations will be retained by the director for a period of one year after which they will be destroyed.

*h.* Oral examinations may be given at the discretion of the department.

**112.29(8) Certification.**

*a.* All operators who passed the operator certification examination by July 1, 1991, are exempt from taking the required operator training course. Beginning July 1, 1991, all operators will be required to take the basic operator training course and pass the examination in order to become certified.

*b.* Application for certification must be received by the department within 30 days of the date the applicant receives notification of successful completion of the examination. All applications for certification shall be made on a form provided by the department and shall be accompanied by the certification fee.

*c.* Applications for certification by examination which are received more than 30 days but less than 60 days after notification of successful completion of the examination shall be accompanied by the certification fee and the penalty fee. Applicants who do not apply for certification within 60 days of notice of successful completion of the examination will not be certified on the basis of that examination.

*d.* For applicants who have been certified under other state mandatory certification programs, the equivalency of which has been previously reviewed and accepted by the department, certification without examination will be recommended.

*e.* For applicants who have been certified under voluntary certification programs in other states, certification will be considered. The applicant must have successfully completed a basic operator training course and an examination generally equivalent to the Iowa examination. The director may require the applicant to successfully complete the Iowa examination.

*f.* Applicants who seek Iowa certification pursuant to 112.29(8)“*d*” or “*e*” shall submit an application for examination accompanied by a letter requesting certification pursuant to those paragraphs. Application for certification pursuant to those paragraphs shall be received by the director in accordance with 112.29(8)“*a*” and 112.29(8)“*b*.”

**112.29(9) Renewals.** All certificates shall expire every two years, on even-numbered years, and must be renewed every two years to maintain certification. Application and fee are due prior to expiration of certification.

*a.* Late application for renewal of a certificate may be made provided that such late application shall be received by the director or postmarked within 30 days of the expiration of the certificate. Such late application shall be on forms provided by the department and accompanied by the penalty fee and the certification renewal fee.

*b.* If a certificate holder fails to apply for renewal within 30 days following expiration of the certificate, the right to renew the certificate automatically terminates. Certification may be allowed at any time following such termination, provided that the applicant successfully completes an examination. The applicant must then apply for certification in accordance with subrule 112.29(8).

*c.* An operator may not continue to operate a sanitary landfill or solid waste incinerator after expiration of a certificate without renewal thereof.

*d.* Continuing education must be earned during the two-year certification period. All certified operators must earn ten contact hours per certificate during each two-year period. The two-year period will begin upon issuance of certification.

*e.* Only those operators fulfilling the continuing education requirements before the end of each two-year period will be allowed to renew their certificates. The certificates of operators not fulfilling the continuing education requirements shall be void upon expiration, unless an extension is granted.

*f.* All activities for which continuing education credit will be granted must be related to the subject matter of the particular certificate to which the credit is being applied.

*g.* The director may, in individual cases involving hardship or extenuating circumstances, grant an extension of time of up to three months within which the applicant may fulfill the minimum continuing education requirements. Hardship or extenuating circumstances include documented health-related confinement or other circumstances beyond the control of the certified operator which prevent attendance at the required activities. All requests for extensions must be made 60 days prior to expiration of certification.

*h.* The certified operator is responsible for notifying the department of the continuing education credit earned during the period. The continuing education credits earned during the period shall be shown on the application for renewal.

*i.* A certified operator shall be deemed to have complied with the continuing education requirements of this rule during periods that the operator serves honorably on active duty in the military service; or for periods that the operator is a resident of another state or district having a continuing education requirement for operators and meets all the requirements of that state or district for practice there; or for periods that the person is a government employee working as an operator and is assigned to duty outside of the United States; or for other periods of active practice and absence from the state as approved by the department.

**112.29(10) Discipline of certified operators.**

*a.* Disciplinary action may be taken on any of the following grounds:

(1) Failure to use reasonable care or judgment or to apply knowledge or ability in performing the duties of a certified operator. Duties of certified operators include compliance with rules and permit conditions applicable to landfill or incinerator operation.

(2) Failure to submit required records of operation or other reports required under applicable permits or rules of the department, including failure to submit complete records or reports.

(3) Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

*b.* Disciplinary sanctions allowable are:

(1) Revocation of a certificate.

(2) Probation under specified conditions relevant to the specific grounds for disciplinary action. Additional education or training or reexamination may be required as a condition of probation.

*c.* The procedure for discipline is as follows:

(1) The director shall initiate disciplinary action. The commission may direct that the director investigate any alleged factual situation that may be grounds for disciplinary action under 112.29(10) "a" and report the results of the investigation to the commission.

(2) A disciplinary action may be prosecuted by the director.

(3) Written notice shall be given to an operator against whom disciplinary action is being considered. The notice shall state the informal and formal procedures available for determining the matter. The operator shall be given 20 days to present any relevant facts and indicate the operator's position in the matter and to indicate whether informal resolution of the matter may be reached.

(4) An operator who receives notice shall communicate orally, in writing, or in person with the director, and efforts shall be made to clarify the respective positions of the operator and director.

(5) The applicant's failure to communicate facts and position relevant to the matter by the required date may be considered when determining appropriate disciplinary action.

(6) If agreement as to appropriate disciplinary sanction, if any, can be reached with the operator and the commission concurs, a written stipulation and settlement between the department and the operator shall be entered. The stipulation and settlement shall recite the basic facts and violations alleged, any facts brought forth by the operator, and the reasons for the particular sanctions imposed.

(7) If an agreement as to appropriate disciplinary action, if any, cannot be reached, the director may initiate formal hearing procedures. Notice and formal hearing shall be in accordance with 567—Chapter 7 related to contested and certain other cases pertaining to license discipline.

**112.29(11)** Revocation of certificates. Upon revocation of a certificate, application for certification may be allowed after two years from the date of revocation. Any such applicant must successfully complete an examination and be certified in the same manner as a new applicant.

**112.29(12)** A temporary operator of a sanitary landfill or solid waste incinerator may be designated for a period of six months when an existing certified operator is no longer available to the facility. The facility must make application to the department, explain why a temporary certification is needed, identify the temporary operator, and identify the efforts which will be made to obtain a certified operator. A temporary operator designation shall not be approved for greater than a six-month period except for extenuating circumstances. In any event, not more than one six-month extension to the temporary operator designation may be granted. Approval of a temporary operator designation may be rescinded for cause as set forth in 112.29(10).

**567—112.30(455B) Emergency response and remedial action plans.**

**112.30(1)** *Purpose.* The purpose of this rule is to implement Iowa Code section 455B.306(6) “d” by providing the criteria for developing a detailed emergency response and remedial action plan (ERRAP) for permitted sanitary disposal projects.

**112.30(2)** *Applicability.* The requirements of this rule apply to the owners or operators of all sanitary landfills.

**112.30(3)** *Submittal requirements.*

*a.* The owner or operator of facilities that are subject to this rule and have been permitted prior to October 24, 2001, shall submit a complete detailed ERRAP that meets the requirements set forth in this rule no later than December 31, 2001.

*b.* Applications for a new permit after October 24, 2001, shall incorporate a complete detailed ERRAP that meets the requirements set forth in this rule.

*c.* An updated ERRAP that meets the requirements of this rule shall be submitted at the time of each permit renewal or permit reissuance application that is due after December 31, 2001.

*d.* An updated ERRAP shall be included with any request for permit modification to incorporate a facility expansion or significant changes in facility operation that require modification of the currently approved ERRAP.

*e.* Facilities that submitted an ERRAP meeting the requirements defined under Iowa Code section 455B.306(6) “d” by May 1, 2001, including regional collection centers that, prior to this date, have met the contingency plan submittal requirement described in 567—Chapter 211, and were approved by the department prior to October 24, 2001, are not required to submit an updated ERRAP that meets the requirements of this rule until the next permit renewal application due date after December 31, 2001.

*f.* Three sets of ERRAP documents shall be submitted for department approval.

**112.30(4)** *Content.* The content of ERRAP documents shall be concise and readily usable as a reference manual by facility managers and operators during emergency conditions. The ERRAP document content shall address at least the following primary issues in detail, unless project conditions render the specific issue as not applicable. The rationale for exclusion of any issue areas that are determined not to be applicable must be provided in either the body of the plan or as a supplement to facilitate department review. Additional emergency response and remedial action plan requirements unique to the facility shall be addressed, as applicable.

*a. Facility information.*

- (1) Permitted agency.
- (2) DNR permit number.
- (3) Facility description.
- (4) Responsible official and contact information.
- (5) Project location.
- (6) Site and environs map.

*b. Regulatory requirements.*

- (1) Iowa Code section 455B.306(6) “d” criteria citation.
- (2) Reference to provisions of the permit.

- c. Emergency conditions—response activities—remedial action.*
- (1) Failure of utilities.
    1. Short-term (48 hours or less).
    2. Long-term (over 48 hours).
  - (2) Weather-related events.
    1. Tornado.
    2. Windstorms.
    3. Intense rainstorms and erosion.
    4. Lightning strikes.
    5. Flooding.
    6. Event and postevent conditions.
  - (3) Fire and explosions.
    1. Waste materials.
    2. Buildings and site.
    3. Equipment.
    4. Fuels.
    5. Utilities.
    6. Facilities.
    7. Working area.
    8. Hot loads.
    9. Waste gases.
    10. Evacuation.
  - (4) Regulated waste spills and releases.
    1. Waste materials.
    2. Leachate.
    3. Waste gases.
    4. Waste stockpiles and storage facilities.
    5. Waste transport systems.
    6. Litter and airborne particulates.
    7. Site drainage systems.
    8. Off-site releases.
  - (5) Hazardous material spills and releases.
    1. Load check control points.
    2. Mixed waste deliveries.
    3. Fuels.
    4. Waste gases.
    5. Site drainage systems.
    6. Off-site releases.
  - (6) Mass movement of land and waste.
    1. Earthquakes.
    2. Slope failure.
    3. Waste shifts.
    4. Waste subsidence.
  - (7) Emergency and release notifications and reporting.
    1. Federal agencies.
    2. State agencies.
    3. County and city agencies.
    4. News media.
    5. Public and private facilities with special populations within five miles.
    6. Emergency response agencies and contact information.
    7. Reporting requirements and forms.
  - (8) Emergency waste management procedures.

1. Communications.
2. Temporary discontinuation of services—short- and long-term.
3. Facilities access and rerouting.
4. Waste acceptance.
5. Wastes in process.
- (9) Primary emergency equipment inventory.
  1. Major equipment.
  2. Fire hydrants and water sources.
  3. Off-site equipment resources.
- (10) Emergency aid.
  1. Responder contacts.
  2. Medical services.
  3. Contracts and agreements.
- (11) ERRAP training requirements.
  1. Training providers.
  2. Employee orientation.
  3. Annual training updates.
  4. Training completion and record keeping.
- (12) Reference tables, figures and maps.

**567—112.31(455B) Biosolids monofill sanitary landfill financial assurance.**

**112.31(1) Purpose.** The purpose of this rule is to implement Iowa Code sections 455B.304(8) and 455B.306(9) by providing the criteria for establishing financial assurance for closure, postclosure and corrective action at biosolids monofill sanitary landfills (BMF landfills).

**112.31(2) Applicability.** The requirements of this rule apply to all owners and operators of BMF landfills accepting waste as of October 31, 2007, except owners or operators that are state or federal government entities whose debts and liabilities are the debts and liabilities of a state or the United States.

**112.31(3) Financial assurance for closure.** The owner or operator of a BMF landfill must establish financial assurance for closure in accordance with the criteria in this rule. The owner or operator must provide continuous coverage for closure until released from this requirement by demonstrating compliance with subrules 112.26(13) and 112.13(10). Proof of compliance pursuant to paragraphs 112.31(3) “a” to “e” must be submitted by the owner or operator yearly by April 1 and approved by the department.

*a.* The owner or operator shall submit the current version of department Form 542-8090, Sanitary Landfill Financial Assurance Report Form, which contains, but is not limited to, the amount of the financial assurance, the annual financial statement required by Iowa Code sections 455B.306(9) “e” and 455B.306(7) “c,” and the current balances of the closure and postclosure accounts at the time of submittal as required by Iowa Code section 455B.306(9) “b.”

*b.* The owner or operator shall submit a copy of the financial assurance instruments or the documents establishing the financial assurance instruments in an amount equal to or greater than the amount specified in subrule 112.31(9). Documentation for the mechanism(s) used to demonstrate financial assurance shall contain, at a minimum, the items required to be submitted as specified in paragraphs 112.31(6) “a” to “i.”

*c.* The owner or operator shall submit a detailed written estimate, in current dollars, certified by an Iowa-licensed professional engineer, of the cost of hiring a third party to close the BMF landfill in accordance with the closure plan as required by subrules 112.26(13) and 112.13(10). Such estimate must be available at any time during the active life of the landfill.

(1) The cost estimate must equal the cost of closing the BMF landfill at any time during the permitted life of the facility when the extent and manner of its operation would make closure the most expensive.

(2) The costs contained in the third-party estimate for closure must be accurate and reasonable when compared to the cost estimates used by other similarly situated landfills in Iowa.

(3) During the active life of the BMF landfill, the owner or operator must annually adjust the closure cost estimate for inflation.

(4) The owner or operator must, annually or at the time of application for a permit amendment that increases closure costs, whichever occurs first, increase the closure cost estimate and the amount of financial assurance provided if changes to the closure plan or BMF landfill conditions increase the maximum cost of closure at any time during the remaining active life of the facility.

(5) The owner or operator may reduce the amount of financial assurance for closure if the most recent estimate of the maximum cost of closure at any time during the active life of the facility is less than the amount of financial assurance currently provided. Prior to the reduction, the owner or operator must submit to the department the justification for the reduction of the closure cost estimate and the updated documentation required by paragraphs 112.31(3) "a" to "e" and receive department approval for the reduction. Approval or denial shall be issued within 30 days of receipt of the reduction request.

(6) The third-party estimate submitted to the department must include the site area subject to closure and account for at least the following factors determined by the department to be minimal necessary costs for closure:

1. Closure and postclosure plan document revisions;
2. Site preparation, earthwork and final grading;
3. Drainage control culverts, piping and structures;
4. Erosion control structures, sediment ponds and terraces;
5. Final cap construction;
6. Cap vegetation soil placement;
7. Cap seeding, mulching and fertilizing;
8. Monitoring well, piezometer and gas control modifications;
9. Leachate system cleanout and extraction well modifications;
10. Monitoring well installations and abandonments;
11. Facility modifications to effect closed status;
12. Engineering and technical services;
13. Legal, financial and administrative services; and
14. Closure compliance certifications and documentation.

*d.* For publicly owned BMF landfills, the owner or operator shall submit to the department a copy of the owner's or operator's most recent annual audit report in the form prescribed by the office of the auditor of the state of Iowa.

*e.* Privately held BMF landfills shall submit an affidavit from the owner or operator indicating that a yearly review has been performed by a certified public accountant to determine whether the privately owned landfill is in compliance with this rule. The affidavit shall state the name of the certified public accountant, the dates and conclusions of the review, and the steps taken to rectify any deficiencies identified by the accountant.

**112.31(4) *Financial assurance for postclosure.*** The owner or operator of a BMF landfill must establish financial assurance for the costs of postclosure in accordance with the criteria in this rule. The owner or operator must provide continuous coverage for postclosure until released from this requirement by demonstrating compliance with the postclosure plan and the closure permit. Proof of compliance pursuant to paragraphs 112.31(4) "a" to "e" must be submitted by the owner or operator yearly by April 1 and must be approved by the department.

*a.* The owner or operator shall submit the current version of department Form 542-8090, Sanitary Landfill Financial Assurance Report Form, which contains, but is not limited to, the amount of the financial assurance, the annual financial statement required by Iowa Code sections 455B.306(9) "e" and 455B.306(7) "c," and the current balances of the closure and postclosure accounts required by Iowa Code section 455B.306(9) "b."

*b.* The owner or operator shall submit a copy of the documents establishing a financial assurance instrument in an amount equal to or greater than the amount specified in subrule 112.31(9). Documentation for the mechanism(s) used to demonstrate financial assurance shall contain, at a minimum, the items required to be submitted as specified in paragraphs 112.31(6) "a" to "i."

c. The owner or operator shall submit a detailed written estimate, in current dollars, certified by an Iowa-licensed professional engineer, of the cost of hiring a third party to conduct postclosure for the BMF landfill in compliance with the postclosure plan developed pursuant to subrules 112.26(14) and 112.13(10). The cost estimate must account for the total cost of conducting postclosure, as described in the plan, for the entire postclosure period.

(1) The cost estimate for postclosure must be based on the most expensive costs of postclosure during the entire postclosure period.

(2) The costs contained in the third-party estimate of postclosure must be accurate and reasonable when compared to the cost estimates used by other similarly situated landfills in Iowa.

(3) During the active life of the BMF landfill and during the postclosure period, the owner or operator must annually adjust the postclosure cost estimate for inflation.

(4) The owner or operator must, annually or at the time of application for a permit amendment that increases postclosure costs, whichever occurs first, increase the estimate and the amount of financial assurance provided if changes in the postclosure plan or BMF landfill conditions increase the maximum cost of postclosure.

(5) The owner or operator may reduce the amount of financial assurance for postclosure if the most recent estimate of the maximum cost of postclosure beginning at any time during the active life of the facility is less than the amount of financial assurance currently provided. Prior to the reduction, the owner or operator must submit to the department the justification for the reduction of the postclosure cost estimate and the updated documentation required by paragraphs 112.31(4)“a” to “e” and must receive department approval for the reduction. Approval or denial shall be issued within 30 days of receipt of the reduction request.

(6) The third-party estimate submitted to the department must include the site area subject to postclosure and account for at least the following factors determined by the department to be minimal necessary costs for postclosure:

1. General site facilities, access roads and fencing maintenance;
2. Cap and vegetative cover maintenance;
3. Drainage and erosion control systems maintenance;
4. Groundwater to waste separation systems maintenance;
5. Gas control systems maintenance;
6. Gas control systems monitoring and reports;
7. Groundwater and surface water monitoring systems maintenance;
8. Groundwater and surface water quality monitoring and reports;
9. Groundwater monitoring systems performance evaluations and reports;
10. Leachate control systems maintenance;
11. Leachate management, transportation and disposal;
12. Leachate control systems performance evaluations and reports;
13. Facility inspections and reports;
14. Engineering and technical services;
15. Legal, financial and administrative services; and
16. Financial assurance, accounting, audits and reports.

d. For publicly owned BMF landfills, the owner or operator shall submit to the department a copy of the owner’s or operator’s most recent annual audit report in the form prescribed by the office of the auditor of the state of Iowa.

e. Privately held BMF landfills shall submit an affidavit from the owner or operator indicating that a yearly review has been performed by a certified public accountant to determine whether the privately owned landfill is in compliance with this rule. The affidavit shall state the name of the certified public accountant, the dates and conclusions of the review, and the steps taken to rectify any deficiencies identified by the accountant.

**112.31(5) *Financial assurance for corrective action.***

a. An owner or operator required to undertake corrective action must have a detailed written estimate, in current dollars, prepared by an Iowa-licensed professional engineer, of the cost of hiring

a third party to perform the required corrective action. The estimate must account for the total costs of the activities described in the approved corrective action plan for the entire corrective action period. The owner or operator must submit to the department the estimate and financial assurance documentation within 30 days of department approval of the corrective action plan.

(1) The owner or operator must annually adjust the estimate for inflation until the corrective action plan is completed.

(2) The owner or operator must increase the cost estimate and the amount of financial assurance provided if changes in the corrective action plan or BMF landfill conditions increase the maximum cost of corrective action.

(3) The owner or operator may reduce the amount of the cost estimate and the amount of financial assurance provided if the estimate exceeds the maximum remaining costs of the remaining corrective action. The owner or operator must submit to the department the justification for the reduction of the cost estimate and documentation of financial assurance.

*b.* The owner or operator of a BMF landfill required to undertake a corrective action plan must establish financial assurance for the most recent corrective action plan by one of the mechanisms prescribed in subrule 112.31(6). The owner or operator must provide continuous coverage for corrective action until released from financial assurance requirements by demonstrating compliance with the following:

(1) Upon completion of the remedy, the owner or operator must submit to the department a certification of compliance with the approved corrective action plan. The certification must be signed by the owner or operator and by an Iowa-licensed professional engineer.

(2) Upon department approval of completion of the corrective action remedy, the owner or operator shall be released from the requirements for financial assurance for corrective action.

**112.31(6) Allowable financial assurance mechanisms.** The mechanisms used to demonstrate financial assurance as required by Iowa Code section 455B.306(9)“a” must ensure that the funds necessary to meet the costs of closure, postclosure, and corrective action for known releases will be available whenever the funds are needed. Owners or operators must choose from options in paragraphs 112.31(6)“a” to “i.”

*a. Trust fund.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by establishing a trust fund which conforms to the requirements of this subrule. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. A copy of the trust agreement must be submitted pursuant to subrules 112.31(3), 112.31(4), and 112.31(5) and placed in the facility’s official files.

(2) Payments into the trust fund must be made annually by the owner or operator over ten years or over the remaining life of the BMF landfill, whichever is shorter, in the case of a trust fund for closure or postclosure; or over one-half of the estimated length of the corrective action plan in the case of a response to a known release. This period is referred to as the pay-in period.

(3) For a trust fund used to demonstrate financial assurance for closure and postclosure, the first payment into the fund must be at least equal to the amount specified in subrule 112.31(9) for closure or postclosure divided by the number of years in the pay-in period as defined in subparagraph 112.31(6)“a”(2). The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{CE} - \text{CB}}{\text{Y}}$$

where CE is the amount specified in 112.31(9) for closure or postclosure (updated for inflation or other changes), CB is the current balance of the trust fund, and Y is the number of years remaining in the pay-in period.

(4) For a trust fund used to demonstrate financial assurance for corrective action, the first payment into the trust fund must be at least equal to one-half of the current cost estimate for corrective action

divided by the number of years in the corrective action pay-in period as defined in subparagraph 112.31(6)“a”(2). The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{RB} - \text{CV}}{\text{Y}}$$

where RB is the most recent estimate of the required trust fund balance for corrective action, which is the total cost that will be incurred during the second half of the corrective action period, CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

(5) The initial payment into the trust fund must be made before the initial receipt of waste or within 30 days of close of the first fiscal year that begins after October 31, 2007, in the case of existing facilities; before the cancellation of an alternative financial assurance mechanism in the case of closure and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department.

(6) The owner or operator or another person authorized to conduct closure, postclosure, or corrective action activities may request reimbursement from the trustee for these expenditures, including partial closure, as the expenditures are incurred. Requests for reimbursement will be granted by the trustee only if sufficient funds are remaining in the trust fund to cover the remaining costs of closure, postclosure, or corrective action and if justification and documentation of the costs are placed in the operating record. The owner or operator must submit to the department documentation of the justification for reimbursement and verification that reimbursement has been received.

(7) The trust fund may be terminated by the owner or operator only if the owner or operator substitutes alternative financial assurance as specified in this rule or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

(8) After the pay-in period has been completed, the trust fund shall be adjusted annually to correct any deficiency of the fund with respect to the adjusted cost estimate and may be adjusted annually should the balance in the fund exceed the adjusted cost estimate.

*b. Surety bond guaranteeing payment or performance.*

(1) An owner or operator may demonstrate financial assurance for closure or postclosure by obtaining a payment or performance surety bond which conforms to the requirements of this subrule. An owner or operator may demonstrate financial assurance for corrective action by obtaining a performance bond which conforms to the requirements of this subrule. The bond must be effective before the initial receipt of waste or before the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department. The owner or operator must submit a copy of the bond to the department and keep a copy in the facility’s official files. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury. The state shall not be considered a party to the surety bond.

(2) The penal sum of the bond must be in an amount at least equal to the amount specified in subrule 112.31(9) for closure and postclosure or corrective action, whichever is applicable.

(3) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond and also upon notice from the department pursuant to subparagraph 112.31(6)“b”(6).

(4) The owner or operator must establish a standby trust fund. The standby trust fund must meet the requirements of paragraph 112.31(6)“a” except the requirements for initial payment and subsequent annual payments specified in subparagraphs 112.31(6)“a”(2) to (5).

(5) Payments made under the terms of the bond will be deposited by the surety directly into the standby trust fund. Payments from the trust fund must be approved by the trustee and the department.

(6) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice from the surety of withdrawal of the cancellation, or proof

of a deposit into the standby trust fund of a sum equal to the amount of the bond. If the owner or operator has not complied with this subparagraph within the 60-day time period, this shall constitute a failure to perform and the department shall notify the surety, prior to the expiration of the 120-day notice period, that such a failure has occurred.

(7) The bond must be conditioned upon faithful performance by the owner or operator of all closure, postclosure, or corrective action requirements of the Code of Iowa and this rule. A failure to comply with subparagraph 112.31(6) "b"(6) shall also constitute a failure to perform under the terms of the bond.

(8) Liability under the bond shall be for the duration of the operation and the closure and postclosure periods.

(9) The owner or operator may cancel the bond only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*c. Letter of credit.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by obtaining an irrevocable standby letter of credit which conforms to the requirements of this paragraph. The letter of credit must be effective before the initial receipt of waste or before the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or no later than 120 days after the corrective action plan is approved by the department. The owner or operator must submit to the department a copy of the letter of credit and place a copy in the facility's official files. The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

(2) A letter from the owner or operator referring to the letter of credit by number, issuing institution, and date, and providing the name and address of the facility and the amount of funds assured, must be included with the letter of credit submitted to the department and placed in the facility's files.

(3) The letter of credit must be irrevocable and must be issued for a period of at least one year in an amount at least equal to the amount specified in subrule 112.31(9) for closure, postclosure, or corrective action, whichever is applicable. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the letter of credit into the closure and postclosure accounts established pursuant to Iowa Code section 455B.306(9) "b." If the owner or operator has not complied with this subparagraph within the 60-day time period, the issuer of the letter of credit shall deposit a sum equal to the amount of the letter of credit into the closure and postclosure accounts established by the owner or operator pursuant to Iowa Code section 455B.306(9) "b." The provision of funds by the issuer of the letter of credit shall be considered an issuance of a loan to the owner or operator, and the terms of that loan shall be governed by the letter of credit or subsequent agreement between those parties. The state shall not be considered a party to this credit transaction.

(4) The owner or operator may cancel the letter of credit only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*d. Insurance.*

(1) An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action by obtaining insurance which conforms to the requirements of this paragraph. The insurance must be effective before the initial receipt of waste or prior to cancellation of an alternative financial assurance, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department. At a minimum, the insurer must be licensed to transact the business of insurance or be eligible to provide insurance as an excess or surplus lines insurer

in one or more states. The owner or operator must submit to the department a copy of the insurance policy and retain a copy in the facility's official files.

(2) The closure or postclosure insurance policy must guarantee that funds will be available to close the BMF landfill whenever final closure occurs or to provide postclosure for the BMF landfill whenever the postclosure period begins, whichever is applicable. The policy must also guarantee that once closure or postclosure begins, the insurer will be responsible for the paying out of funds to the owner or operator or another person authorized to conduct closure or postclosure, up to an amount equal to the face amount of the policy.

(3) The insurance policy must be issued for a face amount at least equal to the amount specified in subrule 112.31(9) for closure, postclosure, or corrective action, whichever is applicable. The term "face amount" means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.

(4) An owner or operator or another person authorized to conduct closure or postclosure may receive reimbursements for closure or postclosure expenditures, including partial closure, as applicable. Requests for reimbursement will be granted by the insurer only if the remaining value of the policy is sufficient to cover the remaining costs of closure or postclosure, and if justification and documentation of the cost are placed in the operating record. The owner or operator must submit to the department documentation of the justification for reimbursement and verification that the reimbursement has been received.

(5) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided that such consent is not unreasonably refused.

(6) The insurance policy must provide that the insurer may not cancel, terminate or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator and to the department 120 days in advance of cancellation. When such notice is provided, the owner or operator shall, within 60 days, provide to the department adequate proof of alternative financial assurance, notice from the insurer of withdrawal of cancellation, or proof of a deposit of a sum equal to the amount of the insurance coverage into the closure and postclosure accounts established pursuant to Iowa Code section 455B.306(9) "b." If the owner or operator has not complied with this subparagraph within the 60-day time period, this shall constitute a failure to perform and shall be a covered event pursuant to the terms of the insurance policy. A failure by the owner or operator to comply with this subparagraph within the 60-day period shall make the insurer liable for the closure and postclosure of the covered facility up to the amount of the policy limits, which shall be equal to the most recently submitted cost estimates.

(7) For insurance policies providing coverage for postclosure, commencing on the date that liability to make payments pursuant to the policy accrues, the insurer will thereafter annually increase the face amount of the policy. Such increase must be equivalent to the face amount of the policy, less any payments made, multiplied by an amount equivalent to 85 percent of the most recent investment rate or of the equivalent coupon-issue yield announced by the U.S. Department of the Treasury for 26-week treasury securities.

(8) The owner or operator may cancel the insurance only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*e. Corporate financial test.* An owner or operator that satisfies the requirements of this paragraph may demonstrate financial assurance up to the amount specified below:

(1) Financial component. The owner or operator must satisfy the requirements of numbered paragraphs 112.31(6) "e"(1) "1," "2" and "3" to meet the financial component of the corporate financial test.

1. The owner or operator must satisfy one of the following three conditions:

- A current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard & Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or
- A ratio of less than 1.5 comparing total liabilities to net worth (net worth calculations may not include future permitted capacity of the subject landfill as an asset); or
- A ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities;

2. The tangible net worth, excluding future permitted capacity of the subject landfill, of the owner or operator must be greater than:

- The sum of the current closure, postclosure, and corrective action cost estimates and any other environmental obligations, including guarantees, covered by this financial test plus \$10 million except as provided in the second bulleted paragraph in numbered paragraph 112.31(6) "e"(1)"2"; or
- Net worth of \$10 million, excluding future permitted capacity of the subject landfill, plus the amount of any guarantees that have not been recognized as liabilities on the financial statements, provided that all of the current closure, postclosure, and corrective action costs and any other environmental obligations covered by a financial test are recognized as liabilities on the owner's or operator's audited financial statements and are subject to the approval of the department; and

3. The owner or operator must have, located in the United States, assets, excluding future permitted capacity of the subject landfill, amounting to at least the sum of current closure, postclosure, and corrective action cost estimates and any other environmental obligations covered by a financial test as described in subparagraph 112.31(6) "e"(5).

(2) Record-keeping and reporting requirements. The owner or operator must submit the following records to the department and place a copy in the facility's official files prior to the initial receipt of solid waste or cancellation of an alternative financial assurance instrument, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department:

1. A letter signed by a certified public accountant and based upon a certified audit that:

- Lists all the current cost estimates covered by a financial test including, but not limited to, cost estimates required by subrules 112.31(3) to 112.31(5); cost estimates required for municipal solid waste management facilities pursuant to 40 CFR Part 258; cost estimates required for UIC facilities under 40 CFR Part 144, if applicable; cost estimates required for petroleum underground storage tank facilities under 40 CFR Part 280, if applicable; cost estimates required for PCB storage facilities under 40 CFR Part 761, if applicable; and cost estimates required for hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, if applicable; and
- Provides evidence demonstrating that the owner or operator meets the conditions of subparagraph 112.31(6) "e"(1).

2. A copy of the independent certified public accountant's unqualified opinion of the owner's or operator's financial statements for the latest completed fiscal year. To be eligible to use the financial test, the owner's or operator's financial statements must receive an unqualified opinion from the independent certified public accountant. An adverse opinion or disclaimer of opinion shall be cause for disallowance of this mechanism. A qualified opinion related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance. If the department does not allow use of the corporate financial test, the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

3. If the certified public accountant's letter providing evidence of financial assurance includes financial data which shows that the owner or operator satisfies subparagraph 112.31(6) "e"(1) but which differs from data in the audited financial statements referred to in numbered paragraph 112.31(6) "e"(2)"2," then a special report from the owner's or operator's independent certified public accountant to the owner or operator is required. The special report shall be based upon an agreed-upon procedures engagement in accordance with professional auditing standards and shall describe the procedures performed in comparing the data in the certified public accountant's letter derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements, the findings of that comparison, and the reasons for any differences.

4. If the certified public accountant's letter provides a demonstration that the owner or operator has assured for environmental obligations as provided in the second bulleted paragraph of numbered paragraph 112.31(6) "e"(2) "1," then the letter shall include a report from the independent certified public accountant that verifies that all of the environmental obligations covered by a financial test have been recognized as liabilities on the audited financial statements and that documents how these obligations have been measured and reported and verifies that the tangible net worth of the owner or operator is at least \$10 million plus the amount of any guarantees provided.

(3) The owner or operator may cease the submission of the information required by paragraph 112.31(6) "e" only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

(4) The department may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subparagraph 112.31(6) "e"(1), require the owner or operator to provide reports of its financial condition in addition to or including current financial test documentation as specified in subparagraph 112.31(6) "e"(2). If the department finds that the owner or operator no longer meets the requirements of subparagraph 112.31(6) "e"(1), the owner or operator must provide alternative financial assurance that meets the requirements of this rule.

(5) Calculation of costs to be assured. When calculating the current cost estimates for closure, postclosure, corrective action, or the sum of the combination of such costs to be covered, and any other environmental obligations assured by a financial test referred to in paragraph 112.31(6) "e," the owner or operator must include cost estimates required for subrules 112.31(3) to 112.31(5); cost estimates for municipal solid waste management facilities pursuant to 40 CFR Section 258.74; and cost estimates required for the following environmental obligations, if the owner or operator assures those environmental obligations through a financial test: obligations associated with UIC facilities under 40 CFR Part 144, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265.

*f. Local government financial test.* An owner or operator that satisfies the requirements of this paragraph may demonstrate financial assurance up to the amount specified below:

(1) Financial component.

1. The owner or operator must satisfy one of the following requirements:

- If the owner or operator has outstanding, rated, general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or guarantee, the owner or operator must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody's, or AAA, AA, A, or BBB, as issued by Standard & Poor's, on all such general obligation bonds; or

- The owner or operator must satisfy both of the following financial ratios based on the owner's or operator's most recent audited annual financial statement: a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05, and a ratio of annual debt service to total expenditures less than or equal to 0.20.

2. The owner or operator must prepare its financial statements in conformity with generally accepted accounting principles or other comprehensive basis of accounting and have its financial statements audited by an independent certified public accountant or the office of the auditor of the state of Iowa. The financial statement shall be in the form prescribed by the office of the auditor of the state of Iowa.

3. A local government is not eligible to assure its obligations in paragraph 112.31(6) "f" if it:

- Is currently in default on any outstanding general obligation bonds; or
- Has any outstanding general obligation bonds rated lower than Baa as issued by Moody's or BBB as issued by Standard & Poor's; or

- Operated at a deficit equal to 5 percent or more of total annual revenue in each of the past two fiscal years; or

- Receives an adverse opinion or disclaimer of opinion from the independent certified public accountant or office of the auditor of the state of Iowa auditing its financial statement as required under

numbered paragraph 112.31(6) “f”(1)“2.” A qualified opinion that is related to the demonstration of financial assurance may, at the discretion of the department, be cause for disallowance of this mechanism.

4. The following terms used in this paragraph are defined as follows:

“*Cash plus marketable securities*” means all the cash plus marketable securities held by the local government on the last day of a fiscal year, excluding cash and marketable securities designated to satisfy past obligations such as pensions.

“*Debt service*” means the amount of principal and interest due on a loan in a given time period, typically the current year.

“*Deficit*” means total annual revenues minus total annual expenditures.

“*Total expenditures*” means all expenditures, excluding capital outlays and debt repayment.

“*Total revenues*” means revenues from all taxes and fees, excluding revenue from funds managed by local government on behalf of a specific third party, and does not include the proceeds from borrowing or asset sales.

(2) Public notice component. The local government owner or operator must include disclosure of the closure and postclosure costs assured through the financial test in its next annual audit report prior to the initial receipt of waste at the facility or prior to cancellation of an alternative financial assurance mechanism, whichever is later. A reference to corrective action costs must be placed in the next annual audit report after the corrective action plan is approved by the department. For the first year the financial test is used to assure costs at a particular facility, the reference may instead be placed in the facility’s official files until issuance of the next available annual audit report if timing does not permit the reference to be incorporated into the most recently issued annual audit report or budget. For closure and postclosure costs, conformance with Governmental Accounting Standards Board Statement 18 ensures compliance with this public notice component.

(3) Record-keeping and reporting requirements.

1. The local government owner or operator must submit to the department the following items:

- A letter signed by the local government’s chief financial officer that lists all the current cost estimates covered by a financial test, as described in subparagraph 112.31(6) “f”(4); that provides evidence and certifies that the local government meets the conditions of numbered paragraphs 112.31(6) “f”(1)“1,” “2,” and “3”; and that certifies that the local government meets the conditions of subparagraphs 112.31(6) “f”(2) and (4); and

- The local government’s annual financial report indicating compliance with the financial ratios required by numbered paragraph 112.31(6) “f”(1)“1,” second bulleted paragraph, if applicable, and the requirements of numbered paragraph 112.31(6) “f”(1)“2” and the third and fourth bulleted paragraphs of numbered paragraph 112.31(6) “f”(1)“3,” and also indicating that the requirements of Governmental Accounting Standards Board Statement 18 have been met.

2. The items required in numbered paragraph 112.31(6) “f”(3)“1” must be submitted to the department and placed in the facility’s official files prior to the receipt of waste or prior to the cancellation of an alternative financial assurance mechanism, in the case of closure and postclosure; or, in the case of corrective action, not later than 120 days after the corrective action plan is approved by the department

3. After the initial submission of the required items and their placement in the facility’s official files, the local government owner or operator must update the information and place the updated information in the facility’s official files within 180 days following the close of the owner’s or operator’s fiscal year

4. The owner or operator may cease the submission of the information required by paragraph 112.31(6) “f” only if alternative financial assurance is substituted prior to cancellation or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

5. A local government must satisfy the requirements of the financial test at the close of each fiscal year. If the local government owner or operator no longer meets the requirements of the local government financial test, the local government must, within 180 days following the close of the owner’s or operator’s fiscal year, obtain alternative financial assurance that meets the requirements of this rule, place the required submissions for that assurance in the operating record, and notify the department

that the owner or operator no longer meets the criteria of the financial test and that alternative financial assurance has been obtained.

6. The department, based on a reasonable belief that the local government owner or operator may no longer meet the requirements of the local government financial test, may require additional reports of financial conditions from the local government. If the department finds, on the basis of such reports or other information, that the owner or operator no longer meets the requirements of the local government financial test, the local government must provide alternative financial assurance in accordance with this rule.

(4) Calculation of costs to be assured. The portion of the closure, postclosure, or corrective action costs which an owner or operator may assure under this paragraph is determined as follows:

1. If the local government owner or operator does not assure other environmental obligations through a financial test, the owner or operator may assure closure, postclosure, and corrective action costs that equal up to 43 percent of the local government's total annual revenue.

2. If the local government assures other environmental obligations through a financial test, including those associated with UIC facilities under 40 CFR Section 144.62, petroleum underground storage tank facilities under 40 CFR Part 280, PCB storage facilities under 40 CFR Part 761, and hazardous waste treatment, storage, and disposal facilities under 40 CFR Parts 264 and 265, the owner or operator must add those costs to the closure, postclosure, and corrective action costs it seeks to assure under this paragraph. The total that may be assured must not exceed 43 percent of the local government's total annual revenue.

3. The owner or operator must obtain an alternative financial assurance instrument for those costs that exceed the limits set in numbered paragraphs 112.31(6) "f"(4) "1" and "2."

*g. Corporate guarantee.*

(1) An owner or operator may meet the requirements of this paragraph by obtaining a written guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, an owner or operator whose parent corporation is also the parent corporation of the owner or operator, or an owner or operator with a "substantial business relationship" with the owner or operator. The guarantor must meet the requirements for owners or operators in paragraph 112.31(6) "e" and must comply with the terms of the guarantee. A certified copy of the guarantee must be placed in the facility's operating record along with copies of the letter from a certified public accountant and the accountant's opinions. If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter from the certified public accountant must describe the value received in consideration of the guarantee. If the guarantor is an owner or operator with a "substantial business relationship" with the owner or operator, this letter must describe this "substantial business relationship" and the value received in consideration of the guarantee.

(2) The guarantee must be effective and all required submissions made to the department prior to the initial receipt of waste or before cancellation of an alternative financial mechanism, in the case of closure and postclosure; or, in the case of corrective action, no later than 120 days after the corrective action plan has been approved by the department.

(3) The terms of the guarantee must provide that:

1. If the owner or operator fails to perform closure, postclosure, or corrective action of a facility covered by the guarantee, or fails to obtain alternative financial assurance within 90 days of notice of intent to cancel pursuant to numbered paragraphs 112.31(6) "g"(3) "2" and "3," the guarantor will:

- Perform, or pay a third party to perform, closure, postclosure, or corrective action as required (performance guarantee); or
- Establish a fully funded trust fund as specified in paragraph 112.31(6) "a" in the name of the owner or operator (payment guarantee); or
- Obtain alternative financial assurance as required by numbered paragraph 112.31(6) "g"(3) "3."

2. The guarantee will remain in force for as long as the owner or operator must comply with the applicable financial assurance requirements of this rule unless the guarantor sends prior notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not

occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.

3. If notice of cancellation is given, the owner or operator must, within 90 days following receipt of the cancellation notice by the owner or operator and the department, provide to the department adequate proof of alternative financial assurance, notice from the guarantor of withdrawal of the cancellation, or proof of the establishment of a fully funded trust fund pursuant to paragraph 112.31(6)“a.” If the owner or operator fails to comply with the provisions of this numbered paragraph within the 90-day period, the guarantor must provide that alternative financial assurance prior to cancellation of the corporate guarantee.

(4) If a corporate guarantor no longer meets the requirements of paragraph 112.31(6)“e,” the owner or operator must, within 90 days, obtain alternative financial assurance and submit proof of alternative financial assurance to the department. If the owner or operator fails to provide alternative financial assurance within the 90-day period, the guarantor must provide that alternative financial assurance within the next 30 days.

(5) The owner or operator is no longer required to meet the requirements of paragraph 112.31(6)“g” upon the submission to the department of proof of the substitution of alternative financial assurance or if the owner or operator is no longer required to demonstrate financial responsibility in accordance with this rule.

*h. Local government guarantee.* An owner or operator may demonstrate financial assurance for closure, postclosure, or corrective action by obtaining a written guarantee provided by a local government or jointly provided by the members of an agency established pursuant to Iowa Code chapter 28E. The guarantor must meet the requirements of the local government financial test in paragraph 112.31(6)“f” and must comply with the terms of a written guarantee.

(1) Terms of the written guarantee. The guarantee must be effective before the initial receipt of waste or before the cancellation of alternative financial assurance, in the case of closure and postclosure; or no later than 120 days after the corrective action plan is approved by the department. The guarantee must provide that:

1. If the owner or operator fails to perform closure, postclosure, or corrective action of a facility covered by the guarantee or fails to obtain alternative financial assurance within 90 days of notice of intent to cancel pursuant to numbered paragraphs 112.31(6)“h”(1)“2” and “3,” the guarantor will:

- Perform, or pay a third party to perform, closure, postclosure, or corrective action as required; or
- Establish a fully funded trust fund as specified in paragraph 112.31(6)“a” in the name of the owner or operator; or
- Obtain alternative financial assurance as required by numbered paragraph 112.31(6)“h”(1)“3.”

2. The guarantee will remain in force for as long as the owner or operator must comply with the applicable financial assurance requirements unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the department. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the department, as evidenced by the return receipts.

3. If notice of cancellation is given, the owner or operator must, within 90 days following receipt of the cancellation notice by the owner or operator and the department, provide to the department adequate proof of alternative financial assurance, notice from the guarantor of withdrawal of the cancellation, or proof of the establishment of a fully funded trust fund pursuant to paragraph 112.31(6)“a.” If the owner or operator fails to comply with the provisions of this numbered paragraph within the 90-day period, the guarantor must provide that alternative financial assurance prior to cancellation of the guarantee.

(2) Record-keeping and reporting requirements.

1. The owner or operator must submit to the department a certified copy of the guarantee along with the items required under subparagraph 112.31(6)“f”(3) and place a copy in the facility’s official files before the initial receipt of waste or before cancellation of alternative financial assurance, whichever is later, in the case of closure and postclosure; or no later than 120 days after the corrective action plan has been approved by the department.

2. The owner or operator shall no longer be required to submit the items specified in numbered paragraph 112.31(6) "h"(2)"1" when proof of alternative financial assurance has been submitted to the department or the owner or operator is no longer required to provide financial assurance pursuant to this rule.

3. If a local government guarantor no longer meets the requirements of paragraph 112.31(6) "f," the owner or operator must, within 90 days, submit to the department proof of alternative financial assurance. If the owner or operator fails to obtain alternative financial assurance within the 90-day period, the guarantor must provide that alternative financial assurance within the next 30 days.

*i. Local government dedicated fund.* The owner or operator of a publicly owned BMF landfill or a local government serving as a guarantor may demonstrate financial assurance for closure, postclosure, or corrective action, whichever is applicable, by establishing a dedicated fund or account that conforms to the requirements of this paragraph. A dedicated fund will be considered eligible if it complies with subparagraph 112.31(6) "i"(1) or (2) and all other provisions of this paragraph and if documentation of this compliance has been submitted to the department.

(1) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, or order to pay for closure, postclosure, or corrective action costs arising from the operation of the BMF landfill and shall be funded for the full amount of coverage or funded for part of the required amount of coverage and used in combination with another mechanism(s) that provides the remaining coverage.

(2) The fund shall be dedicated by state constitutional provision or local government statute, charter, ordinance, or order as a reserve fund and shall be funded for no less than the full amount of coverage or funded for part of the required amount of coverage and used in combination with another mechanism(s) that provides the remaining coverage.

(3) Payments into the dedicated fund must be made annually by the owner or operator for ten years or over the permitted life of the BMF landfill, whichever is shorter, in the case of a dedicated fund for closure or postclosure; or over one-half of the estimated length of an approved corrective action plan in the case of a response to a known release. This is referred to as the pay-in period. The initial payment into the dedicated fund must be made before the initial receipt of waste in the case of closure and postclosure or no later than 120 days after the corrective action plan has been approved by the department.

(4) For a dedicated fund used to demonstrate financial assurance for closure and postclosure, the first payment into the fund must be at least equal to the amount specified in subrule 112.31(9), divided by the number of years in the pay-in period as defined in paragraph 112.31(6) "i." The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{CE} - \text{CB}}{\text{Y}}$$

where CE is the total required financial assurance for the owner or operator, CB is the current balance of the fund, and Y is the number of years remaining in the pay-in period.

(5) For a dedicated fund used to demonstrate financial assurance for corrective action, the first payment into the dedicated fund must be at least one-half of the current cost estimate, divided by the number of years in the corrective action pay-in period as defined in 112.31(6) "i." The amount of subsequent payments must be determined by the following formula:

$$\text{Payment} = \frac{\text{RB} - \text{CF}}{\text{Y}}$$

where RB is the most recent estimate of the required dedicated fund balance, which is the total cost that will be incurred during the second half of the corrective action period, CF is the current amount in the dedicated fund, and Y is the number of years remaining in the pay-in period.

(6) The initial payment into the dedicated fund must be made before the initial receipt of waste or within 30 days of close of the first fiscal year that begins after October 31, 2007, in the case of existing facilities; before the cancellation of an alternative financial assurance mechanism in the case of closure and postclosure; or no later than 120 days after the corrective action remedy has been approved by the department.

(7) After the pay-in period has been completed, the dedicated fund shall be adjusted annually to correct any deficiency of the fund with respect to the adjusted cost estimates and may be adjusted annually should the balance in the fund exceed the adjusted cost estimate.

**112.31(7) General requirements.**

a. Use of multiple financial mechanisms. An owner or operator may satisfy the requirements of this rule by establishing more than one financial mechanism per facility. The mechanisms must be a combination of those mechanisms outlined in this rule and must provide financial assurance for an amount at least equal to the current cost estimate for closure, postclosure, or corrective action, whichever is applicable. The financial test and a guarantee provided by a corporate parent, sibling or grandparent may not be combined if the financial statements of the two entities are consolidated.

b. Use of one mechanism for multiple facilities. An owner or operator may satisfy the requirements of this rule for multiple BMF landfills by the use of one mechanism if the owner or operator ensures that the mechanism provides financial assurance for an amount at least equal to the current cost estimates for closure, postclosure, or corrective action, whichever is applicable, for all BMF landfills covered.

c. Criteria. The language of the financial assurance mechanisms listed in this rule must ensure that the instruments satisfy the following criteria:

(1) The financial assurance mechanisms must ensure that the amount of funds assured is sufficient to cover the costs of closure, postclosure, or corrective action for known releases, whichever is applicable;

(2) The financial assurance mechanisms must ensure that funds will be available in a timely fashion when needed;

(3) The financial assurance mechanisms must be obtained by the owner or operator prior to the initial receipt of solid waste and no later than 120 days after the corrective action remedy has been approved by the department until the owner or operator is released from the financial assurance requirements; and

(4) The financial assurance mechanisms must be legally valid, binding, and enforceable under Iowa law.

d. No permit shall be issued by the department pursuant to Iowa Code section 455B.305 unless the applicant has demonstrated compliance with rule 112.31(455B).

**112.31(8) Closure and postclosure accounts.** The holder of a permit for a BMF landfill shall maintain a separate account for closure and postclosure as required by Iowa Code section 455B.306(9)“b.” The account shall be specific to a particular facility.

a. Definitions. For the purpose of this subrule, the following definitions shall apply:

“Account” means a formal separate set of records.

“Current balance” means cash in an account established pursuant to this subrule plus the current value of investments of moneys collected pursuant to subrule 112.31(8) and used to purchase one or more of the investments listed at Iowa Code section 12B.10(5).

“Current cost estimate” means the closure cost estimate prepared and submitted to the department pursuant to subrule 112.31(3) and the postclosure cost estimate prepared and submitted pursuant to subrule 112.31(4).

b. Moneys in the accounts shall not be assigned for the benefit of creditors except the state of Iowa.

c. Moneys in the accounts shall not be used to pay any final judgment against a permit holder arising out of the ownership or operation of the site during its active life or after closure.

d. Withdrawal of funds. Except as provided in paragraph 112.31(8)“e,” moneys in the accounts may be withdrawn without department approval only for the purpose of funding closure, including partial closure, or postclosure activities that are in conformance with a closure/postclosure plan which has been submitted pursuant to subrule 112.13(10). Withdrawals for activities not in conformance with a closure/postclosure plan must receive prior written approval from the department. Permit holders using a trust fund established pursuant to paragraph 112.31(6)“a” to satisfy the requirements of this rule must comply with the requirements of subparagraph 112.31(6)“a”(6) prior to withdrawal.

e. Excess funds. If the balance of a closure or postclosure account exceeds the current cost estimate for closure or postclosure at any time, the permit holder may withdraw the excess funds so long as the withdrawal does not cause the balance to be reduced below the amount of the current cost estimate.

f. Initial proof of establishment of account. A permit holder shall submit a statement of account, signed by the permit holder, to the department by April 1, 2008, that indicates that accounts have been established pursuant to this subrule. Permit holders for new BMF landfills permitted after April 1, 2008, shall submit to the department, prior to the landfill’s initial receipt of waste, a statement of account that is signed by the permit holder.

g. An account established pursuant to paragraph 112.31(6)“a” for trust funds or paragraph 112.31(6)“i” for local government dedicated funds also satisfies the requirements of this subrule, and the permit holder shall not be required to establish closure and postclosure accounts in addition to said financial assurance accounts.

Accounts established pursuant to paragraph 112.31(6)“a” or 112.31(6)“i,” which are intended to satisfy the requirements of this subrule, must comply with Iowa Code section 455B.306(9)“b.”

h. Yearly deposits. Deposits into the closure and postclosure accounts shall be made at least yearly in the amounts specified in this subrule beginning with the close of the facility’s first fiscal year that begins after October 31, 2007. The deposits shall be made within 30 days of the close of each fiscal year. The minimum yearly deposit to the closure and postclosure accounts shall be determined using the following formula:

$$\frac{CE - CB}{RPC} \times TR = \text{yearly deposit to account}$$

Where:

“CE” means the current cost estimate of closure and postclosure costs.

“CB” means the current balance of the closure or postclosure accounts.

“RPC” means the remaining permitted capacity, in tons, of the landfill as of the start of the permit holder’s fiscal year.

“TR” is the number of tons of solid waste disposed of at the facility in the prior year.

i. Closure and postclosure accounts may be commingled with other accounts so long as the amounts credited to each account balance are reported separately pursuant to paragraphs 112.31(3)“a” and 112.31(4)“a.”

j. The department shall have full rights of access to all funds existing in a facility’s closure or postclosure account, at the sole discretion of the department, if the permit holder fails to undertake closure or postclosure activities after being directed to do so by a final agency action of the department. These funds shall be used only for the purposes of funding closure and postclosure activities at the site.

**112.31(9) Amount of required financial assurance.** A financial assurance mechanism established pursuant to subrule 112.31(6) shall be in the amount of the third-party cost estimates required by subrules 112.31(3), 112.31(4), and 112.31(5) except that the amount of the financial assurance may be reduced by the sum of the cash balance in a trust fund or local government dedicated fund established to comply

with subrule 112.31(8) plus the current value of investments held by said trust fund or local government dedicated fund if invested in one or more of the investments listed in Iowa Code section 12B.10(5).

These rules are intended to implement Iowa Code section 455B.304.

CHAPTER 113  
SANITARY LANDFILLS FOR MUNICIPAL  
SOLID WASTE: GROUNDWATER PROTECTION SYSTEMS FOR THE DISPOSAL OF  
NONHAZARDOUS WASTES

[Prior to 12/11/02, see 567—Chs 102, 103, 110]

**567—113.1(455B) Purpose.** The purpose of this chapter is to protect human health and the environment through the implementation of minimum national standards pursuant to the Resource Conservation and Recovery Act (“RCRA” or “the Act”) for all municipal solid waste landfill (MSWLF) units and under the Clean Water Act for MSWLFs that are used to dispose of sewage sludge.

This chapter details the permitting, siting, design, operating, monitoring, corrective action, reporting, record-keeping, closure, and postclosure requirements for all sanitary landfills accepting municipal solid waste (MSW).

Groundwater is a precious natural resource. The vast majority of citizens in Iowa depend on groundwater as a drinking water source. Agriculture, industry and commerce also depend heavily on groundwater. It is essential to the health, welfare, and economic prosperity of all citizens in Iowa that groundwater is protected and that the prevention of groundwater contamination is of paramount importance. Therefore, the intent of this chapter is to prevent groundwater contamination from MSWLF units to the maximum extent practical, and if necessary to restore the groundwater to a potable state, regardless of present condition, use, or characteristics.

**567—113.2(455B) Applicability and compliance.**

**113.2(1)** All sanitary landfills accepting municipal solid waste must comply with the provisions of this chapter.

**113.2(2)** These rules do not encompass the beneficial use of by-products as alternative cover material. For rules pertaining to the beneficial use of by-products as alternative cover material, see 567—Chapter 108.

**113.2(3)** These rules do not encompass the management and disposal of special wastes. For rules pertaining to the management and disposal of special wastes, see 567—Chapter 109.

**113.2(4)** This chapter does not apply to MSWLF units that did not receive waste after October 9, 1994. The closure permit issued or the rules in effect at the time of closure shall govern postclosure activities for such MSWLF units.

**113.2(5)** This chapter does not apply to MSWLF units that stop receiving waste before October 1, 2007, and are not contiguous with MSWLF units that will continue to accept waste after October 1, 2007. For the purpose of this subrule, contiguous MSWLF units are those that adjoin, abut or have a common boundary or edge with one another or that utilize the same groundwater monitoring network system. The permit issued and the rules in effect at the time waste acceptance ceased shall govern postclosure activities for such MSWLF units except as follows:

*a.* Financial assurance in accordance with rule 567—113.14(455B) shall be required.

*b.* Owners or operators of MSWLF units described in this subrule that fail to complete cover installation within one year after October 1, 2007, will be subject to all the requirements of this chapter, unless otherwise specified.

*c.* Surface water sampling in accordance with subrule 113.10(3) shall be required.

*d.* MSWLF units subject to this rule shall perform groundwater sampling for the following parameters:

(1) Routine semiannual water sampling parameters:

1. Chloride.
2. Specific conductance (field measurement).
3. pH (field measurement).
4. Ammonia nitrogen.
5. Iron, dissolved.
6. Chemical oxygen demand.

7. Any additional parameters deemed necessary by the department.

(2) Routine annual water sampling parameters:

1. Total organic halogen.

2. Phenols.

3. Any additional parameters deemed necessary by the department.

*e.* If the analytical results for a downgradient groundwater monitoring point do not fall within the control limits of two standard deviations above (or below for pH) the mean parameters, listed in subparagraphs 113.2(5) “*d*”(1) and (2), in a corresponding upgradient groundwater monitoring point and it cannot be demonstrated that a source other than an MSWLF unit caused the control limit exceedence, then the owner or operator shall comply with the groundwater assessment monitoring program requirements in subrule 113.10(6) and corrective action requirements in subrules 113.10(7), 113.10(8) and 113.10(9), if necessary.

**113.2(6)** MSWLF units containing sewage sludge and failing to satisfy the requirements of this chapter violate Sections 309 and 405(e) of the Clean Water Act.

**113.2(7)** Consideration of other laws. The issuance of an MSWLF permit by the department in no way relieves the permit holder of the responsibility of complying with all other local, state, or federal statutes, ordinances, and rules and other applicable requirements.

**113.2(8)** Closure of existing MSWLF units.

*a.* Existing MSWLF units that cannot make the demonstration specified in paragraph 113.6(2) “*a*,” pertaining to airports, in 113.6(2) “*b*,” pertaining to floodplains, or in 113.6(2) “*f*,” pertaining to unstable areas, must close in accordance with rule 113.12(455B) and conduct postclosure activities in accordance with rule 113.13(455B).

*b.* Existing MSWLF units that do not have an approved leachate collection system and a composite liner or a leachate collection system and an alternative liner modeled at an approved point of compliance shall cease accepting waste by October 1, 2007.

*c.* Rescinded IAB 12/31/08, effective 2/4/09.

*d.* Those portions of existing MSWLF units demonstrating placement of final cover in conformance with previously approved plans and specifications or regulations in effect at the time of such closure shall not be required to apply additional cover solely to achieve compliance with rule 113.12(455B).

**113.2(9)** Existing MSWLF units that continue accepting waste after October 1, 2007, shall submit an implementation plan to the department by January 31, 2008, that identifies how the MSWLF shall achieve compliance with these rules. The plan shall include a compliance schedule which shall not extend beyond January 31, 2011. This subrule shall not preclude compliance with subrule 113.2(8).

**113.2(10)** Compliance with amendments to these rules.

*a.* Owners or operators of existing MSWLF units that have an approved leachate collection system and a composite liner or a leachate collection system and an alternative liner modeled at an approved point of compliance shall not be required to redesign or reconstruct the MSWLF units due to amendments to these rules subsequent to such approval unless the department finds that such facilities are causing pollution or that continued use of such facilities results in a vertical expansion on top of or against the side slopes of a previously filled noncompliant MSWLF unit. Prior to waste placement in the vertical expansion area, revised design plans shall be submitted to include construction of a separatory liner and leachate collection system that comply with all the requirements of subrule 113.7(5) to be placed between the area of vertical expansion and the underlying noncompliant MSWLF unit. The department, in conjunction with the MSWLF owner or operator, shall determine the maximum amount of time necessary for continued waste placement on top of or against the previously filled noncompliant MSWLF unit to achieve an adequate slope in order to maintain drainage of leachate to the leachate collection system after expected settlement.

*b.* Except as authorized by subrule 113.2(9) and paragraph 113.2(10) “*a*,” if any new requirement conflicts with a provision of or an operating procedure prescribed in the engineering plans or the MSWLF permit, the facility shall conform to the new rule.

**113.2(11)** Equivalency review procedure.

a. In approving a permit application under this chapter, the department may authorize, in writing, alternatives to the design requirements in this chapter only if, and only to the extent that, specific rules in this chapter expressly state that alternatives may be authorized under this chapter.

b. An owner or operator requesting an alternative design under this chapter shall submit a request to the department prepared by an Iowa-licensed professional engineer. The request shall:

(1) Identify the specific rule for which an equivalency alternative is being sought.

(2) Demonstrate, through supporting technical documentation, justification and quality control procedures, that the requested alternative to the design requirements in the rules of this chapter will, for the life of operations at the facility, achieve the performance standards in that rule.

c. No equivalency alternative will be approved unless the application affirmatively demonstrates that the following conditions are met:

(1) The request is complete and accurate and the requirements of this subrule have been met.

(2) The proposed alternative will, for the life of operations at the facility, achieve the performance standards in the rule for which the alternative to the design requirements in that rule is sought.

(3) The proposed alternative will provide protection equivalent to the design requirements in this chapter for the air, water or other natural resources of the state of Iowa, and will not harm or endanger the public health, safety or welfare.

**567—113.3(455B) Definitions.** Unless otherwise noted, the definitions set forth in Iowa Code section 455B.301 and 567—Chapter 100, which are incorporated by reference; the definitions that appear in specific rules within this chapter; and the following definitions shall apply to this chapter:

*“Active life”* means the period of operation beginning with the initial receipt of solid waste and ending at completion of closure activities in accordance with rule 113.12(455B).

*“Active portion”* means that part of a facility or unit that has received or is receiving wastes and that has not been closed in accordance with rule 113.12(455B).

*“Aquifer”* has the same meaning as in 567—Chapter 100.

*“Commercial solid waste”* means all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes.

*“Existing MSWLF unit”* means any municipal solid waste landfill unit that has received solid waste as of the most recent permit renewal.

*“Facility”* means all contiguous land and structures, other appurtenances, and improvements on the land used for the disposal of solid waste. The facility is formally defined in the permit issued by the department. Buffer lands around a facility are not required to be included in the permitted boundary of a facility.

*“High water table”* has the same meaning as in 567—Chapter 100.

*“Household waste”* means any solid waste (including garbage, trash, and sanitary waste in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas).

*“Industrial solid waste”* means solid waste generated by manufacturing or industrial processes that is not a hazardous waste regulated under Subtitle C of RCRA. Such waste may include, but is not limited to, waste resulting from the following manufacturing processes: electric power generation; fertilizer and agricultural chemicals; food and related products and by-products; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing and foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment; and water treatment. “Industrial solid waste” does not include mining waste or oil and gas waste.

*“Lateral expansion”* means a horizontal expansion of the waste boundaries of an existing MSWLF unit.

*“Municipal solid waste landfill (MSWLF) unit”* means a discrete area of land or an excavation that receives household waste, and that is not a land application site, surface impoundment, injection well, or waste pile, as those terms are defined under 40 CFR Part 257.2. An MSWLF unit also may receive other types of RCRA Subtitle D wastes, such as commercial solid waste, nonhazardous sludge, construction

and demolition debris, and industrial solid waste. An MSWLF unit may be publicly or privately owned. An MSWLF unit may be a new MSWLF unit, an existing MSWLF unit, or a lateral expansion. A construction and demolition landfill that receives residential lead-based paint waste and does not receive any other household waste is not an MSWLF unit.

*“New MSWLF unit”* means any municipal solid waste landfill unit that has not received waste prior to the most recent permit renewal.

*“Open burning”* has the same meaning as in 567—Chapter 100.

*“Operator”* has the same meaning as in 567—Chapter 100.

*“Owner”* means the person(s) who owns a facility or part of a facility.

*“Point of compliance”* or *“POC”* means the point at which the MSWLF owner or operator demonstrates compliance with the liner performance standard, if applicable, and with the groundwater protection standard. The point of compliance is a vertical surface located hydraulically downgradient of the waste management area that extends down into the uppermost aquifer underlying the regulated MSWLF unit(s) and where groundwater monitoring shall be conducted.

*“Residential lead-based paint waste”* means waste containing lead-based paint that is generated as a result of activities such as abatement, rehabilitation, renovation and remodeling in homes and other residences. “Residential lead-based paint waste” includes, but is not limited to, lead-based paint debris, chips, dust, and sludges.

*“Runoff”* means any rainwater, leachate, or other liquid that drains over land from any part of a facility.

*“Run-on”* means any rainwater, leachate, or other liquid that drains over land onto any part of a facility.

*“Saturated zone”* means that part of the earth’s crust in which all voids are filled with water.

*“Sewage sludge”* has the same meaning as in 567—Chapter 67.

*“Sludge”* means any solid, semisolid, or liquid waste generated from a commercial or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, or any other such waste having similar characteristics and effects exclusive of the treated effluent from a wastewater treatment plant.

*“Statistically significant increase”* or *“SSI”* means a statistical difference large enough to account for data variability and not thought to be due to chance alone.

*“Uppermost aquifer”* means the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility’s property boundary.

*“Vertical expansion”* means additional waste placement on top of or against the side slopes of a previously filled MSWLF unit, whether active, closed, or inactive.

*“Waste management unit boundary”* means a vertical surface located at the hydraulically downgradient limit of the unit. This vertical surface extends down into the uppermost aquifer.

### **567—113.4(455B) Permits.**

**113.4(1) *Permit required.*** An MSWLF unit shall not be constructed or operated without a permit from the department.

**113.4(2) *Construction and operation.*** An MSWLF unit shall be constructed and operated according to this chapter, any plans and specifications approved by the department, and the conditions of the permit. Any approved plans and specifications shall constitute a condition of the permit.

**113.4(3) *Transfer of title and permit.*** If title to an MSWLF unit is transferred, then the department shall transfer the permit within 60 days if the department has found that the following requirements have been met:

*a.* The title transferee has applied in writing to the department to request a transfer of the permit within 30 days of the transfer of the title.

*b.* The permitted facility is in compliance with Iowa Code chapters 455B and 455D, this chapter and the conditions of the permit.

c. The transferee possesses the equipment and personnel to operate the project in conformance with Iowa Code chapter 455B and these rules and the terms of the permit.

**113.4(4) Permit conditions.** Any permit may be issued subject to conditions specified in writing by the department that are necessary to ensure that the facility is constructed and operated in a safe and effective manner, and in compliance with Iowa Code chapters 455B and 455D, this chapter and the conditions of the permit.

**113.4(5) Effect of revocation.** If an MSWLF permit held by any public or private agency is revoked by the department, then no new permit shall be issued to that agency for that MSWLF for a period of one year from the date of revocation. Such revocation shall not prohibit the issuance of a permit for the facility to another public or private agency.

**113.4(6) Inspection of site and operation.** The department shall be notified when the construction of a new facility or MSWLF unit or significant components thereof have been completed so that the department may inspect the facility to determine if the project has been constructed in accordance with the design approved by the department. The department shall inspect and approve a new facility or MSWLF unit before MSW may be accepted. The department shall inspect a facility and its operations on a regular basis to determine if the facility is in compliance with this chapter.

**113.4(7) Duration and renewal of permits.**

a. *Operating permits.* An MSWLF permit shall be issued and may be renewed for a period no longer than five years, unless the MSWLF adopts research, development and demonstration (RD&D) provisions pursuant to subrule 113.4(10). An MSWLF permit with RD&D provisions pursuant to subrule 113.4(10) shall be issued and may be renewed for a period no longer than three years.

b. *Closure permits.* An MSWLF closure permit shall be issued only after a facility no longer accepts solid waste. A closure permit shall initially be issued for a period of 30 years. If the department extends the postclosure period beyond 30 years, then the duration of the subsequent closure permit will be determined on a site-specific basis. An MSWLF requires a closure permit until the department determines that postclosure operations are no longer necessary.

**113.4(8) Request for permit renewal.**

a. *Operating permits.* A request for an operating permit renewal shall be in writing and filed at least 90 days before the expiration of the current permit. If the applicant is found not to be in compliance with this chapter or the permit requirements, then the applicant shall achieve compliance or be placed on a compliance schedule approved by the department before the permit may be renewed.

b. *Closure permits.* A request for a closure permit renewal or termination shall be filed at least 180 days before the expiration of the current permit. If the department finds that an MSWLF has completed all required postclosure activities and no longer presents a significant risk to human health or the environment, then the department shall issue written notification that a closure permit is no longer required for the facility.

**113.4(9) Request for permit amendment.** Requests for permit amendments must be submitted in writing to the department with supporting documentation and justification.

**113.4(10) RD&D permits.** The department may issue an RD&D permit that overrides the applicable portions of this chapter, as listed below, without issuing a variance. A permit amendment from the department for leachate recirculation only does not require an RD&D permit.

a. The department may issue an RD&D permit for a new MSWLF unit, existing MSWLF unit, or lateral expansion, for which the owner or operator proposes to utilize innovative and new methods which vary from either or both of the following criteria, provided that the MSWLF unit has a leachate collection system designed and constructed to maintain less than a 30-cm (i.e., 12-inch) depth of leachate on the liner:

- (1) The run-on control systems in subrule 113.7(8); and
- (2) The liquids restrictions in subparagraph 113.8(1)“b”(3).

b. The department may issue a permit for a new MSWLF unit, existing MSWLF unit, or lateral expansion, for which the owner or operator proposes to utilize innovative and new methods which vary from the final cover criteria of subrules 113.12(1) and 113.12(2), provided that the MSWLF unit owner or operator demonstrates that the infiltration of liquid through the alternative cover system will not cause

contamination of groundwater or surface water, or cause leachate depth on the liner to exceed 30 cm (i.e., 12 inches).

c. Any permit issued under subrule 113.4(10) must include such terms and conditions at least as protective as the criteria for MSWLFs to ensure protection of human health and the environment. Such permits shall:

(1) Provide for the construction and operation of such facilities as necessary, for not longer than three years, unless renewed as provided in paragraph 113.4(10)“e”;

(2) Provide that the MSWLF unit must receive only those types and quantities of municipal solid waste and nonhazardous wastes which the department deems appropriate for the purposes of determining the efficacy and performance capabilities of the technology or process;

(3) Include such requirements as necessary to protect human health and the environment, including such requirements as necessary for testing and providing information to the department with respect to the operation of the facility;

(4) Require the owner or operator of an MSWLF unit permitted under subrule 113.4(10) to submit an annual report to the department showing whether and to what extent the site is progressing in attaining project goals. The report shall also include a summary of all monitoring and testing results, as well as any other operating information specified by the department in the permit; and

(5) Require compliance with all criteria in this chapter, except as permitted under subrule 113.4(10).

d. The department may order an immediate termination of all operations at the facility allowed under subrule 113.4(10) or other corrective measures at any time the department determines that the overall goals of the project are not being attained, including protection of human health or the environment.

e. Any permit issued under subrule 113.4(10) shall not exceed 3 years, and each renewal of a permit may not exceed 3 years.

(1) The total term for a permit for a project including renewals may not exceed 12 years; and

(2) During permit renewal, the applicant shall provide a detailed assessment of the project showing the status with respect to achieving project goals, a list of problems and the status with respect to problem resolutions, and any other requirements that the department determines necessary for permit renewal.

**113.4(11) Factors in permit issuance decisions.** The department may request that additional information be submitted for review to make a permit issuance decision. The department may review and inspect the facility, its agents and operators, and compliance history. The department may consider compliance with related requirements, such as financial assurance and comprehensive planning. The department may review whether or not a good-faith effort to maintain compliance and protect human health and the environment is being made, and whether a compliance schedule is being followed.

**113.4(12) Notice and public participation in the MSWLF permit issuance and postpermit actions process.**

a. For the purposes of this subrule, “postpermit actions” includes permit renewals and requests for major facility modifications as defined below:

(1) Change in an MSWLF facility boundary or an MSWLF unit.

(2) Application for an RD&D permit pursuant to subrule 113.4(10).

(3) Installation of a landfill gas collection system.

(4) Application for a closure permit for a MSWLF unit.

(5) Transfer of an MSWLF permit to a new owner.

(6) Variance from this chapter under rule 567—113.15(455B).

(7) Change in the postclosure land use of the property.

(8) Other significant permit actions that are determined by the department to require public notice and participation. Such actions may include requests to change any of the requirements set forth as special provisions in the permit.

b. Prior to the issuance of approval or denial for an MSWLF permit or postpermit action, public notice shall be circulated in a manner designed to inform interested and potentially interested persons of the permit or postpermit action request. Procedures for the circulation of public notice shall include at least the following procedures:

(1) Upon receipt of the permit application or postpermit action request, the department shall make a determination of whether public notice is required in accordance with this subrule. If the determination is made that public notice is required, then the department shall prepare the public notice which shall be circulated by the owner or operator within the service area of the MSWLF by posting the public notice near the entrance to the MSWLF; and by publishing the public notice in periodicals or, if appropriate, in a newspaper(s) of general circulation.

(2) The public notice shall be mailed by the department to any person upon request and posted on the department's Web site.

*c.* The department shall provide a period of not less than 30 days following the date of the public notice during which time interested persons may submit their written views with respect to the MSWLF permit application or postpermit action request. All written comments submitted during the 30-day comment period shall be retained by the department and considered by the department in the formulation of the department's final determinations with respect to the permit application or postpermit action request. The period for comment may be extended at the discretion of the department.

*d.* The contents of the public notice shall include at least the following:

- (1) The name, address, and telephone number of the department.
- (2) The name and address of each applicant.
- (3) A brief description of each applicant's activities or operations which result in the submittal of the permit application or postpermit action request.

(4) A statement that any person may submit written and signed comments, or may request a public hearing, or both, on the proposed permit or postpermit action request. A statement of procedures to request a public hearing pursuant to paragraph 113.4(12) "e" shall be included.

(5) Locations where copies of the permit application or postpermit action request may be reviewed, including the closest department field office, and the times at which the copies shall be available for public inspection.

*e.* The applicant, any interested agency, person or group of persons may request or petition for a public hearing with respect to an MSWLF permit application or postpermit action request. Any such request shall clearly state issues and topics to be addressed at the hearing. Any such request or petition for public hearing must be filed with the department within the 30-day period prescribed in paragraph 113.4(12) "c" and shall indicate the interest of the party filing such request and the reasons why a hearing is warranted. The department shall hold an informal and noncontested case hearing if there is a significant public interest (including the filing of requests or petitions for such hearing) in holding such a hearing. Frivolous or insubstantial requests for hearing may be denied by the department. Instances of doubt should be resolved in favor of holding the hearing. Any hearing requested pursuant to this subrule shall be held in the service area of the MSWLF, or other appropriate area at the discretion of the department.

*f.* If the department determines that a public hearing is warranted, then the department shall prepare the public notice of the hearing. Public notice of any hearing held shall be circulated at least as widely as was the notice of the permit application or postpermit action request.

*g.* The contents of public notice of any hearing held pursuant to paragraph 113.4(12) "e" shall include at least the following:

- (1) The name, address, and telephone number of the department;
- (2) The name and address of each applicant whose application will be considered at the hearing;
- (3) A brief reference to the public notice issued for each permit application and postpermit action request;

(4) Information regarding the time and location for the hearing;

(5) The purpose of the hearing;

(6) A concise statement of the issues raised by the person requesting the hearing;

(7) Locations where copies of the permit application or postpermit action may be reviewed, including the closest department field office, and the times at which the copies shall be available for public inspection; and

(8) A brief description of the nature of the hearing, including the rules and procedures to be followed.

*h.* The department shall keep a record of the commenters and of the issues raised during the public participation process and shall prepare written responses to all comments received. At the time a final decision is made, the record and copies of the department's responses shall be made available to the public.

**567—113.5(455B) Permit application requirements.**

**113.5(1)** Unless otherwise authorized by the department, an MSWLF permit applicant shall submit, at a minimum, the following permit application information to the department:

- a.* The name, address and telephone number of:
  - (1) Owner of the site where the facility will be located.
  - (2) Permit applicant.
  - (3) Official responsible for the facility.
  - (4) Certified operator (i.e., "operator") responsible for operation of the facility.
  - (5) Professional engineer(s) (P.E.) licensed in the state of Iowa and retained for the design of the facility.
  - (6) Agency to be served by the facility, if any.
  - (7) Responsible official of agency to be served, if any.
- b.* An organizational chart.
- c.* A site exploration and characterization report for the facility that complies with the requirements of subrule 113.6(4).
- d.* Plans and specifications for the facility, and quality control and assurance (QC&A) plans, that comply with the requirements of subrule 113.7(6).
- e.* A development and operations (DOPs) plan for the facility, an emergency response and remedial action plan (ERRAP), and proof of MSWLF operator certification that comply with the requirements of rule 113.8(455B).
- f.* An environmental monitoring plan that complies with the requirements of rules 113.9(455B) and 113.10(455B).
- g.* The project goals and time lines, and other documentation as necessary to comply with subrule 113.4(10) and other requirements of the department if an RD&D permit is being requested or renewed.
- h.* Proof of financial assurance in compliance with rule 113.14(455B).
- i.* A closure and postclosure plan that complies with the requirements of rules 113.12(455B) and 113.13(455B).

**113.5(2)** Incomplete permit applications. If the department finds the permit application information to be incomplete, the department shall notify the applicant of that fact and of the specific deficiencies. If the applicant fails to correct the noted deficiencies within 30 days, the department may reject the application and return the application materials to the applicant. The applicant may reapply without prejudice.

**567—113.6(455B) Siting and location requirements for MSWLFs.** This rule applies to new MSWLF units and horizontal expansions of existing MSWLF units. Except for paragraphs 113.6(2)"*a*," 113.6(2)"*b*" and 113.6(2)"*f*," this rule does not apply to permitted MSWLF units which have been approved prior to October 1, 2007. Information required to document compliance with the requirements of rule 113.6(455B) shall be consolidated and maintained in a site exploration and characterization report pursuant to subrule 113.6(4).

**113.6(1)** *Local siting approval.* The department will not consider a permit application for a new MSWLF unless local siting approval pursuant to Iowa Code section 455B.305A, if applicable, has been obtained.

**113.6(2)** *Location restrictions.* All MSWLFs shall comply with the following location restrictions.

*a. Airports.* For purposes of this chapter:

"*Airport*" means public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities.

“*Bird hazard*” means an increase in the likelihood of bird-aircraft collisions that may cause damage to the aircraft or injury to its occupants.

(1) A prohibition on locating a new MSWLF near certain airports was enacted in Section 503 of the Wendell H. Ford Aviation Investment and Reform Act for the 21st Century (Ford Act), Pub. L. 106-181 (49 U.S.C. 44718 note). Section 503 prohibits the “construction or establishment” of new MSWLFs after April 5, 2000, within six miles of certain smaller public airports. The Federal Aviation Administration (FAA) administers the Ford Act and has issued guidance in FAA Advisory Circular 150/5200-34A, dated January 26, 2006.

(2) Owners or operators of new MSWLF units, existing MSWLF units, and lateral expansions that are located within 10,000 feet (3,048 meters) of any airport runway end used by turbojet aircraft or within 5,000 feet (1,524 meters) of any airport runway end used by piston-type aircraft only must demonstrate to the FAA that the units are designed and operated so that the MSWLF unit does not pose a bird hazard to aircraft. The owner or operator must place the demonstration of this requirement in the operating record and submit to the department a copy of the demonstration approved by the FAA.

(3) Owners or operators proposing to site new MSWLF units and lateral expansions within a five-mile radius of any airport runway end used by turbojet or piston-type aircraft must notify the affected airport and the FAA. A copy of these notifications shall be submitted to the department.

*b. Floodplains.* For purposes of this chapter:

“*Floodplain*” means the lowland and relatively flat areas adjoining inland and coastal waters, including flood-prone areas of offshore islands that may be inundated by a 100-year flood.

“*100-year flood*” means a flood that has a 1 percent or greater chance of recurring in any given year or a flood of a magnitude equaled or exceeded once in 100 years on the average over a significantly long period.

“*Washout*” means the carrying away of solid waste by waters of the base flood.

Owners or operators of new MSWLF units, existing MSWLF units, and lateral expansions located in 100-year floodplains must demonstrate to the department that the unit will not restrict the flow of the 100-year flood, reduce the temporary water storage capacity of the floodplain, or result in washout of solid waste so as to pose a hazard to human health and the environment. The owner or operator must place the demonstration in the operating record and submit a copy of the demonstration to the department.

*c. Wetlands.* For purposes of this chapter:

“*Wetlands*” means those areas that are inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

New MSWLF units and lateral expansions shall not be located in wetlands, unless the owner or operator can make the following demonstrations to the department:

(1) Where applicable under Section 404 of the Clean Water Act or applicable state wetlands laws, the presumption that a practicable alternative to the proposed landfill is available which does not involve wetlands is clearly rebutted;

(2) The construction and operation of the MSWLF unit will not:

1. Cause or contribute to violations of any applicable state water quality standard;

2. Violate any applicable toxic effluent standard or prohibition under Section 307 of the Clean Water Act;

3. Jeopardize the continued existence of endangered or threatened species or result in the destruction or adverse modification of a critical habitat protected under the Endangered Species Act of 1973; and

4. Violate any requirement under the Marine Protection, Research, and Sanctuaries Act of 1972 for the protection of a marine sanctuary;

(3) The MSWLF unit will not cause or contribute to significant degradation of wetlands. The owner or operator must demonstrate the integrity of the MSWLF unit and its ability to protect ecological resources by addressing the following factors:

1. Erosion, stability, and migration potential of native wetland soils, muds and deposits used to support the MSWLF unit;
2. Erosion, stability, and migration potential of dredged and fill materials used to support the MSWLF unit;
3. The volume and chemical nature of the waste managed in the MSWLF unit;
4. Impacts on fish, wildlife, and other aquatic resources and their habitats from release of the solid waste;
5. The potential effects of catastrophic release of waste to wetlands and the resulting impacts on the environment; and
6. Any additional factors, as necessary, to demonstrate that ecological resources in the wetland are sufficiently protected;

(4) To the extent required under Section 404 of the Clean Water Act or applicable state wetlands laws, steps have been taken to attempt to achieve no net loss of wetlands (as defined by acreage and function) by first avoiding impacts to wetlands to the maximum extent practicable as required by subparagraph 113.6(2)“c”(1), then minimizing unavoidable impacts to the maximum extent practicable, and finally offsetting remaining unavoidable wetland impacts through all appropriate and practicable compensatory mitigation actions (e.g., restoration of existing degraded wetlands or creation of human-made wetlands); and

(5) Sufficient information is available to make a reasonable determination with respect to these demonstrations.

*d. Fault areas.* For the purposes of this chapter:

“*Fault*” means a fracture or a zone of fractures in any material along which strata on one side have been displaced with respect to that on the other side.

“*Displacement*” means the relative movement of any two sides of a fault measured in any direction.

“*Holocene*” means the most recent epoch of the Quaternary Period, extending from the end of the Pleistocene Epoch to the present.

New MSWLF units and lateral expansions shall not be located within 200 feet (60 meters) of a fault that has had displacement in Holocene time unless the owner or operator demonstrates to the department that an alternative setback distance of less than 200 feet (60 meters) will prevent damage to the structural integrity of the MSWLF unit and will be protective of human health and the environment.

*e. Seismic impact zones.* For the purposes of this chapter:

“*Seismic impact zone*” means an area with a 10 percent or greater probability that the maximum horizontal acceleration in lithified earth material, expressed as a percentage of the earth’s gravitational pull (g), will exceed 0.10g in 250 years.

“*Maximum horizontal acceleration in lithified earth material*” means the maximum expected horizontal acceleration depicted on a seismic hazard map, with a 90 percent or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on a site-specific seismic risk assessment.

“*Lithified earth material*” means all rock, including all naturally occurring and naturally formed aggregates or masses of minerals or small particles of older rock that formed by crystallization of magma or by induration of loose sediments. “Lithified earth material” does not include human-made materials, such as fill, concrete, and asphalt, or unconsolidated earth materials, soil, or regolith lying at or near the earth’s surface.

New MSWLF units and lateral expansions shall not be located in seismic impact zones, unless the owner or operator demonstrates to the department that all containment structures, including liners, leachate collection systems, and surface water control systems, are designed to resist the maximum horizontal acceleration in lithified earth material for the site. The owner or operator must place the demonstration in the operating record and submit a copy of the demonstration to the department.

*f. Unstable areas.* For purposes of this chapter:

“*Unstable area*” means a location that is susceptible to natural or human-induced events or forces capable of impairing the integrity of some or all of the landfill structural components responsible for

preventing releases from a landfill. Unstable areas may include poor foundation conditions, areas susceptible to mass movements, and karst terranes.

*“Structural components”* means liners, leachate collection systems, final covers, run-on systems, runoff systems, and any other component used in the construction and operation of the MSWLF that is necessary for protection of human health and the environment.

*“Poor foundation conditions”* means those areas where features exist which indicate that a natural or human-induced event may result in inadequate foundation support for the structural components of an MSWLF unit.

*“Areas susceptible to mass movement”* means those areas of influence (i.e., areas characterized as having an active or substantial possibility of mass movement) where the movement of earth material at, beneath, or adjacent to the MSWLF unit, because of natural or human-induced events, results in the downslope transport of soil and rock material by means of gravitational influence. Areas of mass movement include, but are not limited to, landslides, avalanches, debris slides and flows, soil fluction, block sliding, and rock fall.

*“Karst terranes”* means areas where karst topography, with its characteristic surface and subterranean features, is developed as the result of dissolution of limestone, dolomite, or other soluble rock. Characteristic physiographic features present in karst terranes include, but are not limited to, sinkholes, sinking streams, caves, large springs, and blind valleys.

Owners or operators of new MSWLF units, existing MSWLF units, and lateral expansions located in an unstable area must demonstrate to the department that engineering measures have been incorporated into the MSWLF unit’s design to ensure that the integrity of the structural components of the MSWLF unit will not be disrupted. The owner or operator must place the demonstration in the operating record and submit a copy of the demonstration to the department. The owner or operator must consider the following factors, at a minimum, when determining whether an area is unstable:

- (1) On-site or local soil conditions that may result in significant differential settling;
- (2) On-site or local geologic or geomorphologic features; and
- (3) On-site or local human-made features or human-induced events (both surface and subsurface).

*g. Threatened or endangered flora and fauna.*

(1) All MSWLF owners or operators shall contact the department’s Iowa Natural Areas Inventory with a request to search its records to determine the presence of, or habitat for, any threatened or endangered species or communities of flora or fauna on the proposed site. In the event that the department’s Iowa Natural Areas Inventory does not contain records of threatened or endangered species or communities but their presence is suspected, then the permit applicant shall conduct a site survey.

(2) Should any threatened or endangered species be identified pursuant to subparagraph 113.6(2)“g”(1), the permit applicant shall demonstrate to the department that the MSWLF unit will not cause or contribute to significant degradation of the threatened or endangered species or communities.

*h. Cultural resources.*

(1) All MSWLF owners and operators shall prepare a comprehensive listing of, and assessment of the impact on, any archaeologically, historically, or architecturally significant properties on the proposed site. To assess the impact, the permit applicant shall consult with the historic preservation bureau of the state historical society of Iowa.

(2) Should any significant cultural resources be identified pursuant to subparagraph 113.6(2)“h”(1), the permit applicant shall demonstrate to the department that the MSWLF unit will not cause or contribute to significant degradation of those cultural resources.

*i. Separation from groundwater.* The base of an MSWLF unit shall be situated so that the base of the waste within the proposed unit is at least 5 feet above the high water table unless a greater separation is required to ensure that there will be no significant adverse effect on groundwater or surface waters or a lesser separation is unlikely to have a significant adverse effect on groundwater or surface waters. Artificial means of lowering the high water table are acceptable. The separation of the base of an MSWLF unit from the high water table shall be measured and maintained in a manner acceptable to the department.

*j. Wells and community water systems.* An MSWLF unit shall not be within 1,000 feet of any potable well or community water system in existence at the time of receipt of the original permit application or application to laterally expand the permitted MSWLF unit for the facility that is being used for human or livestock consumption. Groundwater monitoring wells are exempt from this requirement. The department may also exempt extraction wells utilized as part of a remediation system from this requirement. A new MSWLF unit shall not be within 1,000 feet of a downgradient agricultural drainage well.

*k. Property line setback.* An MSWLF unit shall be at least 50 feet from the adjacent property line.

*l. Housing and sensitive populations.* An MSWLF unit shall not be within 500 feet of an occupied residence, recreational area, child care facility, educational facility, or health care facility in existence at the time of receipt of the original permit application or application to laterally expand the permitted MSWLF unit, unless there is a written agreement between the MSWLF owner and such facility. The written agreement shall be filed with the county recorder for abstract of title purposes, and a copy submitted to the department.

**113.6(3) Soil and hydrogeologic investigations.** An MSWLF shall have a qualified groundwater scientist, as defined in paragraph 113.10(1)“d,” to conduct a soil and hydrogeologic investigation in accordance with this subrule. The purpose of this investigation is to obtain data to determine potential routes of contaminant migration via groundwater. Such information is vital for completion of the site exploration and characterization report, and the hydrologic monitoring system plan and design. This subrule sets forth the minimum requirements for soil and hydrogeologic investigations. The MSWLF shall comply with this subrule unless the department issues written approval due to specific site conditions.

*a. Number of borings.* A sufficient number of borings shall be made to accurately identify the stratigraphic and hydrogeologic conditions at the site.

*b. Depth of borings.* Unless otherwise approved by the department in writing, the following requirements shall apply to the depth of borings.

(1) All borings shall be a minimum of 25 feet deep and at least 10 feet below the water table.

(2) At a minimum, half of all borings shall extend 20 feet into the uppermost aquifer, 50 feet below the water table, or 10 feet into bedrock.

(3) At a minimum, one boring shall extend 10 feet into bedrock or 100 feet below the lowest ground surface elevation.

(4) All borings shall be of sufficient depth to correlate strata between borings.

*c. Boring method and soil samples.*

(1) Continuous samples shall be collected for all borings, unless otherwise approved by the department in writing.

(2) Boring logs shall be as detailed as possible in describing each stratum.

(3) Samples shall be clearly marked, preserved and transported in accordance with laboratory procedures.

(4) The permit applicant shall keep and preserve samples until at least 30 days after the permit is issued.

(5) Soil samples from each stratum shall be tested for falling-head permeability and grain size distribution.

*d. Conversion of or plugging borings.*

(1) Borings may be converted to piezometers or monitoring wells. However, the conversion of such borings does not guarantee that more piezometers or monitoring wells will not be required in the department-approved hydrologic monitoring system plan and design.

(2) Borings not converted to piezometers or monitoring wells shall be plugged and properly sealed so as not to create pathways for subsurface or surface pollution migration. Borings converted to piezometers or monitoring wells may still need to be partially plugged depending on the depth of the boring. Plugging shall be performed pursuant to paragraph 113.10(2)“d.”

*e. Soil and hydrogeologic investigation description and analysis.* A soil and hydrogeologic investigation description and analysis shall be completed and maintained and, at a minimum, shall contain the following:

- (1) The boring logs pursuant to subparagraph 113.6(3)“c”(2).
- (2) A description of the properties of each soil and bedrock stratum as appropriate, including:
  1. Soil texture and classification.
  2. Particle size distribution.
  3. Mineral composition, cementation, and soil structure.
  4. Permeability, including horizontal and vertical permeability, and porosity.
  5. Geologic structure, including strike, dip, folding, faulting and jointing.
  6. Previous activities and infrastructure at the site that could affect geology and hydrogeology, such as but not limited to mining, quarry operations, borrow pits, waste disposal, storage tanks, pipelines, utilities and tile lines.
  7. Lenses and other discontinuous units, voids, solution openings, layering, fractures, other heterogeneity, and the scale or frequency of the heterogeneity.
  8. Correlation and continuity of strata between borings.
- (3) Descriptions of the hydrogeologic units within the saturated zone, including:
  1. Thickness.
  2. Hydraulic properties, including as appropriate, conductivity, transmissivity, storativity, and effective porosity.
  3. Concentrations of chemical constituents listed in Appendix I present in the groundwater of hydrogeologic units and the source of those constituents, if known.
  4. Role and effect of each hydrogeologic unit as an aquifer, aquitard, or perched saturated zone.
  5. The actual or potential use of the aquifers as water supplies.
- (4) Plan view maps, and a series of cross sections with two oriented perpendicular and two oriented parallel to the predominant directions of groundwater flow through the MSWLF unit, showing:
  1. The extent of soil and bedrock strata.
  2. The position of the water table.
  3. The position of the uppermost aquifer.
  4. Measured values of hydraulic head.
  5. Equipotential lines and inferred groundwater streamlines of the water table, and the uppermost aquifer if different from the water table.
  6. Location of soil and bedrock borings.
  7. Location of piezometers and monitoring points, if any.
- (5) A description and evaluation of horizontal and vertical groundwater flow which specifically addresses the following and their significance to the movement of pollutants carried by groundwater:
  1. Local, intermediate and regional groundwater systems.
  2. Groundwater recharge and discharge areas within and immediately surrounding the facility, including interactions with perennial and intermittent surface waters and how the facility affects recharge rates.
  3. Existing and proposed groundwater and surface water withdrawals.
  4. The effects of heterogeneity, fractures or directional differences in permeability on groundwater movement.
  5. Directions of groundwater movement, including vertical components of flow, specific discharge rates and average linear velocities within the hydrologic strata.
  6. Seasonal or other temporal fluctuations in hydraulic head.
  7. The effect of existing and proposed MSWLF units.
- (6) An analysis of potential impacts on groundwater and surface water quality, and water users, in the event of a theoretical release at the most downgradient portion of each MSWLF unit. The analysis shall at a minimum utilize contaminants and indicator parameters with high mobility in groundwater (e.g., chlorides, organic solvents). This analysis shall include:
  1. Assumptions and approximations utilized, and why they were utilized.

2. If a model is utilized, a thorough description of models used and each model's capabilities and limitations, including the reliability and accuracy of the models in actual field tests.

3. Projected paths and rates of movement of contaminants found in leachate.

(7) Recommendations for the location of the proposed MSWLF unit and conceptual design based on hydrogeologic information.

**113.6(4) *Site exploration and characterization report.*** An MSWLF shall maintain a site exploration and characterization report. At a minimum, the site exploration and characterization report shall detail compliance with the requirements of rule 113.6(455B) and shall contain the following components.

a. A title page and index.

b. A legal description of the site.

c. Proof of the applicant's ownership of the site and legal entitlement to use the site as an MSWLF.

If the applicant does not own the site, then proof of legal entitlement to the site, such as, for example, a lease, must be submitted. Such legal entitlement must include the following:

(1) Provisions that allow continued disposal operations until closure of the facility.

(2) Provisions for the performance of facility closure operations.

(3) Provisions for postclosure care for at least a 30-year period after facility closure.

d. Proof of the applicant's local siting approval pursuant to Iowa Code section 455B.305A, if applicable.

e. Scaled maps or aerial photographs locating the boundaries of the facility and identifying:

(1) North and other principal compass points.

(2) Section lines and other legal boundaries.

(3) Zoning and land use within 0.5 miles.

(4) Haul routes to and from the facility, including load limits or other restrictions on those routes.

(5) Topography within 0.5 miles.

(6) Applicable setback distances and location requirements pursuant to rule 113.6(455B),

including:

1. Airports within 6 miles of existing, new and planned MSWLF units.

2. Floodplains within or adjacent to the facility.

3. Wetlands within or adjacent to the facility.

4. Fault areas within 200 feet of existing, new and planned MSWLF units.

5. Seismic impact zones within or adjacent to the facility.

6. Unstable areas within or adjacent to the facility.

7. Location of threatened or endangered species within or adjacent to the facility.

8. Location of cultural resources within or adjacent to the facility.

9. Wells within 1,000 feet of upgradient existing, new and planned MSWLF units.

10. Community water systems within 1 mile of upgradient existing, new and planned MSWLF units.

11. Boundaries of the existing, new and planned MSWLF units and the facility property line.

12. Housing and sensitive populations within 500 feet of existing, new and planned MSWLF units.

f. The bird-aircraft hazard demonstration pursuant to paragraph 113.6(2) "a," if applicable.

g. The floodplain demonstration pursuant to paragraph 113.6(2) "b," if applicable.

h. The wetlands demonstration pursuant to paragraph 113.6(2) "c," if applicable.

i. The fault area demonstration pursuant to paragraph 113.6(2) "d," if applicable.

j. The seismic impact zone demonstration pursuant to paragraph 113.6(2) "e," if applicable.

k. The unstable area demonstration pursuant to paragraph 113.6(2) "f," if applicable.

l. The threatened or endangered flora and fauna demonstration pursuant to paragraph 113.6(2) "g," if applicable.

m. The cultural resources demonstration pursuant to paragraph 113.6(2) "h," if applicable.

n. Copies of written agreements with surrounding property owners pursuant to paragraph 113.6(2) "l," if applicable.

o. The soil and hydrogeologic investigation description and analysis pursuant to paragraph 113.6(3) "e."

**567—113.7(455B) MSWLF unit design and construction standards.** All MSWLF units shall be designed and constructed in accordance with this rule.

**113.7(1) *Predesign meeting with the department.*** A potential applicant for a new MSWLF unit may schedule a predesign meeting with the department's landfill permitting staff prior to beginning work on the plans and specifications of a modified or new MSWLF. The purpose of this meeting is to help minimize the need for revisions upon submittal of the official designs and specifications.

**113.7(2) *Plans and specifications.***

*a.* Unless otherwise requested by the department, one copy of plans, specifications and supporting documents shall be sent to the department for review. Upon written department approval, the documents shall be submitted in triplicate to the department for proper distribution.

*b.* All new MSWLF units shall be constructed in compliance with the rules and regulations in effect at the time of construction. Previous department approval of plans and specifications for MSWLF units not yet constructed shall be superseded by the promulgation of new rules and regulations, after which plans and specifications shall be resubmitted to the department for approval prior to construction and operation.

**113.7(3) *General site design and construction requirements.*** An MSWLF shall have the following:

- a.* All-weather access roads to the facility.
- b.* A perimeter fence with a lockable gate(s) to help prevent unauthorized access.
- c.* A sign at the entrance to the facility specifying:
  - (1) Name and permit number of the facility.
  - (2) Days and hours that the facility is open to the public or a statement that the facility is not open to the public.
  - (3) A general list of materials that are not accepted.
  - (4) Telephone number of the official responsible for operation of the facility and the emergency contact person(s).

*d.* All-weather access roads within the facility.

*e.* Signs or pavement markings clearly indicating safe and proper on-site traffic patterns.

*f.* Adequate queuing distance for vehicles entering and exiting the property.

*g.* A scale certified by the Iowa department of agriculture and land stewardship.

**113.7(4) *MSWLF unit subgrade.*** The subgrade for a new MSWLF unit shall be constructed as follows:

*a.* All trees, stumps, roots, boulders, debris, and other material capable of deteriorating in situ material strength or of creating a preferential pathway for contaminants shall be completely removed or sealed off prior to construction of the MSWLF unit.

*b.* The material beneath the MSWLF unit shall have sufficient strength to support the weight of the unit during all phases of construction and operation. The loads and loading rate shall not cause or contribute to failure of the liner and leachate collection system.

*c.* The total settlement or swell of the MSWLF unit's subgrade shall not cause or contribute to failure of the liner and leachate collection system.

*d.* If the in situ material of the MSWLF unit's subgrade cannot meet the requirements of paragraphs 113.7(4) "b" and 113.7(4) "c," then such material shall be removed and replaced with material capable of compliance.

*e.* The subgrade of an MSWLF unit shall be constructed and graded to provide a smooth working surface on which to construct the liner.

*f.* The subgrade of an MSWLF unit shall not be constructed in or with frozen soil.

**113.7(5) *MSWLF unit liners and leachate collection systems.*** The liner and leachate collection system for a new MSWLF unit shall be constructed in accordance with the requirements of this subrule. All active portions must have a composite liner or an alternative liner approved by the department. An MSWLF unit must have a functioning leachate collection system during its active life.

*a. *Liner systems.** An MSWLF unit shall have a liner system that complies with either the composite liner requirements of subparagraph 113.7(5) "a"(1) or an alternative liner system that

complies with the requirements of subparagraph 113.7(5)“a”(2). Liners utilizing compacted soil must place the compacted soil in lifts no thicker than 8 inches after compaction.

(1) Composite liner systems.

1. A composite liner consists of two components, an upper flexible membrane liner (FML) and a lower compacted soil liner.

2. The upper component must consist of a minimum 30-mil flexible membrane liner (FML). FML components consisting of high-density polyethylene (HDPE) shall be at least 60 mil thick. The FML component must be installed in direct and uniform contact with the lower compacted soil component.

3. The lower component must consist of at least a 2-foot layer of compacted soil with a hydraulic conductivity of no more than  $1 \times 10^{-7}$  centimeters per second (cm/sec). The compacted soil must be placed in lifts no thicker than 8 inches after compaction.

4. The composite liner must be adequately sloped toward the leachate collection pipes to provide drainage of leachate. Unless alternative design requirements to this performance standard are approved as part of the permit under subrule 113.2(11) (relating to equivalency review procedure), the leachate collection system shall have a slope greater than or equal to 2 percent and not exceeding 33 percent.

(2) Alternative liner systems.

1. The design must ensure that the concentration values listed in Table I of rule 113.7(455B) will not be exceeded in the uppermost aquifer at the relevant point of compliance, as specified pursuant to numbered paragraph 113.7(5)“a”(2)“2.” Alternative liners utilizing compacted soil must place the compacted soil in lifts no thicker than 8 inches.

2. The relevant point of compliance specified by the department must be within 50 feet of the planned liner or waste boundary, unless site conditions dictate otherwise, downgradient of the facility with respect to the hydrologic unit being monitored in accordance with subparagraph 113.10(2)“a”(2), and located on land owned by the owner of the MSWLF unit. The relevant point of compliance specified by the department shall be at least 50 feet from the property line of the facility.

3. When approving an alternative liner design, the department shall consider at least the following factors:

- The hydrogeologic characteristics of the facility and surrounding land.
- The climatic factors of the area.
- The volume and physical and chemical characteristics of the leachate.
- The sensitivities and limitations of the modeling demonstrating the applicable point of compliance.
- Practicable capability of the owner or operator.

4. The alternative liner must be adequately sloped toward the leachate collection pipes to provide drainage of leachate. Unless alternative design requirements to this performance standard are approved as part of the permit under subrule 113.2(11) (relating to equivalency review procedure), the leachate collection system shall have a slope greater than or equal to 2 percent and not exceeding 33 percent.

*b. Leachate collection system.* All MSWLF units shall have a leachate collection system that complies with the following requirements:

(1) The leachate collection system shall be designed and constructed to function for the entire active life of the facility and the postclosure period.

(2) The leachate collection system shall be of a structural strength capable of supporting waste and equipment loads throughout the active life of the facility and the postclosure period.

(3) The leachate collection system shall be designed and constructed to minimize leachate head over the liner at all times. An MSWLF unit shall have a leachate collection system that maintains less than a 30-centimeter (i.e., 12-inch) depth of leachate over the liner. The leachate collection system shall have a method for accurately measuring the leachate head on the liner at the system's lowest point(s) within the MSWLF unit (e.g., sumps). Furthermore, an additional measuring device shall be installed to measure leachate directly on the liner in the least conductive drainage material outside of the sump and collection trench. Leachate head measurements from cleanout lines or manholes are not acceptable for the second measurement. All such measurement devices shall be in place before waste is placed in the MSWLF unit.

(4) If the leachate collection system is not designed and constructed factoring in leachate recirculation or bioreactor operations, the department may prohibit such activities within the MSWLF unit.

(5) The collection pipes shall be of a length and cross-sectional area that allow for cleaning and inspection through the entire length of all collection pipes at least once every three years. The collection pipes shall not be designed or constructed with sharp bends that prevent cleaning or inspection along any section of the collection pipe or that may cause the collection pipe to be damaged during cleaning or inspection.

(6) Leachate collection system designs shall attempt to minimize the potential for clogging due to mass loading.

(7) Unless alternative design requirements are approved as part of the permit under subrule 113.2(11) (relating to equivalency review procedure), the following design requirements shall apply:

1. A geotextile cushion over the flexible membrane liner (FML), if the liner utilizes an FML and granular drainage media. A geotextile cushion is not required if the granular drainage media is well rounded and less than 3/8 inch in diameter. The geotextile's mass shall be determined based on the allowable pressure on the geomembrane.

2. Collection pipe(s) at least 4 inches in diameter at the base of the liner slope(s), surrounded by the high hydraulic-conductivity material listed in numbered paragraph 113.7(5) "b"(7)"3" below. The collection pipe shall have slots or holes large enough to minimize the potential for clogging from fines conveyed by incoming leachate.

3. One of the following high hydraulic-conductivity materials:

- High hydraulic-conductivity material (e.g., gravel) of uniform size and a fines content of no more than 5 percent by weight passing a #200 sieve. The high hydraulic-conductivity material shall be at least 12 inches in depth and have a hydraulic conductivity of at least  $1 \times 10^{-2}$  cm/sec; or
- A geosynthetic drainage media (e.g., geonet). The transmissivity of geonets shall be tested with method ASTM D4716, or an equivalent test method, to demonstrate that the design transmissivity will be maintained for the design period of the facility. The testing for the geonet in the liner system shall be conducted using actual boundary material intended for the geonet at the maximum design normal load for the MSWLF unit, and at the design load expected from one lift of waste. At the maximum design normal load, testing shall be conducted for a minimum period of 100 hours unless data equivalent of the 100-hour period is provided, in which case the test shall be conducted for a minimum period of one hour. In the case of the design load from one lift of waste, the minimum period shall be one hour. For geonets used in final covers, only one test shall be conducted for a minimum period of one hour using the expected maximum design normal load from the cover soils and the actual boundary materials intended for the geonet. A granular layer at least 12 inches thick with a hydraulic conductivity of at least  $1 \times 10^{-3}$  cm/sec shall be placed above the geosynthetic drainage material that readily transmits leachate and provides separation between the waste and liner.

(8) Manholes within the MSWLF unit shall be designed to minimize the potential for stressing or penetrating the liner due to friction on the manhole exterior from waste settlement.

(9) The leachate drainage and collection system within the MSWLF unit shall not be used for the purpose of storing leachate. If leachate is to be stored, it shall be stored in designated storage structures outside of the MSWLF unit.

(10) All of the facility's leachate storage and management structures outside of the MSWLF unit (e.g., tanks, holding ponds, pipes, sumps, manholes, lift stations) and operations shall have containment structures or countermeasures adequate to prevent seepage to groundwater or surface water. The containment structures and countermeasures for leachate storage shall be at least as protective of groundwater at the liner of the MSWLF unit on a performance basis.

(11) Unless alternative design requirements are approved as part of the permit under subrule 113.2(11) (relating to equivalency review procedure), the leachate storage structures shall be able to store at least 7 days of accumulated leachate at the maximum generation rate used in designing the leachate collection system. Such minimum storage capacity may be constructed in phases over time so long as the 7-day accumulation capacity is maintained. The storage facility shall also have the ability to load tanker trucks in case sanitary sewer service is unavailable for longer than 7 days.

(12) The leachate collection system shall be equipped with valves or devices similar in effectiveness so that leachate can be controlled during maintenance.

(13) The leachate collection system shall be accessible for maintenance at all times and under all weather conditions.

(14) The permit holder shall annually submit a Leachate Control System Performance Evaluation (LCSPE) Report as a supplement to the facility Annual Water Quality Report, as defined in subrule 113.10(10). The report shall include an evaluation of the effectiveness of the system in controlling the leachate, leachate head levels and elevations, the volume of leachate collected and transported to the treatment works or discharged under any NPDES permits, records of leachate contaminants testing required by the treatment works, proposed additional leachate control measures, and an implementation schedule in the event that the constructed system is not performing effectively.

**113.7(6) *Quality control and assurance programs.*** All MSWLF units shall be constructed under the supervision of a strict quality control and assurance (QC&A) program to ensure that MSWLF units are constructed in accordance with the requirements of rule 113.7(455B) and the approved plans and specifications. At a minimum, such a QC&A program shall consist of the following.

*a.* The owner or operator shall designate a quality control and assurance (QC&A) officer. The QC&A officer shall be a professional engineer (P.E.) registered in Iowa. The QC&A officer shall not be an employee of the facility, the construction company or construction contractor. The owner or operator shall notify the department of the designated QC&A officer and provide the department with that person's

contact information. The QC&A officer may delegate another person or persons who are not employees of the facility to supervise or implement an aspect of the QC&A program.

b. The QC&A officer shall document compliance with rule 113.7(455B), and the approved plans and specifications, for the following aspects of construction:

(1) The MSWLF unit's subgrade.

(2) The liner system, as applicable, below:

1. The flexible membrane liner (FML). Destructive testing of the FML shall be kept to side slopes when continuous seams are utilized. Patches over FML destructive testing areas shall be checked with nondestructive methods.

2. The compacted clay component of the liner system. A minimum of five field moisture density tests per 8-inch lift per acre shall be performed to verify that the correct density, as correlated to permeability by a laboratory analysis, has been achieved. Laboratory hydraulic conductivity testing of Shelby tube samples from the constructed soil liner or test pad, or field hydraulic conductivity testing of the constructed soil liner or test pad, or other methods approved by the department, shall be utilized as a QC&A test.

(3) The leachate collection, conveyance and storage systems.

(4) Any other aspect of construction as required by the department.

c. A sampling and testing program shall be implemented by the QC&A officer as part of the QC&A program. The sampling and testing program shall:

(1) Verify full compliance with the requirements of rule 113.7(455B), and the approved plans and specifications.

(2) Be approved by the department prior to construction of the MSWLF unit.

(3) Detail how each stage of construction will be verified for full compliance with the requirements of rule 113.7(455B), and the approved plans and specifications.

(4) Be based on statistically significant sampling techniques and establish criteria for the acceptance or rejection of materials and constructed components of the MSWLF unit.

(5) Detail what actions will take place to remedy and verify any material or constructed component that is not in compliance with the requirements of rule 113.7(455B), and the approved plans and specifications.

d. The QC&A officer shall document the QC&A program. Upon completion of the MSWLF unit construction, the QC&A officer shall submit a final report to the department that verifies compliance with the requirements of rule 113.7(455B), and the approved plans and specifications. A copy of the final report shall also be maintained by the facility in the operating record. At a minimum, the final report shall include the following.

(1) A title page and index.

(2) The name and permit number of the facility.

(3) Contact information for the QC&A officer and persons delegated by the QC&A officer to supervise or implement an aspect of the QC&A program.

(4) Contact information for all construction contractors.

(5) Copies of daily reports containing the following information.

1. The date.

2. Summary of weather conditions.

3. Summary of locations on the facility where construction was occurring.

4. Summary of equipment, materials and personnel utilized in construction.

5. Summary of meetings held regarding the construction of the MSWLF unit.

6. Summary of construction progress.

7. Photographs of the construction progress, with descriptions of the time, subject matter and location of each photograph.

8. Details of sampling and testing program for that day. At a minimum, this report shall include details of where sampling and testing occurred, the methods utilized, personnel involved and test results.

9. Details of how any material or constructed component that was found not to be in compliance via the sampling and testing program was remedied.

(6) A copy of detailed as-built drawings with supporting documentation and photographic evidence. This copy shall also include a narrative explanation of changes from the original department-approved plans and specifications.

(7) A signed and sealed statement by the QC&A officer that the MSWLF unit was constructed in accordance with the requirements of rule 113.7(455B), and the approved plans and specifications.

**113.7(7) Vertical and horizontal expansions of MSWLF units.** All vertical and horizontal expansions of disposal airspace over existing and new MSWLF units shall comply with the following requirements.

*a.* Horizontal expansions shall, at a minimum, comply with the following requirements:

(1) Horizontal expansions are new MSWLF units and, at a minimum, shall be designed and constructed in accordance with subrules 113.7(4), 113.7(5) and 113.7(6).

(2) The slope stability of the horizontal expansion between the existing unit and new MSWLF unit shall be analyzed. The interface between two MSWLF units shall not cause a slope failure of either of the MSWLF units.

(3) A horizontal expansion may include a vertical elevation increase of an existing MSWLF unit, pursuant to paragraph 113.7(7) “*b*,” if approved by the department.

*b.* Vertical expansions shall, at a minimum, comply with the following requirements:

(1) A vertical expansion of an MSWLF unit shall not be allowed if the MSWLF unit does not have an approved leachate collection system and a composite liner or a leachate collection system and an alternative liner modeled at an approved point of compliance.

(2) An analysis of the structural impacts of the proposed vertical expansion on the liner and leachate collection system shall be completed. The vertical expansion shall not contribute to the structural failure of the liner and leachate collection system.

(3) An analysis of the impact of the proposed vertical expansion on leachate generation shall be completed. The vertical expansion shall not overload the leachate collection system or contribute to excess head on the liner.

(4) An analysis of the effect of the proposed vertical expansion on run-on, runoff and discharges into waters of the state shall be completed. The vertical expansion shall not cause a violation of subrule 113.7(8).

(5) The proposed vertical expansion shall be in compliance with the final slopes required at closure pursuant to paragraph 113.12(1) “*e*.”

(6) An analysis of the potential impact of the proposed vertical expansion on litter generation shall be completed. Landfill management strategies may need to be amended to help prevent increased litter.

(7) An analysis of the impact of the proposed vertical expansion on lines-of-sight and any visual buffering utilized by the landfill shall be completed.

**113.7(8) Run-on and runoff control systems.**

*a.* Owners or operators of all MSWLF units must design, construct, and maintain the following:

(1) A run-on control system to prevent flow onto the active portion of the landfill during the peak discharge from a 25-year storm;

(2) A runoff control system from the active portion of the landfill to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

*b.* Runoff from the active portion of the MSWLF unit must be handled in accordance with paragraph 113.10(1) “*a*.”

**567—113.8(455B) Operating requirements.** The requirements of this rule shall be consolidated in a development and operations plan (DOPs) pursuant to subrule 113.8(4) and the emergency response and remedial action plan (ERRAP) pursuant to subrule 113.8(5), as applicable.

**113.8(1) Prohibited operations and activities.** For the purposes of this subrule, “regulated hazardous waste” means a solid waste that is a hazardous waste, as defined in Iowa Code section 455B.411.

*a. Waste screening for prohibited materials.* Owners or operators of all MSWLF units must implement a program at the facility for detecting and preventing the disposal of regulated hazardous wastes, polychlorinated biphenyls (PCB) wastes and other prohibited wastes listed in paragraph 113.8(1) “*b*.” This program must include, at a minimum:

(1) Random inspections of incoming loads unless the owner or operator takes other steps to ensure that incoming loads do not contain regulated hazardous wastes, PCB wastes or other prohibited wastes listed in paragraph 113.8(1)“b”;

(2) Records of any inspections;

(3) Training of facility personnel to recognize regulated hazardous wastes, PCB wastes and other prohibited wastes listed in paragraph 113.8(1)“b”; and

(4) Notification of the EPA regional administrator if regulated hazardous wastes or PCB wastes are discovered at the facility.

*b. Materials prohibited from disposal.* The following wastes shall not be accepted for disposal by an MSWLF. Some wastes may be banned from disposal via the multiple categories listed below.

(1) Hazardous waste, whether it is a chemical compound specifically listed by EPA as a regulated hazardous waste or a characteristic hazardous waste pursuant to the characteristics below:

1. Ignitable in that the waste has a flash point (i.e., it will ignite) at a temperature of less than 140 degrees Fahrenheit.

2. Corrosive in that the waste has a pH less than 2 or greater than 12.5.

3. Reactive in that the waste is normally unstable; reacts violently with water; forms an explosive mixture with water; contains quantities of cyanide or sulfur that could be released into the air in sufficient quantity to be a danger to human health; or can easily be detonated or exploded.

4. Toxicity characteristic leaching procedure (TCLP) (EPA Method 1311) toxic, in that a TCLP listed chemical constituent exceeds the EPA assigned concentration standard in 40 CFR Part 261 or the department assigned concentration standard in Table I of rule 113.7(455B). Waste from a residential building that is contaminated by lead-based paint (i.e., the waste fails the TCLP test for lead only) may be disposed of in an MSWLF unit. The purpose of this exclusion is to help prevent the exposure of children to lead-based paint. Therefore, the meaning of “residential building” in regard to this TCLP exclusion shall be interpreted broadly and include any building which children or parents may utilize as a residence (temporarily or permanently). Such residential buildings include, but are not limited to, single-family homes, apartment buildings, townhomes, condominiums, public housing, military barracks, nursing homes, hotels, motels, bunkhouses, and campground cabins.

(2) Polychlorinated biphenyl (PCB) wastes with a concentration equal to or greater than 50 parts per million (ppm).

(3) Free liquids, liquid waste and containerized liquids. For purposes of this subparagraph, “liquid waste” means any waste material that is determined to contain “free liquids” as defined by Method 9095B (Paint Filter Liquids Test), as described in Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods (EPA Pub. No. SW-846). For the purposes of this subparagraph, “gas condensate” means the liquid generated as a result of the gas recovery process(es) at the MSWLF unit. However, free liquids and containerized liquids may be placed in MSWLF units if:

1. The containerized liquid is household waste other than septic waste. The container must be a small container similar in size to that normally found in household waste;

2. The waste is leachate or gas condensate derived from the MSWLF unit, whether it is a new or existing MSWLF unit or lateral expansion, and is designed with a composite liner and leachate collection system as described in paragraph 113.7(5)“a.” The owner or operator must demonstrate compliance with this subparagraph and place the demonstration in the operating record; or

3. The MSWLF unit is a research, development and demonstration (RD&D) project in which the department has authorized the addition of liquids and meets the applicable requirements of subrule 113.4(10).

(4) Septage, which is the raw material, liquids and pumpings from a septic system, unless treated pursuant to 567—Chapter 68.

(5) Appliances as defined pursuant to 567—Chapter 118, unless there is documentation that the appliance has been demanufactured pursuant to 567—Chapter 118.

(6) Radioactive waste, excluding luminous timepieces and other items using very small amounts of tritium.

(7) Infectious waste, unless managed and disposed of pursuant to 567—Chapter 109.

(8) Hot loads, meaning solid waste that is smoking, smoldering, emitting flames or hot gases, or otherwise indicating that the solid waste is in the process of combustion or close to igniting. Ash that has not been fully quenched or cooled is considered a hot load. Such wastes may be accepted at the gate, but shall be segregated and completely extinguished and cooled in a manner as safe and responsible as practical before disposal.

(9) Asbestos-containing material (ACM) waste with greater than 1 percent asbestos, unless managed and disposed of pursuant to 567—Chapter 109.

(10) Petroleum-contaminated soil, unless managed and remediated pursuant to 567—Chapter 120.

(11) Grit and bar screenings, and grease skimmings, unless managed and disposed of pursuant to 567—Chapter 109.

(12) Waste tires, unless each tire is processed into pieces no longer than 18 inches on any side. The department encourages the recycling of all waste tires, even if processed to disposal standards.

(13) Yard waste.

(14) Lead-acid batteries.

(15) Waste oil and materials containing free-flowing waste oil. Materials contaminated with waste oil may be disposed of if no free-flowing oil is retained in the material, and the material is not a hazardous waste.

(16) Baled solid waste, unless the waste is baled on site after the waste has been visually inspected for prohibited materials.

*c. Open burning and fire hazards.* No open burning of any type shall be allowed within the permitted boundary of an MSWLF facility. The fueling of vehicles and equipment, and any other activity that may produce sparks or flame, shall be conducted at least 50 feet away from the working face.

*d. Scavenging and salvaging.* Scavenging shall not be allowed at the MSWLF facility. However, salvaging by MSWLF operators may be allowed.

*e. Animal feeding and grazing.* Feeding animals MSW shall not be allowed at an MSWLF facility. The grazing of domestic animals on fully vegetated areas of the MSWLF facility not used for disposal, including closed MSWLF units, may be allowed by the department so long as the animals do not cause damage or interfere with operations, inspections, environmental monitoring and other required activities. Large, hooved animals (including but not limited to buffalo, cattle, llamas, pigs, and horses) shall not be allowed on closed MSWLF units.

**113.8(2) Disposal operations and activities.** All MSWLFs shall comply with the following requirements.

*a. Survey controls and monuments.* Survey controls and monuments shall be maintained as follows.

(1) The property boundary, the permitted boundary and the boundaries of all MSWLF units shall be surveyed and marked by a professional land surveyor at least once prior to closure.

(2) Prior to waste placement, all new MSWLF unit boundaries shall be surveyed and marked by a professional engineer.

(3) Survey monuments shall be established to check vertical elevations and the progression of fill sequencing. The survey monuments shall be established and maintained by a professional land surveyor.

(4) All survey stakes and monuments shall be clearly marked.

(5) A professional engineer shall biennially inspect all survey monuments and replace missing or damaged survey monuments.

*b. First lift.* The first lift and initial placement of MSW over a new MSWLF unit liner and leachate collection system shall comply with the following requirements.

(1) Waste shall not be placed in the new MSWLF unit until the QC&A officer has submitted a signed and sealed final report to the department pursuant to paragraph 113.7(6)“d” and that report has been approved by the department.

(2) Construction and earth-moving equipment shall not operate directly on the liner and leachate management system. Waste disposal operations shall begin at the edge of the new MSWLF unit by pushing MSW out over the liner and leachate collection system. Compactors and other similarly heavy

equipment shall not operate directly on the leachate collection system until a minimum of 4 feet of waste has been mounded over the top of the leachate collection system.

(3) Construction and demolition debris and materials clearly capable of spearing through the leachate collection system and liner shall not be placed in the first 4 feet of waste over the top of the leachate collection system. The first 4 feet of waste shall consist of select waste that is unlikely to damage the liner and performance of the leachate collection system.

(4) The owner or operator must place documentation in the operating record and submit a copy to the department that adequate cover material was placed over the top of the leachate collection system in the MSWLF unit or that freeze/thaw effects had no adverse impact on the compacted clay component of the liner.

*c. Fill sequencing.* The rate and phasing of disposal operations shall comply with the following requirements.

(1) The fill sequencing shall be planned and conducted in a manner and at a rate that do not cause a slope failure, lead to extreme differential settlement, or damage the liner and leachate collection system.

(2) The fill sequencing shall be planned and conducted in a manner compliant with the run-on and runoff requirements of subrule 113.7(8) and surface water requirements of rule 113.10(455B).

*d. Working face.* The working face shall comply with the following requirements.

(1) The working face shall be no larger than necessary to accommodate the rate of disposal in a safe and efficient manner.

(2) The working face shall not be so steep as to cause heavy equipment and solid waste collection vehicles to roll over or otherwise lose control.

(3) Litter control devices of sufficient size to help prevent blowing litter shall be utilized at the working face. The operation of the working face shall attempt to minimize blowing litter.

(4) The operation of the working face shall prevent the harborage of vectors and attempt to minimize the attraction of vectors.

(5) Employees at the working face shall be trained to visually recognize universal symbols, markings and indications of prohibited wastes pursuant to paragraph 113.8(1) "b."

*e. Special wastes.* Special wastes shall be managed and disposed of pursuant to 567—Chapter 109.

*f. Cover material and alternative cover material.* Pursuant to 567—Chapter 108, alternative cover material of an alternative thickness (e.g., tarps, spray covers) may be authorized if the owner or operator demonstrates to the approval of the department that the alternative material and thickness control vectors, fires, odors, blowing litter, and scavenging without presenting a threat to human health and the environment. Cover material or alternative cover material shall be available for use during all seasons in all types of weather. Cover material and alternative cover material shall be utilized as follows unless otherwise approved by the department pursuant to 567—Chapter 108:

(1) Daily cover. Six inches of cover material or an approved depth or application of alternative cover material shall be placed and maintained over waste in the active portion at the end of each operating day, or at more frequent intervals if necessary, to control vectors, fires, odors, blowing litter, and scavenging.

(2) Intermediate cover. At least 1 foot of compacted cover material or an approved depth or application of alternative cover material shall be placed and maintained over waste in the active portion that has not or will not receive more waste for at least 30 days. At least 2 feet of compacted cover material or alternative cover material shall be placed and maintained over waste in the active portion that has not or will not receive waste for at least 180 days. Such active portions shall be graded to manage run-on and runoff pursuant to subrule 113.7(8). Such active portions shall be seeded if they will not receive waste for a full growing season.

(3) Scarification of cover. To help prevent leachate seeps by aiding the downward flow of leachate, cover material or alternative cover material, which prevents the downward flow of leachate and is at least 5 feet from the outer edge of the MSWLF unit, shall be scarified prior to use of that area as a working face. Cover material or alternative cover material that does not impede the downward flow of leachate, as approved by the department, does not require scarification. Scarification may be as simple as the

spearing or breaking up of a small area of the cover. Areas of intermediate cover may require removal of some of the cover material or alternative cover material to aid the downward flow of leachate.

(4) Final cover. Final cover over an MSWLF unit that is to be closed shall be constructed and maintained according to the closure and postclosure requirements of rules 113.12(455B) and 113.13(455B).

*g. Leachate seeps.* Leachate seeps shall be contained and plugged upon being identified. Leachate seeps shall not be allowed to reach waters of the state. Soils outside of the MSWLF unit that are contaminated by a leachate seep shall be excavated and then disposed of within the MSWLF unit. Such soils may be used for daily cover material.

*h. Leachate recirculation.* The department must approve an MSWLF unit for leachate recirculation. The primary goal of the leachate recirculation system is to help stabilize the waste in a more rapid, but controlled, manner. The leachate recirculation system shall not contaminate waters of the state, contribute to erosion, damage cover material, harm vegetation, or spray persons at the MSWLF facility. Leachate recirculation shall be limited to MSWLF units constructed with a composite liner.

*i. Differential settlement.* Areas of differential settlement sufficient to interfere with runoff and run-on shall be brought back up to the contours of the surrounding active portion. Differential settlement shall not be allowed to cause ponding of water on the active portion.

**113.8(3) Facility operations and activities.** All MSWLFs shall comply with the following requirements.

*a. Controlled access.* Owners or operators of all MSWLF units must control public access and prevent unauthorized vehicular traffic and illegal dumping of wastes by using artificial barriers, natural barriers, or both, as appropriate to protect human health and the environment.

*b. Scales and weights.* A scale certified by the Iowa department of agriculture and land stewardship shall weigh all solid waste collection vehicles and solid waste transport vehicles. The owner or operator shall maintain a record of the weight of waste disposed of.

*c. All-weather access to disposal.* A disposal area shall be accessible during all weather conditions.

*d. Salvaged and processed materials.* Salvaged and processed materials (e.g., scrap metal, compost, mulch, aggregate, tire chips) shall be managed and stored in an orderly manner that does not create a nuisance or encourage the attraction or harborage of vectors.

*e. Vector control.* Owners or operators must prevent or control the on-site populations of vectors using techniques appropriate for the protection of human health and the environment.

*f. Litter control.* The operator shall take steps to minimize the production of litter and the release of windblown litter off site of the facility. All windblown litter off site of the facility shall be collected daily unless prevented by unsafe working conditions. On-site litter shall be collected daily unless prevented by working conditions. A dated record of unsafe conditions that prevented litter collection activities shall be maintained by the facility.

*g. Dust.* The operator shall take steps to minimize the production of dust so that unsafe or nuisance conditions are prevented. Leachate shall not be used for dust control purposes.

*h. Mud.* The operator shall take steps to minimize the tracking of mud by vehicles exiting the facility so that slick or unsafe conditions are prevented.

*i. Leachate and wastewater treatment.* The leachate management system shall be managed and maintained pursuant to the requirements of paragraph 113.7(5) "b." Leachate collection pipes shall be cleaned and inspected as necessary, but not less than once every three years. Leachate and wastewater shall be treated as necessary to meet the pretreatment limits, if any, imposed by an agreement between the MSWLF and a publicly owned wastewater treatment works (POTW) or by the effluent discharge limits established by an NPDES permit. Documentation of the POTW agreement or NPDES permit must be submitted to the department. All leachate and wastewater treatment systems shall conform to department wastewater design standards.

*j. Financial assurance.* Financial assurance shall be maintained pursuant to rule 113.14(455B).

**113.8(4) Development and operations plan (DOPs).** An MSWLF unit shall maintain a development and operations plan (DOPs). At a minimum, the DOPs shall detail how the facility will operate and how

compliance with the requirements of rule 113.8(455B) will be maintained. The DOPs shall contain at least the following components.

- a. A title page and table of contents.
- b. Telephone number of the official responsible for the operation of the facility and an emergency contact person if different.
- c. Service area of the facility and political jurisdictions included in that area.
- d. Days and hours of operation of the facility.
- e. Details of how the site will comply with the prohibited operations and activity requirements of subrule 113.8(1) and any related permit conditions.
- f. Details of how the site will comply with the disposal operation and activity requirements of subrule 113.8(2) and any related permit conditions.
- g. Details of how the site will comply with the facility operations and activity requirements of subrule 113.8(3), any related permit conditions, and any leachate and wastewater treatment requirements.

**113.8(5) Emergency response and remedial action plan (ERRAP).** All MSWLFs shall develop, submit to the department for approval, and maintain on site an ERRAP.

- a. *ERRAP submittal requirements.* An updated ERRAP shall be submitted to the department with any permit modification or renewal request that incorporates facility changes that impact the ERRAP.
- b. *Content.* The ERRAP is intended to be a quick reference during an emergency. The content of the ERRAP shall be concise and readily usable as a reference manual by facility managers and operators during emergency conditions. The ERRAP shall contain and address at least the following components, unless facility conditions render the specific issue as not applicable. To facilitate department review, the rationale for exclusion of any issues that are not applicable must be provided either in the body of the plan or as a supplement. Additional ERRAP requirements unique to the facility shall be addressed as applicable.

- (1) Facility information.
  1. Permitted agency.
  2. DNR permit number.
  3. Responsible official and contact information.
  4. Certified operator and contact information.
  5. Facility description.
  6. Site and environs map.
- (2) Regulatory requirements.
  1. Iowa Code section 455B.306(6)“d” criteria citation.
  2. Reference to provisions of the permit.
- (3) Emergency conditions, response activities and remedial action.
  1. Failure of utilities.
    - Short-term (48 hours or less).
    - Long-term (over 48 hours).
  2. Evacuation procedures during emergency conditions.
  3. Weather-related events.
    - Tornado and wind events.
    - Snow and ice.
    - Intense rainstorms, mud, and erosion.
    - Lightning strikes.
    - Flooding.
    - Event and postevent conditions.
  4. Fire and explosions.
    - Waste materials.
    - Buildings and site.
    - Equipment.
    - Fuels.
    - Utilities.

- Facilities.
- Working area.
- Hot loads.
- Waste gases.
- Explosive devices.
- 5. Regulated waste spills and releases.
  - Waste materials.
  - Leachate.
  - Waste gases.
  - Waste stockpiles and storage facilities.
  - Waste transport systems.
  - Litter and airborne particulate.
  - Site drainage system.
  - Off-site releases.
- 6. Hazardous material spills and releases.
  - Load-check control points.
  - Mixed waste deliveries.
  - Fuels.
  - Waste gases.
  - Site drainage systems.
  - Off-site releases.
- 7. Mass movement of land and waste.
  - Earthquakes.
  - Slope failure.
  - Waste shifts.
  - Waste subsidence.
- 8. Emergency and release notification and reporting.
  - Federal agencies.
  - State agencies.
  - County and city agencies including emergency management services.
  - News media.
  - Public and private facilities with special populations within five miles.
  - Reporting requirements and forms.
- 9. Emergency waste management procedures.
  - Communications.
  - Temporary discontinuation of services—short-term and long-term.
  - Facilities access and rerouting.
  - Waste acceptance.
  - Wastes in process.
- 10. Primary emergency equipment inventory.
  - Major equipment.
  - Fire hydrants and water sources.
  - Off-site equipment resources.
- 11. Emergency aid.
  - Responder contacts.
  - Medical services.
  - Contracts and agreements.
- 12. ERRAP training requirements.
  - Training providers.
  - Employee orientation.
  - Annual training updates.
  - Training completion and record keeping.

13. Reference tables, figures and maps.

**113.8(6) MSWLF operator certification.** Sanitary landfill operators shall be trained, tested, and certified by a department-approved certification program.

*a.* A sanitary landfill operator shall be on duty during all hours of operation of a sanitary landfill, consistent with the respective certification.

*b.* To become a certified operator, an individual shall complete a basic operator training course that has been approved by the department or an alternative, equivalent training approved by the department and shall pass a departmental examination as specified by this subrule. An operator certified by another state may have reciprocity subject to approval by the department.

*c.* A sanitary landfill operator certification is valid until June 30 of the following even-numbered year.

*d.* The required basic operator training course for a certified sanitary landfill operator shall have at least 25 contact hours and shall address the following areas, at a minimum:

- (1) Description of types of wastes.
- (2) Interpreting and using engineering plans.
- (3) Construction surveying techniques.
- (4) Waste decomposition processes.
- (5) Geology and hydrology.
- (6) Landfill design.
- (7) Landfill operation.
- (8) Environmental monitoring.
- (9) Applicable laws and regulations.
- (10) Permitting processes.
- (11) Leachate control and treatment.

*e.* Alternate basic operator training must be approved by the department. The applicant shall be responsible for submitting any documentation the department may require to evaluate the equivalency of alternate training.

*f.* Fees.

(1) The examination fee for each examination is \$20.

(2) The initial certification fee is \$8 for each one-half year of a two-year period from the date of issuance to June 30 of the next even-numbered year.

- (3) The certification renewal is \$24.
- (4) The penalty fee is \$12.

*g.* Examinations.

(1) The operator certification examinations shall be based on the basic operator training course curriculum.

(2) All individuals wishing to take the examination required to become a certified operator of a sanitary landfill shall complete the Operator Certification Examination Application, Form 542-1354. A listing of dates and locations of examinations is available from the department upon request. The application form requires the applicant to indicate the basic operator training course taken. Evidence of training course completion must be submitted with the application for certification. The completed application and the application fee shall be sent to the department and addressed to the central office in Des Moines. Application for examination must be received by the department at least 30 days prior to the date of examination.

(3) A properly completed application for examination shall be valid for one year from the date the application is approved by the department.

(4) Upon failure of the first examination, the applicant may be reexamined at the next scheduled examination. Upon failure of the second examination, the applicant shall be required to wait a period of 180 days between each subsequent examination.

(5) Upon each reexamination when a valid application is on file, the applicant shall submit to the department the examination fee at least ten days prior to the date of examination.

(6) Failure to successfully complete the examination within one year from the date of approval of the application shall invalidate the application.

(7) Completed examinations will be retained by the department for a period of one year after which they will be destroyed.

(8) Oral examinations may be given at the discretion of the department.

*h.* Certification.

(1) All operators who passed the operator certification examination by July 1, 1991, are exempt from taking the required operator training course. Beginning July 1, 1991, all operators are required to take the basic operator training course and pass the examination in order to become certified.

(2) Application for certification must be received by the department within 30 days of the date the applicant receives notification of successful completion of the examination. All applications for certification shall be made on a form provided by the department and shall be accompanied by the certification fee.

(3) Applications for certification by examination which are received more than 30 days but less than 60 days after notification of successful completion of the examination shall be accompanied by the certification fee and the penalty fee. Applicants who do not apply for certification within 60 days of notice of successful completion of the examination will not be certified on the basis of that examination.

(4) For applicants who have been certified under other state mandatory certification programs, the equivalency of which has been previously reviewed and accepted by the department, certification without examination will be recommended.

(5) For applicants who have been certified under voluntary certification programs in other states, certification will be considered. The applicant must have successfully completed a basic operator training course and an examination generally equivalent to the Iowa examination. The department may require the applicant to successfully complete the Iowa examination.

(6) Applicants who seek Iowa certification pursuant to subparagraphs 113.8(6) "h"(4) and (5) shall submit an application for examination accompanied by a letter requesting certification pursuant to those subparagraphs. Application for certification pursuant to those subparagraphs shall be received by the department in accordance with subparagraphs 113.8(6) "h"(2) and (3).

*i.* Renewals. All certificates shall expire every two years, on even-numbered years, and must be renewed every two years to maintain certification. Application and fee are due prior to expiration of certification.

(1) Late application for renewal of a certificate may be made, provided that such late application shall be received by the department or postmarked within 30 days of the expiration of the certificate. Such late application shall be on forms provided by the department and accompanied by the penalty fee and the certification renewal fee.

(2) If a certificate holder fails to apply for renewal within 30 days following expiration of the certificate, the right to renew the certificate automatically terminates. Certification may be allowed at any time following such termination, provided that the applicant successfully completes an examination. The applicant must then apply for certification in accordance with paragraph 113.8(6) "h."

(3) An operator shall not continue to operate a sanitary landfill after expiration of a certificate without renewal thereof.

(4) Continuing education must be earned during the two-year certification period. All certified operators must earn ten contact hours per certificate during each two-year period. The two-year period will begin upon issuance of certification.

(5) Only those operators fulfilling the continuing education requirements before the end of each two-year period will be allowed to renew their certificates. The certificates of operators not fulfilling the continuing education requirements shall be void upon expiration, unless an extension is granted.

(6) All activities for which continuing education credit will be granted must be related to the subject matter of the particular certificate to which the credit is being applied.

(7) The department may, in individual cases involving hardship or extenuating circumstances, grant an extension of time of up to three months within which the applicant may fulfill the minimum continuing education requirements. Hardship or extenuating circumstances include documented

health-related confinement or other circumstances beyond the control of the certified operator which prevent attendance at the required activities. All requests for extensions must be made 60 days prior to expiration of certification.

(8) The certified operator is responsible for notifying the department of the continuing education credits earned during the period. The continuing education credits earned during the period shall be shown on the application for renewal.

(9) A certified operator shall be deemed to have complied with the continuing education requirements of this subrule during periods that the operator serves honorably on active duty in the military service; or for periods that the operator is a resident of another state or district having a continuing education requirement for operators and meets all the requirements of that state or district for practice there; or for periods that the person is a government employee working as an operator and is assigned to duty outside the United States; or for other periods of active practice and absence from the state approved by the department.

*j.* Discipline of certified operators.

(1) Disciplinary action may be taken on any of the following grounds:

1. Failure to use reasonable care or judgment or to apply knowledge or ability in performing the duties of a certified operator. Duties of certified operators include compliance with rules and permit conditions applicable to landfill operation.

2. Failure to submit required records of operation or other reports required under applicable permits or rules of the department, including failure to submit complete records or reports.

3. Knowingly making any false statement, representation, or certification on any application, record, report or document required to be maintained or submitted under any applicable permit or rule of the department.

(2) Disciplinary sanctions allowable are:

1. Revocation of a certificate.

2. Probation under specified conditions relevant to the specific grounds for disciplinary action. Additional education or training or reexamination may be required as a condition of probation.

(3) The procedure for discipline is as follows:

1. The department shall initiate disciplinary action. The commission may direct that the department investigate any alleged factual situation that may be grounds for disciplinary action under subparagraph 113.8(6)“j”(1) and report the results of the investigation to the commission.

2. A disciplinary action may be prosecuted by the department.

3. Written notice shall be given to an operator against whom disciplinary action is being considered. The notice shall state the informal and formal procedures available for determining the matter. The operator shall be given 20 days to present any relevant facts and indicate the operator's position in the matter and to indicate whether informal resolution of the matter may be reached.

4. An operator who receives notice shall communicate verbally, in writing, or in person with the department, and efforts shall be made to clarify the respective positions of the operator and department.

5. The applicant's failure to communicate facts and positions relevant to the matter by the required date may be considered when determining appropriate disciplinary action.

6. If agreement as to appropriate disciplinary sanction, if any, can be reached with the operator and the commission concurs, a written stipulation and settlement between the department and the operator shall be entered into. The stipulation and settlement shall recite the basic facts and violations alleged, any facts brought forth by the operator, and the reasons for the particular sanctions imposed.

7. If an agreement as to appropriate disciplinary action, if any, cannot be reached, the department may initiate formal hearing procedures. Notice and formal hearing shall be in accordance with 567—Chapter 7 related to contested and certain other cases pertaining to license discipline.

*k.* Revocation of certificates. Upon revocation of a certificate, application for certification may be allowed after two years from the date of revocation. Any such applicant must successfully complete an examination and be certified in the same manner as a new applicant.

*l.* Temporary certification. A temporary operator of a sanitary landfill may be designated for a period of six months when an existing certified operator is no longer available to the facility. The facility

must make application to the department, explain why a temporary certification is needed, identify the temporary operator, and identify the efforts which will be made to obtain a certified operator. A temporary operator designation shall not be approved for greater than a six-month period except for extenuating circumstances. In any event, not more than one six-month extension to the temporary operator designation may be granted. Approval of a temporary operator designation may be rescinded for cause as set forth in paragraph 113.8(6) "j." All MSWLFs shall have at least one MSWLF operator trained, tested and certified by a department-approved program.

**567—113.9(455B) Environmental monitoring and corrective action requirements for air quality and landfill gas.** All MSWLFs shall comply with the following environmental monitoring and corrective action requirements for air quality and landfill gas.

**113.9(1) Air criteria.** Owners or operators of all MSWLFs must ensure that the units do not violate any applicable requirements developed under a state implementation plan (SIP) approved or promulgated by the department pursuant to Section 110 of the Clean Air Act.

**113.9(2) Landfill gas.** All MSWLFs shall comply with the following requirements for landfill gas. For purposes of this subrule, "lower explosive limit" means the lowest percent by volume of a mixture of explosive gases in air that will propagate a flame at 25°C and atmospheric pressure.

*a.* Owners or operators of all MSWLF units must ensure that:

(1) The concentration of methane gas generated by the facility does not exceed 25 percent of the lower explosive limit for methane in facility structures (excluding gas pipeline, control or recovery system components);

(2) The concentration of methane gas does not exceed the lower explosive limit for methane at the facility property boundary; and

*b.* Owners or operators of all MSWLF units must implement a routine methane-monitoring program to ensure that the standards of paragraph 113.9(2) "a" are met. Such a program shall include routine subsurface methane monitoring (e.g., at select groundwater wells, at gas monitoring wells).

(1) The type and frequency of monitoring must be determined based on the following factors:

1. Soil conditions;

2. The hydrogeologic conditions surrounding the facility;

3. The hydraulic conditions surrounding the facility;

4. The location of facility structures (including potential subsurface preferential pathways such as, but not limited to, pipes, utility conduits, drain tiles and sewers) and property boundaries; and

5. The locations of structures near the outside of the facility to which or along which subsurface migration of methane gas may occur. Examples of such structures include, but are not limited to, houses, buildings, basements, crawl spaces, pipes, utility conduits, drain tiles and sewers.

(2) The minimum frequency of monitoring shall be quarterly.

*c.* If methane gas levels exceeding the limits specified in paragraph 113.9(2) "a" are detected, the owner or operator must:

(1) Immediately take all necessary steps to ensure protection of human health and notify the department and department field office with jurisdiction over the MSWLF;

(2) Within 7 days of detection, place in the operating record and notify the department and department field office with jurisdiction over the MSWLF of the methane gas levels detected and a description of the steps taken to protect human health; and

(3) Within 60 days of detection, implement a remediation plan for the methane gas releases, place a copy of the plan in the operating record, and notify the department and department field office with jurisdiction over the MSWLF that the plan has been implemented. The plan shall describe the nature and extent of the problem and the proposed remedy.

*d.* The owner or operator shall submit an annual report to the department detailing the gas monitoring sampling locations and results, any action taken, and the results of steps taken to address gas levels exceeding the limits of paragraph 113.9(2) "a" during the previous year. This report shall include a site map that delineates all structures, perimeter boundary locations, and other monitoring points where gas readings were taken. The site map shall also delineate areas of landfill gas migration

outside the MSWLF units, if any. The report shall contain a narrative explaining and interpreting all of the data collected during the previous year. The report shall be due each year at a date specified by the department in the facility's permit.

**567—113.10(455B) Environmental monitoring and corrective action requirements for groundwater and surface water.** All MSWLFs shall comply with the following environmental monitoring and corrective action requirements for groundwater and surface water.

**113.10(1) General requirements for environmental monitoring and corrective action for groundwater and surface water.** The following general requirements apply to all provisions of this rule.

*a.* Surface water requirements. MSWLF units shall not:

(1) Cause a discharge of pollutants into waters of the United States, including wetlands, that violates any requirements of the Clean Water Act, including, but not limited to, the National Pollutant Discharge Elimination System (NPDES) requirements, pursuant to Section 402 of the Clean Water Act.

(2) Cause the discharge of a nonpoint source of pollution into waters of the United States, including wetlands, that violates any requirement of an areawide or statewide water quality management plan that has been approved under Section 208 or 319 of the Clean Water Act.

*b.* A new MSWLF unit must be in compliance with the groundwater monitoring requirements specified in subrules 113.10(2), 113.10(4), 113.10(5) and 113.10(6) before waste can be placed in the unit.

*c.* Once established at an MSWLF unit, groundwater monitoring shall be conducted throughout the active life and postclosure care period of that MSWLF unit as specified in rule 113.13(455B).

*d.* For the purposes of this rule, a "qualified groundwater scientist" means a scientist or an engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields demonstrated by state registration, professional certifications, or completion of accredited university programs that enable that individual to make sound professional judgments regarding groundwater monitoring, contaminant fate and transport, and corrective action.

*e.* The department may establish alternative schedules for demonstrating compliance with:

(1) Subparagraph 113.10(2)"*e*"(3), pertaining to notification of placement of certification in operating record;

(2) Subparagraph 113.10(5)"*c*"(1), pertaining to notification that statistically significant increase (SSI) notice is in operating record;

(3) Subparagraphs 113.10(5)"*c*"(2) and (3), pertaining to an assessment monitoring program;

(4) Paragraph 113.10(6)"*b*," pertaining to sampling and analyzing Appendix II constituents;

(5) Subparagraph 113.10(6)"*d*"(1), pertaining to placement of notice (Appendix II constituents detected) in record and notification of placement of notice in record;

(6) Subparagraph 113.10(6)"*d*"(2), pertaining to sampling for Appendices I and II;

(7) Paragraph 113.10(6)"*g*," pertaining to notification (and placement of notice in record) of SSI above groundwater protection standard;

(8) Numbered paragraph 113.10(6)"*g*"(1)"4" and paragraph 113.10(7)"*a*," pertaining to assessment of corrective measures;

(9) Paragraph 113.10(8)"*a*," pertaining to selection of remedy and notification of placement in record;

(10) Paragraph 113.10(9)"*f*," pertaining to notification of placement in record (certification of remedy completed).

**113.10(2) Groundwater monitoring systems.** All MSWLFs shall have a groundwater monitoring system that complies with the following requirements:

*a.* A groundwater monitoring system must be installed that meets the following objectives:

(1) Yields groundwater samples from the uppermost aquifer that represent the quality of background groundwater that has not been affected by leakage from a unit. A determination of background quality may include sampling of wells that are not hydraulically upgradient of the waste management area where either:

1. Hydrogeologic conditions do not allow the owner or operator to determine which wells are hydraulically upgradient; or

2. Sampling at other wells will provide an indication of background groundwater quality that is as representative as or more representative than that provided by the upgradient wells.

(2) Yields groundwater samples from the uppermost aquifer that represent the quality of groundwater passing the relevant point of compliance specified by the department under numbered paragraph 113.7(5)“a”(2)“2.” The downgradient monitoring system must be installed at the relevant point of compliance specified by the department under numbered paragraph 113.7(5)“a”(2)“2” that ensures detection of groundwater contamination in the uppermost aquifer. When physical obstacles preclude installation of groundwater monitoring wells at the relevant point of compliance at existing units, the downgradient monitoring system may be installed at the closest practicable distance, hydraulically downgradient from the relevant point of compliance specified by the department under numbered paragraph 113.7(5)“a”(2)“2,” that ensures detection of groundwater contamination in the uppermost aquifer.

(3) Provides a high level of certainty that releases of contaminants from the site can be promptly detected. Downgradient monitoring wells shall be placed along the site perimeter, within 50 feet of the planned liner or waste boundary unless site conditions dictate otherwise, downgradient of the facility with respect to the hydrologic unit being monitored. Each groundwater underdrain system shall be included in the groundwater detection monitoring program under subrule 113.10(5). The maximum drainage area routed through each outfall shall not exceed 10 acres unless it can be demonstrated that site-specific factors such as drain flow capacity or site development sequencing require an alternative drainage area. If contamination is identified in the groundwater underdrain system pursuant to subrule 113.10(5), the owner or operator shall manage the underdrain discharge as leachate in lieu of assessment monitoring and corrective action.

(4) Be designed and constructed with the theoretical release evaluation pursuant to subparagraph 113.6(3)“e”(6) taken into consideration.

*b.* For those facilities which are long-term, multiphase operations, the department may establish temporary waste boundaries in order to define locations for monitoring wells. The convergence of groundwater paths to minimize the overall length of the downgradient dimension may be taken into consideration in the placement of downgradient monitoring wells provided that the multiphase unit groundwater monitoring system meets the requirements of paragraphs 113.10(2)“a,” 113.10(2)“c,” 113.10(2)“d” and 113.10(2)“e” and will be as protective of human health and the environment as the individual monitoring systems for each MSWLF unit, based on the following factors:

- (1) Number, spacing, and orientation of the MSWLF units;
- (2) Hydrogeologic setting;
- (3) Site history;
- (4) Engineering design of the MSWLF units; and
- (5) Type of waste accepted at the MSWLF units.

*c.* Monitoring wells must be constructed and cased by a well contractor certified pursuant to 567—Chapter 82 in a manner that maintains the integrity of the monitoring well borehole. This casing must be screened or perforated and packed with gravel or sand, where necessary, to enable collection of groundwater samples. The annular space (i.e., the space between the borehole and well casing) above the sampling depth must be sealed to prevent contamination of samples and the groundwater. Monitoring wells constructed in accordance with the rules in effect at the time of construction shall not be required to be abandoned and reconstructed as a result of subsequent amendments to these rules unless the department finds that the well is no longer providing representative groundwater samples. See Figure 1 for a general diagram of a properly constructed monitoring well.

(1) The owner or operator must notify the department that the design, installation, development, and decommission of any monitoring wells, piezometers and other measurement, sampling, and analytical devices documentation has been placed in the operating record.
